		Technology, Tokyo
Edward M. Featherstone	1998	Director, Japanese Area and Language Training, Yokohama
Robin White	1998-2001	Director, Office of Japanese Affairs, Washington, DC

DON CARROLL BLISS, JR.
Commercial Attaché
Tokyo (1923-1924)

Ambassador Bliss was born in Michigan and educated at Dartmouth College. He entered the Foreign Service in 1923, specializing primarily in the Commercial and Economic fields. During his long and distinguished career, the Ambassador served in Tokyo, Bombay, Batavia, Alexandria, Singapore, Prague, Bangkok, Athens, Cairo, Paris, Calcutta, London, Ottawa and Addis Ababa, where he was U.S. Ambassador from 1957 to 1960.

BLISS: Yokohama had been destroyed, and part of Tokyo. Many people had died and many were homeless. News of the great earthquake of September 1, 1923 had flashed around the world but cold print conveyed no more than that. Japan was far away across the Pacific, a country of kimonos and rickshaws and cherry blossoms. Now the ugly reality lay exposed, the stark scene illuminated by an October afternoon sun as passengers lined the rail while the Dollar Line's "President Harrison" was tying up to a half-ruined pier. Here and there a roofless fire-blackened concrete skeleton with gaping windows was still standing, as was the squat tower of the deserted railway station where clock stopped at just -past noon recorded the moment when disaster struck. Otherwise a busy port and teeming city had been wiped out of existence, every brick building reduced to rubble, every wooden structure and flimsy house consumed by fire. The earthquake had shuddered many of those houses down when people were preparing their noon meal over hibachis glowing with charcoal and fires had sprung up everywhere, fanned by a stiff breeze which soon became the roaring fury of a firestorm, Thousands of men, women, and children had been pinned under falling masonry and collapsing tile roofs or trapped by flames as they fled, to make of the city a vast crematorium. The fires had long since burned out but a spiral of smoke still rose from a mound of smoldering cotton bales heaped to the roof of a vanished warehouse.

The city had been reduced to ashes but its life was beginning to stir again. A small crowd waited on the pier for the ship's gangway to be lowered. Distant ant-like figures were moving through the desolation. Tin-roofed shacks had been erected along roadways cleared for a modest bustle of foot traffic and horse-drawn vehicles, an occasional automobile. The aptly named Tent Hotel, pitched on the rubble and ashes of the Grand Hotel, displayed a streak of white canvas on the Bund. On the semi-circle of bluffs above the city a fringe of buildings spared by the fire still stood on the skyline, some intact, sore in disarray and an American flag floated over the field hospital rushed up from Manila by the U.S. Army as part of its response to disaster.

A few passengers debarked with their baggage to spend the night in the Tent Hotel, and a few came aboard, including, a young man who was looking for me. "I'm Vice Consul Martin," he said, "with a message for -you. Your orders have been changed and you're assigned to Tokyo instead of Kobe. You'll have to get off the ship here before it sails at midnight." This was splendid news – I would be at the center of things rather than far away to the south, and, attached to the Embassy rather than a satellite Consulate. There was plenty of time to check out with the purser, to have the wardrobe trunk brought up from the hold and put out on the pier, to pack the bags in the stateroom. Young Martin was happy to have dinner on board and answer a flood of questions.

The Consulate had been obliterated and its site occupied by an Army detachment brought in from Manila. Joe Ballantine had arrived from Shanghai to take charge; two Vice Consuls and several Japanese staffers rounded out the complement. They were all camping out in Army tents, eating Army chow, and not too unhappy, although water was a problem and there was no electricity. The rail line had not been restored and I would have to go up to Tokyo in an Army truck. The Embassy had been installed in the Imperial Hotel and Jefferson Caffery was Chargé. Beyond that Martin didn't know much about what went on in 'Tokyo.

As we climbed down with the hand luggage the pier was completely deserted except for the wardrobe trunk standing there on the rough planking in the glare of the ship's lights. In Washington they had told me to provision myself as though headed for a desert in which none of the amenities of civilized life could be found. Consequently the trunk was stuffed with soap, toiletries, and a year's supply of clothing, along with all the formal attire prescribed for a budding diplomat. To move that trunk was obviously beyond our powers, there wasn't a soul in sight to help with it, and we would have to come back in the morning.

Away from the ship all was black except for a few specks of light and a brighter glow from the Tent Hotel. On the sagging pier we stumbled toward a lantern hanging on a pole to mark an improvised pontoon bridge that crossed a short stretch of water and brought us finally to land. Martin led the way into the customs shed where a dozing figure in rumpled uniform topped by a red face under a bristle of black hair sat at a desk lit by a kerosene lamp and adorned with a bottle and an empty glass. Our loads spread on the counter, Martin addressed authority: "We're going ashore now; would you like to see the baggage?" The figure stirred, coughed up phlegm, spat copiously on the floor. "God damn," it said, and relapsed into immobility. "Please clear this baggage, we want to go ashore." The figure spat again. Another "God damn." "Thank you very much," Martin said, as we picked up the luggage and departed by the farther door. I was in Japan.

A sentry shone a flashlight at us and opened a gate in the chain fence. The American Consulate was a cluster of tents dimly illuminated by kerosene lanterns. Martin led the way and lit his own lantern to reveal an Army cot on either side of a wall tent floored with packed rubble. We were soon between Army blankets, the lantern had been doused, but I continued to babble into the darkness, wildly excited as I was by what was for me a great adventure. Martin's replies got shorter and. I thought he was dropping off to sleep when he suddenly slipped across the tent and tried to get into bed with me! Outraged, I gave him a knee in the belly and he retreated to his

own cot, mumbling, "But you shouldn't talk that way." To this day I don't know what I said or had done to make him expect a welcome on my side of the tent.

It was some time before I fell asleep. What an introduction to my first post abroad! The first Japanese I had encountered was a horrible drunken brute; the first Foreign Service Officer I met was a revealed homosexual. What further disillusionments lay in store for an innocent abroad? In the morning I found out.

At breakfast in the mess tent Joe Ballantine welcomed me to a Japan he loved and turned me over to a sulky young Vice Consul with instructions to retrieve my trunk. One of the Japanese staff quickly recruited a couple of baggage coolies equipped with rope and carrying pole and we trooped out on the pier to where he trunk still stood, but no longer in solitary state. A gang of stevedores lay in wait for us, four or five of them in the dingy rough cotton tights and short jackets of Japanese laborers, sweat-rags on their heads. As our men approached to pick up the trunk a great jabber of expostulation arose and the Japanese clerk stepped forward to interpret. More talk, floods of talk, with sweeping gestures, while the two Americans stood mumchance. At last it was explained. The stevedores had spent the whole night guarding the trunk, they said, even circling the area in a small boat to protect it from a raid by water. They had been faithful to their trust, they pointed out, anyone could see that the trunk was untouched, and now they wanted their pay.

"That's ridiculous," I exploded, "we didn't hire them, we've never seen them before, we don't owe them anything. Tell our men to pick up the trunk and let's go." Another flood of talk, and the baggage coolies still hung back. "Can't we find somebody who is in charge of this dock, or maybe a policeman?" I asked Martin desperately, but he only looked helpless. I felt helpless myself, remembering last night's customs officer. The stevedores were not impressed by either of us and were determined to hold their hostage until they collected tribute from the foreigner. The baggage coolies clearly had no intention of doing battle for us, there was no authority in sight to be invoked, and we ourselves carried none. The impasse was complete and I had to surrender. What did they want? Twenty yen? Impossible ridiculous, but I would give them, ten even if they didn't deserve it. Now it was just a matter of haggling and the tension of confrontation eased. We settled for fifteen and while the racketeers were gloating over their money the trunk was -picked up and borne away. Ballantine was more amused than indignant over the incident, but he cast an appraising eye toward his Vice Consul; that young man wouldn't get very far in the Service.

There was an hour or two to wait, and Johnny Tynan drifted in from the Tent Hotel, knapsack over his arm. He had graduated from Georgetown University, he told us, and set out on a freighter to go around the world. At an early stage the crew tried to rough him up, but Johnny had been an inter-collegiate boxer and after a bout or two on the afterdeck he had no more trouble. In Kobe he heard about the earthquake and decided to draw his pay and come up for a look-see. Now he was sitting beside me on my cot while we pored over a Japanese phrase-book; after my recent experiences I was determined to learn something of the language as soon as possible. So I was going up to Tokyo with my baggage? Could he hook a ride? There was no objection, and in due course we set out in a light Army truck, Johnny sitting behind on the trunk.

The dusty road more or less paralleled the deserted rail line through a countryside of rice paddies and market gardens and a series of small towns. There was some earthquake damage to larger buildings but most of the shops and houses were still standing, untouched by fire. After the ashes and rubble of Yokohama this was the real Japan at last, not the Japan of picture postcards but a land where every sight and sound and smell was strange and exciting. Particularly exotic were the smells: the mingled odors of musty rice straw, pungent soy sauce and sour sake, the scents of cedar and pine, incense from a Buddhist's shrine, the reek of open drains in the towns, the whiff of night-soil from lush market gardens. The narrow streets of the villages were crowded and our driver roared through them, klaxon blaring, scattering animals and people and leaving behind a trail of outrage against the heedless foreigner. And so to Tokyo and another scene of devastation.

Between the high stone gateposts of the Embassy a curving driveway led to a heap of rubble over which the American flag flew from the stump of a flagpole, its upper half burned away. On the extensive grounds within a surrounding wall an encampment housed a detachment of Marines and some junior Embassy personnel, with space available for stray Americans. I had a wall tent for myself, floored with the grass of a lawn and equipped with Spartan military simplicity except for the wardrobe trunk. For ablutions a soldier left a pail of cold water outside the tent flap every morning.

Major Latham presided over the mess tent in which the Marine officers and Embassy folk breakfasted, dined off Army rations, and spent their evenings gossiping until bed-time, all for a modest mess bill. During one such session Lee Murray, code clerk in the Embassy, lamented his inability to get home leave after surviving the earthquake – Washington was dilatory about producing a replacement – and Johnny Tynan spoke up. He had taken Foreign Service courses at Georgetown and thought he could qualify. Consequently Lee was on his way before long and Johnny was sworn in as code clerk. This was possible because most Government cable traffic in those unsophisticated days utilized the simple “Gray code” of five-letter groups listed in a book, no more elaborate and not much more secure than the similar commercial codes of Western Union and private companies.

So much for living. Getting to work was a walk of twenty minutes or so through a burned-out area to the Imperial Hotel, that earthquake-proof monstrosity designed by Frank Lloyd Wright in an attempt to create something vaguely Oriental out of an exotic confusion of jagged forms and elaborate angles, with walls the color of his Arizona sands into which shells, has been ground to take the skin off an unwary knuckle. The Embassy had taken over a wing of the hotel for its Chancery, most of the furnishing replaced by office equipment except for the carpeting, an occasional couch or armchair, and light standards of elaborate metal lattice-work. Yes, we had electricity, and bathrooms with hot water, plenty of them and much superior, I thought, to the cold shower rigged up by the Marines.

Most of the Embassy officers roomed in the hotel and they had complained so bitterly to Washington about the high cost of their way of life that all salaries, including mine, were doubled by “hardship” allowances. Consequently I was quite well off and could afford to lunch in the hotel and foregather in the bar on equal terms with colleagues and others in the foreign community, although in the Embassy hierarchy I was the lowest form of animal life. For some weeks, therefore, life moved in a narrow orbit between tent home and hotel office, with on

occasional foray into Tokyo's main business district. Some multi-story office buildings had collapsed, but most had survived; the vast Marunouchi Building had shed its skin of yellow brick but was being repaired; the Bank of Japan and other buildings with excessively heavy steel frames were intact; the big department stores had been damaged but were back in business; the Ginza was coming to life as a shopping street. The charming little cottages of the prostitutes immured in the Yoshiwara, completely wiped out by fire in a scene of unspeakable horror, had been among the first to be rebuilt as good as new.

The bar of the Imperial Hotel was naturally the main gathering-place for the foreign community, particularly the Americans, a place where news was exchanged and "earthquake stories" circulated. Here we learned of the reluctance of the Japanese, wary of foreign intrusion, to accept help from abroad. A U.S. Navy vessel loaded with relief supplies was permitted to discharge its cargo (provided it departed immediately), but Philippine rice was below Japanese standards and most American foods were alien to the Japanese diet; the winter-weight union suits were mostly too big and many of them, buttoned-up flaps and all, appeared as the outer garments of rickshaw coolies; no Japanese body ever occupied a single bed in the field hospital on the bluff in Yokohama. Those were some of the things we were told as we sat in the bar after work.

Men who had survived the earthquake, tongues loosened by alcohol, also had to relate their experiences, to unburden themselves to anyone who would listen. Some of the tales were tragic and some comic, there had been miraculous escapes, cases of blind panic and arrant cowardice, instances of magnificent heroism and self-sacrifice.

One man whose wife was pinned unconscious under fallen roof beams was driven back from frantic efforts to release her, and he would never forget how her hair puffed into flame as her face was blotted out in a gush of fire and smoke. Poor old Babbitt went once a week to Yokohama to search the ashes of the Grand Hotel for some trace of his wife, last seen struggling to get out of a window. All he ever found was his coin collection melted into a solid mass of metal.

Then there was the tale of two Army language officers collecting shells and romping naked on an empty beach, their clothing and picnic basket stowed among the rocks. When the earthquake struck the sea retreated, leaving a vast expanse of shining sand over which they raced to escape the tumbling cliff, only to sense a huge tidal wave roaring toward them and then scramble up the rocks to avoid being swept away. Another shock, and again they fled out on the sand, again climbed the shattered cliff. With all of their possessions buried under tons of rock, they made their painful way inland to a farmhouse where charity fitted them out with kimonos and sandals. It took them five footsore, exhausting, half-starved days to get back to Tokyo.

Most dramatic of all was the story of Tommy Ryan, repeated endlessly by one Bridges, an American salesman who had been in Tokyo on that Saturday afternoon while his wife was staying in the Grand Hotel in Yokohama. It was a hot, muggy day, and she, like several other women, was taking a bath before lunch. When the hotel collapsed a chimney fell across the tub, fracturing her legs and pinning her down, completely helpless. Tommy Ryan, a young Assistant Naval Attaché, had been sitting on the hotel verandah and at the first shock he vaulted the railing into the street, escaping death by two feet, as he put it. After milling about in the panic-stricken

crowd he heard a woman screaming and soon located Mrs. Bridges high above the street on the mountain of splintered wood that had been the hotel. He climbed up to her but found the bricks of the chimney more than he could move alone. Back in the street, he seized upon a fellow American to help him, but was brushed aside – fire wars now blazing up and smoke billowing over them. (Tommy would never say his name, but some people thought they knew.) So Tommy clambered up again, and alone he tore at the bricks with bleeding hands in a frantic race with the fire and got the woman out just as the flames were reaching them. Down in the street he snatched a kimono from the nearest Japanese and carried the helpless woman to the shore where small boats from the “President Wilson” standing off in the harbor were doing valiant rescue work. Now she was convalescing in a Kobe hospital while Bridges sat in the bar proclaiming his conviction that Tommy Ryan was a hero, a saint, the salt of the earth, but he was not satisfied until he had written in the same sense to his Senators and Congressmen, the Secretary of the Navy, the Secretary of State, the Chief Justice, even President Coolidge himself, in fact to everyone in Washington he had ever he had ever heard of. As a result of this one-man campaign Ensign Ryan was recalled to Washington, promoted a grade, and assigned to a soft berth on the President’s yacht “Mayflower.”

The country was in official mourning for the: seventy-five thousand Japanese subjects consumed in the holocaust. Theaters and cinemas were therefore closed, no public entertainments were permitted, and when the Imperial Hotel arranged dances for its foreign guests they were hastily abandoned after the hall was invaded by members of the super-patriotic Black Dragon Society in samurai gear, waving swords and denouncing, sacrilegious foreigners. In these circumstances the diplomatic corps withdrew within itself to form a tightly knit community cut off from all but official contacts with the host country; it was a group of foreigners beleaguered in a sea of unfriendly Japanese. The British were somewhat aloof and the Americans were mere hotel-dwellers, but there were pretty daughters in the Belgian, French, and Siamese Embassies, dinner parties were exchanged and dances organized, even a fancy-dress party; for such festivities protocol was relaxed and all presentable young people were welcome. That was all very well and sometimes fun, but some of us found the Japanese countryside more interesting and far more beautiful than anything in the capital, while the country folk were more hospitable, more attractive and more friendly than city people, as is often the case in rural areas around the world.

Only a few weeks after my arrival in Japan, therefore, three restless young men decided rather brashly to get out of Tokyo for a weekend in Nikko, site of the fabulous ancestral shrines of the Tokugawa shoguns. Armed with a phrase-book and equipped with overnight gear in knapsacks, we set out on a northbound train for a railway junction with the mellifluous name of Utsonomiya whence, we were told, we could get to Nikko on a branch line. The train was a revelation, gliding over a smooth roadbed through an open green countryside of fields and clumps of pine or bamboo among which thatched farmhouses crouched like plump mushrooms. The railway car, of European corridor compartment design, was gleaming spotless, and at a station along the way we could chaffer through the windows with peddlers offering Kirin beer and *bentos* – flat lunch-boxes of rice topped by strips of eel cooked in soy sauce. Delicious they were, although we were clumsy with the wooden chopsticks in their paper sheaths.

At Utsonomiya the train glided on its way leaving us on an empty platform at the edge of town, the station deserted except for the baggage porter, a gnome in a red cap. The gnome had little

more English than we had Japanese, but the phrase-book and sign language made it clear that there would be no train to Nikko. Could we get a motorcar to take us there? He was a blank. Could he find a taxi? That seemed to ring a bell, and he darted away up the street, leaving us to wait while a small crowd of schoolboys gathered to stare and giggle. A few travelers arrived at the station in the dark grey kimonos of middle-class Japanese, but one and all turned away when we approached them, phrase-book at the ready. From among the schoolboys a voice called out, "You speak English?" and we turned eagerly, but they only laughed at the joke.

After half an hour of this we decided to strike out for ourselves, splitting up to quarter the town, the station to be our rendezvous. Some distance along the street I followed there was a bicycle shop and in a lean-to alongside stood a Ford sedan.

Eureka! In the shop an old woman motioned me to wait, soon returning with a bright-eyed youngster about ten years old in the short kimono and visored cap of a schoolboy. "Yes," he said, in carefully enunciated English, "can I help you?" He listened to my tale of frustration and seemed to understand perfectly. "You wish to go to Nikko," he said. "You wish to go in a motorcar. Please wait here." He turned to go and I stopped him. "What is that," pointing to the Ford, "what is the word for it?" "*Jidisha*," he said, and grinned broadly. "That is a Japanese word I shall never forget," I told him, and I haven't. (It means "fire-wagon and it wasn't in the phrase-book). "Can we take that one?" "No," he said, "I will bring. Please wait." The old woman sat me on a stool with a cup of tea and a biscuit, and before long the little boy was back in a touring car driven by a nondescript character, his assistant beside him on the front seat. (In those days a driver in the Orient always had to have an assistant, presumably to the dirty work, if any.)

Back at the station we picked up the other two travelers, empty-handed and desperate, and soon struck a bargain for the trip. The little boy was pleased and proud, and just then we loved him, that precocious infant with the spirit of a Samaritan; he was not one to pass by on the other side like the travelers in the station. So we made much of him and offered him money, but he wouldn't accept it. He even refused a Hershey bar. "I am pleased to help you," he said, and would hear no more.

It was only two hours to Nikko, along a gravel road climbing past fields and forests to the Miyako Hotel. The affable black-coated proprietor that old-fashioned little hostelry was only too glad to see tourists on his doorstep again and there was nothing he wouldn't do for us, his only guests that weekend and perhaps the first in months. The next day was one of pure delight as we explored the sacred precincts and stood in wonder before buildings of lacquer and gold adorned with carvings painted in bright colors, gleaming like jewels against the dark green of the giant cedars, nor did we overlook the famous three monkeys under the eaves of a shed. With the hotel's facilities to speed us on the way our return to Tokyo was a breeze.

Another memorable expedition took us southward to a railway station from which we climbed a gravel road slanting up the side of a deep valley to Hakone. Half way up a landslide had carried a quarter mile of road into the depths below and a gang of laborers was gouging out the steep hillside with handcarts and mattocks and shovels of unfamiliar design. We edged gingerly across the gap and reached the Fujiya Hotel at dusk. Again we were the only guests, this time in an ornate tourist facility resembling the lavishly decorated ground floor of a pagoda. There was

electric light, but no heat, it was colder indoors than out, and we shivered mightily in our tweeds as we sat around a table in the vast empty drawing-room. Two sharp hand-claps, a voice instantly answered “Hai!” and a servant came running. Brandy might warm us up, we thought. We ordered a bottle and surprised ourselves by drinking the whole of it, but the alcohol went more into producing heat than inspiring conviviality, and we were still stone cold sober, accent on the cold. In despair we retired to our rooms and our sunken baths – long and deep and copiously fed by pipes leading into the hotel from a nearby hot spring. The body heat engendered by that steam-wreathed session was enough to carry us comfortably through our pre-prandial cocktail and a formidable dinner before we retreated to the shelter of soft beds and mountainous quilts. In the morning we climbed the rounded shoulder of the mountain for the traditional view of Fujiyama mirrored in the waters of Lake Hakone.

In later months, as we gained in sophistication, many more expeditions were organized by different groups in the American community. Some followed the tourist trail to the resorts and beauty spots touted by the guidebooks, to Kamakura, Miyanoshita, Atami, Kyoto and Nara, even to an assault on Fujiyama. Others were off the beaten track, to a fascinating Japanese hotel unknown to foreigners at Chuzenji on the Izu Peninsula, or to a climb of Mount Nantai, looming five thousand feet over Lake Chuzenji on the highlands above Nikko. Since all Japanese mountains are sacred, when we climbed Nantai the women had to hang back out of sight and rejoin us above, while the men followed the prescribed path through a gate guarded by a Shinto shrine where the white-robed priest collected an admission fee and intoned a prayer for our safe journey up the mountain. At the top a large bell was mounted on a stand and we rang it vigorously to announce our safe arrival to the priest below.

In the meantime my way of life was drastically altered when the mess tent was addressed by Major Latham one evening. “I’m sick and tired of all these damned civilians,” he said, glaring at us. “I’ll give you a week to find other quarters. This is a military operation, not a damned hotel. I don’t care where you go, but you can’t stay here.” The Imperial was out of the question despite my temporary affluence, but there was no conceivable alternative until someone in the bar suggested Coty’s house. Before the earthquake Coty had been the manager in Japan for National Cash Register, living with his family in a Japanese house, and the company still had it on a long lease, although at the moment it was full of refugees. When they cleared out I might be able to live there.

That was the answer, and within a week Titus and I moved in to take over the one room already vacated, and soon the whole house. To share expenses we recruited two young married couples from among our colleagues. They were only too glad to get out of the hotel and they settled in happily, one couple in the wing, the other in the larger front room upstairs, while Titus and I remained in the smaller bedroom. We all had to memorize the address: Aoyama Sanhome Minamicho rokuji-ichi banchi Coty San no uchi. Quite a mouthful. In translation, working backwards, it came out as “Mr. Coty’s house, 61 South Street, Third Avenue, Greenhill.” The street number, incidentally, was no help; numbers were assigned in chronological order as houses were built. The policemen in their box at the corner would know.

To get to it from midtown there was a street-car line along Sanhome to Aoyama, but it was not in operation. Sanhome was paralleled by Minamicho, one block away to the south, a tree-

shaded dirt road lined on one side by middle-class Japanese houses screened from the street by high bamboo fences; on the other side it bordered the great Aoyama cemetery. Located on solid high ground, this purely residential area had survived the earthquake with no visible damage, its electric power and water supply intact.

Coty's house was unusual in that district for its second story with glassed-in facade from which one could overlook the vast expanse of the cemetery – acres and acres crowded, almost paved, with gravestones, shrines and monuments, all of rough grey stone with an occasional shrub or tree to break the sad monotony. A one-story wing dripping wisteria extended from the house to the street, and in the angle, inside our bamboo fence, a modest little garden displayed a plum tree in one corner, a clump of bamboo in another, some azaleas and ferns, but no grass on the hard-packed earth. Outside in the street, looking to the right on a clear day, one could see the tiny cone of Fujiyama pricking the sky under arching trees, as it does in so many Japanese prints. A hundred yards away to the left a two-man police box stood at the corner of a dirt road bisecting the cemetery. 'That road was lined with cherry trees, and in the spring thousands of families would be coming from all over the city for a ritual stroll under the blossoms whenever the newspapers announced that the cherries were blooming in Aoyama.

Some adjustments had been made to adapt a Japanese house for the use of an American family, but they were minimal. Coty had put down a few rugs so that we could wear shoes indoors and not be walking on the *tatami*, those springy slabs of straw matting, six feet by three and several inches thick, which floor all Japanese houses. He was not going, to live on the floor as the Japanese do and had introduced iron beds and wicker furniture, but to -protect the precious *tatami* every leg of chair, table or bed had to be planted on a flat glass saucer. He could, and did heat the house in winter with good old American oil stoves in every room, but he could not introduce plumbing nor could he alter the structure of the house and the scantlings that supported the second floor behind plaster walls seemed flimsy.

There were no windows except the untypical glass facade of the second story, and no doors other than one at the side entrance giving on a tiny porch. Instead there were *shoji*, decorated paper screens in light frames of natural wood fitted into grooves top and bottom; they served as partitions and as sliding doors between rooms and they opened the living-dining room wide to the open air of the garden. (The Japanese, it is thought, came originally from a warmer climate far to the south and were clinging to their ancient ways.) The second story and its two bedrooms separated by *shoji* were reached by a narrow staircase of unpainted polished wood.

There was no plumbing either, except for a tap somewhere in the back premises. The communal bath was a tall oval wooden tub, full to the brim with water heated by a charcoal fire underneath. Ritual called for scrubbing with soap and water and thorough rinsing (tin dipper provided) before climbing into the tub and sitting on a wooden bench, soaking in hot water up to the neck. One emerged lobster red, warm through and through, and pleasingly relaxed.

In the absence of plumbing there was no water-closet, only a cubicle housing a seat with a tight lid, above a receptacle to catch and store the night-soil. Once, a week this was emptied, when what we called a "honey-wagon" arrived to take away this vital contribution to agriculture, and for the next half-hour we longed for those pads the Japanese wore over their noses in winter to

guard against catching cold. The “honey-wagon” was a narrow vehicle carrying tall wooden drums all in a row, their lids less than air-tight, and it came in various sizes ranging from the two-cylinder miniwagon pushed by a couple of coolies to the eight-cylinder horse-drawn monster often encountered on streets leading to the waterfront, there to be emptied into barges for transport farther afield.

We had no servant problem in Coty’s house; along with it came the Japanese family he had employed for years and to which he turned over stewardship when he left Japan. The reigning queen of the establishment, as far as we were concerned, was Hiday San (Miss Chrysanthemum), a comely young woman who had been more or less brought up with Coty’s daughter and spoke fluent English. She was our linguistic link with the neighborhood, the policemen on the corner, and the rest of the staff, which meant with her family. Chief among these was “Cooky” San, her father, a talented cook who was a friend of the chef at the Imperial -Hotel. From a kitchen we never saw he produced amazing and delectable things, ranging from a delicious concoction of baby eels and rice to the roast turkey and baked Alaska of a formal dinner. Our encounters with him were brief, however, and we practically never saw his wife and ten-year old son; they all lived together in back premises which we would not penetrate, but among them they kept the house spotless, did the laundry, pressed the suits, mended the socks, polished the shoes. What more could anybody want?

Some means of transportation other than shank’s mare would have been welcome, but there wasn’t any. Street-cars were not running, no taxicabs were to be found in Aoyama, and it was too far to expect a rickshaw puller to take one to the Imperial Hotel three miles away, and anyway that would have been expensive. So we walked, back and forth, three miles each way, rain or shine, through the cemetery under the cherry trees, and then along a street of small neighborhood shops, finally through Hibiya Park to the hotel. The street of shops was fascinating and one stopped often to study the things offered for sale: clothing, housewares, foodstuffs, medicines, toilet articles, every single item different from anything one had ever seen before, most of them handcrafted and often beautifully decorated. And then there was the archery range and the booth where young men practiced *judo* under an instructor, the art store lined with fascinating picture scrolls, the curio shop with its ivories, jades and lacquers. To walk that street twice a day for months on end was to acquire a sense of intimacy with Japanese life that no tourist could derive from the department stores or the blaring commercialism of the Ginza.

If the Japanese Government had political problems we juniors paid little heed, but we were quite aware of the shock to national pride delivered by the Asian Exclusion Act of 1924. An Imperial rescript admonished the people not to revenge themselves on Americans living in Japan – they could not be held responsible for what had been done in Washington – and none of us were ever abused or even reproached. Nevertheless a corpse eviscerated in traditional *hara-kiri* fashion was found in a corner of the American Embassy compound along with a suicide note of eloquent patriotic protest. The police told us privately that it was probably only a cover-up for murder, since no man could commit *hara-kiri* and also cut his own throat, but this was never made public. The body was therefore buried in Aoyama at a ceremony attended by thousands of people amid inflammatory speeches and scenes of great emotion. The police at the corner were worried lest our house in Minamicho attract demonstrators, but nothing happened and we rejoiced in our obscurity.

One political fact of life no one could escape was the reverence paid to the Emperor, direct descendant of the Sun Goddess who gave birth in a cave to the first of a line unbroken even through the era dominated by the Tokugawa shoguns. No Japanese could look down on the Emperor from above and every eye was cast to earth in his presence. Just then the Emperor was dying in the Imperial Palace and all of his attributes, including the idolatry, had been assumed by Hirohito, the Prince Regent. It was therefore unprecedented in Japanese history, more desecration than political act, when an unhappy student fired a shot at Hirohito's passing limousine from a gun concealed in a cane.

The police saved the would-be assassin from being torn to pieces by the crowd and he stood trial hopelessly behind a conical straw dunce-cap reaching to the shoulders and concealing his features completely. There was talk of an Imperial pardon, since he had missed his target and only broken a window, but that was just talk.

Perhaps 'because of that incident roadways were cleared half an hour before the Prince Regent was scheduled to pass, no one was permitted even to cross the street beforehand, and all windows overlooking his route were sealed blind. The police hauled an indignant Australian diplomat down from the lamp standard he had climbed, camera at the ready for a candid shot. I was caught myself one day at a street crossing and required by a vigilant policeman to wait, along with a steadily growing crowd of Japanese men and women in like case. When the red Daimler touring car with its gold chrysanthemum insignia at last come down the street, Hirohito sitting alone on the back seat, the crowd sank to earth as one man, leaving me standing, the only upright figure in a sea of –prostrate kimonos. The Prince caught this phenomenon out of the corner of his eye, gave me a knowing grin, almost a laugh at the absurdity of it all, and waved a half salute. Smiling back, I returned the salute and had to restrain an impulse to cheer, it gave me such a warm feeling for Hirohito. God he might be to the Japanese, but for me that day he was a fellow human being, a man with a sense of humor.

