

Population projections for South Sudan by County 2015 - 2020

National Bureau of Statistics

March, 2015

Preface

There has been a lot of demand for population projection and understandably so because it is not appropriate to keep planning with one year figure. For effective managing for results, planners need to know the number of the population segments they are planning for. For that, the Bureau has produced population projection for South Sudan for the period 2008-2015. Population projections by county were also estimated for the same period. Because of the delays and uncertain days for census taking, the Bureau has continued to do population projections for the period 2015-2020. Population projections by county were also estimated for the same period. These are the contents of this document.

It is the hope of the Bureau that the public, especially the planners use this information.

Isaiah Chol Aruai,
Chairperson, NBS

Notes

It was not possible to estimate county projection parameters because of paucity of data. So to get the county population in the future, the state population projections were distributed to the counties according to the county population distribution at the time of census. This was then broken down by sex according to the total population distribution by sex for that state in that year.

A new county has been created from the former Baliet. This is Akoka County. It takes 20.5% of the former Baliet County population.

The percentage distribution of the population by sex is presented in Appendix A and the projected populations and the percentage distributions by sex are presented in Appendix B

Table 1: Upper Nile State, Renk County population projections

Year	Male	Female	Total
