In the context of Japanese TV broadcast (ARIB: Association of Radio Industries and Businesses), reference: [http://www.dibeg.org/aribstd/STD-B24/ARIB\\_STD-B24-1\\_v5.1\\_E1.pdf](http://www.dibeg.org/aribstd/STD-B24/ARIB_STD-B24-1_v5.1_E1.pdf), character sets are used in text streaming which are mostly included in Unicode and ISO/IEC 10646. In addition to regular Japanese text (broadly conceived as a mixed of Romaji (ASCII), Hiragana, Katakana, and Kanji) many symbols are also used. Most of these symbols are already encoded in the standard mentioned earlier. However many still are not and that has lead to the creation of Private Use characters in fonts used in the ARIB context. It would be desirable to encode many of these symbols to avoid confusion with end user created private characters. This document is categorizing them in usage groups:

- Traffic signs
- Audio/Video symbols
- Map/Guide symbols
- Arrows
- Numbers followed by period
- Chad symbols
- Japanese date symbols
- Japanese currency symbol
- Squared Latin abbreviations
- Miscellaneous symbols
- Registry Office symbols (?)
- Numbers followed by comma
- Parenthesized ideographs
- Circled Ideographs
- Geometric shapes
- CJK brackets
- Miscellaneous symbols
- Superscripts

- Closed captions
- Letterlike symbols
- Tortoise Shell Bracketed ideographs
- Square Enclosed ideographs
- Number forms
- Weather symbols

The groups are classified using a mix of semantic usage (Traffic signs, Map/Guide symbols, etc...) and glyph categorization (Arrows, Numbers period, Superscripts, etc...). Some of the latter groups' content may be integrated in the semantic group once their usage is clarified. As usual with symbol characters encoding, the adopted name is important because it drives unification decision depending whether the name conveys a semantic concept or a pure glyph description.

Inside these groups, you can find glyphs representing icons and some of text-derived constructs. These text derived glyphs contains either ASCII letters and punctuations combined together or Japanese text elements (Kanji and Hiragana). These Japanese text elements can be listed as follows:

- Square enclosed Kanji
- Circle enclosed Kanji
- Tortoise shell bracketed Kanji
- Small Kanji
- Square Hiragana

Another set contains smaller size Kanji. There is currently no precedent at encoding smaller size CJK ideographs in isolation.

The last set contains a single Hiragana cluster and is similar in approach to the 'Squared Katakana words' encoded in 3300-3357.

In addition the ARIB character set contains CJK characters not yet encoded in Unicode. Discussion about these is outside the scope of this document but has been documented in WG2 N3318. Because ARIB derived application are starting to appear in the IT industry, there is some urgency at addressing encoding issues concerning these characters. Although this is not a UCS encoding proposal, it should be reviewed carefully as the base for such a document. It may also be combined in the future with additional proposals addressing public signage concerns.

All ARIB characters are presented using their ARIB code in increasing order and categorized using the groups mentioned above. Because most of these groups have some characters already encoded in the UCS, the relevant code point, glyph and names (shown in small uppercase) have been provided. When the ARIB standard provided a character name, it is shown in the 'Description' column.

## Symbols