An earthquake is not a one-time thing, I soon learned. After a major slippage along the fault it is a matter of months before the stresses deep underground are locked into immobility and pressure builds up for the next shudder of release, perhaps in twenty-five years. In the meantime we were constantly experiencing minor quakes as the earth settled down, most of them known only to the seismographs although every once in a while there would be a perceptible tremor. This would reach the surface as a distinct shock, a bump from below, followed by some seconds of intense vibration and finally by earth waves rippling over the surface. On the cot in my tent I could watch with equanimity when I was jolted awake and the tent pole waved to and fro. Sitting at the dinner-table in someone's house was something else again: with the shock from below forks stopped halfway, cups paused in midair, and talk broke off abruptly while everyone held his breath; there was an audible sigh of relief when the vibration did no more than rattle the dishes and only a picture fell down when the house began to sway. One day a fairly stiff one tipped over the lamp standards in the office and through the windows we could see the telephone poles and light standards along the street waving back and forth like coconut palms in a hurricane, the earth rippling toward us in clearly visible waves. In the Imperial Hotel this was in no way alarming since we that the hotel was earthquake-proof, built as it was on a single great slab of reinforced concrete that rode the waves like a giant raft.

The house in Minamicho was not earthquake-proof, we well knew. When the big one hit at dawn of a winter morning and a tremendous shock jolted me out on the floor I therefore rolled promptly under the iron bed. It would some protection, one hoped, if the roof were to collapse and heavy tiles crunch down. The night light in the hall dimmed and went out as current was shut off at the power station and the first sharp jolt was followed by a protracted rasping shudder as rock ground against rock, far below. The noise was deafening; every pane of glass and everything movable in the house was rattling violently, house beams were strumming like banjo strings, and the excruciating din extended to everything in the neighborhood. Nell Calder was screaming in the next room and I never heard her. Titus scrambled around on the floor in the space between our beds and I yelled at him: "Get under the bed, you damned fool." "I can't find my glasses," he gasped, and finally obeyed. By then the waves were hitting the house and it tossed and pitched like a small boat in a choppy sea, every joint creaking and groaning. At one point it pitched so steeply that I felt myself sliding on the *tatami* and dug my nails into the straw matting to keep from going overboard. The whole framework of the house was twisted and wrenched back and forth so far that the *shoji* came out of their grooves and fell in all directions.

Altogether it lasted more than two minutes, the longest two minutes in any man's life, until that dreadful swaying finally died away and I climbed into bed; it was over, and I was cold. Calder busied himself putting the *shoji* back in their grooved between our upstairs rooms, like the solicitous bridegroom he was. Titus was still scrambling around. "I've got to get out, I've got to get out," he said, put his foot through a *shoji* and stumbled out into the hall and down the stairs. The policemen from the corner called to know if we needed help and Hiday San replied that all was well.

When Titus came back to bed in the grey light of morning he explained: "I just had to go outside to see if the earth was still underfoot and the sky overhead. Everything was in place, the trees still standing, and now I feel better." Eventually the sun rose, he had some breakfast and he felt better yet. But none of us can ever forget that two minutes of blind terror, of utter helplessness as we lay trapped in a storm-tossed house from which there was no time to escape and in which the only possible refuge seemed to be under a bed.

On the Richter scale it was a major earthquake, not one of the greatest. Six months before it would have been catastrophic, but everything not earthquake-proof had already collapsed in September and there was not much additional damage. There were a few fires, quickly extinguished, but the fear of them was so great that a number of guests in the Imperial Hotel, we were told, had rushed outdoors and plunged into the lily pond at the front entrance. Could they have been refugees from Yokohama?

CECIL B. LYON
Third Secretary
Tokyo (1933)

Cecil B. Lyon was born in New York in 1903. He graduated from Harvard

University in 1927. Mr. Lyon joined the Foreign Service in 1930 and served in Cuba, Hong Kong, Japan, China, Chile, Egypt, Poland, Germany, France, and Ceylon. He was interviewed in 1988 by John Bovey.

Q: Yes, '33. The war in China was not too far ahead though, was it?

LYON: I was in China when it started.

Q: Was there any feeling then, or any sort of fore-seeing of the terrible things that were to come, the mistakes of the Japanese and so on?

LYON: That's a very difficult question. I don't think we were yet conscious of much. As I mentioned, I was Third Secretary. I felt I was in heaven: wonderful post, marvelous chief, Mr. Grew, and the lovely country -- I loved Japan. My work was doing the weekly political report, and also I was assigned to do despatches on the sale of the Chinese-Eastern Railway, I think it was called. The Japanese were buying from the Russians, the last link of the TransSiberian which came from Harbin to Dairen. That went on for some time and I covered that with Geoffrey Parsons, who was Mr. Grew's private secretary. He had the job that I might have had, and we often wondered whether, if I had got the job, I ever would have dared to have the courage to ask to marry Elsie. I'm afraid I wouldn't have had, because I would not have been earning enough even on my munificent \$2500 a year.

In that connection I think it might be interesting to know something about the personal life of old Foreign Service Officers. I hadn't been in Japan more than a month and on July 3rd I went, terrified, into Mr. Grew's study and asked if I might marry his daughter. And he said, "Oh, and what is your situation?" So I drew myself up and I said, "Sir, I'm a Foreign Service Officer, Class 8 unclassified C." He said, "What on earth does that mean? What do you earn? What are your prospects?" I said, "\$2500 a year." And he sort of moaned and said, "What other prospects have you?" I said, "When my father dies I'll get half of a very small trust fund." And he said, "Well then, I'll have to talk to my wife." And he went and talked to his wife and thank goodness she was on my side so Elsie and I got married.

But getting back to the more serious side...

Q: Yes. Let me interrupt you there just a minute. My recollection of this period is very dim. Weren't the Japanese already all over Korea -- weren't they occupying Korea still at this time?

LYON: I believe that was later. That was after I left Japan.

Q: I thought that was before the invasion of China.

LYON: You're right about that, but I'm a little bit hazy regarding dates at my advanced age.

Q: I've been very interested recently to read about the sort of mystery that still surrounds the Emperor during the ordeal of his illness that's going on now, and the attitude of the Japanese. It's really a mystical sort of thing.

LYON: Yes, he's the descendant of the Sun God.

Q: Yes. What was the feeling toward the Emperor then?

LYON: Oh, utter reverence and devotion.

Q: Its the same man, isn't it? Its the same guy, isn't it?

LYON: Its the same guy and over here, I will show you what Elsie and I were given as a wedding present by Hirohito -- this lacquer box. It has the imperial chrysanthemum on it, and his mother the Empress Dowager gave us the silver vase in the other room which I'll show you. It has two lions on the side of it and neither of us have ever known whether she did it because we were called Lyon, or it was just an accident. No, there was tremendous reverence for him and for all the members of the royal family and really Japan was almost a fairy tale country when we were there. The women and men all wore kimonos; the women wore beautiful kimonos; now they're all in western clothes. The country, as you know, is absolutely beautiful. You've been there, haven't you?

Q: Never, no.

LYON: Its absolutely beautiful, now its terribly crowded, but then all cities are. We had a very astute Counselor called Eddie Neville -- we didn't have a minister then -- who had lived in Japan many years and he and his wife were very much on top of things. Mr. Grew had very good relations with all the Japanese, and so did Mrs. Grew. They liked Japan. Mrs. Grew, of course, was a collateral descendant of Commodore Perry, so that went down well. And really things ran along very smoothly as far as the Embassy was concerned. I think it was the premier Embassy in Tokyo in those days. The Japanese were easy to get to know, which may surprise you. Elsie had lots of young Japanese friends. When I came upon the scene she'd already been there a year and we used to go off skiing with them, and one would stay in little inns heated only by a hibachi. I remember there was one couple we used to go with frequently and all four of us would sleep on the floor in the little room in the inn with the hibachi at our feet and our bodies stretched out like the arms of a clock -- at 12:00, 3:00, 6:00 and 9:00. A lot of people found the Japanese standoffish. I never did.

Q: Did these people...were they speaking English? Did you have to learn Japanese?

LYON: As you know, John, I'm not a good linguist. Elsie is an excellent linguist but even she had trouble with Japanese. Elsie speaks fluent French, fluent German, fair Italian and fluent Spanish. When we were in Peking she learned Chinese, but she had trouble with Japanese. It was rather funny when we were in Peking, we were assigned to Santiago, and I said, "Well, that's one place where I shall be ahead of you because I speak Spanish." Not good Spanish, needless to say. We got there and we hadn't been there a month when Chileans would say to me, "But how is it you don't speak better Spanish? Your wife speaks such good Spanish." She'd learned it in a month.

Q: Yes, that's surprising. I didn't think the Japanese...that you would hear that much English among the Japanese at that period. Nowadays of course...

LYON: Well, of course, let's face it. In those days we were seeing the government people and the upper crust, if I may use that horrible word; but, even as I remember, Japanese servants seemed to speak some English -- I don't know why, but they did.

Q: And you found them quite easy to get to know?

LYON: I found them easy to know.

Q: I've never had much experience with them. The ones that I've met in different posts I always felt that I got to a certain level, and then there was a whole basement underneath that I just couldn't get into at all.

LYON: Well I think the reason I found it easy -- I think Elsie had broken the ice, and she had all these Japanese girlfriends and then they had husbands and it made it all very easy. And in that connection, John, I think I'll mention something that I have often wondered about. I've often wondered why the administration of the Foreign Service doesn't take advantage of things like this in the appointment of personnel. I've always thought that after the war when things were so difficult with Japan, it would have been very wise to send Elsie and me back to Tokyo where we could have picked up old friendships and perhaps been helpful. The same thing with Turkey where Elsie and her family were for so many years. They did send us back to Chile where we'd been before, but I think Personnel could be more astute in selection of posts for people. I think mostly it is a matter, or was in my days, the old days, of someone in the Department who is looking for an officer to fill a certain spot and happens to know you and your abilities to say, "Oh, Cecil knows how to do this, he knows how this works, we'll send him." I personally never wanted to concentrate, I never wanted to be an expert in one country, or a specialist, because I wanted to see the world and I certainly did.

Q: Well, you did, of course, go to Chile twice.

LYON: Yes, and I wasn't too happy about that.

Q: Don't you find that it's difficult to revisit? I've been stationed twice in Holland, and although the second visit was all right I was a little stale on the whole enterprise.

LYON: Yes, I think so, but I was just thinking of Japan where things were so difficult it might have been of some use. I didn't want to ever go back a second time -- although this contradicts what I'm saying about the wisdom of sending people back. As to Chile, of course, when they make you an Ambassador, you certainly don't want to say, "No, I don't want to go because I've already been there." But I did find it difficult because when I got there -- we'd been there earlier as a Third Secretary, and Chile is a small country; you know everybody and all the people that are in government are your friends, so 15 years later they think, "Ah, local boy makes good. He'll get us aid, he'll get us all the aid we want, we'll just turn to him, and things will come flowing." And, of course, it doesn't and you can't do that. So it's got advantages and disadvantages.

You asked about the Emperor. When I went to Japan I had with me a little cocker spaniel puppy and I'd already become engaged to Elsie at this point, and was invited up to Kara, where the Grews were spending the summer. And I said, "I'm bringing Sambo," that was the name of my little puppy. And word came back, "Mrs. Grew says not to bring Sambo. You've got to choose between Elsie and Sambo." So I said, "I choose Sambo." So I went up to Karuizawa and I got out of the car at the Grews' house and Sambo jumped out of the car, ran upstairs, and jumped on my mother-in-law-to-be's bed. And I never got him back, she was so intrigued by him.

Just as we were leaving Japan, Elsie and her father were walking along the moat that surrounds the imperial palace and they had Sambo with them. Sambo fell in the moat, and Mr. Grew was terribly upset. Just then a taxi came along and the taxi driver climbed down inside the moat, rescued Sambo, and then disappeared -- they didn't get his name. So they sent out word trying to find the name of the taxi driver and something came out in the paper about it. And a few days later Mr. Grew went to the New Year's reception at the palace and the Emperor looked at him and said, "How is Sambo?" It was a human touch, I think, from the descendant of the Sun God. His brother and sister-in-law, Prince and Princess Chichibu, came to our wedding and it was rather amusing because Elsie and I were standing in the receiving line and suddenly they appeared and everybody deserted us and ran to see the Chichibus and Elsie and I were left ten minutes alone at our own wedding reception, which was rather fun. And then we had to ask permission to leave because we couldn't leave before the royalty left. So we asked permission, and we were allowed to go and set off on our honeymoon. The honeymoon was amusing also because I hadn't been at the post six months and I wasn't due for leave for six months but Mr. Grew looked up in the regulations and it said, "In the case of emergency you may grant two weeks leave." He said, "This is certainly an emergency."

Okay, that will close Japan, I think.

MAX WALDO BISHOP
Language Training
Tokyo (1935-1937)

Vice Consul
Osaka (1937)

Political Officer
Tokyo (1938-1941)

Ambassador Max Waldo Bishop was born in Arkansas in 1906. In addition to Tokyo and Osaka, his career in the State Department included foreign assignments in Ceylon, Saudi Arabia, and Thailand. He was interviewed by Thomas F. Conlon in February 1993.

Q: What was your first post in the Foreign Service? Did you have some training in the State

Department before you went overseas?

BISHOP: No, I didn't. Ordinarily, we would have had the usual course that every Foreign Service Officer has when he enters the Department -- orientation or whatever. We did not have that. I was asked, and so were those who went with me, if I wanted a language assignment. I said, yes, I did. I asked for a language assignment in the Far East, and I got Japanese.

Q: Had you asked for Japanese?

BISHOP: No, I think I just asked for the Far East. They had a Chinese course, and, in fact, Edward Rice [later Consul General in Hong Kong] went to China at the same time I went to Japan. There were eight of us who went to Japan -- they're in the picture on the wall, the lower picture on the right. Those were the Japanese language students in my group.

Q: Had that program been going on for some years?

BISHOP: Oh, yes, it had been going on for a long time and was very well organized.

Q: Did you have any duties at the Embassy, or was your whole function simply to learn Japanese?

BISHOP: Learn Japanese.

Q: Did you live with a Japanese family?

BISHOP: No. I had three tutors a day -- sometimes only two tutors. They came to the house. We had *tokuhons* (readers), assignments and so forth. I never was very good at calligraphy. At one time -- I'm probably boasting now -- I knew and could read 3,000 characters. Even learning to recognize and read 1,500 characters is a big memory job. All of these characters were on cards -- on one side were the characters and their various compounds -- and then on the back side was the English meaning. So you'd go through these cards, and those you didn't get right you put to one side and did them again -- day after day. You'd get new cards and more and more until -- well, you had to know 1,000 characters. I was ultimately able to recognize and read about 3,000 characters.

Q: I recall that in Ambassador (Joseph C.) Grew's memoirs he mentions that no Westerner can really learn to speak Japanese. I know some people who can speak Japanese passably well, but, of course, as foreigners, they are not really part of Japanese culture -- that must have been what he was talking about.

BISHOP: That's right. Well, it was (Stanley) Hornbeck, I think, or somebody in the Department who said that because my name was Max Waldo Schmidt, I would be excellent at languages. Of course, I don't know a jot of German. For the most part, my ancestry is English and Irish, I guess. I learned Japanese as best I could...

Q: This Japanese language course was for about two years, 1935-1937?

BISHOP: That's right.

Q: Then, after you finished the language course, what happened next?

BISHOP: Then I went to Osaka as Vice Consul. I did everything there, including the accounts. After just a few months, I was ordered back to the Embassy in Tokyo as Third Secretary.

Q: What Section of the Embassy were you assigned to then?

BISHOP: I was assigned to the Political Section because I was a Language Officer. All of the Japanese interpreters or translators were under me.

Q: Do you have any special recollections from that period -- major questions that came to you? After all, this was a period when Japan was steadily moving along the aggressive course that later led to Pearl Harbor, war in the Pacific and so on. Could you see any clear signs of this in your early days in Japan?

BISHOP: Yes. The biggest translating job I did at the Embassy was the National General Mobilization Law. At that time, I told Gene Dooman (Eugene Dooman), the counselor of the Embassy, and Joe Grew, our Ambassador, that the passage of this law would mean that the Japanese were preparing for a major war. They passed the law. I translated the whole thing.

Q: When did they pass the law? Do you remember what year?

BISHOP: Well, Mrs. Lispenard Crocker (wife of Edward Crocker, Second Secretary in Embassy Tokyo) and I went to the Japanese Imperial Diet to listen to the opening session that year. Of course, she didn't speak any Japanese, so I interpreted for her. There were just the two of us from the Embassy. We wanted to get a feel for the situation. The Japanese were getting ready for a major war. The "China Incident" had just occurred.

Q: That was in July, 1937.

BISHOP: That's right. Anyhow, that was my job as interpreter and translator and head of that unit in the Political Section in the Embassy. I also drafted the monthly Political Report in the Embassy.

Q: How many people were in the Political Section at the time?

BISHOP: Well, let's see. There was myself -- I was low man on the totem pole -- and Cabot Coleville.

Q: Gene Dooman?

BISHOP: Eugene Dooman was the Counselor of the Embassy.

Q: I see. There was just one Counselor of Embassy?

BISHOP: Yes. We also had an Economic Attaché. The Political Section, actually, included myself, Cabot Coleville and Bill Turner. Cabot Coleville left on transfer. And, of course, Gene Dooman was the Counselor of Embassy. Actually, he was perfectly bilingual in Japanese. His family had been missionaries in Japan. He spoke Japanese like the Japanese.

Q: What about Stanley Hornbeck? What was his function?

BISHOP: Oh, Stanley Hornbeck was back in the Department. He didn't serve in the Embassy. I was one of the few people that he really liked and respected, I think. I came back to Washington to serve in the Department on the Japan Desk in July, 1941, though I was not the senior man.

Q: Was Hornbeck the top man on the Japan desk?

BISHOP: Oh, no, Hornbeck was Political Adviser in the Department. He was referred to as PAH ("Political Adviser Hornbeck"). There was a European, a Latin American, a Far Eastern and a Near Eastern Political Adviser -- four of them in the Department, as I recall. They all had Assistant Secretary rank, I think. There was only one Under Secretary of State.

Q: The Under Secretary was the number two in the Department, the deputy to the Secretary of State?

BISHOP: That's right. Then below the Under Secretary were the Assistant Secretaries. Each one had an area -- Europe, the Middle East, Latin America and the Far East.

Q: You mentioned returning to the United States in July, 1941, about five months before Pearl Harbor. I recall your saying that earlier in 1941, you had a particularly important conversation with the Peruvian Minister in Tokyo, which Ambassador Grew then passed on to Washington. Could you give us some of the background to that?

BISHOP: Well, actually, the Peruvian Minister -- and I saw him and his Counselor after World War II was over -- he told me that, according to some of his sources -- he did not name them, and I did not ask him who they were -- the Japanese planned a surprise, all-out attack on Pearl Harbor if and when they decided to go to war with the United States.

Q: And this conversation with him took place in January, 1941?

BISHOP: Yes, it had to be in early 1941.

Q: Well, I'm interested in this because I think that it is now well established that definite Japanese planning began with an order from Admiral Yamamoto, the Commander of the Combined Fleet, to study the feasibility of an attack on Pearl Harbor. And this order was issued in early January, 1941. If I remember correctly, the Peruvian must have talked to you within a week of the issuance of that order. Now this was a highly secret order, and yet it became known to the United States almost immediately.

BISHOP: Well, I got that intelligence not only from the Peruvian, but from other sources.

Q: What other sources? Could you describe them?

BISHOP: Mostly American.

Q: American businessmen?

BISHOP: No, the best source I had was a newspaperman. The journalists in those days were very reliable. They were not sensationalists.

Q: They were not investigative reporters?

BISHOP: I'll tell you an interesting story on this. Prior to the Pearl Harbor attack, the United Press correspondent in Tokyo -- I think he is dead now -- was one of my best sources. In those days, we didn't have funds to buy information.

Q: There was no intelligence organization?

BISHOP: No, you were on your own, and you collected information as best you could. Of course, the press had money to buy information. I remember the name of the United Press correspondent was Tommy Thompson, Harold O. Thompson. I think that he was the best American correspondent out there. He really had access to good information.

Q: As I recall it, the drift of Japan toward war was unmistakable and had been so for many years. But the specific matter of Pearl Harbor as a target was not so clear.

BISHOP: Well, I sent that telegram. Actually, Ambassador Grew sent the telegram to the effect that his Peruvian colleague had told a member of his staff, etc. That was shortly before I went home on transfer to the Department. Things were getting really hot, and Ambassador Grew wanted me back there. Maxwell Hamilton, on the Japan Desk, also wanted a Japanese expert, if you will, fluent in Japanese and what not. When my ship called in Honolulu on my way back to the U.S., I met with a number of Naval officers who were following the situation closely. The Navy had been training Japanese language officers for a long time in Japan. Some of these Navy people came down to the boat I was traveling on -- I guess the President Coolidge. I spent a whole day with them, discussing "What about this," and "What about that?" I said, well, we don't read their war plans, but the story, which I got from here, there and everywhere -- from good sources -- was that Pearl Harbor was going to be hit. They told me then that they were flying daylight reconnaissance patrols from dawn to dusk. The patrols stopped at dusk because, of course, they couldn't see in the dark.

Q: No radar?

BISHOP: No radar. So they said they had extended these reconnaissance flights out about 500 miles farther from Pearl Harbor. Well, of course, the Japanese got through these patrols. Also,

you can yell for a year, crying "Wolf, wolf, wolf," and here I was, recommending more reconnaissance flights. I don't think that the Navy was as alert at the end of 1941 as they were at the beginning of that year.

Q: I think that it was anticipated that war was about to break out. That was unmistakable, but the Navy did not give much credence to Pearl Harbor as a likely...

BISHOP: Well, now here's another matter. We were talking last night about General Marshall. He was out horseback riding on the morning of December 7. The Army sent a final warning. You ought to read everything written about Admiral Kimmel and what they did to him. His son, Tom Kimmel, a brilliant young Navy officer, was railroaded out of the Navy. Not railroaded out exactly, but he never made Admiral. Admiral Kimmel -- the attack and then his transfer from his position as Navy commander -- just broke his heart.

If you think back to the psychology of the American people at that time, the only way that we could be brought into the war was through the Pacific -- the Japanese. The Germans didn't really attack us. Our ships went back and forth across the Atlantic. We sank a couple of German submarines. They didn't sink any of our ships until after we got into the war. Then they littered the whole Atlantic Coast with sunken ships. Anyhow, the only way you were going to get the American people to go to war was through the Pacific -- somehow involving the Japanese, the so-called "wily Orientals."

The Japanese did not tell the Germans in advance that they were going to attack Pearl Harbor. They didn't tell the Germans anything. The Germans were far more frank with the Japanese. The Japanese didn't tell anybody anything. They knew exactly what they wanted to do, and they did it. They wanted to liberate the colonial territories...

Q: And establish the Co-Prosperity Sphere, as they called it?

BISHOP: They called it the Co-Prosperity Sphere and so forth. But the Japanese objective was to get the European, non-Asiatic empires out of there. These empires would have died eventually anyhow -- the Dutch, the French and the British. The Portuguese didn't hurt anybody. They could have stayed there.

Q: The Portuguese decided to leave when they wanted to do so, much later on.

BISHOP: That was it.

Q: Well, then you returned to the Japan Desk, and, as I recall your saying, you were involved in taking notes or otherwise assisting Secretary Hull in the negotiations with Admiral Nomura and, later on, Ambassador Kurusu, in 1941?

BISHOP: Yes, that was my principal job. I kept all of the pre-Pearl Harbor files in my office in a filing cabinet which had a lock on it, the same as almost every filing cabinet in the Department of State and throughout the government.

Q: Was this a combination or a key lock?

BISHOP: A key lock. When you left the Department, you took your keys down to a board near the front door of the State Department and hung them up there.

Q: There was nobody watching the keys?

BISHOP: Oh, yes, there was somebody there all the time, but nothing was well protected. And I don't think that anybody particularly cared. Classified material was protected -- it wasn't left out in the open or anything of that sort. I don't know whether we had Communist agents in the Department at the time. As you know from the "Pumpkin Papers"...

Q: Well, this could have been the time when those documents were taken from the Department.

BISHOP: Alger Hiss was in the Department. Whenever Alger Hiss went on leave, I took his place in Stanley Hornbeck's office, where he was principal aid to Hornbeck. He was a very fine man, a person you would enjoy talking with. But I noticed that, once in a while, he had some dubious, Left Wing characters in his office. But that's another story.

Q: Then you were a part of the discussions with the Japanese, which were unsuccessful. What were your feelings when you learned that Pearl Harbor had been attacked?

BISHOP: I wanted to get out of the Foreign Service and get back my Military Intelligence commission. But the Chief of Personnel said, "Look, you can do that, but I can assure you that you won't get anywhere with it. You can get out of here, but you won't go anyplace else." I had my reserve commission from the time I was waiting for my Foreign Service appointment to come through. I took an examination to get my commission in the Army and so forth. There's my copy of the commission over there on the wall. It was issued in 1935.

Q: Then you continued in Washington after war broke out?

BISHOP: Yes. But I had been married. My first wife became seriously ill. By the way, it was Alger Hiss who arranged for me to take her to Johns Hopkins Hospital. He was from Baltimore. He was the nicest and most helpful person and friend you'd ever want to know. They gave her a complete examination but couldn't find anything for sure. She dragged one foot, and her gold bracelets fell off her arm. The doctor told me that they thought it was "hysteria." Not "hysteria" in a usual sense. He said that hysteria, in medical terms, could cause symptoms of any known human disease or illness, except pregnancy in a male! Anyhow, it turned out to be cancer, from which she eventually died.

Q: What year did she die?

BISHOP: In 1944. She was ill for three or four years.

Q: Did you continue on the Japan Desk during most of the war?

BISHOP: Yes. Actually, it was more than that. I always considered that matters involving U.S. foreign policy were my strong point in the Department. Hornbeck didn't use me so much on that as Hamilton did. We wrote a number of perceptive memoranda on what was likely to happen and what we were planning to do.

Q: What was your next assignment after the Japan Desk?

BISHOP: In 1944, I was assigned as Consul in Colombo, Ceylon. I didn't do much consular work. My principal duties involved advising our military leaders in the Southeast Asia Command on the various problems which came up, which have been well described in published histories. I was also assigned as a secretary of the Mission in New Delhi, India, where I was Political Advisor to General Wedemeyer, then the Commanding General of the U.S.-Burma-India Theater of Operations. I knew General Merrill, who commanded Merrill's Marauders in Burma.

Q: At the end of World War II, were you a part of the discussions about what to do with Japan? In other words, whether to try the Emperor as a war criminal or keep him as a symbol of Japan?

BISHOP: That was absolute stupidity in the Department of State. When the war was over, unless we wanted to act like one of the Balkan countries, there was no reason to try the Emperor. We had fixed Japan. We had burned them out. They knew that they had it coming to them. There was no point to a trial. Thank God that General MacArthur was put in charge in Japan because he was tough. He purged some of the military leaders, but that was about all. They were finished. I was the first Foreign Service Officer back in Japan after the surrender.

Q: When was this? This would have been in 1945?

BISHOP: Yes.

Q: Were you assigned to SCAP (Supreme Commander, Allied Powers -- General MacArthur's office)?

BISHOP: No, I wasn't assigned to his office. I was assigned as a State Department representative. George Atcheson, another Foreign Service Officer, arrived as my supervisor. George hated Japan and the Japanese. He was on the USS PANAY (a gunboat stationed on the Yangtze River in 1937) when the Japanese bombed it. He had reason to dislike the Japanese. He was intelligent and a very fine Foreign Service Officer. He wanted nothing to do with Japan. Fortunately, from my point of view, I was the first Foreign Service Officer to arrive on duty there. Jack Service (John Stewart Service) came out with George Atcheson. Jack and I were the same rank, but I got there first, so I outranked him.

Q: Well, John Service went on to work in China?

BISHOP: Yes. He was a China hand, but they sent him to Japan. George Atcheson was also a China hand. The people in the Department thought that if they sent China hands over to Japan, they would fix the Japanese.

When we were there in Tokyo after the war, General MacArthur, of course, had control of all of the communications. His staff controlled all of the messages sent out. We'd take the messages over to the code room in plain language, and the Army communicators would encode them in the proper code and send them to the Secretary of State. Well, George Acheson didn't like that. I don't know whether it was Jack Service who put him up to it, but George thought we ought to have our own codes for our messages. MacArthur said no. He said that we could send the messages through the Army message center, which would encode them and send them to the State Department or wherever we wanted. Well, I told George, "Look, either you're going to agree on this and do it their way, or you're going to have an impossible situation. We will lose. The State Department will lose." I mean, MacArthur was the Supreme Allied Commander. This was just tilting with a windmill. Why?

Q: How many State Department officers were assigned when you went back to Tokyo?

BISHOP: I was the only one at first. The others came out with George Acheson from Washington.

Q: How many came out with Acheson? I suppose they came over a period of time.

BISHOP: They came over a period of time. Alex Johnson (U. Alexis Johnson) and Beppo Johansen came from China. Beppo had studied Japanese at the same time that I did and was junior to me.

Q: What did they call this group? Was it called the American Embassy in Tokyo?

BISHOP: No, we were in the Office of the Political Adviser to SCAP.

Q: Didn't Ambassador (William) Sebald serve there at some point?

BISHOP: He came there fairly early. He was there when I left Tokyo. After I married my second wife, we stayed there for about a year until 1947. I hadn't met her family, and she hadn't met mine. She was my secretary in the Office of the Political Adviser. It wasn't an easy time in some ways because I was the only one in the office who felt that we had punished the Japanese people enough.

Q: The Peace Treaty with Japan was signed in 1951. When was the Embassy in Tokyo as such reopened?

BISHOP: Not until after MacArthur left.

Q: He left in April, 1951, as I recall. The Peace Treaty came in September, 1951, so shortly after that, the Embassy was reconstituted as such. Who was the first Ambassador? Was it John Allison or William Sebald?

BISHOP: Yes, Bill stayed on for a short time, and then he went to Australia as Ambassador. He wasn't formally Ambassador to Japan, as far as I can recall. U. Alexis Johnson was then

appointed Ambassador to Japan.

Q: Then when did you leave Japan?

BISHOP: Let's see. The war was over in 1945. I went back to Washington in 1947 to attend the National War College. I never went back to Japan after that. I was in the second class at the National War College. I recall that one of the children of an Army officer in our class saw the picture which stated that I had graduated as a member of the second class at the National War College. She said with concern, "I don't see why Daddy had to go to a second class War College."

ULRICH A. STRAUS
Childhood, Japan (1936-1940)

G-2 Intelligence Officer, United States Military
Japan (1946-1950)

Ulrich A. Straus was born in Germany in 1926. His career in the Foreign Service included assignments to Japan, Germany, and the Philippines. He was interviewed by Charles Stuart Kennedy in 1992.

STRAUS: So I came to Japan at the age of six and entered initially into a German school, and then, in 1936, when it was very apparent what was going on in Germany, I entered the American School in Japan. Again in 1938, as the war clouds gathered in Europe and East Asia, my father had the foresight to apply for an American visa. That came through in 1940. In the summer of 1940, we all marched down to the American Consulate in Yokohama and got immigrant visas to the United States.

Q: Had you learned any Japanese while you lived there?

STRAUS: Yes, but less than you might think. My first language was German, and my second language was Japanese, and my third language was English. In many respects, I think I was already Americanized before entering the United States. In a way, that was home. Certainly Germany wasn't home, and certainly Japan wasn't home, although we felt very comfortable in Japan. But all my friends at that point were also leaving. I have often been asked whether Pearl Harbor was a big surprise. My answer to that is that by the spring of 1941, the American School in Japan had so few kids left that they didn't even bother to open in the fall of 1941. This meant that practically everyone who could leave or felt they could leave had left.

Q: I must say by leaving Germany in 1933 and Japan in 1940, you must have the feeling that the sleigh was going just before the wolves jumped on you.

STRAUS: As an aside, my father left Seoul, Korea about three hours ahead of the Communists in 1950.

I went to high school in New York. During the war, I was a sophomore, I believe, in high school. A gentleman whom we had known in Japan, Paul Rush, who had been a kind of a teacher missionary, and by then was Captain Rush, was going around the country looking up the relatively few Americans who had lived in Japan prior to the war to get them interested in going to the Army Language School when they became the proper age. Of course I was interested, all of my old friends are going to be there.

In 1944, I graduated from high school. At that time, I was still classified technically as an enemy alien. But I set off for the University of Michigan where this Army Language School course was being given. I found out there that I couldn't take any civilian courses in Japanese because they had canceled them for lack of teachers. But they allowed me as a civilian to go to the Japanese Military Intelligence Service Language School, despite my enemy alien classification.

For almost a full year, I did that. When I turned 18...you could draft aliens but aliens could not volunteer...I joined that group and went to basic training. While in basic training, the Emperor decided to throw in the towel in August, 1945. I completed my military training and in January, 1946, came back to Japan as a Second Lieutenant. Shortly thereafter, I was ordered to go to the Tojo trials.

Q: He was a military general who became Prime Minister in the middle of the war?

STRAUS: Before the war -- he led Japan into World War II.

The reason I was picked was that I knew German, and there weren't many people in Japan in those days who knew German because all of those who did had been shipped to Germany. I knew both Japanese and German. Along with some British Navy officers, I went through literally tons of German Foreign Office files that had been shipped from Germany to us to go over for possible use by the prosecution against the Japanese who were charged with waging aggressive war in collusion with Germany and Italy.

We wrote many précis, and after a while, our British colleagues left, and I was still there. Then I was working with the lawyers, making full translations of these documents into the two official languages of the court, which were English and Japanese. In fact, I certified as to the accuracy of translation of those documents. It may well have been the most responsible job I ever had -- and at age 19.

Q: It is interesting that you were a second lieutenant at age 19 without a college degree. Normally, I thought you had to be the equivalent of an adult which, in those days, was not...

STRAUS: That's right. But I think before World War II it was much more common for even regular officers not to have a degree.

Q: What was your impression of Japan at this time? Were you able to look up old friends?

STRAUS: Tokyo was smashed. I think something like 60 percent of Tokyo just didn't exist any

more. Other cities were burned even more to the ground. Seeing old friends, of course, came with a sense of relief that they were still alive but depressing the way they had to live in those days. I, along with everybody else, would take some rations to them and help them out the best I could. The people I knew generally were the lucky ones who had a place to live. But, what was impressive, I guess, was that discipline didn't totally break down. People had to go into the countryside to get food and bargain with the farmers. They would go out with large rucksacks containing what little possessions they had been able to save to bargain for food from the farmers. The farmers, in those days, were the kingpins. They did very well.

Train windows were smashed in because that was the only way people could get in and out of the jam-packed cars. But there was virtually very little crime, even though people were literally starving to death. But there was a lot of sadness, too.

The Japanese at that time were very grateful to us because they had feared the worse. The government had told them all the terrible things we were going to do...rape, pillage and burn. And, of course, none of that happened.

Q: Well, here you were, and you had been accustomed to Japanese society. What was your impression as a young man of the impact between the American forces, who were basically a group of pretty young guys and not very sensitive?

STRAUS: First of all, let me say that I knew very little about Japanese society. My parents' interaction with the Japanese was very limited. The number of times we had Japanese in our house I could probably count on the fingers of one hand in a period of seven years. I had one friend who lived in the neighborhood, but by and large, my playmates were all from the American School, and my whole life was directed at the American School. So I am not sure I can really answer your question. I was beginning to learn something about Japanese society at that time.

Q: What were your impressions from what you were getting and from others who were dealing with the Tojo trial, etc.?

STRAUS: The 28 Class A war criminals...I used to see them on the bench...were beaten men. They were totally disgraced men. I think there was none of the haughtiness that was demonstrated by some of the German war criminals.

One comment on the trial...I was a member of the prosecution, and I dealt with the lawyers. The prosecution was very much aware of the fact that the law they were applying was largely ex post facto law. This is a charge that has been made subsequently. But I think there was a feeling that we had very little choice in the matter. We could not really do what the Russians probably would have preferred to do, and possibly the Chinese, too...stand the designated war criminals against the wall and shoot them. We could not just let them go. We didn't feel we could just turn them over to a weak and untested Japanese government. That might not have been acceptable to the American public at all. So, I think the Western public putting them on trial was perhaps the only reasonable political alternative. And we hoped it would have two results. That it might provide a deterrent for future leaders and that it might provide education for the Japanese public, who, of

course, learned a great deal about their then recent history for the first time.

Q: Did you get any feel for the dissemination to the Japanese people of what was happening?

STRAUS: Yes, it was disseminated through the radio and newspapers. We controlled everything, so we could force the Japanese to do almost anything we wished. I don't think, to be very truthful, that the Japanese had a great deal of interest in it because they were interested in survival at that time. They didn't care very much about anything that was going on in the rest of the world.

Q: When you have lost, you have lost.

STRAUS: You are just interested in survival and getting back on your feet some how.

Q: What was the feeling within the American military toward General MacArthur?

STRAUS: Well, you know, MacArthur never had the adoration of the troops as, let's say, Eisenhower did. He was an aloof figure and a showman. My own feeling was that perhaps he was a better administrator of Japan than he was a General. There was a good deal of dissension below MacArthur. There were two most prominent political wings, one, conservative, under Major General Willoughby, who was in charge of G-2 (Intelligence), and the other, under General Whitney, who handled the Government Section, the more liberally inspired section. Things got so bad between the two sections that we were ordered not to talk to each other.

Q: You were in which?

STRAUS: After I left the war crimes trial, I was in G-2. But my best friend and roommate was with the Government Section.

Q: What were you doing when you left the trials?

STRAUS: For a bit, I worked for G-2. The trials may have whetted my interest in the Foreign Service, and G-2 did some more because I was working in something called G-2 Operations, and our task was to put together what was known as an intelligence summary of the day's happenings in the Far East Command, which was MacArthur's command. Together with a number of other people, prominent among whom was Tom Shoesmith, who later was DCM in Tokyo and Ambassador to Malaysia, we worked on the Japan part of that. So what we were doing was a kind of journalistic reporting job of what was going on in Japan on the political, economic and social side of things. I contributed some writing to that. We were hampered by the fact that the folks in Government Section, which played a behind-the-scenes role in Japanese politics, would not talk to us, and we could not ever acknowledge the fact that the Japanese government was not a totally free agent.

Q: Since the war was over, what were the intelligence concerns?

STRAUS: The concerns in Japan were that we just wanted to know what was going on. Of

course, this was being read not just in Tokyo but by the commands below us. There were still, at that time, about 100,000 troops in Japan. The military concerns were largely outside. They dealt with some of the tense situations in Korea -- between North and South -- and the successful campaign of the Communists in China. There was also a great deal of interest about the communists in Japan.

MARSHALL GREEN
Secretary to Ambassador
Tokyo (1939-1941)

Japanese Language School
Berkeley, California (1942)

Ambassador Marshall Green was born in 1916 in Holyoke, Massachusetts. He received an undergraduate degree from Yale University in 1939. In addition to his service in Japan as secretary to the ambassador, Ambassador Green was posted to in Australia, China, Indonesia, Hong Kong, and South Korea. He was interviewed on March 2, 1995 by Charles Stuart Kennedy.

Q: *Was this October, 1939?*

GREEN: Yes.

Q: *World War II had just started.*

GREEN: Yes. World War II had just started. I was driving west on my way to Japan, spending a good deal of time visiting friends. I went all over the place. I remember that it was in Eureka, California, that I overheard the report of the outbreak of war in Europe.

So I joined Ambassador Grew in San Francisco and went out on the "Tatsuta Maru", a Japanese liner. I put my Ford convertible in the hold of the ship. It was transported to Japan for \$50. I had it during the whole time I was in Japan. Finally, I sold it to the younger brother of the Emperor before I left. Then it was painted maroon, because all of the Imperial family cars had to be maroon in color. That is just a sidelight.

So I went out to Japan. It was during our transpacific trip that I got to know Mrs. Grew, who was to be a great bridge companion. Then en route to Japan, I played golf with the Ambassador in Hawaii. I shot about the best score that I ever had. That endeared me to him, and I became his constant golf companion in Japan.

Q: *Obviously, you were brand new and really still "wet behind the ears" when you arrived in Japan. How did you view Japan at that time? How did it appear in your eyes in 1939?*

GREEN: Yes. I had very little in the way of background, except that I was highly knowledgeable

about geography. I was also interested in demography, being convinced that the expansionism of Germany, Italy, and Japan was rooted in population pressures of those crowded countries. So I went to Japan, knowing all about the geography and demography of the area, but almost nothing of its politics and little of history and culture.

I arrived in mid-October 1939 as a freshly minted, potential Foreign Service Officer, but I wasn't in the Foreign Service. I was being paid out of Ambassador Grew's own pocket the princely sum of \$50 a month, for which I wrote out the checks, and he signed them. But on \$50 a month I could live pretty well because my Embassy compound apartment was free and many of us converted US dollars on the black market in China into yen at four times the rate you could get in Japan. We could do that through colleagues and friends in China. That was illegal, but everybody did it, except the Ambassador.

On the other hand, since we saw Japan as a potential enemy, it wasn't terribly hard to square my New England conscience with this kind of activity.

Q: How did you view the Japanese system?

GREEN: I never claimed to know much about how the Japanese system operated and I had to depend on the Embassy viewpoint of others whom I encountered. Of course, I was more impressed by the views of Ambassador Grew who showed me his daily diary entries. I was also influenced by the views of senior Embassy officers like Gene Dooman and Ned Crocker or more junior ones like Max Schmidt and Jim Espy. I also had many good friends in the diplomatic and consular corps both in Tokyo and Yokohama. But, as you can see, I had almost no Japanese friends except those with whom I played football and golf or whom I met at Embassy social functions.

Q: "Turbulent Era," for example.

GREEN: That's right.

Q: I read that book, and that decided me to go into the Foreign Service.

GREEN: Oh, yes. Well, anyway, I can tell you this. I wasn't very helpful to Grew, except socially. I didn't know anything about Japan. I wasn't a very serious student of Japan. I never wrote any reports for him about Japan or took on a particular subject, as, indeed, one of my predecessors, Jeff Parsons -- J. Graham Parsons -- had done. He'd been with Grew for three or four years and had become very helpful to Grew. My successor, Bob Fearey, also became most useful to Grew, being deeply involved in events that occurred just before Pearl Harbor. And then, during their incarceration, he helped to put together Grew's report to Secretary Hull.

Q: You were there...

GREEN: I was there for almost two years -- not quite. A year and three-quarters.

Q: You left when?

GREEN: I left Japan in May, 1941. My feelings about Japan at that time, as I say, were very much shaped by Grew and by the people around him. Eugene Dooman was the Counselor of the Embassy, was born in Japan, and spoke Japanese absolutely fluently. Grew didn't speak a word of Japanese, nor did Mrs. Grew. I was shocked at that. He and Mrs. Grew had been in Japan for many years. She had been there as a young girl and later on as the wife of Ambassador Grew. The Ambassador had already been in Japan for about seven years when I arrived there. I remember that on Thanksgiving Day, 1939, when we were down in Kobe to take the train back to Kyoto, where we were staying, they didn't even know how to say, "Where is the train to Osaka or Kyoto." They couldn't speak a word of Japanese.

I don't really believe that Ambassador Grew had very much, first-hand information about the inner workings of the Japanese system. He relied for his information on the Japanese Foreign Ministry, on the Imperial Household, on the ministerial group, on his Foreign Service colleagues, and on his diplomatic colleagues. At the same time, he had an infinite capacity for detail. He worked very hard and conscientiously. He applied himself to the task. He "lived" the problems.

One could criticize Grew, as many did, for being too pro-Japanese, for being too oriented toward Japanese goals, rather than, say, Chinese, American, or other goals. That's unfair. The fact of the matter is that he was a great American statesman. He thought in broad-minded terms. One must admit, nevertheless, that he was always hopeful, always playing for the chance that Japan might straighten itself out, that maybe by one more diplomatic effort we could avoid what seemed to be an almost inevitable Armageddon. He tried every route to see if there wasn't some way to avoid war.

What he was warning Washington about all the time was this: we're talking awfully "tough" back in Washington, but we don't have the stick to back that up. We ought to be damned careful about being as "tough" as we were regarding economic sanctions or holding back on shipments of scrap, ships, planes, or even oil, which was the most critical of all. If we (including the UK, Holland, France, etc.), were going to embargo shipments to Japan of these things (especially oil), Japan is going to be driven to the wall, and we were going to find ourselves at war with Japan, inevitably. But he was always wondering whether there wasn't some way out of that.

Of course, meanwhile, we were already well into World War II. During the first half or three-quarters of my first year there, it was a "phony" war. Then the situation became very serious when Japan joined the Tripartite Axis.

Meanwhile, Ambassador Grew was "distant" from the fighting which was going on in China. He was "distant" from the Manchukuo puppet empire there [in Manchuria]. I think that a lot of people in Washington -- and, certainly, people in our Embassy in China -- felt that Grew really didn't understand what a horrible machine the Japanese Army was and the cruelties that they visited upon the Chinese. Well, now, Grew did know that. So these comments aren't fair. On the other hand, if you don't experience these things at first hand and don't see or hear or live through them, you're always going to be seen as not knowing the real, inside truth.

Q: Did he make any effort to get out and around, or could he have done so?

GREEN: Well, I don't think that he did enough of that. I also think that he should have gone back to Washington once or twice to pursue his case, because he had a very good case. However, you have to remember that traveling to Washington, in those days, took at least a month or two. Even if you took Pan American Airways, which was just starting its transpacific route, you still had to go by ship all the way down to Manila or Hong Kong to take the flying boat. So it was very difficult to communicate in person with Washington. On the other hand, you could pick up a phone, but the phone was insecure. There was another problem, and that was the problem of coded communications. Grew did not know about "Magic," in other words, that we had broken the Japanese [diplomatic] code, although I don't think that we had broken it much before Pearl Harbor.

Q: It was pretty close to the time of Pearl Harbor.

GREEN: There's one thing that one must always remember. That is, if you do have access to "Magic," as they called it, you may feel that you are in the know with superior knowledge in relationship to those without access to broken coded messages. Therefore, there is a tendency that outsiders' views are not given the weight that they would otherwise be given by insiders.

Back in Washington Secretary of State Hull was privy to "Magic," as well as President Roosevelt, presumably. I don't know whether Dr. Stanley Hornbeck was privy to "Magic." He was the head of the Bureau of Far Eastern Affairs. Whatever it was, this was an "angle" which, I think, was worth taking into consideration.

Q: Did Grew have access, as Ambassadors often do, to "movers and shakers" in Japan who came in to meet with him and discuss various issues over cigars, and so forth?

GREEN: Yes, there were, of course, lots of people who would come in and who had various kinds of experience. Especially journalists. The newsmen tended to get around. Obviously, in Japan they were subject to censorship. The extent to which they knew things and were able to communicate them back to their home offices was not too good. It isn't as if there were well informed newsmen of the type you have today. There were some. But mostly there was lots of information dealing with little issues or scandals involving individuals. But when it came to knowing the real "inside" of what the Emperor, the Japanese military and particularly the Army, or the people who "really mattered" were thinking, there was very little way of knowing.

Q: How about our military attachés? Did they have any particular entree?

GREEN: The attachés did have some entree to the military, to the Japanese Navy, but very little to the Japanese Army. After all, the Navy had had more foreign connections than the Japanese Army. The Japanese Army, though, was politically more powerful than the Japanese Navy, and really ran the whole "show."

Q: At this point Japan was more or less under a military dictatorship, or a military oligarchy, or what have you.

GREEN: Yes. The Army was "calling the tune," getting ever more deeply involved in Manchuria and then in China. It made heavy demands, both in terms of finances and personnel. What is hard to say is the extent to which the Emperor would prevail if he were to take a strong stand against what the Army wanted. Or would the Army simply find some way of "hushing him up." One never knew. I think that Grew was making his "pitch" very much to the Imperial Household and the Emperor.

Q: How did this take place?

GREEN: Well, really, it took place through intermediaries: people like Marquis Kito, Count Kalbayana, and Baron Maeda. They all had connections with the Imperial Family. He invited the brothers of the Emperor to the Embassy for dinner parties and things like that. Obviously, the Emperor knew a lot about Ambassador Grew. We went through the formal "bows" at the Imperial Palace once a year -- or twice a year, in his case. But, by and large, the Emperor was "out there somewhere." Ambassador Grew had these intermediaries through their insights into how the Emperor felt. On the whole, he felt that the Emperor could exercise a beneficial and stabilizing influence in a country that otherwise seemed to be plunging rather relentlessly toward war, thanks to the powerful position of the military, especially the top generals.

Q: What was the feeling in the Embassy at the time about the Japanese invasion of China? Where was it going, what did it mean, and how would it play out?

GREEN: Well, the Embassy was involved in all kinds of protests that came out of the situation in China, like the sinking of the USS PANAY [a gunboat on Yangtze patrol which was sunk by Japanese bombers].

Q: When did that happen?

GREEN: That was in 1937, I think. These were incidents which occurred in which Japanese force resulted in the killing or injury of Americans or damage to their property or interests. Those were things that had to be taken up in Tokyo by Ambassador Grew.

I am not aware that Ambassador Grew had much first-hand knowledge of what was going on in China. Even if he did, I'm not sure that it would have changed his thinking. The fact that he was continually trying to "get through" and ingratiate and commend, which is the typical way a diplomat functions, was seen by some as being "soft" toward Japan. However, I think that when you read his diary, you realize that there is no "softness" there. He was just trying to use all of the diplomatic arts to keep peace.

During those last six months before the Pearl Harbor attack (I had left Japan in May), Grew was involved in a major effort through Prince Konoye to try to set up a meeting between Konoye and President Roosevelt in Alaska, in which the two leaders would get together and come to some agreements which would at least have staved off war. I think that Grew felt that President Roosevelt would welcome such a development, because Roosevelt was so anxious to keep supplies going to Europe and keep our Navy [in the Atlantic] to protect British merchant ships carrying supplies to beleaguered Britain. If the United States became involved in a war in the

Pacific, it would have been quite a blow to our total capacity to help Britain in its beleaguered hours. So I think that Grew felt that Roosevelt would be sympathetic to some efforts [in this direction], and there was some evidence that Roosevelt was.

This brings up the whole question of Dr. Stanley Hornbeck and his extraordinary powers. I don't recall if I ever met him or not. However, we are talking about a man who was a presence we felt very strongly [in the Embassy] in Tokyo. He was the equivalent of the Assistant Secretary of State for East Asian and Pacific Affairs. His official title was Director of Far Eastern Affairs in the State Department.

He was born in China of missionary parents, or perhaps his father was a businessman. Anyway, he was brought up in China. He was pro-Chinese in his viewpoint and very anti-Japanese. Ambassador Grew used to send copies of daily entries in his diaries to Hornbeck in the hope that Hornbeck would be able to see the issues in a more balanced way and realize what Grew was trying to do. But I think that Grew was dealing with a man [Hornbeck] whose views were rigidly set and who was very bitterly anti-Japanese, as anybody whose experience was in China would make him. The difficulty was that Ambassador Grew's communications with Washington were by cable. There were almost no telephone calls. It was all done by telegram. The telegrams went to Hornbeck before they went to Secretary Hull. Or, if they went to the White House, Hull would be asked to comment and would ask Hornbeck [for his views]. So Hornbeck's input became rather governing, with regard to Washington's reactions to [what Grew reported or recommended].

This became a very major issue just before Pearl Harbor. I had left Japan, and my successor, Bob Fearey, was deeply involved. He's written articles about this whole episode that deserve careful reading.

Q: What were your duties when you were private secretary to Ambassador Grew in the Embassy in Tokyo?

GREEN: My duties were largely of a social nature. I made the seating arrangements for luncheons and dinners. "Chief of Protocol" would be a better description of what I did. I had to take the inventory of the wine cellar of the Embassy. I had to handle the checkbooks and keep the Ambassador's local accounts. Not his investments, of course, since we are talking about his expenditures from day to day. I often played bridge with Mrs. Grew and golf with the Ambassador.

I had played football during my years at Yale -- on the 150 pound team. I found myself playing football in Japan and was eventually elected to the "All-East Japan Football Team." I remember playing football on New Year's Day in both 1939 and 1940. In 1940 I had to change my clothes immediately from morning suit (after attending a palace reception) to football clothes in the Ambassador's stand-by limousine, with shades drawn, while I sped from the Imperial Palace to Korakuen Stadium, where we won handily against the All-West Japan Team from the Kansai, the Osaka-Kobe area.

Q: Did you have any particular feeling about the Embassy? Let's start with, say, Eugene

Dooman. What was his relationship...

GREEN: Well, I think that Dooman had a profound influence on Ambassador Grew -- probably disproportionately so, because of his knowledge of Japanese and his background in Japan. He shaped Grew's thinking to a large extent. There were others around Grew, like Ned Crocker, a First Secretary who was later to become my father-in-law; Stuart Grummon, the other First Secretary; and "Chip" Bohlen, Second Secretary, who had a lot of expertise regarding the Soviet Union and had come to Tokyo direct from Moscow. These were all able people who had a marked influence on Grew's thinking. However, I would quickly add that the Japanese whom I earlier mentioned had a lot of influence on him, as did some of the American newsmen, either stationed in the Tokyo area -- the ones who spoke English and ran the "Japan Times," the Fleischers -- people like that had influence on the Ambassador's thinking.

Then, of course, there were lots of distinguished visitors who came through Tokyo. The Ambassador would meet with them. So he had a wide exposure to other people's thinking on world problems, quite apart from the fact that he had a long background in diplomacy.

Q: How would you characterize the Embassy, either professionally or otherwise? This was the first glimpse you had of an Embassy family. How did Grew and Dooman run the place?

GREEN: By today's terms it was not a big Embassy, which meant that personal relationships were closer than is usual today, with Grew and Dooman heading up the Embassy family.

Q: You played football with Japanese. What was their attitude toward China and Korea?

GREEN: I had a feeling that the Westernized Japanese, mostly "Nisei" (second generation Japanese-American) who came back to Japan, stayed out of politics. They talked very little. For the most part people were pretty damned super-cautious about expressing their opinions and views, because there was the "Kempeitai," and other police and thought control organizations. People had to be careful. It wasn't as bad as we've seen in some of the dictatorships in modern times, but it was approaching that.

Q: Did you feel that when you traveled around Japan?

GREEN: Yes, I felt it. I can't say that I traveled very much around Japan. I wish that I had traveled more. I did take one long trip which took me through Korea, Manchukuo, and North and Eastern China. I was carrying messages and materials for our Embassy in Peking, as well as to our Consulates in Shanghai and Mukden, which is now Shenyang. I must say that, having taken that trip, I had a rather different view of Japan. You saw Japan from a different standpoint, and it was a critical one. Of course, things were almost chaotic in China, but clearly, the Japanese were invaders and ruthless occupiers of neighboring countries, that's all. There was no other way of looking at it. I might say that, after taking that trip, I was more anti-Japanese than I had been. Frankly, I was rather "spoiling" to go to war with Japan.

Q: Was this a common attitude...

GREEN: No, I felt more strongly about these issues than did almost all my US contemporaries. If I could just read from a letter to my father, it will give you a little bit of what I felt. I didn't come across this letter until I was preparing for this interview.

Q: *What was the date of this letter?*

GREEN: The date of the letter is August 8, 1940. After deploring widespread isolationism in the United States, including my father to some extent and certainly many of my classmates of Yale, I went on to write: "Isn't it strange that the usually impetuous youth, red-blooded, go-getting youth, the back bone of totalitarian parties abroad, in America are so defeatist, so lacking in the qualities which built our nation. We are over civilized" -- these are my words -- "Over-humored by the good fortune to which we have fallen heir. Where the youth of other lands are aggressive, we are retracting, and our doom, like that of the Greek and Roman civilizations, is sealed when we produce, in our declining years, men not willing to fight for what they have. American support for material aid to the Allies comes from older men, wiser men, like Nicholas Murray Butler [Chancellor of Columbia University at the time] or Henry Stimson [former Secretary of War and of State], and, please note, World War veterans, such as General Pershing. But from the youth, only isolated instances. I have read with delight the opinions of many of our university presidents, leading educators, novelists, and journalists and with equal disgust the opinions of the youth they instruct. I tell you, it is a dangerous condition that we are in, when a nation-wide appeal for enlistments brings in only 9,000 enlistees, of which only a fraction are able to meet the physical requirements. Conscription we must have and will have. It is the only way, maybe, that we can condition our cloistered, theorizing youth to realities." So, these were my thoughts.

Q: *Fairly strongly expressed.*

GREEN: I felt very strongly about it.

Q: *It's hard to recapture how the "America First" and others felt. It's difficult...*

GREEN: They divided our class at Yale very sharply. In 1939 we could see the war coming. We had already seen what Neville Chamberlain [British Prime Minister] had said and done and how the German occupation had affected Czechoslovakia. But we had the "America Firsters," as some of them were called, and Father Coughlin, and some of that group...

Q: *Father Coughlin of Detroit, a Catholic priest.*

GREEN: Yes. These were people that I just loathed. I was quite strongly pro-Roosevelt, because I could see that he was carefully and conscientiously girding and conditioning America to the realities of having to go to war.

Q: *You say you saw Grew's diaries. Did he discuss in those diaries where Japan and America were moving during the time you were there? How did he feel about the situation?*

GREEN: I believe he was projecting events over the long term, that he saw that there was enough in common between Japan and the United States -- particularly the Japanese he knew. He

could see that their way of thinking of the world was very much the same as his own and that of his friends back in the States. He felt that if we could only get rid of the damnable Japanese "war machine," things would improve. Meanwhile, and this is an important thing to remember, although most people forget it. The Japanese people were getting fed up with their long bloody war with China. They'd lost several million men -- or perhaps hundreds of thousands would be a safer figure to use.

Q: *It was not an easy war for them.*

GREEN: No! Every family in Japan had been affected by war.

Q: *And the Chinese fought a lot harder than they're given credit for.*

GREEN: That's right. Oh, the casualty rates were terrible. The Japanese were really suffering and they were having to "pinch" all the time -- "onion peel" as they say. So the anti-war sentiment in Japan was potentially powerful. Now Ambassador Grew realized this. I don't think that Dr. Stanley Hornbeck fully appreciated that, nor did most Americans. When you do realize that, then there's a certain realism to Grew's thought that for by keeping negotiations going, then the anti-war sentiment in Japan would continue to grow to the point where there would be a possible breakthrough between the leaderships of our two countries. In that way, there could be peace. So I don't think that Ambassador Grew was unrealistic about the possibility of peace. What I am saying is that I don't think that a successful secret meeting between [Japan Prime Minister] Prince Konoye and President Roosevelt was possible. They could have gotten together, but to have such a meeting in secret? No. It was unrealistic to think that the Japanese Army would even allow this to happen. They would certainly have "bolted" and taken over power.

Now [a rapprochement between Japan and the United States] might have been achieved in a certain way. Grew was trying to work toward that end. People like Bob Fearey and others believed that Grew's proposal [for a meeting between Konoye and Roosevelt] was a fairly realistic one and might have worked. I don't entirely agree with that.

Q: *Even if there had been a Konoye-Roosevelt meeting, the Japanese Army had shown that it was quite willing to go in and assassinate him.*

GREEN: That's right. And you have to remember this, too. The senior Japanese Army officers had to think about the younger officers, the "hot heads," under them.

Q: *They had just...*

GREEN: These young officers were a pretty bloodthirsty lot. Once they had tasted blood and become accustomed to "ruling the roost," they would have become very difficult to control. Anything that looked like "appeasement," even if the top military people had condoned it, which is totally unlikely -- but if they had, you still had the problem of the younger officers. And that came up in the February 26 incident, when some of the lower-ranking officers took over control of Tokyo, for a short time, revolting against their superiors.

Q: *What year was that?*

GREEN: 1936.

Q: *Talking about various groups, we had our China specialists, who basically came out of missionary families. You had Eugene Dooman and others, who also came out of missionary families, too. However, they had two very different outlooks. While you were in Japan, was there ever any effort to get American Chinese and Japanese specialists to get together and talk?*

GREEN: No, not that I was aware of. That's a good question, because I think that nowadays the first thing that we would do would be to try to get them together. Of course, we were handicapped by travel considerations before World War II, in view of the distances involved.

Q: *It was very difficult.*

GREEN: However, it is true that we would have benefitted a great deal from the kinds of meetings we later had. We have had regular Chiefs of Mission meetings since World War II. We didn't have that kind of opportunity earlier.

Q: *Because of considerations of money and so forth.*

GREEN: However, I don't think that the "pro-Japanese crowd" [in the State Department prior to World War II] -- the people with experience in Japan -- could possibly have stood up to Stanley Hornbeck, who was too powerful for them.

Q: *Well, this is a question which came up at a later date -- and not too much later -- in the Bureau of Far Eastern Affairs, under Walter Robertson. That bureau, from time to time, has been "dominated" by one person.*

GREEN: That's right. It has been, although I don't think that I "dominated" it when I was head of it.

Q: *When you get someone who is almost an "ideologue" in there. Now, returning to your experience, because someone else can review how Grew operated during the time when you weren't with him. You left Tokyo in May, 1941. First of all, how did you return to the United States?*

GREEN: I came back on one of the "President" liners -- the "President Coolidge."

Q: *What were you "after" at that point?*

GREEN: I was coming back to take the Foreign Service exam. I went to a "cram school" for a month or so -- didn't get anything out of it -- and took the exam. I just barely "squeaked" through. Then came the war. I was going to be drafted. So I saw an opportunity to enlist in the Navy, in the Japanese language school, and I took it. So that's how I moved from Tokyo into the Navy, within eight months.

Q: *Where did you go to the language school?*

GREEN: At that time [1942] the school was located in Berkeley, California. This was a "crash" course which had been launched, I'd say, at some point in 1941. I got into the second group that went through the course. The groups at that time were rather small. The course lasted for about a year, during which you were supposed to learn Japanese, I wouldn't say that they turned out people who were proficient in Japanese, although we had some very bright students. Our Navy made a mistake in not accepting Japanese-Americans as language officers since most had some knowledge of the language and some were bilingual. This all reflects the bad prejudices against all Japanese, whatever their status and however long Japanese descendants had lived in the US

What was worse for us at Boulder was the order by President Roosevelt (and urged by General DeWitt) that all Japanese-Americans had to be relocated 200 miles East from our Pacific coast. This included our Japanese-American teachers, requiring us to move the whole language school to the University of Colorado in Boulder. That's where I completed my year of training.

Q: *We know by experience today that one year isn't going to do a great deal...*

GREEN: No. No. It doesn't help much. You are immediately thrown into the fray. Of our class of about 30 students 27 went into Combat Intelligence with a short period of training in Hawaii before going out to the Pacific Islands. Three of us were sent to Washington to serve in ONI, the Office of Naval Intelligence. That's where I was located all during the war, except for the last year of the war, when I moved into "Communications Intelligence." This office is still on Nebraska Avenue, NW

For me it was really a fascinating period. I did make one trip, for several months, to the CBI theater.

Q: *That's the "China-Burma-India" theater.*

GREEN: That's right. But basically I was always here in Washington. I was not interpreting. I was translating -- lots and lots of documents, some of them fascinating. I was once given documents we took out of the I-1 submarine sunk off Guadalcanal. This was a bunch of oil-soaked documents flown to Washington, to the Naval laboratories in Anacostia, MD. I worked for several days and translated this stuff. It was absolutely fascinating. The Chief Engineer of the I-1 submarine kept careful records of all of the ships that were being built in Japan for the submarine fleet, both the coastal and seagoing types. All the names were listed down one side of the document followed by the specifications of each ship, both those that were afloat and those that were being built -- and where they were being built: Ominato, Jure, Yokosuka, and Sasebo.

So on this great, pull-out sheet, with a minimum amount of effort, I was able to get all of the details of the Japanese submarine fleet. We put out two "Fleet Bulletins" on the basis of that. That's one thing that I was able to accomplish. It was very typical of my whole career. I was lucky, just lucky.

Another accomplishment was in communications intelligence, when I got the idea that the "call signals" new ships were using related to their standardize sizes and uses and to where the Japanese were building them. Therefore, we were able to nail down, merely from call signs, roughly what kinds of ships they were.

Q: You remember the way that the US Navy used to name ships. Battleships were named after states, aircraft carriers after famous battles, and so forth.

GREEN: The call signs were just four letter signals. We would find out, for example, that there were 200 barrels of tung oil loaded at Tientsin aboard "Shiminoseki-7 Maru" with call signal JABC. We had never heard of the "Shiminoseki-7 Maru," but we could immediately deduce from its call sign the size of the ship and whether it was an oiler or freighter. Of course, that was immediately passed on to our air and naval commands.

Q: After looking at these documents, what was your impression of how the Japanese ran their fleet?

GREEN: One reaction was that their security was terrible. Why they ever allowed their soldiers to carry diaries, with gun positions sketched out in them. Now, I wasn't dealing with that kind of intelligence, but our combat intelligence people were. The second thing was that they had no typewriters of the kind we have. Everything had to be done by long-hand and then by mimeograph machine. Well, now, there was a tremendous difference between the way we were doing things and the way the Japanese were doing things. Most insecure of all, the Japanese relied too much on code books which we had already seized.

Q: We are now moving toward the end of World War II. What rank did you have [in the Navy] at the end of the war?

GREEN: I was a full lieutenant.

Q: When did you leave the service?

GREEN: After "V-J Day" in August, 1945, I immediately tried to get into the State Department. The Navy was reluctant to release anybody in intelligence who knew the Japanese language, because they wanted these people for occupation duties and things like that. So it wasn't easy getting out. Meanwhile, I took my Foreign Service oral exam, and the Department accepted me, so I was in the State Department. However, I was still in Navy uniform. My first job in the State Department was to get other naval officers, who were Foreign Service Officers, back into the State Department. I can tell you, to go up to a salt-encrusted Navy captain to try to persuade him to release some of his men back to the State Department wasn't easy. That was my first job.

**NILES W. BOND
Consular Officer
Yokohama (1940-1942)**

Niles W. Bond was born in Massachusetts in 1916. He received a BA from the University of North Carolina and graduated from the Fletcher School of Law and Diplomacy in 1938. His postings abroad include Havana, Yokohama, Madrid, Bern, Tokyo, Seoul, Rome, Rio de Janeiro and Sao Paulo. In 1998 Charles Stuart Kennedy interviewed Mr. Bond.

BOND: ...we were sent to Yokohama.

Q: This was in 19...?

BOND: This was in 1940.

Q: I've got you arriving there June 4, 1940.

BOND: Yes.

Q: How did you get there?

BOND: We took a ship, so-called. It was terrible. I forget the name of the line. They ran mainly in the Pacific, possibly exclusively.

Q: This wasn't the President line.

BOND: Yes. I think it was the President Line. That's right because it was the President Monroe. It was a terrible old tub. After I got out to Yokohama, I looked it up in Jane's books and it had a very spotted past. It had been built in 1911 or something like that, and belonged at one time to some Middle Eastern country that had since disappeared. It was terrible. Anyway, we had a pretty good trip out. My boss in Yokohama had asked me to bring all sorts of things along with me, which I didn't really appreciate, but he turned out to be a nice guy. We were housed in an apartment within the Consulate building. It was a new building, constructed after the earthquake, along the lines of the White House in Washington! It also contained an apartment for the Consul General and for the other vice consul. Just ten weeks after my wife and I arrived, all dependents were repatriated.

Q: When you arrived in Japan in 1940, from your perspective, what was the situation in Japan at that point?

BOND: The situation was that relations between the two governments were just about as bad as they could get. But the attitude of the Japanese people was that they were just as pleasant as they could be. The official policy was not reflected in the way we were treated by them at all. Of course, things got worse later on. Since our honeymoon had been so short, we wanted to get together for our first wedding anniversary. So I persuaded my boss, who turned out to be a very nice man, in spite of all the stuff I had to carry for him. He said I could take local leave, adding that where I went locally, he didn't even want to know about. He said "even if it means going up the gang plank of a Japanese ship." So, we arranged to meet in Honolulu for our anniversary,

June 25, 1941.

The main consular business in Yokohama was crew list visas, mostly for Japanese ships. So I had a lot of dealings with the NYK line and, when I told them that I was doing this trip, they were very helpful. There was a ship going there that would get me there just in time. It was the flagship of their fleet, a very nice ship. They sold me a third class ticket but put me in first class. I ate and slept first class the whole trip.

We were about a week out to sea when the ship suddenly started making strange course alterations, around and around, back and around. I finally learned that they had just received news that the Germans had attacked the Soviet Union.

Q: June 22, 1941.

BOND: Yes. Our anniversary was on the 25th of June. So, I think it actually must have been a bit before the 22nd when they received this word. Obviously, it put them in a very dangerous situation. Japan was afraid of the Soviet Union and, with Germany as a Japanese ally attacking the Soviet Union, the Soviets were expected to strike Japan; which they never did. Anyway, the trip went on uneventfully after that. Then I picked up the same ship coming back a week or ten days later, I think. It had gone to Los Angeles and San Francisco. It was the last Japanese passenger ship to go to the West Coast of the U.S., the last one to return, the last to call at Honolulu. My wife returned to California, where she was living, and that was when I realized I was going back out of the frying pan into the fire.

Q: You were the whole time in Yokohama, is that right?

BOND: In that period, yes.

Q: We had our embassy in Tokyo, so you were handling seaman and shipping?

BOND: Mostly that, yes. Mainly visas and passports, including crewlist visas. We only had a Consul General and two vice-consuls, of which I was the junior one. We had two or three Nisei clerks and two male American clerks. So we all did everything. Whatever there was to do, we did it. As time went by, more and more Americans left; after the State Department repatriated its women and children, others followed suit, business people and so forth. So it got to be more and more a stag party.

Q: Did you find that the Japanese government was making it difficult to be an American official there? Were you being followed or challenged or that sort of thing?

BOND: No, I didn't see any evidence of that. The governor or the mayor would occasionally give a big diplomatic party in the early part of World War II, and I remember the belligerents of either side standing at opposite ends of the big room with the neutrals wandering back and forth. But the Japanese were very polite to us at that point.

Q: By '41 you were taking this trip to Hawaii and back and so we're moving up toward the latter

part of '41. Was it obvious to you that the tensions were getting worse?

BOND: Oh, very obvious. December 7, 1941 (a Sunday in Japan, but a day earlier in the U.S.) dawned sunny and unseasonably warm. I joined a dozen or so colleagues from the American Embassy in Tokyo at a beach house rented by the Embassy at Shichirigahama, a small fishing village on the coast south of Tokyo. Chip Bohlen came down, and others from the Embassy. Anyway, there were a dozen or so people there, and all we talked about was “when is it going to happen?” and “where will it happen?” Everybody knew it was going to happen: the Japanese had to make a move. They were running out of everything. They had already run out of steel. They were tearing down railings, light posts, all that sort of thing. They were very low on oil. Scrap iron was the thing they missed the most. When the U.S. cut off scrap iron shipments, we knew it was the end. So we knew something was going to happen. The consensus was that it would happen first in Southeast Asia, which it did, by a matter of hours. That was the day before Pearl Harbor.

If I could go back chronologically to the question of the Japanese attitude toward us: there was only one time that I ran into any unpleasantness. We had a new Consul General, Irving Linnell, who had just arrived. Yokohama was his last post. He was in his 60s and about to retire. One Sunday in October or November, before Pearl Harbor, I took him for a ride around the countryside so he could see his district. Yokohama was, at that time, part of a fortified zone because it was so close to the big naval base on the coast. Ordinarily, getting into Yokosuka was very difficult, but if you were already inside the fortified zone, it wasn't. I took a wrong turn. All the signs were in Japanese, which I could not read. I ended up inside the Yokosuka Naval Base. No American had been inside that base in years, if ever. I had a plate on the car saying “American Consulate, Yokohama,” so they knew who we were. The ship-building crew of the base was just getting out. This was about four or five in the afternoon. The workmen saw our license plate and got very abusive and started beating on the car. We were rescued by a Japanese Naval Patrol. They arrested us both and took us to a little headquarters kiosk that they had there. They asked us what we were doing there, and were not at all impressed by our story that it was a mistake. Finally, they called the Japanese Foreign Office and found out that we were real. Then they guided us out of the base and let us go. They were not very polite.

Q: No.

BOND: I remember also back in early '41 when I was taking a courier trip from Tokyo to Peking. It was in late January, early February and I was carrying six bags. I had a Marine guard along to help with the unwieldy pouches. We went from Tokyo to Shimonoseki on the south coast of Japan. Then we took a ferry across to Korea to what they called Fusan in those days. Then we got on the South Manchurian railway and went from Fusan the whole length of the Korean Peninsula across the Yalu River, across Manchuria, and then on past the Great Wall of China and into Tsing Tao and then Peking. The train was full of Japanese soldiers and they were very nasty toward us; we seemed to be the only non-Asiatics on the train. They had obviously been drinking a lot. There was no food on the train except cold rice, and the temperature at the station at Mukden when we passed through was 25 degrees below zero Fahrenheit, so that you couldn't get a drink of water through the water system or wash or anything.

Q: While you were in Japan were you kept abreast of what was known about Japanese troop movements in China? I'm not talking about the real military thing but the fact was that the Japanese weren't really doing that well. They thought they had taken over but they found themselves in a long hard war which they never really won.

BOND: No. I don't know to what extent the Embassy was privy to that sort of information. The only reading matter we had was the Tokyo English language newspaper. Since that paper was under government control, one didn't learn anything pejorative about the Japanese Government. So we were really pretty much in the dark about that.

Q: What happened when the attack came on Pearl Harbor? Let me ask you one question before that. As the gates were shutting, so to speak, prior to the attack on Pearl Harbor, did the visa business fall off and your regular work fall off?

BOND: Yes. By the time the war broke out, we were doing practically nothing but reporting to the Navy Department on ship movements. The Consulate in Yokohama is right on the bank of Tokyo Bay, so we had a wonderful view of the whole Bay. It was very active with shipping. We had a telescope up on the roof and we used it. It used to be, when we first started, that the Japanese ships had the name in Japanese characters and also in Romaji, which we could read. Then, for security reasons, they painted out the Romaji, leaving just the Japanese characters on the ship. Then sometime before the war broke out, they painted those out, too. So we didn't have very much to go on. We had a set of...

Q: Silhouette books?

BOND: Yes. Silhouette books, and we could tell...

Q: ...what class they were and that sort of thing?

BOND: Yes, but that was it. The Japanese, as it turned out, knew about our spying on their ships because one of our American clerks who was a Nisei, with an American father and a Japanese mother, was working for the Kempeitai.

Q: This is the Japanese secret service.

BOND: I would describe them more as the equivalent of the German SS. They were the ones who, when we were interned, took us over. But you were asking about the day of the attack. When I got back from that day at the beach, I had dinner and went to bed fairly early. I was awakened about five o'clock in the morning by a telephone call from this same Nisei clerk who turned out to be working for the Kempeitai. He said, "I think you ought to turn your radio on, because there's something going on in Southeast Asia. The Japanese have sunk, I think, two British battleships."

Q: That was a little later. I think there were some previous attacks.

BOND: Yes. They had made a serious attack on the British fleet, including the Britannia; I think

it was, the flagship of their fleet. He said that the fighting was apparently still going on and suggested that I turn on the radio. So I turned on the radio and I kept it tuned to an English language station in Shanghai, which had good music when it wasn't broadcasting news and had lots of news all the time when it wasn't playing music.

So I had that on and all of a sudden the news reader interrupted and said he had a special communiqué from the Imperial General Staff. Then he read the communiqué: the Japanese had attacked Pearl Harbor, and Japan was now in a state of war with the United States and Great Britain.

It was about five-thirty by the time I got that and so I woke my colleague, the other vice-consul. We had some things to burn. There was a good place out in the garden which was hidden by shrubbery so we were taking things from the secret files and burning them. After two or three hours of this, the Kempeitai arrived in force and took over everything.. One thing we kept, at the Consul General's insistence (and he was right in a way.) He said, "The last things you want to burn are the code books, because we may get a coded message from the Embassy that we will have to be able to read." So we kept the code books and they were still there when the Japanese arrived.

The truckload of Kempeitai guards were commanded by a major. He made us go around and open all the files and show him what was inside and so on. He saw the code books. They were in a vault in the consul general's office, but he didn't touch them. He didn't touch anything. He just closed them up and put a Kempeitai seal on them. Then he went on his way, and this was a mistake on his part. This was because my vice consul colleague, Jules Goetzman, and I decided that the thing at the top of our list was getting those code books back, out of the vault, and destroyed, before the Japanese got them and read them or used them. The code was still uncompromised at that time, as we learned later...

So, to make a long story short, there were two doors to the Consul General's office, one of which opened into a hallway that led to our apartments upstairs. The other led to his secretary's office which was now being used as a sleeping area for the guards. There were about a dozen guards sleeping in there, and more sleeping around the area.

Q: These were Japanese guards.

BOND: Yes. The vault that held the code books was right up against the wall on the other side of which they were sleeping. So we found one night that they had failed to shut tight the one door that we had access to. So we went upstairs and lit a fire in the fireplace and waited until about midnight. Then we went downstairs very quietly and carefully and opened the vault. Every time we turned the thing we heard this "clunk" inside. It sounded horribly loud to us, but nobody woke up. There was no movement from the next room. We took the books out and closed the safe very carefully. We didn't lock it because that would have made more noise. We just closed it firmly. We had to break the Kempeitai seal, of course, to get in.

When we went upstairs and spent the rest of the night burning the two code books. We finished between five and six in the morning. Then we had a good, stiff drink and went to bed. About an

hour later, someone knocked on my door: one of the subordinates of the guard detachment. He said, "The Major wants to see you downstairs right away." He then went over to wake my colleague, and we were taken downstairs to where the Major was waiting.

The Major took us into the Consul General's office, pointed to the broken seal on the safe, and asked if we knew anything about it. When we nodded, the Major ordered us to open the safe. Once it was open and he saw the empty space where the code books had been, he demanded that the books be returned to him at once. My colleague replied that they had already been destroyed and offered to show the Major the ashes. The Major, in a rage probably fueled as much by fear for his own head as anything, drew his sword and demanded an explanation. Recalling a discussion we had had the night before while burning the code books, Goetzman and I, in an inelegant mixture of English and Japanese, endeavored to explain the destruction of the codes in terms of *bushido*, the traditional *samurai* code of loyalty and honor. We pointed out that Americans, too, had such a code of conduct and tradition of loyalty which demanded that we risk our lives to protect our country, in this case by protecting its codes. My colleague then asked the Major what he would have done in the same situation. The Major slowly sheathed his sword, drew himself to attention, and then quietly began to weep as he left the room. From that moment on, nothing more was heard from the Japanese about the incident - or about the Major, whom we never saw again. But the books were burned and I was told when I got back to Washington that they were still uncompromised at the time we destroyed them.

Q: Obviously, everyone at our Embassy in Tokyo was put in together. There are stories about how they played bridge and golf and all that...

BOND: Yes, that's right. They had it pretty easy, yes, but not that easy...

Q: But essentially, they weren't giving you territorial immunity.

BOND: No, they weren't. They also confiscated our cars. The complete guard detachment was changed each week. We were told by someone that they didn't want the guards to get too friendly with us. Then finally, in about late March or early April, when it began to warm up, one of the guards came to us and said, "Would you like to play some baseball?" We had a softball, they had a softball bat. So we played out in the garden. The rules were that if anybody hit the ball over the wall, it was an automatic out; he couldn't chase the ball unless he was a guard.

(Laughter)

Q: You played with the guards?

BOND: We played several games with the guards and they were very nice. What they talked about most was "my cousin in California." They were all interested in going to visit their cousins or uncles in California. Things like that. There was no sign of animosity at all. But, for the first three months we were interned, the Kempeitai would not even allow the Foreign Office to see us. They wouldn't allow the Foreign Office to send a representative down. I think it was Sweden that was the...

Q: Protecting power.

BOND: Yes, the protecting power. They wouldn't allow anyone from the Swedish Legation to see us. So we couldn't get anything changed nor anything done. I don't know how it happened, but finally that situation changed. The Foreign Office sent a delegation down with many apologies. The Swedes came down, too.

One of the things that the Foreign Office persuaded the Kempeitai to do was to allow us to walk an hour each day in a little park that was across the street. It was exactly a mile long and it had been built with American funds after the earthquake.

Q: In 1923?

BOND: Yes, the 1923 earthquake. The park was built on the ruins. That was before the present consular building was built. Anyway, the Kempeitai allowed it. There had been several others sent down from Manchuria and Korea to be interned with us. Foreign Service people. So we were about 10 or 12 altogether.

They would take us walking with guards fore and aft along the park front, one time up, one time back. We were under strict orders not to speak to anyone. The weather was good and there were many Japanese walking, particularly on weekends. We never had the slightest show of animosity from any of the Japanese we passed.

One day, while we were walking, we had an interruption. There were benches every 50 yards or so and, sitting on one of them was a Caucasian-looking young man. It didn't ring a bell to me. I couldn't get a very good look at him but, as we got closer and were passing him, he jumped up and ran over to me. He put his arms around me and said, "Hello! Hello! Hello!"

As it turned out, when I was in Cuba, he had been a German vice-consul in Havana. He had subsequently been expelled from Cuba for espionage in 1940, and had been transferred to Panama. He was expelled from Panama almost as soon as he arrived there. The only way he could get back to Germany was through Japan and the Trans-Siberian Railway. But, while he was en route to Japan, Germany invaded the USSR, forcing him to remain in Japan, (*laughter*), so he didn't make it home.

Anyway, the guards were very upset over this interruption. They ran over and grabbed him. They pulled him away and demanded his identification. He showed them his German diplomatic passport. The guard called for his superior to come over and look at it. He said, "Look, this is impossible! These people are enemies! What are they doing hugging each other!?" He didn't believe it. But finally they accepted the fact that he was German and that we were pre-War friends. I don't know what happened to him. He had to spend the whole war there, I guess. I never saw him again.

Q: What about food? Did the Japanese supply it?

BOND: We had a bad time with food. The Japanese were under the impression that we had lots of food stashed away because we always shipped things in from San Francisco. The latest

shipment from San Francisco was sitting on the dock at the time of the Pearl Harbor attack. We had been told by the Japanese shipper that it was there, and we could actually see it. The shipper said it would be delivered but it never was.

We had lots of flour, lots of coffee, powdered milk. That sort of thing. Nothing really to eat. We finally convinced the Kempeitai that we really didn't have anything to eat. So they made an arrangement for the New Grand Hotel to send us meals. It was a very good hotel just down the street, the only good hotel in Yokohama. But it took a very long time to work out the details.

In the meantime, we had a variety of things to chew on from an unexpected source: our former Japanese servants. No longer allowed on the premises and obviously aware of our predicament, they hid tiny packets of edibles in the bushes behind the garage where they could not be seen leaving them, nor we retrieving them. Without their generosity, we might have starved.

At about the end of our first week of New Grand Hotel food, we found that we were eating cat. They were sending over cat. At first, we got chicken or some sort of fowl and seafood. Then, all of a sudden, cat. We drew the line at that. It was about then that the Foreign Office finally got through to us. They made an arrangement with a Swiss hotel and with the Kempeitai for us to have two meals a day at this little Swiss hotel, about two blocks from the Consulate. It was a very nice little hotel. The food was wonderful. The guards who took us over there were also fed.

As far as I know, the hotel never got paid for any of this. We couldn't pay. We didn't have any money. The Swiss owners were so pro-American they did everything they could for us. Gave us the best of everything while the guards were over in a corner eating sushi. That arrangement continued the rest of the time we were there.

Q: When did you finally leave? Were you ever united with the Embassy group?

BOND: Yes. What happened was that, I think about the first of June, we had a visit from a Japanese police official in uniform. I happened to be there when he came in and he asked to see the consul general. So I said, "He's somewhere around. I'll find him for you." He had come to invite the consul general to lunch with the local chief of police of the Prefecture. He was inviting the Consul General as well as the two officers assigned to Yokohama. The three of us were to lunch the following day at the New Grand Hotel. He said "Guards will be sent to bring you over."

The consul general was rather silly. He said, "Never would I accept such an invitation." The policeman, who spoke very good English, said, "Sir, you don't understand. This is not an invitation. This is a command. You will be there and your two subordinate officers will be there also. We will pick you up tomorrow at the arranged time."

So they came around and picked us up. The consul general was still in a huff. He wouldn't speak to anyone. The luncheon was in a private dining room with beautiful mahogany paneling. There were about 10 other Japanese officials there in addition to the chief of police, who sat at the end of the table. The consul general sat at the other end and we sat beside him. Other police officials, of various ranks, were also at the table.

Ever since I arrived in Yokohama, I'd had frequent dealings with the chief of police. Until Pearl Harbor. We had become good friends. I liked him very much. He was in his 60s and was on the verge of retirement. Anyway, when we went up there, the consul general wouldn't even look at him. He just stayed in his seat. Well, I went over and shook hands with him and we had a nice little chat. He had always been cooperative.

We sat down to lunch. Then the consul general rudely stood up and said to the chief of police, "I insist on knowing why you have brought us here." We had just started to eat the first course. The chief of police said, "We have a saying in Japan that 'One does not eat peanuts while making love.' We'll save the peanuts 'til after lunch." The consul general was very displeased.

Q: The chief of police was talking?

BOND: Yes. He then talked at some length about such innocuous subjects as Japanese painting and the ancient art of Japanese sword-making before turning to more serious matters. He spoke of his life-long admiration for the United States and his sadness that our two countries had to be at war with each other. Secondly, he stated that he was obliged to warn us that Japan, under the aegis of the Emperor, could never be defeated in war. He started to sit down but rose again and, in a lighter tone, addressed his American guests. He informed us in a by-the-way fashion that we would be leaving Japan the following week aboard the NYK liner Asama Maru, en route to our exchange point in East Africa.

On June 17, 1942, more or less in keeping with the chief of police's promise, the diplomats, journalists, businessmen, dependents, and other Western Hemisphere nationals selected for repatriation on this first exchange of enemy aliens were transferred by the Japanese to the pier where the Asama Maru was moored. The diplomats were boarded first and I managed to remain at the top of the gangplank from where I could watch for friends whom I had neither seen nor had news of since the war began. Many of these had been in prisons or concentration camps and some were down to skin and bones, some were almost unrecognizable. Others, good friends of mine, gave no sign of recognition when I greeted them, their only reaction a blank stare.

With everyone on board we expected to sail that night. But we didn't sail that night, nor the next. We were there another week. There were rumors all over the ship about, you know, "the whole thing's going to be called off; we're going back; we're going to be imprisoned somewhere; they're not going to exchange us after all." As it turned out, the delay was because the Emperor had a relative in the States who did not have diplomatic status, and he was trying to get him included. The State Department finally agreed and we sailed shortly after midnight on the 25th of June. And God, were we glad to go. Every morning for weeks we'd get up to see which side the sun was rising on.

Being very junior, my fellow vice consuls and I were relegated to the silk holds of the ship. To get to our quarters, we had to go down as far as you could go by stairs, and then by ladder. We were below the waterline in small compartments, oh, I'd say 12 by 14 feet, something like that. They had built six sleeping shelves into each one of those. So there were six of us in each compartment and we couldn't turn the light out because there was a cage around the only light

bulb.

Our first stop was Hong Kong where we picked up colleagues from South China. They'd had a very hard time, a much harder time than we'd had. Journalist Joe Alsop was one of those who got on there. Then on to Saigon. We went up the Saigon River and it was sort of like the Titanic trying to go through the Panama Canal. We just barely made it.

Q: Yes. It's not a very large river.

BOND: That's right. So we went up there, and spent the Fourth of July of 1942 in Saigon aboard a Japanese ship. We boarded the diplomats and some missionaries there. That was our only other pick-up stop. Then we went on to Singapore to refuel and take on water, and then across the Indian Ocean to Mozambique.

Q: I can't remember. Had the Doolittle Raid occurred?

BOND: Yes. It occurred while we were there. It was in April. I think we had just started eating at the Swiss restaurant. Anyway, we were walking back from the Swiss restaurant and all of a sudden this plane came flying very low from across the Bay. It was a B-25, a two engine and twin-tailed. None of us had ever seen a B-25 before because they weren't put into service until about 1942. We thought it was probably a Japanese Air Force exercise. There were American markings on the plane and we thought that might have been to make it seem more realistic.

Then we looked across the Bay. There were great clouds of black smoke coming up from the refineries. So then we thought maybe it was the real thing. We were just about to arrive at our Consulate. There was another plane that flew over at some distance but this one must have been barely 500 feet off the ground. The only thing they hit in Yokohama was the hospital and the reason they hit that was because there was an anti-aircraft gun on the roof.

Once the planes had gone, the head of the guard contingent called us all together and he was furious. He said, "What do you mean!? What do you mean by attacking us that way!? What do you mean?" He said, "If it happens again, there will be some serious repercussions, so don't let it happen again."

In the meantime, I remember, one of the American male clerks was tied up in about a half-mile of rope and then hung with signs all over him in Japanese. They paraded him through the streets of Yokohama. They didn't hurt him, they delivered him back and took off his ropes. That was the Doolittle Raid as we saw it. The clerk's name was Dick Child.

Q.: Could you see Yokohama Harbor when you were under incarceration?

BOND: Yes. It could be seen best from the roof, but that was off-limits to us during our internment. But we could see it even from downstairs. My own apartment looked out over the garden, but my colleague's second-floor apartment on the front of the building looked right out over the Bay.

Q: Were you keeping notes on what was happening?

BOND: For the last six months or so before Pearl Harbor, our principal official activity was reporting daily to the U.S. Navy Dept. in Washington on the movement of ships into and out of Tokyo Bay. We had managed to destroy or hide copies of our telegrams to the Navy Department before the first arrival of the Kempeitai. Once the Kempeitai arrived, they took away all of our writing materials, all our paper, all our radios, books, everything. The only thing they missed was a little portable phonograph we managed to hide, with one record: a wonderful jazz recording of "I Can't Get Started"...(*hums tune*) We did have that but, with no writing materials and constant searches, we couldn't keep notes. We did have one old copy of LIFE magazine and one of the things in it was a double page spread on different moustache styles. We decided to assign each of us one particular style and, when it grew in, we'd shave it off and start a different style. (*Laughter*) Oh, God!

Q: Were you aware of the progress of the War while you were there?

BOND: We occasionally had Japanese newspapers discarded by our guards, which some of our Nisei employees could read. So from time to time we could see what the Japanese Government was saying about the war. No matter what the battle scene was, it was always a great victory for the Japanese. Then, sometime in April or May, there was the Battle of the Coral Sea, which we learned about from a newspaper thrown away by the guards. It carried a communique about this great battle. It don't remember how many American carriers it said had been sunk, but it admitted the loss of Japanese ships, including carriers. We took this unprecedented admission as a sign that they'd really had a bad time. As it turned out, that was a turning point of the naval war. But that's all we could get.

ROBERT A. FEAREY
Private Secretary to the U.S. Ambassador
Tokyo (1941-1942)

Mr. Fearey was born and raised in New York and graduated from Harvard University. He joined the State Department in 1952, after serving as private secretary to the American Ambassador in Tokyo. During his Foreign Service career Mr. Fearey held a number positions dealing with Political-Military Affairs in Washington and abroad. His foreign assignments included London, Tokyo and Paris. Mr. Fearey provided a copy of his Report and Addenda to Georgetown University.

FEARY: This is the story of one year of what has turned out to be a rather interesting life. Another such period was my year as special assistant to John Foster Dulles during his negotiation of the Japanese Peace Treaty. But with the fiftieth anniversary of Pearl Harbor and of the unsuccessful US-Japan negotiations that preceded it approaching in December, there is special reason to set out now my recollections of what I observed and participated in as a private

secretary to our Ambassador to Japan, Joseph C. Grew, in Tokyo and in Washington from mid-1942 to mid-1942.

The story of those negotiations, referred to on the US side as “the Washington talks,” (Washington’s position was that the talks never reached the negotiation stage because of the two sides’ inability to agree on prior “fundamental and essential questions,” but, for simplicity’s sake, I will overlook the distinction and use the word negotiations herein.) is available in Mr. Grew’s Ten Years in Japan (1944), and Turbulent Era Vol. II (1952) and in the official records, published after twenty-five years, in The Foreign Relations of the United States. 1941. Japan. Fully set in those volumes are the arguments supporting Washington’s handling of the negotiations, on the one hand and on the other--Ambassador Grew’s firmly held views that Washington’s stance was unimaginative and inflexible, that the Embassy’s carefully considered reports, analyses and recommendations centering on Prime Minister Konoye’s proposal that he and President Roosevelt meet face-to-face in Honolulu in a direct effort to achieve a settlement of all outstanding issues were given short shift, and that if the meeting had been allowed to take place, the Pacific War might have been avoided.

Ambassador Grew, whom I continued to see from time to time during the war, remarked several times that only history can judge the issue. We are now fifty years into history, and it is perhaps not amiss to pull the arguments together for another look. I am no historian, but at least I have the benefit of having assisted Grew in a small way in the preparation of his never published "failure of a mission" report during our post-Pearl Harbor internment in Tokyo, of discussing the issues with him at length during our two months long voyage home, and of accompanying him when he called on Secretary of State Cordell Hull and attempted to present the report. I thought then, and I think now, that Grew was right, that the meeting should have been held, and that if it had been held the Pacific War might in fact have been avoided, without sacrifice of any significant U.S. or Allied principle or interest. Over most of its length, however, what I will relate is of little or no historical interest consisting of events and anecdotes during our internment and the long voyage home via Lourenco Marques (now Maputo) and Rio de Janeiro aboard the "Asama Maru" and the "Gripsholm".

The story begins in April 1941 during the Easter vacation of my senior year at college. I was cutting the lawn at home in Long Island, New York, when a call came from James D. Regan, Senior Master at Groton School in Massachusetts, from which I had graduated in 1937. Did I recall Ambassador Grew's practice of asking Groton’s headmaster to nominate a Grotonian about to graduate from college to come out to Tokyo for two years as his private secretary? I said that I did indeed recall it, and remembered that Marshall Green, of Groton’s class of 1935, currently held the job. Regan said that Green's time would be up in June, that Rev. John Crocker, Groton's then headmaster, had received a letter from Ambassador Grew asking him to propose a successor, and that he wished to propose me.

Regan said that there was, of course, the problem of the draft--would I be prepared and able to obtain a deferment? I said that I thought my retinal detachment history would prevent me from serving in any, even home-front, military capacity; that the job with Grew interested me very much and that I would try to expedite determination of my draft status. He said that he would

mail me a copy of Grew's letter to Crocker, which, as a demonstration of Grew's writing talents, devotion to Groton and the Foreign Service and sense of humor, I will attach to this account.

A month later, after being classified 4-F (excluded from any form of military service), I confirmed my acceptance of the position to Crocker. Soon afterward, I received a letter of welcome from Mr. Grew, and in June, Green returned home. We met in New York, where he removed any doubts I might have had that I made the right decision. "The Grews," he said, "were great, the Embassy group first class, the duties of the job not too arduous and Japan still a wonderful place, notwithstanding the gathering of war clouds." In the course of a couple of days together, I offered Green an airplane ride, having at that time accumulated several hundred flying hours. He still talks of our bombing run a few feet above a tanker moving down Long Island Sound, with the captain running for cover on the bridge.

In those days, hard as it is to believe now, US Foreign Service Officers called personally on the Secretary or Under Secretary before departing for their posts. The number of FSOs was sufficiently small to permit this. I was not an FSO, but Grew had written to his old friend, Under Secretary Sumner Welles, another Grotonian, to ask him to oversee my departure arrangements and briefly receive me. I recall waiting in the anteroom between Secretary Hull's and Under Secretary Welles' offices, occupied by two secretaries, before Mr. Welles came out to usher me in. The two claimed to be their bosses entire secretarial support!

Driving my own Dodge car across the country, I read up on Japan, but comforted by Green's report that I would have almost no need for Japanese, I attempted to learn only a few phrases. At San Francisco, I boarded the *Kamakura Maru* and recall during the voyage tossing a ball in the ship's pool with Mamoru Shigemitsu, Japan's Ambassador to the U.K. who became Foreign Minister in 1943 and signed the surrender instruments for Japan on the *Missouri*. He had lost a leg from a terrorist bomb some years before in Shanghai, and swimming was accordingly his favorite sport. Afterward, we sometimes discussed the deterioration of US-Japan relations and what might still be done about it over tea on the deck.

Arriving in Yokohama, I was met by an Embassy driver, and with his help, I started the paperwork to have my car released by the port authorities. My amah (servant), Kanisan, inherited from Green, met me with a bow and a giggle at the door of my government provided apartment in the Embassy compound in Tokyo. I had barely started to unpack when the phone rang - it was Ambassador Grew inviting me up the hill to his residence to get acquainted.

As I entered Grew's study, he turned from the old typewriter on which he had hunt and pecked his work at home for decades and greeted me warmly. We talked for about half an hour, during which he said that he had just received a letter about me from my maternal grandfather, Bishop William Lawrence, who had confirmed him at Groton years ago. Mrs. Grew came in to be introduced, lamenting the fact that unlike my predecessor, I did not play bridge. Grew said that he nevertheless had good reports on my golf, which was the important thing. Both could not have been nicer. I left feeling that all would be well.

The next day I met the Embassy staff, particularly Eugene H. Doorman, the Embassy Counselor-born in Japan, fluent in Japanese and Grew's right-hand man--Edward S. Crocker, First

Secretary; Charles E. Bohlen, Second Secretary--recently arrived from Embassy Moscow and later President Roosevelt's Russian interpreter/advisor and Ambassador to the USSR, France and the Philippines--Captain Henri H. Smith-Hutton, Naval Attaché; Lt. Colonel Harry J. Creswell, Army Attaché; Frank S. Williams, Commercial Attaché and Marion Arnold, Mr. Grew's longtime secretary, with whom I shared his outer office.

I had known that one of my principle duties would be golf. Weekday afternoons, when permitted, Grew would quickly assemble a foursome from the Embassy golfers--most often Doorman, Bohlen, Crocker and myself--and away we would go to Koganei, Kasumegaseki or some other nearby course. Relations with Japan had reached a point where Grew's Japanese friends could no longer afford to be seen with him, including on the golf course. On the other hand, as I will bring out later, there were those, including Prime Minister Konoye, who found carefully arranged golf games and private dinners still feasible for meeting with Grew and Doorman at critically important junctures.

The Grew's favorite weekend retreat from the summer heat of Tokyo was in Karuizawa, about three hours drive up in the so-called Japanese Alps in central Honshu. There they stayed in the Mampei Hotel, and golf was the order of the day. I was frequently included in these excursions, sometimes going with them in their Embassy car and sometimes driving up on my own.

I was invited on such a trip the first weekend after I arrived and recall teeing up at the first hole for my first game of golf in Japan, with Grew, Chip Bohlen and Ned Crocker looking on. To my partner, Mr. Grew's and my delight, I hit one of the best drives of my life. Thereafter, my game reverted to form, but at least I never had to be concerned about failing to hold up my end with partner Grew. A tremendous golf enthusiast, he unfortunately seldom broke one hundred. His putting style was unique--between his legs with a croquet-type stroke--but unfortunately no better for the fact. Bohlen and I both prided ourselves on the length of our drives; considerable sums passed between us on the issue, on top of the team bets.

As the weeks passed, I became aware that Grew and Doorman were heavily preoccupied with an undertaking which they believed could critically affect the prospects for averting war. Though the matter was closely held within the Embassy, I learned that it related to a proposal Grew had transmitted to Washington from Prime Minister Konoye that he and President Roosevelt meet fact-to-face in Honolulu in an effort to fundamentally turn US-Japan relations around before it was too late. Grew had told Washington that Konoye was convinced that he would be able to present terms for such a settlement at such a meeting which the US and its allies would be able to accept. Konoye had said that the terms had the backing of the Emperor and of Japan's highest military authorities and that senior military officers were prepared to accompany him to the meeting and put the weight of their approval behind the hoped-for agreement with the President on the mission's return to Japan. Grew and Doorman had strongly recommended that Washington agree to the meeting.

Returning to daily life at the Embassy, of the many incidents that stick in my mind, I will relate only two, both relating to the British Ambassador, Sir Robert Craigie, a distinguished but slightly stuffy representative of His Majesty's Diplomatic Service.

One of my duties as private secretary was to operate the movie projector when the Grews showed American movies after dinner parties at their residence. The machine was somewhat antiquated and occasionally broke down in the middle of a reel. This happened one evening when the Craigies were among the guests. Mrs. Craigie, sitting next to Mrs. Grew, remarked, "Isn't it unfortunate, my dear, that machine of yours is always breaking down."

To which Mrs. Grew, a formidable adversary in repartee, replied, "Yes, my dear, but isn't it fortunate that we have no important guests tonight."

A few weeks later, Sir Robert called on Grew in his office for a review of events. After he has departed, Grew called me in to say that in the course of conversation, Sir Robert had asked him if he was aware that his private secretary had been seen in the company of a half Swedish, half German young lady known to be close to the German community in Tokyo, including members of the German Embassy. Surely with the access which the private secretary undoubtedly had to sensitive materials, Mr. Grew would wish to ensure that the relationship was terminated. Grew said that he had told Sir Robert in no uncertain terms that he had every confidence in his private secretary and that if this were not the case, he would not restrict my contacts but would send me home. Grew doubted we would hear anymore of the matter, and we didn't.

Reverting to the Konoye proposal, although my knowledge of the cables back and forth was limited at the time, the records show that Washington's initial reaction to the proposal was not unfavorable. The idea caught the President's imagination. In a late August session with Japanese Ambassador Kichisaburu Nomura, Roosevelt "spoke of the difficulty of going as far as Hawaii and elaborated his reasons why it would be difficult to get away for twenty-one days. He turned to Juneau, Alaska as a meeting place, which would only require some fourteen or fifteen days, allowing for a three or four days conversation with the Japanese Prime Minister." At the close of the meeting, he said, "that he would be keenly interested in having three or four days with Prince Konoye, and he again mentioned Juneau.: In his August 28 reply to Roosevelt through Nomura, Konoye said that "he would be assisted by a staff of about twenty persons, of whom five each would be from the Foreign Office, the Army, the Navy and the Japanese Embassy at Washington." Nomura "thought that the inclusion of Army and Navy representatives would be especially beneficial in view of the responsibility which they would share for the settlement reached." Konoye told Grew about this time that a destroyer with steam up awaited in Yokohama to carry him and his associates to the meeting place. An Embassy officer who lived in Yokohama confirmed this.

However, at a meeting with Nomura at the White House on September 3, the President read a message, prepared at State, from him to Konoye, which included the statement that "it would seem highly desirable that we take precautions toward ensuring that our proposed meeting shall prove a success by endeavoring to enter immediately upon preliminary discussions of the fundamental and essential questions on which we seek agreement. The questions which I have in mind for such preliminary discussions involve practical applications fundamental to achievement and maintenance of peace..." When Nomura asked whether the President was still favorable to a conference, "the President replied that he was but that it was very important to settle a number of these questions beforehand if the success of the conference was to be safeguarded..." He added

that “it would be necessary for us to discuss the matter fully with the British, the Chinese and the Dutch, since there is no other way to effect a suitable peaceful settlement for the Pacific area.”

In succeeding meetings, Roosevelt and Hull reiterated these two themes--that the proposed meeting must be preceded by preliminary US-Japan discussions of (by which they clearly meant agreement on) “the fundamental and essential questions on which we seek agreement,” and by US consultation with our Chinese, British and Dutch allies. In a September fourth meeting with Nomura, Hull said that “this was especially necessary with the Chinese who might otherwise be apprehensive lest we betray them. He (Hull) felt that before we are in a position to go to the Chinese, the American and Japanese Governments should reach a clear understanding in principle on the various points to be discussed affecting China.” Concern for Chiang Kai-shek’s reactions was clearly a key factor in the Administration’s thinking.

Konoye, in his initial broaching of the meeting idea in the spring, had explained to Grew, and he to Washington, why it was necessary for him to meet personally with Roosevelt outside Japan and why he would be able to propose terms at such a meeting which he could never propose through diplomatic channels. If he had said he was to use such channels to provide the specific assurances Washington sought on the China question and other issues, his Foreign Minister, Yosuke Matsuoka, who had led Japan into the Axis Pact with Germany and Italy and who, with the Germans and Italians, would do anything to prevent a Japanese accommodation with the US, would immediately leak those assurances to fanatical Japanese elements and to the German and Italian Embassies; he (Konoye) would be assassinated, and the whole effort would fail. A further risk of hostile leaks lay in the codes through which the Embassy and the State Department communicated. The Embassy hoped that one of its codes was still secure, but Konoye told Grew that he believed that Japanese cryptographers had broken all the others. The Embassy did not know that we had broken the Japanese codes and that Washington knew everything that passes by cable between Tokyo and the Japanese Embassy in Tokyo.

After Matsuoka was forced to resign as Foreign Minister following the German invasion of Russia in June, Konoye told Grew, and he Washington, that Matsuoka had left supporters behind in the Foreign Office who would equally leak the positive and forthcoming terms which he (Konoye) intended to propose to the President. On the other hand, Konoye maintained that if he, accompanied by senior representatives of the Army and Navy, could meet face-to-face with Roosevelt, propose those terms and have them accepted in principle, subject to Washington and Allied concurrence and the working out of detailed implementing arrangements, the reaction of relief and approval in Japan would be so strong that die-hard elements would be unable to prevail against it.

Grew and Doorman supported this reasoning. From the Emperor down, they told Washington, the Japanese knew that the China venture was not succeeding. Particularly after the July freezing of Japanese assets abroad and the embargo on oil and scrap shipments to Japan, the endless war in China was driving Japan into ruin. Every time a taxi went around the corner, Japan had less oil. There was solid reason to believe that the bulk of the Japanese people, except for the die-hards and fanatics, would sincerely welcome a face-saving settlement that would enable the country to pull back, on an agreed schedule, from China and Southeast Asia, even if not from Manchuria. Japan had now held Manchuria for nine years and successfully integrated its

economy into the homeland economy, and its disposition presented special problems which would have to be worked out in agreement with Nationalist China. (Chiang Kai-shek reportedly declared in 1937 that China was determined to give up no more of its territory--a tacit admission that the return of Manchuria to China could not at that time be expected.) But the time was now--the opportunity had to be seized before Japan's economic situation and internal discontent reached so serious a level that the military felt obliged and entitled to take complete control and launch Japan on a suicidal war against the West.

Grew told Washington that because of the risks of hostile exposure, Konoye could not provide the clear and specific commitments concerning China, Indochina, the Axis Pact, non-discriminatory trade and other issues which Washington sought before the proposed meeting. On the other hand, he argued, there was strong reason to believe that Konoye would be able to provide those commitments at the proposed meeting and that with the Emperor's, the top military's and the people's support, they would be carried out. No one could guarantee this, but the alternative was almost certainly replacement of the Konoye Government and a rapid descent toward war. A State Department paraphrase of an August eighteenth Grew cable to Hull concluded as follows:

“The Ambassador urges with all the force at his command for the sake of avoiding the obviously growing possibility of an utterly futile war between Japan and the United States that this Japanese proposal not be turned aside without very prayerful consideration. Not only is the proposal unprecedented in Japanese history, but it is an indication that Japanese intransigence is not crystallized completely, owing to the fact that the proposal has the approval of the Emperor and the highest authorities in the land. The good which may flow from a meeting between Prince Konoye and President Roosevelt is incalculable. The opportunity is here presented, the Ambassador ventures to believe, for an act of the highest statesmanship, such as the recent meeting of President Roosevelt with Prime Minister Churchill at sea, with the possible overcoming thereby of apparently insurmountable obstacles to peace hereafter in the Pacific.” (For a fuller exposition of Grew's views in his own words, see the attached copy of his message of August nineteenth to the Secretary and Under Secretary.)

As the weeks passed and Washington still withheld approval of Konoye's meeting proposal, he and Grew became increasingly discouraged. Konoye warned at their secret meetings that time was running out, that he would soon have no alternative but to resign and be succeeded by a prime minister and cabinet offering far less chance of determinedly seeking and being able to carry out a mutually acceptable US-Japan settlement. Again and again Grew urged Washington to accept the meeting as the last, best chance for a settlement. He urged that not only Konoye, but he and Doorman firmly believed the Emperor and Japan's top military and civilian leaders wished to reverse Japan's unsuccessful military course, if this could be accomplished without an appearance of abject surrender. Japan could not pull its forces out of China and Indochina overnight without such an appearance, but it could commit itself to a course of action which would accomplish that result in an acceptable period of time under effective safeguards.

Personalities can make an important difference in such situations. Secretary Hull's principal Far Eastern advisor was a former professor named Stanley K. Hornbeck. Coming to the post with a China background, he was personally known by Grew and other Embassy Tokyo officers to have shown disdain and dislike for the Japanese. Word reached the Embassy that it was largely as a result of his influence and advice that Roosevelt's and Hull's initially favorable reaction to the meeting proposal had cooled. It was largely at his insistence that the policy of requiring Japan to provide clear and specific assurances on outstanding issues, particularly respecting China, before such a meeting could be held had been adopted. Hornbeck was quoted as saying that Grew had been in Japan too long, that he was more Japanese than the Japanese and that all one had to do with the Japanese was to stand up to them, and they would cave. The Embassy heard that State's "Japan hands," led by Joseph W. Ballantine, tended to agree with its recommendations, but how strongly was not clear. What did seem clear was that Hornbeck had the upper hand and that his views were prevailing with Hull and Roosevelt.

On October 16, Konoye, having plead and waited in vain for US acceptance of his meeting proposal, resigned and was replaced by General Hideki Tojo. In a private conversation with Grew, Konoye put the best face he could on this development, recalling that Tojo, as War Minister in Konoye's cabinet, had personally supported the meeting proposal and had been prepared to put his personal weight behind the hoped-for agreement with the President. But Grew and Doorman now held little hope for peace, believing that the chance which Konoye had presented of a reversal, not at once, but by controlling stages, of Japan's aggressive course had been lost. The Washington talks continued, and Grew employed his talents to the full with his old friends, the new Foreign Minister, Admiral Teijiro Toyoda, and others to make them succeed. But he was privately frank to say that in his view, the die had been cast when Konoye gave up on the proposed meeting and resigned.

Reflecting this view, Grew sent a number of cables during October and November, warning that the Japanese, finding themselves in a corner as a result of the freeze and embargo, not only might, but probably would, resort to an all-out, do-or-die attempt to render Japan invulnerable to foreign economic pressures, even if the effort were tantamount to national hara-kiri. In a message on November 3, he expressed the hope that the US would not become involved in war "because of any possible misconception of Japan's capacity to rush headlong into a suicidal struggle with the United States." He said that "the sands are running fast," and that "an armed conflict with the United States may come with dangerous and dramatic suddenness." Earlier in the year, he had reported that the Peruvian Ambassador in Tokyo had informed diplomatic colleagues that a Japanese Admiral in his cups had been heard to say that if war came, it would start with an attack on Pearl Harbor. The contrast between Grew's prescient warnings and Hornbeck's reported view that if one stood up to the Japanese, they would cave, could not be more stark. But "China-hand" Hornbeck's analysis prevailed over that of our Tokyo Embassy, not only with Hull and the President, but also apparently with our military authorities responsible for our Pacific defenses.

And so war came. It was Sunday in the US but Monday morning, December 8, when the news reached us in Tokyo. At about 8:00, I walked over from my apartment to the Embassy chancery--a distance of about forty feet. There, standing or lying around on the chancery lobby floor, were a collection of golf bags. It was the day for the "Tuffy's Cup" annual golf tournament, inaugurated some years before by the British Naval Attaché, Captain Tuffnel.

Chip Bohlen came down the stairs. Had I heard the news? The Japanese had attacked Pearl Harbor and other points around the Western Pacific, and the Imperial Headquarters had announced that a state of war existed between Japan and the US and its Allies. As I absorbed this intelligence, other Embassy officers arrived, most having heard the news from their drivers, who had heard it over their car radios.

The Ambassador had not yet come in, so I went up to his residence. He was relating to Ned Crocker how he had delivered a personal message from the President to the Emperor through Foreign Minister Togo at midnight and how he had been called over to Togo's office at 7:30 that morning to receive the Emperor's reply. Grew said that if Togo had known about the attack, he had given no sign of it on either occasion, though his manner had been even stiffer than usual that morning. That, however, could be accounted for by the fact that the Emperor's response to the President's message had broken off the year-long US-Japan negotiations. Grew later heard on good authority that Togo knew nothing of the attack until the news came over the radio early Monday morning.

I returned to the chancery, where people were talking in knots and scurrying about. I joined Bohlen, who was exchanging information with a British Embassy officer named Johnson who had driven over. We agreed that the Japanese appeared to have scored a major initial success. Walking back to my apartment, I comforted Kani-san, who was in tears, as best I could.

I then went down to the compound's front gate, which was closed tight with Japanese police standing all about. Outside, up the street, I heard a newsboy calling "*Gokkai, Gokkai,*" meaning "Extra, Extra" and waving copies of the English language "official" Japanese Government newspaper, *The Japan Times and Advertiser*, on which I could see gigantic headlines. It occurred to me that the paper would probably not only be informative on what happened, but would make a great souvenir. So I walked as inconspicuously as I could back along the eight-foot wall surrounding the compound to a corner where some small pine trees provided a little cover. There I scrambled over the wall, bought two copies of the paper, one to give to Grew and one to keep, and scrambled back. Fortunately, this somewhat foolhardy maneuver was not noticed by the police, who I knew had orders to allow no one in or out of the compound without express official permission.

Mr. Grew was delighted to receive his copy. He asked me to start collecting issues of the Japan Times Advertiser every day for him to take back to Washington as of possible value to US intelligence services and historians. My copy of the December 8 issue, with its massive headline, WAR IS ON, hangs framed on our basement room wall at home. Its probable value as a collector's item is enhanced by the fact that the Tojo Government, at about the time I went over the wall, ordered that paper's sale stopped and required everyone who had bought a copy to turn it in to the police for destruction. This was because the paper contained a fuller account of Konoye's efforts to avoid war that the government wanted known. The paper also contains the English version of the Imperial Rescript to the Japanese people on the outbreak of war. Probably drafted and translated by the Lord Keeper of the Privy Seal, Marquis Kido, who was fluent in English, it is a masterpiece of prose, almost Biblical in its majesty and sweep. A copy is attached.

Getting ahead of my story for a moment, I returned to Tokyo in early October, 1945 as Special Assistant to the Political Advisor to the Supreme Allied Commander, General MacArthur. Thinking it would be nice to have a copy of the August 15, 1945 surrender issue of the same paper, which during the war had been renamed the *Nippon Times*, to go with my December 8, 1941 outbreak of war issue, I searched out a copy, and it hangs in our basement alongside the earlier one. The surrender headlines are understandable smaller than the outbreak of war ones, reading, "His Majesty Issues Rescript to Restore Peace." But as in 1941, the Rescript is a prose masterpiece, probably also written by Marquis Kido, and a copy of it is attached. Beside the two newspapers on our wall are two pages of a 1942 issue of *Life*, with pictures and captions portraying our life during the internment, along with other memorabilia of my time with Grew.

Returning to Pearl Harbor Day in Tokyo, at about 11:00 a.m., a car containing several Japanese officials drove into the compound, and a Mr. Ohno of the Foreign Office asked to see the Ambassador. Someone called the residence, and Mrs. Grew answered. On being informed that a Foreign Office official wished to see the Ambassador, she replied that he was busy, and couldn't Gene Doorman receive him? But Doorman was not there. Having earlier been denied entrance to the compound by an overly-zealous guard, he had gone off to the Foreign Office to protest. So Ohno asked to see the next ranking Embassy officer, who was First Secretary Crocker. By that time, I had realized what was up and slipped into Crocker's office with Ohno and his colleagues.

After a brief exchange of greetings, Ohno pulled a paper from his pocket and said, "I am instructed to hand to you, as representing the Embassy, the following document which I shall first read to you."

"No. 136 - Strictly Confidential/Investigation V."

Ministry of Foreign Affairs
Tokyo, December 8, 1941

"Excellency:

I have the honor to inform Your Excellency that there has arisen a state of war between Your Excellency's country and Japan beginning today.

I avail myself of this opportunity to renew to Your Excellency the assurances of my highest consideration."

Shigenori Togo

Minister of Foreign Affairs

His Excellency Joseph Clark Grew,
Ambassador Extraordinary and Plenipotentiary of
the United States of America at Tokyo.

After a brief silence, Crocker said, "This is a very tragic moment."

Ohno replied, "It is, and my duty is most disasterful."

Ohno then proceeded to read the following statement concerning the Embassy and its functions:

1. The functions of the Embassy and the Consulates will be suspended as of today.
2. Members of the Embassy and Consulates will be accorded protection and living facilities in accordance with international usages.
3. In order to secure protection and facilities aforementioned, it is recommended that all the members of the Embassy be congregated in the Embassy compound.
4. Communication with the outside, including telephone and telegraph, will be suspended. In the case anyone desires to go out, permission must be obtained from the Gaimusho through the officer who will be posted in front of the Embassy, liaison officer, Mr. Matsuo. He has come here with me.
5. As soon as a country representing your interests is nominated, contact between your Embassy and representatives of the said country will be allowed as is necessary for the purpose of representing your interests.
6. Due attention is being paid to protecting the citizens of the United States.
7. All wireless transmitting sets will be surrendered at once.
8. All shortwave, wireless receiving sets, private as well as official, the use of which will no more be acquiesced to be handed over.
9. En clair telegrams informing your government of having been notified of a state of war will be allowed through the liaison officer."

Ohno then asked that someone be assigned to take the police representatives of the Department of Communications around to each office and apartment to be shown every receiving and transmitting radio in the premises. After phoning Grew, who felt that we were not in a position to refuse the request, as it was a case of *force majeure*, Crocker agreed to this under protest.

Again demonstrating youthful indiscretion, I went back to my apartment and effectively hid a tiny pocket radio which a college housemate and amateur radio expert had made for me and which I had brought along to Japan. The radio was about five inches long, three inches wide and three-quarters of an inch thick and had what my friend had told me might be two of the smallest tubes ever made. I carried it inside the upper pocket of my jacket, with holes cut in the pocket so I could reach in to turn the control knobs. a thin wire ran up under the back of my coat to a small, almost invisible ear plug. With this device, I had been able, unbeknownst to anyone, to listen to the radio during classes at college and even when riding my motorcycle. In Japan, I had tried it out a few times and had no trouble receiving Japanese language stations. In our current predicament, I thought it might be a useful source of information, and in any case, I did not want to lose it. The searchers never found it, and it did prove to be a moderately useful source of information until the tiny batteries wore out. I brought it back to the States on the repatriation ship.

Even before Ohno's arrival, a group of us under Bohlen's direction had started to burn the Embassy code books and classified files. The code books were numerous and bulky and the files extensive. Burning them effectively was no easy task, particularly in contrast with modern destruction techniques. The burning was carried on in metal waste baskets indoors and steel drums outdoors in the garage enclosure. From time to time, in spite of our best efforts, whole or partial pages of unburned code or text would float up and away over Tokyo.

Ohno and the agents searching for radios showed no interest in the destruction operation, saying that their orders were solely to find and remove radios, particularly, of course, transmitters, of which the Embassy had none. All our electronic message traffic was by coded text through the Japanese Postal and Telegraph Service. Ohno's lack of interest may have resulted from the fact, as Konoye had informed Grew a few months before, that Japanese cryptographers had broken all our codes except, Konoye thought, one.

In the days that followed, our group of sixty-five organized itself under Grew's and Doorman's direction into a smoothly running, not unpleasant routine. Fortunately, as one of my responsibilities, and with the possibility of war all too apparent, I had in August mailed into San Francisco a large grocery order, after obtaining from each American staff member a list of exactly what he or she wanted, paid in advance. The order arrived only a week or two before Pearl Harbor and proved to be a godsend.

Helen Skouland, a file clerk who later married career Ambassador H. Freeman Mathews, set up a store in a chancery office of all the assembled goodies. She and I decided that in the circumstances, a Communist distribution and accounting system was indicated, based not on who had ordered what but on what the relative needs were, including those of the ten or so American businessmen who had sought refuge in the compound when the war broke out and who had not participated in the order. So we devised a system under which the original orders were nullified, and all items were essentially rationed, with payment recalculated on the basis of a combination of need and ability to pay. The arrangement was readily accepted, and the groceries were successfully strung out to last until our departure. Fresh produce was procured from the Tokyo markets through our Japanese servants, almost all of whom stayed loyally with us to the end.

As the youngest member of the group, except for the eight-year old daughter of the Naval Attaché and his wife, Cynthia Smith-Hutton, I was appointed Sports Director. This was not an insignificant assignment. Although most of the group busied themselves pretty well writing, reading, learning to type or whatever, there was inevitably a good deal of leisure time, and sports had a definite morale and fitness importance. So Bohlen, the Assistant Naval Attaché, Commander Mert Stone and I laid out a nine-hole golf course, totaling over 500 yards among and over the buildings; we set up a badminton court and ping pong table in the garage courtyard; and I organized a succession of hotly contested tournaments in all three sports, with prizes. Some of the prizes, such as engraved silver cups and ashtrays, I ordered from outside, and some were sent in my friends of the Grews, particularly the Finnish Ambassador, Lars Tiltse and his wife.

Golf had always been Mr. Grew's favorite sport, and every morning he came down from the residence for a game. He still had misplaced confidence in my golfing skills and chose me as his partner for all the team contests. We won our share, and each of us brought back several trophies

engraved “Greater East Asia Black Sulphur Springs Golf Club.” “Black Sulphur Springs” was a reference to the plush resort where our counterparts, the Japanese diplomats in the US, were held. On other occasions, we used the title “Greater East Asia Co-Prosperity Sphere Golf Course.”

To enliven our golf games, I organized a running sweepstakes under which, if you drew the name of the next person to break a window, you won the pot. Needless to say, with some of the holes going over three-story apartments houses into small, invisible to the driver greens, a great many balls ended up in the Tokyo streets. Fortunately, we had a lot of balls and never ran out. And every day, except Sunday, the Grews and four or five other avid poker players gathered for their marathon poker series., which continued on the repatriation ships almost to New York. The stakes were fairly high, and at one point, the indebtedness of an Assistant Army Attaché reached a level uncomfortable to the Grews and the rest of the group as it was to him. But happily in the end, he pulled up almost even. The bridge players, led by Mrs. Grew, were equally committed to their almost daily game.

Everyone at the outset did his or her own laundry in the sink or bathtub, as the sight of drying linens and apparel around the compound attested. One day, while playing hide-and-seek with my best friend and constant companion, Cynthia, We came upon an old washing machine in the Grew’s attic. I managed to get it going, had it brought down to a room in the chancery basement and sent Cynthia to tell all and sundry that we were ready to take over their laundry chores, including delivery back to the apartments if they would bring their things down suitably bundled to us by 9:00 every morning. The next day, the pile waiting beside the machine was impressive, and it remained so for the rest of our stay. Cynthia performed all deliveries, including up the considerable climb to the residence. Our only misadventure was when Mrs. Grew sent down some of her best silk curtains, and I failed to see when I put them in the machine that a pair of Gene Doorman’s black socks were still in it. I accompanied Cynthia on the delivery. Mrs. Grew, after recovering from the shock, was kind enough to say that grey had always been her favorite color.

Another of my duties was control of the Grew’s wine cellar, located in the basement of the residence. Grew had earlier served in Germany--in fact, he had been Charge of our Embassy in Berlin when World War I broke out--and had brought a distinguished collection of German, French and other wines to Tokyo. Needless to say, he and the rest of us saw little point in leaving them for the Japanese to drink up after we had gone. So with the Grew’s permission, I brought the supply down at an accelerated pace by distribution to their and other messes around the compound. But there were still a good many bottles left when we departed.

On another occasion, my eyes started to itch and run. I mentioned it to Grew, who suggested to me that I see his eye man, Dr. Inouye. We were allowed out on police-escorted visits to doctors and dentists. On such occasions, I noticed that the sidewalks were as crowded with pedestrians as ever but that with the shortage of gasoline, the streets were almost barren of cars, even charcoal powered ones. And yet when the traffic light was against them, the crowds, without a car in sight in either direction, would pile up en masse on the sidewalk corners until the light turned green. Habits of conformity and discipline prevailed to an extent which would have been considered ridiculous in the West.

Dr. Inouye examined me carefully and announced that I had trachoma. He said that he would perform the necessary operation at once, consisting of scraping my upper and lower eyelids. Fortunately, I did not relish his description of the operation or the appearance of the scraping machine which he brought out, and I also remembered that trachoma was a serious and highly contagious disease quite common in the Far East but rarely caught by Westerners. I told Inouye that I thought I had better return for the operation the next day.

Back at the Embassy, I told Bohlen. Together we recognized that if I had indeed come down with trachoma, all the carefully negotiated repatriation plans, then nearing completion, could be disrupted. Bohlen went off to discuss the matter confidentially with one or two others. When he came back, he reported that another of our group, Consul General Slavens, had recently complained of the same symptoms. He had seen a doctor (not Inouye) who had diagnosed the problem as pink eye. He had largely recovered. Needless to say, I did not return to Dr. Inouye, but cured myself with some of Slavens medication. Bohlen and I mentioned the matter to no one.

In mid-April, I was playing golf on our private course with Major Stanton Babcock, the Assistant Army Attaché (believe it or not, another Grotonian!), when we heard explosions in the distance. We looked up and saw a rather large military aircraft slowly flying quite low over the Diet (Parliament) building with black anti-aircraft bursts visible behind and above. As we watched it disappear to the south, obviously untouched by the anti-aircraft fire, Babcock said that he was sure that it was an American bomber but that he had no idea how it could have got to Tokyo. The most likely way was from an aircraft carrier, but he had never heard of a plane of that size taking off from a carrier.

We dropped our clubs and ran up for a better view from the residence. There we encountered Grew with the Swiss Minister, Mr. Gorge. Grew said that he had been bidding the Minister farewell when they had seen and heard a number of large airplanes overhead. Shortly after, they had observed fires burning in different directions with lots of smoke. Sirens and gunfire could still be heard as we stood there, but the planes were no longer in view.

The papers that evening reported that nine enemy aircraft had been shot down over various parts of Japan, and several photos were shown to prove it. On examination, however, our military colleagues concluded that the photos were all of one downed plane, taken from different angles. Only later did we learn through Gorge that we had a ringside view of the Doolittle raid.

On arriving in Japan in July, I had got to know the former girlfriend, a diplomat's daughter, of an Embassy officer which had been reassigned some months before back to the States. The young lady had told me that the officer, on getting settled in his new job back home, would be calling for her and that they would be married. The last time I had seen her, in early November, she had told me that as far as she knew, this plan still held and that she hoped soon to depart.

I had tried to convince the young lady, whom I will call Jane, that these things do not always work out as planned, but without much success. After Pearl Harbor, with communications cut off and having learned that the young man had become engaged to someone else, it bothered me that

Jane might spend the entire war in lingering hope that he would be waiting for her. Being at a romantic age, I felt that I should get word of the young man's engagement to Jane.

This was made difficult by the fact that she lived in Yokohama. To meet this problem, I managed to get word to a golfing friend in the German Embassy, who had once expressed interest in my clubs and who knew Jane, that I would be glad to sell the clubs to him if he could come in to close the deal. He came in, and while we bent over the clubs, I asked him if he would go to Yokohama and ask Jane to meet me at 8:00 p.m. two evenings later in a second story room in the home of Naval Attaché, Captain Smith-Hutton, just outside the compound wall. The window was only a few feet from the top of the wall in an only moderately exposed part of the compound. The nearest police box, or *koban*, was about twenty yards away, and it would be dark.

My German friend agreed to do this, and at the appointed time, I wandered out to that part of the compound. As I approached, the policeman emerged from his *koban* to walk his beat up and down the inside of the wall. I said, "*Samui desu nee*," (cold, isn't it), to which he replied, "*Hai, soo desu*" (it certainly is) and turned back on his beat toward the shelter of the *koban*.

Under the cover of the now rather complete dark, I jumped over the wall and through the window, which the Smith-Huttons, who were, of course, parties to the plot, had promised to leave open. There was Jane, to whom I gave the news. She took it stoically, but as we talked, it became clear how much she dreaded the prospect of life in wartime Japan for an indefinite number of years ahead. A bit carried away, I said that as my wife, she would be able to accompany us on the exchange ship to the US, where we would immediately have the marriage annulled. I said that I thought that Mrs. Grew, who knew Jane and her parents, might be prepared to serve as Jane's guardian for the undertaking, if Jane's parents would agree. Jane said she would beg for their consent and would find some means of letting me know their answer.

I related the conversation to Mrs. Grew, who, as I expected, readily agreed to help get Jane settled in the US and to be responsible for her. But word came from Jane a few days later that her parents would have none of it. That was the end of the venture. Jane spent a difficult four years in Japan during the war, married a US serviceman during the occupation, and lives happily with him and their family in the US to this day.

Midway through the internment, in late March, Grew, whose fondness for golf was well known to Japanese officialdom, was informed by the Foreign Office that he, Doorman and one or two other Embassy officers would be permitted to play a game of golf, maybe two, at one of the Tokyo courses. The offer was tempting, as the Japanese knew it would be, but after soul-searching deliberation, Grew informed Doorman and the rest of us that he had decided to decline. There would, however, be no objection if we wished to go, not as sport or entertainment, but because we felt the need for reasons of physical or mental health. His undoubtedly well-justified concern regarding his own acceptance of the invitation was that the Japanese would photograph him on the course, and he had no desire to see himself so pictured in the world press at that point. He knew that a number of Allied diplomats had accepted the offer but that the British Ambassador had not. Needless to say, the rest of us followed Grew's lead and did not go out either.

In late December, as I recall, Grew mentioned that he had started work on a report to Secretary Hull and the President, presenting his frank, carefully considered views on what he believed had been Washington's mishandling of the pre-Pearl Harbor negotiations. After devoting ten years of his life to the cause of American-Japanese friendship and seeing it end in the holocaust at Pearl Harbor, he did not feel that he could in good conscience fail to present to his superiors in Washington and to history his honest assessment of the 1941 negotiations as viewed from the Embassy. It would be his own, personal report for which he alone would be responsible, but he hoped to benefit from Doorman's comments and suggestions in its preparation and later from those of a few others in the Embassy, notably, Crocker and Bohlen. The report would, of course, be entirely confidential, for Hull's and the President's eyes only, unless they wished to open it to others.

Every morning Grew worked on the report in his study in the residence, progressively bringing Doorman and the Crocker and Bohlen into the task. Marion Arnold did all the typing. One morning in March, he handed me a copy and asked me to take it to my apartment, study it and give him my thoughts and suggestions, all the way from major policy considerations to drafting points. I was to show the draft to no one and was to bring it back myself to him with my comments.

I spent two days at the task and was rewarded by Grew's apparently sincere thanks for what I produced. As I will soon explain, to the best of my knowledge, no copy of the paper exists today. Accordingly, I can rely only on memory in attempting to relate what it contained.

Essentially, Mr. Grew, a master of the English language, recapitulated in clear, concise, often eloquent terms that case for the Konoye-Roosevelt meeting which he had earlier advanced in his cables. From the moment he had arrived in Tokyo as a Hoover appointee in 1932, he recalled, he had devoted himself unremittingly to the cause of the US-Japan friendship. Instead he had seen the relations steadily worsen as Japan's aggressive course took it into Manchuria, then China and then Indochina and the Malay Peninsula.

Finally, Grew wrote, in the summer and fall of 1941, an opportunity had presented itself under Prime Minister Konoye to reverse that course. Again and again, in carefully reasoned messages and with the benefit of intimate knowledge of the evolution of Japanese policy, of conditions and attitudes in Japan and of the leading personalities involved, including Prime Minister Konoye, the Embassy had argued that the opportunity was a real one which should be seized. It had clearly explained why Konoye could not present his far-reaching proposals, representing a fundamental shift in Japanese policy, through diplomatic channels because of the virtual certainty of hostile leaks, of Konoye's resulting assassination and of the failure of the enterprise. Konoye was prepared, with the Emperor's and the military's backing, to pull Japanese forces out of China and Indochina. But this had to be done by controlled stages over a specified, limited period of time and not so as to appear to be an abject surrender.

Washington had initially shown interest in the proposal. But this soon waned and was replaced by sweeping and inflexible demands on Japan, which ignored the real situation in which Japan, as a result of its own misguided policies, had placed itself. The US in effect said to Japan, agree to withdraw completely from China and Indochina, to in effect renounce the Axis Pact and to

subscribe to open and non-discriminatory trade practices, and then we will negotiate with you. The Embassy had explained that Konoye sought many of the same goals that the US did but that he had to reach them by stages, which took account of the hard facts that Japanese forces were by that time stationed widely over China and Indochina, that the nation had undergone heavy sacrifices in pursuit of its misguided policies and that a reasonable period of time was required to turn the ship of state around. The Embassy's advice that reasonable confidence should be placed in the good faith of Konoye and his supporters to implement the steps which were so clearly in Japan's interest was apparently disbelieved and rejected.

Grew, in his report, set forth more specifically than he had in his cables or than he later did in his books the terms which Konoye had told him he intended to present to the President. They were, as I recall:

- (1) Japan would effectively commit itself not to take hostile action against the US under the Tripartite Pact in case of war between Germany and the US;
- (2) Japan would commit itself to withdraw its forces from China lock, stock and barrel within eighteen months from the date of finalization of the US-Japan settlement agreement;
- (3) The US and its allies, in return for these commitments and for evidence of the beginning of the withdrawal of Japan's forces from Indochina and China, would (a) partially lift the freezing of Japanese assets and the embargo on the shipment of strategic materials to Japan, and (b) commence negotiations for new treaties of commerce and navigation with Japan on the clear understanding that signature and ratification would depend on Japan's full compliance with its obligations under the agreement;
- (4) Japan would complete the withdrawal of its forces from Indochina and the Malay Peninsula;
- (5) The US and its allies, on the completion of the withdrawal of Japanese forces from China, would completely terminate the freezing and embargo and effectuate the new treaties of commerce and navigation;
- (6) The disposition of Manchuria would be left to be determined after the war in Europe was over--Konoye intended to point out to the President that if the Allies prevailed in Europe, they would clearly be able to compel Japan's withdrawal from Manchuria; if, on the other hand, the Axis prevailed, Japan would equally clearly be able to remain in control of Manchuria.

I also recall Grew's relating in his report an aspect of Konoye's plan which I have not seen set forth anywhere else. Because of Konoye's concern about the danger of leaks of what he and the President would hopefully agree at their meeting, Grew said that he (Konoye) had told him that he planned, with the President's cooperation, to keep the terms of their agreement secret until he had returned to Japan. Immediately on his return, he intended to meet with the Emperor, obtain his approval of the agreement terms and of an Imperial Rescript so stating, and then at once go on the radio to announce the terms, bearing the Emperor's and the highest military authorities'

support, to the people. As earlier noted, Konoye believed that the people's response to the agreement would be so positive that extremist elements would not be able to prevail against it.

Although it took fifty years since I studied and made suggestions on Grew's internment report, and I kept no notes, I believe the above is an accurate rendition of what I read. The reciprocally controlled, step-by-step (*pari passu*) nature of the arrangement is particularly clear in my mind because of Grew's emphasis on it in our discussions on the "Gripsholm." The first steps, he stressed, would be required of Japan; The US and its allies would not be obliged to start to lift the freezing and embargo or take any other action involving cost or risk until they were convinced that Japan was faithfully fulfilling its prior commitments, including those relating to the withdrawal of its forces from Indochina and China. The US and its allies thus stood to gain much--the avoidance of war in the Pacific without sacrifice of any essential Allied principle or objective--while risking nothing.

Why Konoye's intended terms were not presented in the above detail in Grew's cables from Tokyo may be explained by Konoye's reluctance to go into such detail before the meeting or by Konoye's and the Embassy's lack of confidence in the security of the US codes. Why he did not present them in this detail later on in his books I do not know. The specifics of the arrangement, clearly enabling the Allies to maintain control of the implementation of the settlement, would seem to add to the strength of Grew's case that the Konoye-Roosevelt meeting should have been held.

Returning to the story of our internment, the arrangements through the Swiss and Spanish Governments for our exchange with Japanese diplomats, businessmen and others held in the US finally fell into place, with June 18 as our scheduled sailing date. We would travel aboard the *Asama Maru* via Hong Kong, Saigon and Singapore, through the Sunda Straights and across the Indian Ocean to Lourenco Marques (now Maputo), the capital of Mozambique. There we would meet the Swedish cruise ship, *Gripsholm*, which would have brought the Japanese repatriates from New York. They would board the *Asama Maru* for Tokyo while we proceeded to the *Gripsholm* via Rio to New York.

As June 18 approached, Grew pondered how he could most safely carry out his report. While our persons and effects should, under diplomatic usage, not be searched, we had no assurance that the Japanese would respect that rule, as they had not respected many other rules of diplomatic privilege during the internment.

After discussing the problem with Doorman and others, he decided to make seven copies of the sixty-page, legal size document to be carried, one copy each, on his own, Doorman's, Crocker's, Bohlen's, my and a couple of other Embassy officers' persons on the theory that the Japanese would be less likely to search us than our baggage. The problem, it became apparent when the seven copies were ready, was that it did not fold very well, producing a noticeable bulge in our pockets. So someone, I forgot who, conceived the idea of making two holes at the top of each of the copies and hanging them down our backs inside our shirts, suspended by concealed strings around our necks. On our arrival aboard the ship, we would all repair to the Grew's cabin to hand our respective copies over to him, to be kept in a locked box throughout the voyage.

The early morning of June 17 we were taken in a line of police-escorted taxis to the Tokyo Railroad Station. We walked in between lines of police to a large waiting room. There had been collected several score American and other diplomats, missionaries, businessmen, newsmen and others who had been held at various points around Tokyo. The newsmen, who the Japanese assumed were all spies, had been held in closed confinement or prison, often in solitary, constantly interrogated and in many cases, tortured. (Later, on the ship, some of them demonstrated the “water cure” torture to which they had been subjected--some many times.) There was much handshaking as friends met after six months of separation and exchanged experiences.

After an hour or so, we boarded a special train and rode by a roundabout route through Kawasaki directly to the ship. There were no searches or inspections of any kind on the train or as we boarded the *Asama Maru*, a fairly large liner. Aboard the ship, we were joined by many more American and other repatriates collected from all over Japan.

Soon word spread that a hitch had developed and that our departure would be delayed. The ship moved out to anchor beyond the breakwater, and the next day, it moved again to another anchorage further out in the bay. For a week, we sat there, with launches full of Foreign Office and other officials and police coming and going and with constant rumors of our imminent departure or our return to shore. Our newsman, Max Hill of AP, who had spent almost his entire internment in solitary under torture, said that if we did not depart, he would commit suicide. He clearly meant it and in fact did commit suicide some years later, perhaps due in part to what he had suffered in confinement.

About midnight of June 24, I went on deck. a large group of crewmen were debarking from a launch, a nearby gunboat was frantically signaling with lights and further down the deck, I heard policemen saying goodbye. I woke some Embassy colleagues up in time to see the Foreign Office launch leave for the last time. The anchor came up, and the ship began to move. And then, just as we were being ordered off the decks, presumably to prevent our carrying back military secrets of the harbor, the great white cross, perhaps forty feet wide and tall, high up at the front of the ship, lit up. Our lives would depend on its safe-conduct message being seen and respected by enemy and friendly surface warships and submarines as we made our way through active war zones around Asia and across the Indian Ocean to Africa.

This is perhaps a fit point to repeat a story Chip Bohlen told me years later. He had attended a party in Moscow where the company included several Soviet naval officers. Someone brought up the diplomatic exchanges early in the war, and Bohlen, fluent in Russian, mentioned that he had been on the *Asama Maru*. One of the former naval officers looked at him and said that he (Bohlen) was lucky to be alive. He told how he had been a submarine skipper in the Indian Ocean, and one very dark and foggy night, he had seen a large ship about to cross his path. Knowing of no Allied vessels of that size in the area, he had assumed it to be an enemy ship. He had ordered torpedoes into the tubes and was just about to give the order to fire when the fog cleared, and he saw a great, lighted cross. He and Bohlen toasted fate and each other with vodka.

On June 27, we passed between the mountainous west coast of Taiwan and two small green islands. Two Japanese submarines surfaced and traveled alongside us for a while. Two days

later, we anchored (back of) Hong Kong in Repulse Bay. US Consul General Southard was one of the first to come on board. He had lost fifty-four pounds in confinement, and his clothes hung on him like sacks. About 100 repatriates were added to our number, including Joe Alsop. That brought us to about 800 souls, with another 150 due to come on in Saigon. Knowing Alsop (still another Grotonian), and being in charge of billeting, I invited him to join the five of us in my cabin. He told us harrowing stories of the fall of Hong Kong, and we endured the clacking of his portable typewriter to all hours all the way to Rio, as he prepared to file them on our arrival there.

On July 2, we sailed all day along the Indochina coast, moving slowly to allow another repatriation ship, the *Conte Verdi* (which years later burned in a famous accident at sea), to catch up with us at Singapore. The next day we started up the Saigon River, anchoring ten miles short of the city. Annamese swarmed around the ship in their little boats, yelling, diving for coins and selling all kinds of fruit, the first many of our company had seen in a long time. We dropped money down in waste baskets as the end of ropes and pulled up our purchases. Some of us fell for an impressive “cognac” in impressively labeled bottles, which turned out to be a mixture of alcohol, vanilla extract and river water. I kept my bottle in the attic for thirty years and then poured it down the toilet.

On July 4th, we sailed back down the Saigon River and after some complicated maneuvers, set off for Singapore. Approaching shore two days later by a guided zig-zag course to avoid mines, we anchored near the just arrived *Conte Verdi*. We at first thought we were at Singapore, but it turned out to be an anchorage about fifty miles up the east coast of Malaya. About 150 additional repatriates came on board, with more tales to tell. We were not allowed off, and on July 11th, headed for the Sunda Straights. At one point, we could have slung a stone in one direction onto Java and in the other, onto Sumatra. Looking out a porthole, I saw us pass within twenty feet of the upright masts of a sunken freighter. On entering the Indian Ocean, we soon felt “monsoon swells,” and a fair number were seasick that night.

At about 11:00 the night of July 13th, our rudder failed, and we took a ninety-degree turn toward the *Conte Verdi*, which was running parallel to us and a little behind. Passing to her rear, we took another ninety-degree turn and almost hit her again. We then came to a complete stop as the *Verdi* circled us and half an hour later started up again at half speed. The next morning we were still at half speed, with the *Verdi* just in sight on the horizon.

I will hear quote from a diary I kept of this part of the trip:

“July 22nd. Up at 7:00, in sight of coast of Africa. Strong wind, very cold (winter down here, of course). About 8:00 *Verdi*, leading then, picked up pilot while still moving and proceeded across bay toward Lourenco Marques, twenty miles off. a few minutes later we did the same. Nothing has so brought home to me the distance we have traveled as the sight of the four coal black Negroes who rowed the Portuguese pilot alongside. From the same rail, we had seen the same operation performed at Tokyo, Hong Kong, Saigon and Singapore. It seemed no time at all ago that we had been buying papayas from chattering, red-lipped (betel

nut) Annamese down below--and now from African Negroes. We followed *Verdi*, caught up and passed her, drew near promontory behind which lay L-M, passed around point and right by tanker flying American flag, blowing its whistle to beat the band. British ships on other side doing same. Much cheering and shouting back and fourth. Mrs. Grew and I standing on top deck had been trying to decide whether a large white ship up ahead was the *Gripsholm* or not. Now we could make out the name in big black letters on the side. Ambassador joined us to say the Port Captain now on board had seen him and been most agreeable, even saying we might go ashore as soon as we landed if he wished. We had been speculating for days whether we would be allowed ashore. Now it appears we will.

“We berthed in front of *Gripsholm*, with *Verdi* behind her. L-M dock is a long (half mile) siding--ships berth sideways is single file. Port facilities--cranes, warehouses, etc.--excellent. During afternoon, I handled distribution of first class mail brought aboard by State Department man from *Gripsholm*. Much pleased to find good sized packet for myself. Informed that exchange of our group of about 800 with the Japanese would begin tomorrow at 9:00 a.m., and we would go ashore afterwards.”

“July 23rd. Next morning people started to line up at 8:00 to exchange. I arranged with Muir (other State Department representative) to get Ambassador and Mrs Grew off without meeting Ambassadors Nomura and Kurusu. We four marched off the boat first, I carrying Bohlen's hat box (containing Grew's report) as I had from Tokyo to Yokohama and onto *Gripsholm*. a long line of Japanese coming off *Gripsholm* and going up the pier to get on *Asama* was beginning to form. Aboard *Gripsholm*, we waited in smoking room until Grews' cabin cleaned and ready, then all up to eat fabulous buffet lunch, buy escudos (L-M currency). Spent most of day with press boys Hill, Bellarie, Tolischus and Alsop.”

“July 24th. Arrived back at gangplank with Moran 9:00 a.m. from Polona Hotel to find Ambassador, Williams and Crocker itching to get out on the golf course. Took taxi to American Consulate, picked up Preston (Consul), who took us to Polona Golf Club. Fine club house. Crocker and I played Ambassador and Williams. Fairways terrible, greens fine. None of us expected to even touch the first ball, not having held a driver for eight months. I drove first, and just as my first drive in Japan, hit one right down the middle 250 yards and then soon reverted to type. Had a fifty. We only played nine. Funny sort of hard-shelled oranges all over the eighth hole.”

“Back to ship for lunch. During afternoon, Clara Hamasaki deposited baby with husband Jimmy, and we saw the town. Same in evening, starting with movie “Dive Bomber” and ending at casino. Am working to get them better cabin. Got Wills up to first class from fifth and have helped others. Terrible *yakamashii* about cabin allotment. People sleeping all over lounges and decks as night before.”

“July 25th. Went shopping with Jane and Cynthia in Preston’s car all morning. Afternoon, played tennis with Benninghoff on private court with girl we met at casino night before. Evening, dance at Yacht Club with same.”

“July 26th. Took Cynthia with me while I bought toothpaste, etc. and then out to zoo. Taxi trip out there of twenty-five minutes gave some idea of African country, natives carrying bundles on head, poverty. Mozambique produces almost nothing, lives by levying head tax on its Swazi natives sent (gladly) to South African mines. Fine zoo, lions, leopards, baby elephants, pythons, etc. spread over about thirty acres, finely landscaped, loud speaker playing jazz all the time. Cynthia wandered away from me for a second, and when I looked up, she was patting what looked like a two-ton lion on the head through the bars.”

“When we got back at 1:00, the *Asama* had pulled out a hundred yards into the harbor and *Verdi* was just dropping her ropes. Japanese on shore (diplomatic transferees) and on ship were waving flags, shouting *banzai*. *Asama* and *Verdi* sailed slowly out together. I was probably the only American in the whole town who felt anything like mixed emotions as we watched them go. Cynthia felt no emotion, informing me that she felt the call, so we went back on board *Gripsholm*, and thence to lunch. Mr. Doorman saw me on deck and asked if I would like to sit with Mr. and Mrs. Stanton (Hong Kong), mother of Fearon (St. Marks), Mrs. Shields, Lois Fearon and him at meals, so there I will be for the voyage. In the afternoon, back on shore and more shopping with Cynthia, and in the evening, a drive and a movie with Preston Jr., son of American Consul. Preston Sr. was Consul in Norway when Germans came in. Preston Jr. works in Jo’burg and is just back from flight training in Scotland.”

“July 27. Sightseeing with Jane and Cynthia until 1:00 p.m. when we all had to be on the ship. Sail tomorrow 7:00 a.m.”

“July 27. Sailed 3:00 p.m.”

One incident which I neglected to include in my diary is of some interest. Grew had worried as we approached Lourenco Marques what he should do if he met Japanese Ambassador to the US, Admiral Kichisaburu Nomura, in the street. They were longtime friends, and he would normally have been glad to greet him, but now Nomura was an Ambassador of a country with which the US was at war. Grew had no desire to have a photograph of Nomura and him chattering together shown all over the Free World. He decided that if they met, he would bow stiffly and pass on without pausing.

And meet they did, in the main street. Nomura was accompanied by Ambassador Saburo Kurusu, who had been sent to Washington a month or so before the outbreak of war to assist Nomura. I happened to be with Grew. Nomura smiled broadly at Grew and started over with his hand outstretched, trailed by Kurusu. Grew never slackened his pace. Bowing coldly, he ignored the

outstretched hand and passed on. The incident long rankled with him, but he never doubted that he had done the right thing.

The voyage across the South Atlantic was uneventful. Life aboard the *Gripsholm* was in every respect in happy contrast with what it had been on the *Asama Maru*--outdoor games, swimming pool, movies, excellent food. Most of those who were thirty, forty, or even fifty pounds underweight and/or suffering from nutritional diseases made a good start on their recovery. I will resort again to my diary for the highlights of our stopover in Rio.

“August 11th. Up at six to watch entrance into Rio de Janeiro harbor, supposed to be most beautiful in world. Fine day. Docked 10:00 a.m. Elsie Lyons, Ambassador’s youngest daughter, had flown from Chile, where her husband is the Minister, came on board. We got off about 11:00. As at Lourenco, I carried Bohlen’s hatbox containing “the dynamite.” Dowling from the Rio Embassy and others met us (Ambassador Caffery in US). Pictures right and left as we walked to car, drove to Embassy. There we deposited hatbox in coderoom vault and departed for Copacabana Hotel where Mrs. Grew had gone. Lunch with Grews, then out shopping with Newton. No laundry since Tokyo so bought shirts, etc. Saw a lot of the city. Half hour swim at Copacabana beach. Back to ship 5:30, dressed, headed for Simond’s (Consular of Embassy) house for cocktails for all Foreign Service personnel. Went from there with Cooper and Cabot Colville (Tokyo man now doing checking on suspicious Japanese in S.A.) To party given by Mrs. Caffery where cream of Rio society, quantities of champagne, Brazil nuts, smart talk. Left there about 8:00 for third cocktail party at Jack White’s house, First Secretary, Embassy in suburbs, and from there about ten of us to the Urca for dinner. Urca and the Copacabana are the two best night clubs in Rio. Three wonderful orchestras, floor show 11:00-1:00. Mostly S.A. type of music. Never saw people who enjoyed dancing so much or were so good at it, or orchestras which so genuinely enjoyed playing. Atmosphere entirely different and indefinitely superior to N.Y. night clubs. Left about 3:30 a.m. Half way back to ship when Natalie Boyd and I decided to visit Copacabana. Stayed there an hour.”

“August 12th. Up at 7:30, took taxi with Charlie Cooper out to Sugar Loaf. Five miles. Took us to top in cable car. Marvelous view of city, harbor. Down about 11:00 and decided to go up to the other high point of the city, Corpus Christi, with great big white statue of Christ. About 100 feet below statue we stopped at hotel for lunch and then went up. Even higher and better view than Sugar Loaf; about 2,000 feet straight up. Drove back to ship. Saw Benninghoff and Allison sitting at one of the sidewalk cafes on Avenida Rio Branca, Rio’s Broadway, so stopped for a beer and then walked to ship.”

“Sailed 4 p.m. Stood with Jane and Cynthia on deck as Harry, flying back to US, faded into distance. He may be assigned to a ship and at sea before we get back. Mrs. Grew stayed behind as planned. Ambassador had asked me before we

reached Rio if I would like to move in with him. Moved in that night, Cabin 1A, no less”

The trip from Rio to New York was another two-week pleasure cruise aboard the Gripsholm. Rooming with Grew provided me further opportunity to discuss his report. He told me that on our arrival in New York, he planned to go at once by train to Washington. He wanted me to go with him, unless some problem arose in New York that necessitated my staying a few hours or overnight. He spoke again of wanting to introduce me to Assistant Secretary of State Howland Shaw to discuss job possibilities, adding that if an appropriate position was not available at State, he wanted to introduce me to the President, “who should be able to open a few doors.” He had been kind enough to read and compliment me on a paper I had written during our internment, in which I set forth my ideas for the post-war world, and said he wished to give copies to Shaw and the President.

We docked in New York on August 25th. The ship was immediately flooded with State Department and other officials and newsmen, almost all of whom headed for Grew. After he had met with the press and dealt with the most pressing arrival problems, the two of us were taken by limousine to the station and entrained for Washington.

Then we were met by Grew’s own car and driver and driven to his home at 2840 Woodland Drive. He unpacked, read some mail and made some phone calls. And then, as we were finishing an early dinner, the doorbell began to ring. One after another, a half dozen old friends, including James Forrestall and Harry Hopkins, came in to welcome Grew home and hear his account of events before and after Pearl Harbor. Grew kindly introduced me to all the great men and called on me a few times to enlarge on his replies to their questions.

The next morning, armed with the original copy of his report, he and I climbed into his car and drove to the southwest corner of the State Department, where Secretary Hull’s office was located. Perhaps a dozen reporters and cameramen awaited, peppering Grew with questions and flashes as we worked our way through to Hull’s outer office. Under Secretary Welles was away. After a few moments wait, Grew was ushered into Hull’s office. I sat outside and tried to answer his and Welles secretaries’ questions about our experiences.

About twenty-five minutes later the Secretary’s raised and clearly irate Tennessee accent penetrated the oaken door. I could not make out what he was saying, but it was obvious that the meeting was not going well. Soon the door opened, and Grew emerged looking somewhat shaken, with Hull nowhere in sight. Though it was still only mid-morning, Grew suggested that we walk two blocks up the street to the Metropolitan Club for lunch.

When we were settled there, I asked him what had happened. He replied that he had presented his report to the Secretary, explaining that although it had benefited from the comments and suggestions of the principal members of the Embassy staff, who concurred in it, it was his personal report for which he alone was responsible. As the Secretary knew, he had continued, the Embassy’s assessment of the situation in Japan during the latter part of 1941 and its views and recommendations on the course the US should pursue had not been accepted in Washington.

There may, of course, been factors known to Washington but not in Tokyo which would account for this, but no such factors had been communicated to the Embassy, most of whose messages, in fact, received no reply at all (In his diary, Grew likened his messages to Washington to throwing pebbles into a pool on a dark night.). Nevertheless, during the internment, he had felt it his duty to review the record as it was available in Tokyo and to draw up for the Secretary, the President and Department's classified files his frank appraisal of the course of the negotiations in the months before Pearl Harbor. It was his honest, confidential report--he had provided copies to no one and would not without the Secretary's express approval.

Grew said that the Secretary started to leaf through the report. As he did so, he face hardened and flushed. After a time, he half threw the report back across the desk toward Grew and said, "Mr. Ambassador, either you promise to destroy this report and every copy you may possess or we will publish it and leave it to the American people to decide who was right and who was wrong." Taken aback, Grew said that he had replied that this was his honest, confidential report to his superiors in Washington and that he could not in good conscience agree to destroy it. Neither could he be party to its publication and a public controversy in time of war when national unity was essential. Subject to the Secretary's approval, he had decided that what he could most usefully do would be to undertake an extensive speaking tour around the country to inform the American people about Japan's military strength and the need to prepare for a long, though in the end inevitably victorious, Pacific war. The Secretary's response had been, "Mr. Ambassador, come back at 10:00 tomorrow morning, and give me your answer to the alternatives I have presented."

I told Grew that I did not see how he could have given any other reply than the one he had. In the course of lunch, he asked if I was a member of the Metropolitan Club. I said, "No, I had only just graduated from college."

"But you want to be a member, don't you?"

"Yes, I guess so."

Looking around, he said, "There's my old friend, Howland Shaw, who I think is a member of the Board of Governors."

He beckoned Shaw over, introduced me and told him that I want to join the Club. a few days later, I received a note from Shaw welcoming me into the Club and saying that I was free to use it pending my election. a bill for \$20 was enclosed. I was formally elected in January, 1944, paying an initiation fee of \$100. These days, one waits four to five years for election, and the initiation fee is \$10,000.

The next morning, Grew and I climbed into his car again and headed down Rock Creek Parkway to Hull's office. This time there were no reporters or cameramen, and Grew was promptly escorted into Hull's office. No sounds penetrated the oaken door, and after about thirty minutes, the two emerged together smiling and obviously on friendly terms.

Again Grew suggested that we walk up to the Metropolitan Club. During lunch, since he had not volunteered any information, I asked him what had happened concerning his report. He said that the Secretary had not mentioned it but that he expressed strong support for his (and Grew's) planned nationwide speaking tour. The rest of the time had been spent in a discussion of the war in Europe and other topics.

Shortly afterward, with Grew's help, I went to work for Leo Pasvolsky, whom the Secretary had put in charge of the State Department's post-war planning work. I spent the war as a member of a small unit under George Blakeslee and High Borton, preparing research/policy papers which, after approval by the Far East Area Committee and the State-War-Navy Coordinating Committee (SWNCC), were issued in 1945 and 1946 as directives to the Supreme Allied Commander, General MacArthur, in occupied Japan. During that time, I continued to see Mr. Grew occasionally and one or twice to draw him out on what had happened to his report, since an exhaustive search of the Department's files had failed to reveal it. He never seemed to want to discuss the matter, nor did Gene Doorman, whom I also ran into from time to time and who, toward the end of the war, served as the State member of SWNCC.

Years later, during the '70s and '80s, after I had been assigned back to Washington, I made a determined effort to find a copy of the report. It seemed a shame for students of the pre-Pearl Harbor negotiations to be denied access to the personal assessment of those negotiations written right after Pearl Harbor during the internment by our Ambassador on the spot. This seemed particularly true considering that he and Washington differed sharply on the proposed Konoye-Roosevelt meeting. The essential reasoning of each side--Washington's and the Embassy's--had long been in the public record, but I had never seen the Embassy's case set forth as eloquently and persuasively as in Grew's internment report. Having earlier confirmed that the report was not in the collection of Grew papers at Harvard, I sought for clues from Mrs. Marion Johnston, Grew's long-time secretary, and from members of his family but to no avail. The family told me that at one of his last meetings with them, Mrs. Grew (who died in 1965) had said that everything he wished to say to history was in his books. With this clear statement of Grew's wishes, and convinced in any case that no copy remains, I abandoned the search.

In Chapter XXXIV, "Pearl Harbor: From the Perspective of Ten Years," of his 1952 Turbulent Era - Volume II, Grew reaffirms in 131 pages the themes of his internment report. He then cites the contrary views of Herbert Feis, the noted historian, in his 1952 book, The Road to Pearl Harbor.

"If Konoye was ready and able--as Grew had thought--to give Roosevelt trustworthy and satisfactory promises of a new sort, he does not tell of them in his 'Memoirs.' Nor has any other record available to me disclosed them. He was a prisoner, willing or unwilling, in the terms precisely prescribed in conferences over which he presided. The latest of these were minimum demands specified by the Imperial Conference of September 6, just reviewed. It is unlikely that he could have got around them or that he would have in some desperate act discarded them. The whole of his political career speaks to the contrary. . ."

Grew, as I have described, believed that face-to-face with Roosevelt, Konoye intended, and would have been able, to “get around” the minimum demands specified by the Imperial Conference of September 6th and earlier conferences.

Grew concludes his Turbulent Era account with the following:

“I may as well close this Postscript with a single sentence from Mr. Feis’s book, taken out of context it is true, but in my ex-parte view, it is the crux of the whole story. ‘It will always be possible,’ he writes, ‘to think that Grew was correct; that the authorities in Washington were too close to their texts and too soaked in their disbelief to perceive what he saw.’”

If, as one can only conclude from reading Chapter XXXIV in Turbulent Era, Grew in 1952 still firmly held to the views he had expressed in his report to Hull and Roosevelt, why did he not insist on the report’s being accepted by Hull in 1942, incorporated in the Department’s classified files and made available to historian twenty-five years later in The Relations of the United States, 1941, Japan? Why did he apparently destroy every copy?

I do not know, but my best guess is that he decided that pressing the report on a resistant Hull would serve no useful purpose and would on the contrary cut him (Grew) off from Hull and the Department and the support he needed from them to do what he felt was much more important at that point--to tour the country to awaken the people to Japan’s military strength and the prospect of a long war. He may also have been looking ahead to the end of the war, wishing to do nothing which would jeopardize the possibility of his being able to influence the terms the Allies offered to Japan, particularly concerning the disposition of the Emperor. As for his obligations to history, he may have concluded that he could tell his story later in articles or books, when doing so would no longer have the above-cited disadvantages.

Supporting this hypothesis is the fact that, with his report removed as an obstacle, Grew was able to carry out his speaking tour in 1942-43, and in 1944-45, he was able to exert important influence on Allied occupation policies, especially concerning the Emperor. He was also able to publish his view of the 1941 negotiations in his books--a limited account in his Ten Years in Japan in 1944 and a fuller account in Turbulent Era in 1952, after he had retired from the Government.

Having reviewed the arguments *pro* and *con* Konoye’s proposed meeting with the President from the vantage point of fifty years later, what should one conclude? My own views are as follows:

- 1) The US should have agreed to the meeting. There was certainly some basis for believing that an acceptable settlement could have been achieved at the meeting and that it could have been implemented over an eighteen to twenty-four month period. Washington’s contention that if the meeting were held and failed, the situation would be worse than if it had not been held at all is

hard to accept. How could the aftermath of a failed meeting have been worse than what actually happened--a terrible, four-years war?

2) The odds, I believe, are that if the meeting had been held, it would have produced an agreement. But if I had to bet a large sum, I would have to come down on the side that the agreement would not have been effectively accepted and implemented in Japan. Persuasive as Konoye's and Grew's arguments were, Japan in 1941 was probably too much under military domination and too committed to the goal of Japanese hegemony in East Asia to reverse course, except as a consequence of defeat by superior military force. One has to suspect also that Konoye and Foreign Minister Toyoda, in their conversations with Grew, overstated General Tojo's and other Japanese military authorities' support of the meeting proposal and their commitment to implementation of the settlement terms Konoye hoped to bring back from the meeting. (The Memoirs of Prince Fumimaro Konoye, published in 1946, tend to support this suspicion, particularly Konoye's accounts therein of General Togo's statements at critical meetings.)

3) Grew's analysis, views and recommendations submitted to Washington during the summer and fall of 1941 were wholly sound. He strongly urged that the meeting be held, for all the reasons brought out above, but he always acknowledged that it might not succeed. He rightly did not accept Washington's contention that if it failed, the situation would be worse than if had not been held. His reporting of the situation in Japan, his analysis of Japanese psychology and his warnings of the imminence of war if the meeting opportunity was let pass could not have been more perceptive and accurate.

Looking back to the critical months in the late summer and early fall of 1941, a further possibility should be noted. One has to wonder whether Roosevelt may not have welcomed Hornbeck's anti-meeting arguments not for their own merit but because he (FDR) had by that time concluded that the U.S. had to declare war against Germany before Great Britain succumbed. While not wanting war with Japan, Germany's Axis ally, he may have seen the meeting with Konoye as antiethical to the requirements for full U.S. involvement in World War II if it was to be won.

This ends the story of my year with Grew, but the Konoye elements of the story prompt a brief postscript.

One of the papers I prepared toward the end of my post-war planning work at State concerned "The Apprehension, Trial and Punishment of Japanese War Criminals." When I left for Japan in early October, 1945, to serve as Special Assistant to Ambassador George Atcheson, the Political Advisor to General MacArthur, I took a copy of this not yet finally approved paper with me and gave it, along with other such papers, to Atcheson for his information,

In mid-November, Atcheson called me into his office to say that he had just had a call from General MacArthur complaining that although a number of major, or "Class a," German war criminals had been arrested and were in jail, none had been apprehended in Japan. He said that

he wanted a list of such Japanese “Class a’ war criminals on his desk within, as I recall, twenty-four hours, so that he could immediately order them arrested.

Atcheson said that since I had drafted the not yet officially received war criminals directives, I was the logical one to compile the requested list. I said that my work had concerned the arrest, trial and punishment of Japanese war criminals of all the various “Classes” but that it had not extended to which Individual Japanese were guilty of war crimes. Nevertheless, I said that I thought I could obtain the help I needed to compile the requested list.

I thereupon called Herbert Norman, a Canadian, a leading Japan scholar and a friend from pre-war days, who was attached to General MacArthur’s headquarters in an intelligence capacity. With his long experience in Japan and language fluency, I knew that Norman would be able to add much to my knowledge of who the major Japanese war criminals were. Together that evening at Dai Ichi Hotel, where we were both billeted, we drew up a proposed list, with a brief statement of our reasons for each name. I handed it to Atcheson in the morning. He had it delivered to General MacArthur , and banner headlined a day or two later announced that all had been arrested.

Some time later, MacArthur called Atcheson to say that he was sure there were more Japanese major war criminals and that he wanted a second list. I met again with Norman, who this time argued strongly that Konoye should be included because of the positions of highest responsibility which he had occupied over most of the pre-Pearl Harbor decade, including when Japan attacked China in 1937. In compiling the first list, I had resisted Norman’s view that Konoye should be included, arguing that he had never been an active protagonist of Japan’s aggressive course but rather, as an inherently somewhat weak and indecisive man, had allowed himself to be used by aggressive elements. And he had seen the light in 1941 and done his utmost, at the risk of his life, to reverse Japan’s military course through his plan for the meeting with President Roosevelt. Norman said the he appreciated these points but that we could not omit from our list someone who had held the positions which Konoye had held and who possessed the intimate knowledge of the Japanese pre-war decision process and if critical top-level prewar meetings which he did. His status would be less that of a major war crimes suspect than that of a material witness.

And so we agreed to include Konoye in the second list. But we also agreed that if he were arrested, we would get word to him of the special circumstances attending his arrest. With his far more extensive Japanese contacts than mine, Norman undertook to find someone who would convey this message.

Konoye was notified of his arrest on December 6th, and ten days later, in the early morning of the day he was to report to Sugamo Prison, he committed suicide. Norman told me that he had arranged for a Konoye confidante to pass our message to him, but we never learned whether it got through. If it did, it probably had little influence. The word that reached us from the Konoye circle of intimates was that as a two-time Prime Minister and long time advisor to the Emperor, and with his noble lineage extending back a thousand years, his pride could not endure the humiliation of standing in court as a suspected war criminal. In his Konoe Fumimaro--a Political Biography, 1983, Yoshitake Ota relates how a few hours before his death, Konoye asked his son, Michitake, for a pen and paper and wrote the following:

“I have made many political blunders beginning with the China War, and I feel my responsibility for them deeply. I find it intolerable, however, to stand in an American court as a so-called war criminal. The very fact that I did feel responsible for the China War made the task of effecting a settlement all the more crucial to me. Concluding that the only remaining chance to achieve a settlement of the war in China was to reach an understanding with the United States, I did everything in my power to make the negotiations with the United States a success. It is regrettable that I am now suspected by the same United States of being a war criminal.”

CLIFF FORSTER
Japanese Internment
Philippines (1941-1943)

Cliff Forster was born in Manila, the Philippines in 1924. His father was the field director for the American Red Cross in the Middle East. After serving in the U.S. Navy, Mr. Forster attended George Washington University and Stanford University. Mr. Forster served in the Foreign Service in the Philippines, Burma, and Israel. He was interviewed by G. Lewis Schmidt on May 29, 1990.

FORSTER: I spent most of my boyhood in the Philippines and elsewhere in the Far East, mostly China and Japan, and when the Japanese occupied the Philippines we were interned by them first at the Santo Tomas camp in Manila, and later at the Los Banos camp in the southern Philippines.

Q: I have several questions about your internment. First of all, were you interned as an entire family? Secondly, I would like to know what kind of treatment you got in the camp. Were you mistreated, other than having short rations, which were partly the fault of the Japanese and partly just general wartime conditions? Or did you have some severe treatment in the camp?

FORSTER: Yes, Lew, to answer your first question, we were all interned as a family. If you recall that occupation, it came very fast. The Japanese actually invaded the Philippines, the 14th Army, under General Masaharu Homma, in late December. But from December 8th on they had complete control of the skies. Our planes, including the newly-arrived B-17s, were caught on the ground at Clark Field. Our P-40s simply could not take on the Zero fighters. We were in a bad way. And yet MacArthur's forces held on valiantly, trying to stem that tide. There were two major invasions, one at the Lingayen Gulf to the west, the other on the Lamon Bay side to the east, and it was a pincers movement on Manila.

So almost until the week Manila was declared an open city, which was just about Christmas Day, those of us in the civilian community had actually been led to believe that we were holding the line. We were told that everyone should stay in Manila, keep calm and stay off the main highways. We then could see the trucks coming through from the south in large numbers with

American troops speeding north. We did not know they were on their way to Bataan, this deployment to escape capture and surrender in Manila.

Homma's objective was to take Manila, and he had been given his orders by general headquarters in Tokyo to capture MacArthur in fifty days' time. Of course, he did not due to MacArthur's strategic move into the Bataan peninsula. That conflict went on until Corregidor fell in early May of 1942.

Back to Manila, to get to your question. On December 30th, we were all instructed to move from our homes, to go into selected hotels, and the one we were all put into, about a thousand of us, was the Bay View Hotel, which still is there, across from the American Embassy. The United States High Commissioner, Francis Sayre, by that time had gone with MacArthur to Corregidor. The President of the Philippines, Manuel Quezon, had also gone to Corregidor. We had no knowledge of all this. We knew that something was happening, because Manila had suddenly been declared an open city by MacArthur, and there was a large banner over the city hall declaring Manila was now an open city. We tried to reason that out. It was obvious to us it was an open city and that meant the Japanese could come in at any time. And they did. They came in the day after New Year's Eve.

Now, on December 31st, New Year's Eve, I accompanied by father down to the military pier, Pier 1, for the evacuation of the last, most severely wounded Americans and Filipinos aboard an old inter-island ship, the Mactan. Very little is known about this first mercy ship of World War II. My father was instructed by MacArthur to get the wounded out of Sternberg Hospital which was a military hospital right in Manila, and he didn't want to have them captured by the Japanese. So about the only boat that was still afloat was this old inter-island vessel which had been in the Battle of Jutland. In no time at all, he was able to get Filipinos together to paint that boat white and red crosses on the side.

On New Year's Eve, Manila was ringed by fires (we were submitting it to scorched earth tactics all the week before) and I went down with Dad to board the Mactan. You had the wounded from Lingayen and the fighting in the south and it was a very sad, very historical time. I remember the captain was a Filipino captain, Julian Tamayo. My father was concerned about his being able to clear the minefield at Corregidor. He asked Tamayo if he felt he could manage that all right, and Tamayo said, no problem, he had the US Navy charts, he'd get them through. His destination for the wounded was Sydney and the ship pulled slowly away from the pier just hours before the occupation of the city. My father had final clearance from the International Red Cross in Geneva. He never did get a response from then Prince Shimadzu, the director of the Japanese Red Cross in Tokyo, although Shimadzu had informed him earlier that they would respect this ship. Then there was silence.

At that point, mind you, the Japanese forces were just on the outskirts of Manila. We could hear the artillery firing. We watched the little ship move out across the bay that night. It was a dramatic sight, with the city on fire, this little white ship with the red crosses on the hull lit up with spotlights.

My dad never knew until he returned to the States -- he was later exchanged aboard the

Gripsholm -- whether that ship had managed to get through. It was always on his mind. They did make it. They had a few close calls in the Celebes, but Captain Tamayo got the Mactan limping into Sydney and the Aussies were up on the bridge singing "Waltzing Matilda," a tremendous welcome to the survivors who managed to get through on that ship.

That's getting away from your question, but I just wanted to share some of that background, because you have to realize the suddenness of the whole thing, how quickly it hit us.

Q: I've never heard most of this story. I think it will be a very interesting addition to the interview.

FORSTER: Well, it's one that I've been trying to write up in this manuscript which I hope to finish fairly soon. There are so many untold stories like this which I do feel should be told. I'm glad to have this opportunity to tell this one, because it was a very moving story, indeed.

On January 1st, we could hear the firing very close to the city. Of course, the ship had cleared Corregidor by that time. On the afternoon of January 2nd, the first troops rolled in. They were all on motorbikes, most of them. All I could think of was Genghis Khan and the Mongol hordes. They had these backflaps like the Foreign Legion, and rifles strapped on their backs. You could see they'd been through a lot, because they were all dusty and mud-covered. They had Japanese flags on the bikes, but you heard this roar in the distance as they came in, just thousands of them on these motor bikes coming up what was then Dewey Boulevard. They were followed by tanks. Tanks rumbled in all night. I witnessed all this from the Bay view Hotel with my father and Carl Mydans, the Life photographer who was also in the hotel, and Shelley, his wife, as the Japanese moved into what was then the High Commissioner's residence, where our Embassy and USIS are now, hauling down the stars and stripes and hauling up the rising sun. So that was the end of our era in the Philippines, and we were just numb from all of this. It happened so fast.

The next thing we knew, we were being rounded up and informed that we were "under the benevolent custody of the Japanese Imperial Army," and had nothing to be concerned about. So they put us in these trucks and took us to this old university, then the oldest under the American flag, the University of Santo Tomas. For the next several days, the Allied internees were pouring in from all around the city. There was complete chaos, in a way, because the Japanese had no supplies there for us. Their primary objective was hot pursuit of the American forces moving into the Bataan peninsula, and they could care less about us, except to throw us into this camp.

My father's doctors and nurses were all Filipinos who did a fabulous job by us. He told them to go to the warehouses around Manila, where there was a lot of cracked wheat, which my father actually was in charge of for transshipment to Chungking via the Burma road. The ships never made it, since they were bombed in the harbor. But they did get the cargo of cracked wheat ashore, so we had sacks and sacks of cracked wheat. It was amazing how the Filipino staff, with all the turmoil and everything going on, were able to get all that cracked wheat into camp, along with some milk supplies, enough to keep us going for a while until the Japanese finally decided they would give us a regular diet of Mongo beans -- pretty healthy stuff then -- and rice, occasionally one Banana. That was about it. Much of it was pretty wormy.

Then they told us we could farm this small garden that was behind the university, and I was on that detachment, I remember. We just all went to work. Some of us became gardeners, other became garbage collectors, and handled the food line and the cooking. All of a sudden you had these Manila senior executives -- it was a great leveling process, because they were all engaged in work of this kind. We even put on skits to entertain the camp. One of them I recall was the tune of "Oh, Take Me Back to My Little Grass Shack," but it went something like this: "Oh, take me back to my little air-conditioned flat in old Manila/Where that rinky-hinky-dinky-stinky town of mine goes by/Oh, I used to be a teller in Manila's leading bank/But now I'm cleaning out a septic tank." And on and on it went. We had a lot of fun with these skits and it was good for camp morale.

I think one thing that got us through the years that followed was a sense of humor and the American ability to organize themselves. We had more doggone committees in that camp to do this and that, which kept us busy. We organized our own school. I was in my last year of high school when the war started, about to graduate, preparing to come to the US to college, so we had our graduation in that camp. The class gift to the principal was a roll of toilet paper since it was hard to come by. Things moved on under very difficult conditions, but we managed to all pull together.

Now, on treatment. I think I've already indicated that the initial treatment, when they came in, was quite good. They were on their good behavior. As time went on and the tide turned in the South Pacific the situation changed. I recall it was about August of '42 after the Battle of the Coral Sea. All their defeats were played up in their propaganda output as tremendous victories. All you heard was their side of the story. They reported they would soon be in Australia and were pushing us back in the Solomons and winning. The aircraft carrier Lexington had been sunk. It looked pretty dismal, because they also gave us very detailed reports on what they had sunk right here in Pearl Harbor. MacArthur's forces would soon be defeated on Bataan and Corregidor. Then you had Singapore and Hong Kong going under and the Battle of the Java Sea. In our Asiatic Fleet, the flagship USS Houston had been sunk in the Sunda Straits. Our old favorite destroyers, World War I-class four stackers, the Edsall, the Bulmer, the John Paul Jones, many of those ships also went down in the Battle of the Java Sea. It looked pretty bad. We thought, "This is a rough time. We're going to be here for a long, long time."

As time went on, we did encounter rough treatment. We had this case of two Australians and a New Zealander -- one of them was in our room -- who attempted to escape early on in February of '42. They were caught just beyond the gate and returned to the camp. We were brought down to witness their torture. They were summarily shot at close range. The effect of this on the camp was devastating. As a matter of fact, we were cautioned by older and wiser people in camp not to do anything to provoke the Japanese at that point. The shipmates of two of these fellows were ready to rush the Japanese, and they were held back. "If you do that, they're going to fire on everyone." This was a tank crew, a very rough crew that was on guard duty down in the front, and we were terribly concerned there would be bloodshed. Emotions were running very high. Well, there were a number of incidents like this. Of course, as time went on, they increased.

I would like to say this, however, and it's something that influenced my thinking about entering USIS years later. Our treatment would fluctuate depending on who was the commandant. If the

commandant had had any kind of contact with us, had either lived in the States or studied under our missionaries, in Japan, in other words, a long association, the treatment was much better. Those commandants who had had no contact -- and many of these chaps were younger -- who had been fed this line of hate, that we were the enemy and to be destroyed and so on, the treatment from these fellows was very severe. In the second camp we were sent to, Los Banos, we experienced this. It was a very nasty time, indeed. We experienced so many things there, some of it sad and tragic, some of it rather funny in a way. It's amazing how you remember the funnier things and not so many of the sad things.

We had one commandant, for example, whom we called "Porky" and he had this long cigarette holder. He was terribly upset one evening, I guess with good cause, because this camp was right on the side of Mt. Makiling and we had decided we were going to put on our first play. I was selected for a very minor part. I don't know if you remember the play "Arsenic and Old Lace."

Q: Yes.

FORSTER: Boris Karloff played the part that I played in this scene, and he doesn't have much to say. The character was slightly off his rocker, as you may recall, the older brother of two old maids who were pretty much into the wine and knocking off their guests with arsenic. He would always come running down the stairs, thinking he was at the Battle of San Juan Hill, shouting, "Charge!" That was about my only big line and I really rehearsed it. We had put up this loudspeaker and we never thought about the ramifications of this thing. But when my turn came, I gave a very lusty "Charge!" and the guards at the gate knew that command, as did our commandant, "Porky". So there was a great deal of consternation, and suddenly the guards were up around the shack where we were broadcasting this for the camp and stopped everything in a hurry. We were brought up to explain what this was all about, and we assured the commandant that there was no attempt to communicate this command to anyone beyond the camp. (Laughter)

We had a wonderful guy as an interpreter, who had served for many years with Singer Sewing Machine in Japan before his capture in Manila. I don't recollect his name now, but I think you might have known him later in Tokyo since he returned there in the post-war years. He did a beautiful job of explaining the content of the play to our humorless commandant. Finally, "Porky" said, "All right, but don't do it again," and proceeded to close down the whole operation. (Laughter) No more plays for this camp.

Q: So your thespian career was cut rather short.

FORSTER: Cut very short, indeed.

The other experience which was some indication of their own problems took place when we were ordered to build additional quarters in X number of days because they wanted to get all the Allied personnel out of Manila. Tojo had come to Manila and we were told that he'd been very upset by the presence of so many Allied internees right in the heart of the city. This was not good. Of course, a number of Filipinos were in contact with us feeding us information on what was going on through clandestine radio and so on. He just did not want to have any kind of contact and Los Banos was in an isolated area far from Manila.

So they gave us inadequate materiel to construct this camp, and my boss-supervisor was a Scot, a very crusty Scot, and he just pointed out, "It ain't gonna work. The first typhoon that's going to come through here will blow it all down." We sent in this report to the commandant, pointing out the nature of the problem. He came back and emphatically told us, "Continue on. Build this camp." Sure enough, the first typhoon came through, and you've never seen such a mess. Only about two or three of these buildings were still standing. We had built just a few at that time. But most of them were flat.

The commandant had lost much face, of course, so he gathered us all on the baseball field. There was a chap beside him, sitting with his head down, and he told us, all of us who were assembled there, that the engineer responsible for the design and materiel for this camp, was not a Japanese. He was a Korean. He then pointed to this fellow sitting there alongside him as the real culprit. Of course, we guffawed since it was obvious that he was trying to pass the buck to this poor Korean in the Japanese Army. I don't know where they found him. I guess they just pulled him in to point the finger. And there were some "boos." (Laughter) This was just a little anecdote to give you some idea of the frame of mind at that time, too.

So that, I hope, answers your question about treatment to illustrate how it was fairly good in the beginning, but became more difficult as time went on.

Q: How long were you interned?

FORSTER: I was interned until the fall of '43, when a number of us were rounded up and told to proceed to Santo Tomas for a prisoner exchange. When I arrived at Santo Tomas I saw my mother and father for the first time. They had been under house arrest ever since he had had a heart attack in the camp in Manila.

We joined the Manila group and were taken up to Lingayen Gulf where we boarded the Teia Maru which had been the Aramis, a French ship captured in Saigon when the war started. It was still war-time gray although it did have some red crosses on the hull. It had not been painted white, however, a requirement for exchange vessels. The ship picked up the first exchangees in Japan at Yokohama. It then proceeded to Shanghai, Hong Kong and Lingayen Gulf since the ship couldn't come into Manila Bay because we still had the minefield problem there. Then it went upriver to Saigon, where we picked up the French, down to Singapore, through the Sunda Straits to Marmagao in what was then Portuguese Goa to be met there by the Gripsholm. The Japanese on the Gripsholm boarded the Teia Maru as we went aboard the Gripsholm for the final voyage home.

We were next sent to Port Elizabeth, and from Port Elizabeth to Rio, where we were checked over from a health standpoint, interrogated for what we knew about the Japanese situation in Manila, our own treatment, the kind of questions you've just been asking. When we arrived in New York we received a very fine welcome with fire boats coming alongside. That was December 1, 1943, I believe.

Q: When we were off tape, incidentally, you mentioned that there were two Gripsholm

repatriations, a first and a second one. I guess most of the ranking people came out from Japan on the first one.

FORSTER: That's right. It was a diplomatic exchange.

Q: Ambassador Alex Johnson?

FORSTER: Correct. Also Ambassador John Allison.

Q: And Allison. You did not go out on the first one; you went out on the second one?

FORSTER: The second one. The second Gripsholm was primarily for diplomats, but of lesser rank from these different places. There were also Red Cross-affiliated officials, which included my father, foreign correspondents, like Carl and Shelley Mydans of Time-Life, Royal Arch Gunnison of Collier's, Emily Hahn from Hong Kong, smoking her famous cigar on the deck, as I recall. Quite a person, indeed. And a number of missionaries. There were other categories, but that was primarily it. I think some of the officers and crew of ships that had been sunk were also on that exchange like the President Harrison, which was seized while trying to escape from China. Most of the exchangees, however, were diplomatic and Red Cross personnel, journalists and missionaries. And they were matched with Japanese in those categories coming in the other direction.

RAY MARSHALL
Naval Occupying Forces
Japan (1945-1946)

Raised an orphan in Mississippi, Mr. Marshall joined the Navy during World War II and was part of the occupation forces of Japan. After the War he earned a B.A. from Millsaps College in Jacksonville, Mississippi, an M.A. at Louisiana State University, and a Ph.D. in Labor Economics from the University of California, Berkeley. Mr. Marshall went on to become the Chairman of the International Working Group for the Commission on Skills of the American Workforce, and the Secretary of Labor. He was interviewed in 1993 by Morris Weisz.

MARSHALL: . . . I was in Japan in the occupation forces. I was off-shore in Japan getting ready to invade when the war ended, so I went in and was there from August 1945 until about May of 1946.

Q: But not with any labor function?

MARSHALL: No. I was a sailor, so I knew what was going on and took a strong interest in it. My sense of it is that we had several different kinds of influence. One, of course, is that in a general sense we strengthened democratic institutions, and I think that probably was our main impact. And, of course, free labor movements are essential in my judgment for a democratic

society. We required that the Japanese establish a free labor movement, and they modeled their early labor movement after the Wagner Act in their law, but then pretty soon, because they were able to wipe the slate clean, and because they had greater unity within the country, our paths diverged; that is, they stayed with the Wagner Act in Japan. We passed the Taft-Hartley Act here and became much more anti-union, whereas in Japan and Germany they didn't take that path. They didn't go through all the things we did. They didn't pass the Taft-Hartley Act and have a strong anti-union movement during the 1970's and 1980's. It is inconceivable to me that in either Japan or Germany any group of employers would form a Council for a Union Free Environment, so I think our influence was to get the Japanese and the Germans started in democratic institutions, but I think they were smarter than we were in holding on to it, and in realizing that in the post-World War II period your people were your most important asset, and that therefore you had to pay attention to a kind of universal education for all workers with a skills training system and a participatory system.

It is interesting what we did in Germany. You see, we realized that the best way to head the fascists off was to have worker participation or co-determination in the German companies, or at least the British realized that probably more than we did, but we realized it too, that a free labor movement is an important buffer against totalitarian forces whether of the left or of the right, and therefore we encouraged the growth of a free labor movement. I think that the Germans have taken that and developed a pretty powerful economic system based on a much higher degree of worker participation than we have.

My sense of it is that Japanese employers were willing to take the latest thinking from people like W. Edwards Deming and others, and say that makes a lot of sense and that we need to develop that system, whereas American employers were not [willing], and I think the interesting question is: Why not? The answer is "Taylorism". Taylorism was always much more deeply embedded in the American system, and the interesting thing about it to me is that here the United States was the champion of democracy and free labor movements, and we probably have the most elitist management system of any major industrial country.

CHRISTOPHER A. PHILLIPS
U.S. Army – Staff of General MacArthur
Tokyo (1945-1946)

Christopher A. Phillips was born in the Hague, Netherlands, to parents working in the Foreign Service. He attended Harvard University, completing two years before enlisting in the U.S. Army Air Corps in 1942. After the war, he completed his degree at Harvard. Mr. Phillips went on to hold numerous positions, including Deputy Assistant for United Nations Affairs, 1953-1957, Deputy Permanent Representative to the United Nations, 1969-1973, and member of the U.S.-China Trade Council, 1973-1986. He was appointed Ambassador to Brunei Darussalam in 1989, and held that post until 1991. He was interviewed by Charles Stuart Kennedy in 1993.

PHILLIPS: I spent a year in Japan on the staff of General MacArthur at his headquarters in the Daichi building in Tokyo. There I was assigned to the Price Control and Rationing Division of the Economic and Scientific Staff Section of SCAP [Supreme Commander for the Allied Powers]. Our job was to establish policies for the distribution of food throughout the country so as to prevent starvation during the difficult first year of the occupation.

Q: I'd like to go back, since this has pertinence to foreign affairs. What was your impression, I mean here you were a young man on the staff of General MacArthur, obviously way down in the bowels, but what was your impression of MacArthur, and two, how did you feel-what was the atmosphere about dealing with the Japanese and about the relationship to Washington and directions from Washington?

PHILLIPS: You're quite right. I was down in the bowels of SCAP, although by that time I had been promoted to the lofty rank of First Lieutenant! This didn't exactly give me day to day access to General MacArthur, but I was able to gain some impressions of his impact on that quite remarkable first year of the occupation. Although, ostensibly guided by directions from Washington, MacArthur exercised a great deal of independent authority. In theory, it was the Far Eastern Advisory Commission, which comprised representatives of all the allied countries, that established general policies for the occupation. In fact, the real authority for issuing policies and directives to SCAP resided in Washington. But MacArthur took a rather imperial view of his role and was not unduly influenced by instructions from Washington or guidance from the Far Eastern Advisory Commission.

Q: What about the staff around him? Did you get any feel about the staff and its impact on MacArthur?

PHILLIPS: A small group of senior colonels and generals who had been through the war with him exercised the greatest influence - officers such as General Marquette, in charge of the Economic and Scientific Staff Section and General Whitney, who headed up the Government Section. But there were many more junior officers down the line, who from the standpoint of day to day operations, played key roles in implementing SCAP policies. During that first year the staff was almost entirely drawn from our military and naval forces, most of whom had been through the same training programs as had I. We had all participated, to some extent, in the planning operations leading up to the occupation, and were, therefore, well prepared for the tasks that confronted us on our arrival. On the whole it was a smoothly run operation, due in large part to clearly defined policies and MacArthur's extraordinary influence and leadership. We all marveled at how ordinary Japanese seemed to venerate the General. It made one wonder if perhaps they saw in him as a new Imperial being, temporarily replacing the Emperor himself.

Q: I was wondering, at the time you were there, if one could not have discerned two rather different currents of thinking about occupation policies. On the one hand, New Deal views, though more pragmatic than the earlier days of the Roosevelt presidency, still influenced Washington thinking. At the same time you had a general and his senior officers who generally reflected more conservative views. MacArthur had a lot of autonomy. I would have thought, even in this first year, there would have been some sort of conflict - or did things just sort of click together?

PHILLIPS: Well you raise a good point. Given these circumstances, one might well have concluded that policy conflicts between Washington and SCAP were inevitable. But in fact things did sort of click together. Of course there were occasional differences of opinion between Washington and SCAP, but overall there were remarkably few. We tend to forget that under MacArthur during the first year of the occupation, some truly radical reforms were introduced into Japan which changed, the whole nature of Japanese society. An example of this was the highly successful land reform program. For many years land tenancy had stood at close to 50 % of the land. As a result of these reforms, absentee ownership of agricultural land was abolished and former tenants were able to buy their land on very favorable terms. At the same time landlords were reimbursed for the property they lost.

EILEEN R. DONOVAN
Education Officer, Civil Information and Education
Tokyo (1945-1948)

Japan-Korea Desk Officer
Washington, DC (1948-1950)

Ambassador Eileen R. Donovan taught high school history in Boston when World War II began. After the Pearl Harbor incident, Donovan joined the Women's Auxiliary Corps. She was sent to Officer Candidate School in Des Moines, and came out as a 2nd Lieutenant. After teaching Japanese women for a period, she took the Foreign Service exam and was sent back to Tokyo to begin her career that would culminate with an Ambassador appointment. She has served in Manila, Barbados, and Japan. The interview was conducted by Ann Miller Morin in 1985.

DONOVAN: They marked out a bailiwick for us on ship so we wouldn't be bothered by all these men. We landed in Japan in October, '45, which was very close to the beginning, because you remember the signing of the Missouri was the signing of the end of the war, it wasn't the peace treaty, but on the Missouri the surrender was in September. So Tokyo was pretty beat up. I have some pictures in there how it looked in those days.

Q: You arrived in Yokohama?

DONOVAN: We arrived in Yokohama and we stood up in the back of a truck going up the road to Tokyo. There was nothing on the road but little rusty square iron safes which were all that was left of the Japanese little houses that had been there and were burned down, mostly in the Doolittle raid of that year.

Q: You must have seen an awful lot of fire damage. People aren't aware of that in this country.

DONOVAN: We passed a big billboard saying "You are now entering Tokyo by courtesy of the

First Cavalry Division.” They made them change that later on to “home of.” We were taken to a hotel called the Daichi, which was built originally for Olympic games that never took place. There were little small rooms, but they gave each of us a room that had a little tiny bathtub in it, and there I stayed for a good many years.

This is where SCAP comes in. General MacArthur's title was Supreme Commander for the Allied Powers. That's SCAP. I went into a division called CIE, Civil Information and Education Section, of the GHQ, General Headquarters, of SCAP.

Q: Civil Information and what was the rest of that?

DONOVAN: Civil Information and Education Section. That was all Japanese Civil Information and Education Section. There I stayed as an education officer. In that division, the education section, they were all pretty much generalists, that is, in secondary education and other things. I was also Women's Education Officer. That's the first and only time that I have ever worked exclusively or primarily on women's matters. But they were very glad to see me.

Q: What specifically were the women's matters at this time?

DONOVAN: Well, for example, I don't like to go on too long...

Q: No, no this is very interesting, very important.

DONOVAN: Early in the game General MacArthur said that women would be allowed to enter the Imperial Universities. There were four or five Imperial Universities that were the very best. But they were not trained to pass the examinations to enter. They had women's colleges, so-called, fine schools, but they were really high school level according to the way we would call it, and the girls weren't prepared to go much higher. So then you had to look and see why that was, because I kept my mouth shut for three months after I first got there and just listened to the Japanese women educators. There was one, Miss Hoshino, who was a Wellesley College graduate who had a college called Tsuda, T-S-U-D-A, which was one of the best. Then there was Nippon Joshi Daigaku, Japan Women's University, and they had some fine teachers, too. I just listened to them and their ideas. I wasn't imposing anything. I was learning. Finally when Miss Hoshino thought she knew me well enough, she pulled out a little book in Japanese from under her futon where she had kept it all during the war, called *Education for Women in the New Japan*, dated 1925. When the militarists took control, they banned her book from the libraries and the newsstands and said that all copies must be destroyed.

Q: Was it a book she'd written?

DONOVAN: Yes. She kept one. She had translated... I think she had an English copy too, because how could I have read it otherwise? She said, "You know, there isn't anything very new. We have known and wanted all these changes for many years but we were forbidden to have them." Then I had to go farther and farther down. I found that the girls' education at the primary and at what we would call the elementary level was quite different from the boys, because they had separate textbooks, like first year arithmetic for boys and first year arithmetic for girls, the

same with history and geography and science. And they were all at a lower level than the boys. And the farther on they got in the school system, the greater the difference became. So even those that were fortunate enough to go to one of the colleges... So then I had to say, "Why is this? This seems strange in a subject which is no different. It's arithmetic, it's the same..." "Well, because they were spending so much time on cooking and sewing. The extra hours were taken from these academic subjects. So they said, "We can't use the same text book when we don't have the same hours of instruction." Then I found, I don't know how I found her, whether she came to me or how I found her, I found a young woman named Matsuo Omoi who had been, I think they called it domestic science or homemaking education, at one of the good universities on the west coast.

Q: U.S. west coast?

DONOVAN: Yes, the U.S. west coast. And she had gone back to Japan. She said, "Eileen, this is the difference. I could draw up a curriculum in which they learn as much as they do now in cooking and so on without spending all those inordinate number of hours on it."

Q: Sounds like a man had set it up in the first place. [Laughter]

DONOVAN: So anyway, then the Minister of Education was called the Mombusho. I used to go over, and heaven help me, talk to them about American education, just in an academic sort of way. I wasn't telling them they should do anything like it. And anyway, with the help of the other people in the education division, the boss, a man named Mark Orr who's now at the University of South Florida, we got the Mombusho to agree to let Matsuo Omoi prepare a new curriculum in homemaking, which would then do away with the necessity of having separate textbooks. Then gradually this thing could be evened out. But it wasn't a one day project.

Q: Of course not.

DONOVAN: I spent a lot of time on that. Then I also spent some time... the only reason I'm in the book over here was because they had an "Imperial Rescriptive 1900," which was issued by the Emperor, really by his minions, saying that the purpose of education was loyalty and filial piety, which is all right. Those are lovely, lovely things, except that they didn't interpret them as we would. Loyalty meant strictly to the emperor and so did filial piety. So when the militarists got in charge, they used these things and this rescript was the basis for all the education in Japan at the lower levels. We'd studied this thing at the University of Michigan. But we hadn't done anything about it. One of the ministers of education was very fond of this and we hadn't done anything about it. How could you say that education meant helping people to think when there was nothing but these things? And then the end of it, it ended up "loyalty to our emperor, coeval in heaven and earth." It was really emperor worship Shinto-style. So I said, "Mark, we've got to get rid of this thing. It's silly to go on talking about democratic education when you have this." So I did a lot of studying on it and I went to a wonderful man named Tom Blakemore, who was the only American who had been graduated from the Tokyo Imperial University Law School and we found out the meaning of the words and the connotations. Finally--it was a Ministry of Education decree--but we suggested firmly that it be done, that it was no longer the basis for education.

Q: That's pretty basic, yes, very basic.

DONOVAN: Remind me, I'll show you that.

Q: And very far-reaching.

DONOVAN: Yes. You asked me what I was doing in Japan. Those are the highlights. Then I had another idea. Who were we? We were all in that place, former schoolteachers and school principals and things, who were we to be making such decisions? History would call us to account. By gosh, we'd better get some really well-known educators over there. So we invited what turned out to be an education mission to Japan, consisting of what started out as the fifty most famous educators.

Q: Ethel Weed?

DONOVAN: She didn't do the education, though, she was concerned with the women - there were four or five women in the Japanese Diet.

Q: Concerned with the politicians?

DONOVAN: The political part of it.

Q: That's fascinating, you had a captain's rank?

DONOVAN: No, not quite yet. I did before I finished there. I was first lieutenant. Then a lot of my women's friends there looked at that uniform, and, not a lot but one or two, said "Were you with Doolittle when they bombed Tokyo?" So I decided to get out of uniform. I became a civilian while I was there. I got my release from active duty at the Zama in Japan. It's a place where you went. I became a civilian.

Q: What sort of a place is this?

DONOVAN: We used to call it the repple-depple. It's the Zama replacement depot. It's a place where you went to - it's not important at all. I became a civilian and that's when I started writing my mother frantic letters for clothes. But I didn't know I was going to be in this book which is called...

Q: Unconditional Democracy.

DONOVAN: *Education and Politics in Occupied Japan* by Toshio Nishi. I'm not going to ask you to read this now, but he has a whole section about the...

Q: Oh, yes, "Donovan objected there were not..." Oh very, very good.

DONOVAN: About the imperial rescript.

Q: Very good. In the course of your work did you have any reason to see the general, MacArthur?

DONOVAN: Yes, but not too often. I did that when I went back in 1949 on the education exchange survey mission. There were two or three people in between me and the general.

Q: Well, I imagine he was sort of an awesome figure, wasn't he?

DONOVAN: Yes.

We had General MacArthur invite over what started out to be the fifty most famous educators to Japan to look at what we were doing and to write a report so that we'd have somebody other than...

Q: Some authority, weight of authority?

DONOVAN: Yes. We did that, and they came in the spring of 1946. It was a slightly different group than we had originally asked for. We picked out people in various fields, but when it got to Washington naturally they had to have a representative of the CIO, and they had to have one black, and I remember a little Irish catholic priest who came to me when the word got out that we were doing such a thing, and he got hold of the list, and he said, "Eileen Donovan, do you realize that there's not a Catholic name on this list?" I said, "No, I never thought of it. What has that got to do with it?" I said, "As a matter of fact, let me look at it again," and I read down. I said, "There's not a Jewish name on there either." Anyhow they came, and they more or less agreed with what we were doing except I thought they never gave the... the women's education was not in the report.

Q: Oh, is that right?

DONOVAN: I thought they slighted them all. I gave them all kinds of lectures and I had my Japanese women leaders talk to them and visited schools and stuff.

Q: So, in effect, they were perpetuating the same old male supremacy, weren't they?

DONOVAN: No. They weren't doing that.

Q: But they were by default, weren't they?

DONOVAN: Yes, isn't that nice?

Q: That's lovely.

DONOVAN: This is the education division when I first got there.

Q: Oh, for heaven's sake, all men except for yourself. How about that? You certainly got used

early to being the token woman, didn't you?

DONOVAN: Yes. That was several years later when they got all the local employees and everybody else in there.

Q: Not too many women then.

DONOVAN: Well, there are plenty. They're all clerks, but... anyway.

Q: To get back to this business, why didn't [they] give more weight to the women's part of it? They didn't think it was important?

DONOVAN: I don't know. They had... those are all pictures of going over. Here's the sign "Entering Tokyo." There are some pictures that were smuggled out of Hiroshima within an hour of the bombing.

Q: Oh, my. Oh, my.

DONOVAN: That's me visiting one of the schools where the little girls dug up their kimonos from underground.

Q: And put them on?

DONOVAN: Yes, that's me, God help me, giving a lecture to the ministry of education people.

Q: Good for you.

DONOVAN: I have a nerve.

Q: No, why not, you were the authority.

DONOVAN: I mean I knew at the time. I wrote down here, "if the Japanese keep a book of future war criminals, if they go to war with us again, I'll probably head the list." Imagine me, a woman, doing this. On my left is Terry Nishi. That's about what Tokyo looked like.

Q: Oh, boy, what a mess. What a mess.

DONOVAN: I'm looking for the education mission.

Q: Part of the mission at the Tokyo. Would that be it?

DONOVAN: They had- (end of tape)

-he formed an orchestra called Hiroshi Watanabe and the Stardusters.

Q: (Laughter) I love it. Hiroshi Watanabe and the Stardusters, that's lovely.

DONOVAN: That was up on the roof.

Q: You finally left the service in 1948, is that right?

DONOVAN: Yes. I was a civilian then in the same job. This was when I was still wearing a uniform without any insignia before my mother sent me clothes.

DONOVAN: So gradually I advanced from collating papers. It was 95, I think, in that office, with no air conditioners. Then however, not more than six months later, I was ordered back to the Department to what they call the Japan-Korea branch public affairs section. It was one of those predecessors of the Department version of USIA. They didn't have any then. So we had another set of farewell parties and that time I went, in November of '48. Went back to the Department as Japan-Korea desk officer. I never did have any basic training.

Q: Never got it at all? No basic training. You were thrown in to sink or swim, weren't you?

DONOVAN: That's right.

Q: You never went through that course at FSI?

DONOVAN: No, I went through other courses later, many of them.

Q: But you didn't go through that beginning one? No.

DONOVAN: So, where do you want to go from here, coach? [Laughter] Did you have that down there that I was trying to start a cultural exchange program in that job?

Q: Yes.

DONOVAN: Then they decided to send me on another mission which was just a small one, called the Education Exchange Survey Mission, in 1949, in the summer. There were only five people on it and I was the Department member of that. So I went off in the middle of this job to that.

Q: The others were from the Department of Education?

DONOVAN: No, no. There was one, John Dale Russell was head of the office of education. The chairman was a man named Tulley, who was Chancellor of Syracuse University. There were two others. Their pictures are in another book here somewhere. So we went back to Japan because none of these men really approved... didn't understand General MacArthur, didn't know what he was trying to do. We had a luncheon with General MacArthur and his wife right near the beginning. It was one of those wonderful luncheons that he's had many times before, I think, in which Mrs. MacArthur would greet us, you know, a charming southern lady, then he'd come in

from the Daichi building where he worked, and then we'd sit down at the lunch table - I don't remember whether they gave us a cocktail or not, probably not. So I, being the only lady again, was on his right and Mrs. MacArthur was at the end of the table. So he turned to me and he said, I don't know if he really remembered me, but if he didn't Larry Buckler or one of his minions had briefed him. He never went anywhere without being briefed--he said, "Well, Miss Donovan do you like the State Department better than the army?" I said, "Well, sir, actually I'm doing very much the same type of work. I loved it when I was in the Army and working with you, but one thing I didn't like was that necktie on a woman in peace time. Now I don't have to wear the necktie anymore." So then he asked me a couple of other simple questions. Then came the - I'm sure it was the routine--Mrs. MacArthur said to him from the end of the table, "Gen'al, Chancellor Tulley has asked me a question which you can answer much better than I. If Chancellor Tulley would repeat his question to you." So then Chancellor Tulley repeated his question, and of course there was silence at the rest of the table. And General MacArthur answered with a nice short answer that took about twenty-five minutes. Then he said, "Are there any other questions?" And somebody asked another question, and somebody asked another question. I think we sat there at that table for two and a half hours. He answered beautifully in his wonderful rhetoric, and splendidly and he knew what he was doing.

Q: Was he frank?

DONOVAN: Yes. Yes he was. I didn't hear anything that I myself would have questioned. When we went out, two of the men said, "Hey, he's 'whatever the version at that time was of' he's really something". They were all tremendously impressed. Then we had an interview with the emperor, too.

Q: Did you?

DONOVAN: I went out in the backyard and patted the emperor's white horse. I have a picture of that, too.

Q: Oh, yes, that famous white horse.

DONOVAN: Then we came back after a month or so. Then I was assigned again. You see I was doing all these things while I was on that job.

Q: Of course.

DONOVAN: John D. Rockefeller III, who had been to Japan and was most impressed, was writing, not a book but a pamphlet, a study on cultural relations with Japan. He didn't know so very much to write it. He knew quite a lot, but not to sit down and write a report. So there was another chap there in the Department of State who was an old Japan hand named Doug Overton. The two of us were assigned to go up to New York and stay at a hotel and go to John D's office every day and help him write his report, which we did.

Q: Did you? It pays to be a Rockefeller.

DONOVAN: I think I have that report somewhere. I've got a bunch, a footlocker here.

Q: Have you? With your papers in it?

DONOVAN: There are some papers that are useful and some are not. I think the report of the education mission is there, and this Rockefeller cultural report, stuff like that. They're stashed away underneath the water heater out there somewhere.

Then I went to Manila. The Korean war came about that time. Everybody lost interest in Japan.

Q: That's right, didn't they?

DONOVAN: 1950.

Ambassador Donovan was interviewed by Arthur L. Lowrie in 1989

Q: Let me ask you an historical footnote kind of question on Hiroshima. What was the date that you went there?

DONOVAN: It was early November 1946.

Q: 1946, so it was just a little over a year after the bomb. What were the effects of the Atomic Bomb that were still in evidence then?

DONOVAN: Everything was still in evidence. The city was nothing but a bunch of shambles. I went down with a male officer. I was still in the Army then, a Captain. He was concerned with adult education and I was concerned with just education. We were met by the officials of the city in these beat-up charcoal-fueled old cars. These officials introduced themselves, they were all men. They were the Chief of police and the Mayor and head of the Department of Education, all these miscellaneous officials. They apologized very deeply and said, sorry we have no place to meet, which was pretty obvious because there was nothing but debris all around. But, they said there's a little island out here in the Inland Sea where there is a nice little temple and we'll go out there. We had to take a ferry boat to get over. So, we went out, I guess it was about three o'clock when we got out there. We sat down and had the usual refreshment consisting of little "mikan", you know, tangerines, and tea and sake which I didn't drink. They were drinking sake and beer and that's a terrible combination. Then I asked a few questions like, is your family still here? The man would say no, my wife and three children were killed by the bomb, ha ha ha ha. It turned out that almost all of them had lost their families and there they were being so hospitable out on this little island where nobody in the world knew where we were. I said, well when are we going to get to the meeting? When are we going to start? They said, oh, we're not going to do that today. We're going over to the city of Kure tomorrow and have the meeting over there in a building.

They said, you're going to stay here all night. By that time it was five o'clock and it was getting dark, quite dark and night had fallen. It was in November. I said, oh no, we can't stay here. We had neglected, because John had missed an earlier train to stop in Kure where they had a British installation. We were supposed to stop and check in with the British. Otherwise, it was all American around Japan but that was British. So they didn't know where we were and I said, well we really have to go back tonight. And they said oh no, no, no and they all laughed again. They said, we know what you're thinking but we have separate rooms for you and Captain Nelson. That wasn't what I was thinking about that time. Captain Nelson was enjoying himself, by the way. I said, no we'll have to go back right now. They said, no we can't. The ferry stopped running at five o'clock. I said, well there must be another boat. I said, we really have to get to Kure tonight. Otherwise, the British would set out a search party for us. They probably have already called GHQ Tokyo and said, where are these characters, and Tokyo wouldn't know. So, they found a little boat. It was an outboard motor about 12-feet long and they sat John and me on the center of the seat, and they all stood up. The boat was rocking. The darkness was black and we went out about 500 yards or more and I said, John this is going to be a Japanese revenge party. I said, no one knows where we are. These guys are now going to take revenge on us for the loss of their families. I said, is there a lose board down on the floor there? I said, you might as well make an effort to defend us but we're going to be in that water in a very short time. Take it from me, this is our last night on earth. Well, he became serious very quickly. Then the laughing stopped and there was deep silence. And I thought, it's coming John, and then suddenly the motor started up again and off we went across the bay or whatever it is to the railroad station. We bade them all farewell and said we'd see them in Kure in the morning. We got in about ten o'clock at night to a very, very angry British officer (for which I didn't blame him a bit).

So, the next morning the whole group that was in Hiroshima and a whole bunch of others--I don't know who they were--all assembled to hear what the United States Government was going to do rebuilding schools and we had a very nice meeting. We left at the end of the day and they gave me a little cheap wooden tray as a parting gift. You know they always give gifts. You could buy one in any store in Tokyo for about \$3 US then but that didn't matter. They had chiseled in the back of it, "To Captain Donovan, The First Western Woman In Hiroshima Since The End Of The War" and I treasure that. There it is over there.

Q: *The one on the stand?*

DONOVAN: Yes. Now that was an interesting two days, wasn't it?

Q: *Was there any signs on the people of the bomb, radiation, burns?*

DONOVAN: No. Well we didn't see anyone, you see, except those people that met us.

Q: *You didn't see that many people?*

DONOVAN: No. We didn't see anybody really. We got in these little cars and went out to the place where we got on the ferry boat. But that was before the Foreign Service.

ABRAHAM M. SIRKIN
Chief of News Division, General MacArthur's Headquarters
Tokyo (1946-1948)

Mr. Sirkin was born in 1914 in Barre, Vermont, and attended Columbia College, graduating in 1935. He was drafted into the U.S. Army in 1941. After he left the Army he served at number of posts with USIA and USIS, including England, India, and Greece. Mr. Sirkin was interviewed by Charles Stuart Kennedy in 1997.

SIRKIN: ...I was in the Philippines when the war ended. I was in a foxhole as a matter of fact, preparing for the invasion of Southern Japan when we heard about the atomic bomb and shortly thereafter the end of the war. Soon thereafter the whole unit was picked up and we went to Manila. I was at the airport when the Japanese Army Officers arrived to sign the arrangements for the surrender ceremony on the Missouri. I watched as the Japanese came down from their plane and MacArthur's Intelligence Chief standing on the tarmac to greet them. The big issue was, were they going to shake hands or not? To this day I don't remember whether they did or not.

When we landed in Nagoya, I was by then doing public relations for this small command. I immediately phoned the press office of the Army headquarters of Southern Japan in Kyoto and I said there was nothing much to do in Nagoya, was there something I could do up there in Kyoto? By then people were preparing to leave. "Yes, sure we are losing our this, we are losing our that, going home." So I went immediately to Kyoto where I became a Public Information Officer, number two to the press officer for the Southern Command of General Krueger. After chaperoning bunches of correspondents around Southern Japan, I found that the Tokyo people were leaving and I was asked if I was willing to hang around. My job was still waiting for me in New York, but I was finding this so much more interesting. I didn't go home, I didn't have a family, a wife so I accepted. So I went up to Tokyo and became the Chief of the News Division in MacArthur's Headquarters.

Q: I'd like to stop at this point I think, and we will pick it up next time where you have just become Chief of the News Division in Mac Arthur's Headquarters. How's that?

Today is the 18th of June, 1997. When did you become this, what year are we talking about?

SIRKIN: I guess it's 1946.

Q: In the first place, you were going to say before you got to this there was something about a photographer.

SIRKIN: When I was working in the Southern Headquarters of General Krueger, groups of foreign correspondents would come down South in Kyoto to cover things in that area that the

occupation officials tried to interest the correspondents in covering like the blowing up of Japanese armaments and ammunition. One group that came down had about seven or eight correspondents, including a Life editor and photographer Eisenstein.

Q: A major figure in photography?

SIRKIN: He had a big retrospective exhibit not so long ago in New York. Anyway, they were all set to go first to Hiroshima and then to Nagasaki. After they had been to Hiroshima they all wanted to go to Nagasaki because that was the other place they knew about. I started urging, especially the Life editor (I think his name was Dick Lauterbach) who was controlling Eisenstein's assignments. I said I think Nagasaki is just another version, somewhat rather smaller than Hiroshima. But I argued there was something that nobody had covered yet, which would be very photogenic, which was the enforced return and processing of the Japanese conquerors of Manchuria and Northern China with the packs on their back. I couldn't persuade any of the other correspondents; they all insisted on going on to Nagasaki. We were on the Island of Kyushu. I did persuade Lauterbach, who got Eisenstein to go with me and just a few of the other correspondents to Sasabu where there was a processing center for returning Japanese. Eisenstein went and took these pictures and ended up with a cover story for Life. The picture was right on the cover and inside, I don't know how many pages, showing all these former conquerors. Some of them actually with big packs on their back of their belongings, returning from their country's defeat where they had been lording it over Northern China. So, I thought it was an educational thing for the American public to see one of the activities of the occupation. It turned out to be a good thing for Eisenstein even if he had been grumbling about missing Nagasaki.

Q: You moved into the MacArthur Headquarters in '45, to be head of the News Division was it?

SIRKIN: This was in '46. I had been doing the news work for the Southern Command, General Krueger. I offered to go up to Tokyo to fill in when Colonel Reid was leaving and they said sure come on up. This was the News Division of the Public Information, I forget the titles now, but it was the Public Information Office of General MacArthur's Headquarters run by a former National Guard General from one of the Dakotas. He had been with MacArthur all the way up from Australia and knew his entire group of Generals. All the time I was there I myself never exchanged a word with MacArthur. I saw him numerous times because one of my jobs was to be the person representing the press, in a sense, at the meetings of the Allied Council for Japan, where the press was not permitted, usually. I was there to write any press releases. Most of the time MacArthur himself was not in the chair. The other three were a Russian General, a Chinese General and an Australian political science professor, who represented the whole British Commonwealth, a four-power group representing all nine allied powers. Some of the others didn't have a seat on the Council. The Dutch and the French and the others were not in the Council.

I'm trying to remember where, whether I was in Tokyo or still in Kyoto, I guess I was in Tokyo by then, but on the basis of my experience taking people to Hiroshima, people like Roy Howard and Spike Cannon, editor of Christian Science Monitor, groups like that and knowing how it worked in Hiroshima, John Hersey came through for The New Yorker, and he just stopped by my office to tell me what he was going to do. He was going to do something in Hiroshima, trying

to do The New Yorker version of it. I was able to give him the names of a few doctors and others who we had had contact with when I had been bringing groups down to Hiroshima.

Q: Can you describe a bit the atmosphere in the News Division particularly? The MacArthur rule was almost imperial. Wasn't it?

SIRKIN: He was the Emperor of Japan.

Q: What were your observations being down in an element which was still of interest because if nothing else General MacArthur's staff and all had a pretty good eye about public relations and publicity, particularly for the General.

SIRKIN: They were concerned about getting favorable publicity. Officially my job was to write press releases and respond to press inquiries about the activities of the Headquarters. The Headquarters was SCAP, Supreme Command of the Allied Powers, in Japan. The press office was in the Radio Tokyo Building. It was the building where Radio Tokyo used to operate and was taken over by the occupation and run by the military for a while, before it was turned back to the Japanese civilians. On the second floor of the Radio Tokyo Building was this fairly big newsroom of desks with typewriters, and correspondents from all over the world. Mainly the news agencies, AP, UP, INS, Agence France Presse, and Tass. All these people had desks there, plus, of course, The New York Times, Chicago Tribune and Chicago Daily News and outfits that had foreign correspondents. I had an office of six or seven reporters who covered the different departments of the occupation, such as agriculture, industry, education, religion, and labor. The official dealing with the Japanese press, I think it was called CI and E, Information and Education. I forget what the C stood for, but it was about the domestic situation because they were determined to change the mentality that led to the war, including getting involved in religion, the Shinto religion, to demilitarize it to a certain extent, and in education, school and women's affairs; presumably women's roles were not as equal as they were in the western countries. My office became a factory of press releases; reporters who worked for me would come and tell me what was going on and anything that they considered newsworthy in their section. Depending on what the story was, I would have to check the press release for both content and style and policy.

Q: Was there an effort to make sure that every story that came out of Japan had a General MacArthur in the first sentence?

SIRKIN: No. I don't think Emperor worship reached that far. There was concern with some of the Officers around MacArthur about anything that might turn out to be derogatory. One of the Bureau Chiefs was Miles Vaughn of UP who had come up with MacArthur from way back in the war. He was an extreme admirer of MacArthur. As a matter of fact, I guess it was '47 or '48, he had written a whole series in UP about the achievements of MacArthur. That was just before the election year in the U.S. when MacArthur was put forth as a candidate. It was something of an amusement to some of the other UP people including the Bureau Chief in Washington, Lyle Wilson. One of Miles' assistants told me at one point, after MacArthur had been trounced in the Wisconsin primary, about a one-sentence cable, I guess it was from Lyle Wilson in the Washington Bureau of UP to Miles Vaughn, "UNPACK".

There was a lot of interesting by-play especially political in the international sense. I frequently had a lot of problems with the grumbles from The Chicago Tribune correspondent about the too-liberal behavior of MacArthur's occupation. I know he came in once and pounded the desk complaining, "What is MacArthur doing, letting all these Communist labor leaders out of jail?" Some had been in jail since the Japanese imperial time. (End of tape)

Q: You are saying labor leaders had been let go?

SIRKIN: Some of the labor leaders had been released, the Socialist as well as the Communist ones, and some of the more conservative writers, particularly the Chicago Tribune correspondent, was exercised as to why. The Communists were going to take over the labor movement. For a while the Japanese labor movement was I think heavily communist controlled. But MacArthur did a number of other interesting things some of the biographers there who were writing about him didn't expect. He invited Roger Baldwin to come over to Japan to teach.

Q: Head of the Civil Liberties Union?

SIRKIN: Founder and then Chief of the American Civil Liberties Union. He came over to teach the Japanese or advise how to teach the Japanese to understand civil liberties as understood in the United States. That surprised again some of these more conservative correspondents. They didn't expect that. Also, MacArthur was breaking up the zaibatsu. Some of his staff had been recruited from academia, Washington bureaucracy, New Dealers whatever and they were trustbusters at home. They were going to trust bust.

Q: Would you explain what a zaibatsu was?

SIRKIN: A zaibatsu was a big Japanese trust, Mitsui, Mitsubishi, etc. There were four big ones and there was an effort by the occupation, the Industry Department of MacArthur's occupation, to break them up and the assumption was as in Germany where people were assuming that one of the forces behind Hitler was big steel... and that a similar thing was going on in Japan and one way to do it was to apply trust busting techniques, including introduction of American-Western taxation norms and tax collection procedures. I always remember The New York Times correspondent who specialized particularly in the economics side, Burton Crane, once told me that he was given an explanation from a Japanese person of how the Japanese operate when the occupation comes in and tells them "We know you keep two sets of books, one that you really keep for yourself so you know how the business is doing and the other to show the tax collector. Now your American tax reforms are forcing us to keep three sets of books, one to see our books, a second when they tell us we know you keep two sets of books, and we say okay, we'll show you the other set, and a third set for us so we'll know what's really going on in our business".

Q: Did you run across any effort by General Willoughby, who was General MacArthur's sort of hatchet man? Did he ever try to interfere, was there discomfort with the news bureau?

SIRKIN: There were several situations that arose. The correspondent for the Christian Science Monitor was among four or five others liked to play on the investigative side and was a little bit

more liberal than the rest, thinking MacArthur wasn't doing enough to destroy the Japanese industrial establishment. They occasionally would write a piece that wasn't 100% supportive of what, let's say, the SCAP the government section wanted to see published. So when the Monitor Editor in Chief, Erwin Canham, came through on one of the group visits organized by the Pentagon, I sat next to him on the plane from Tokyo to the Philippines. (The group was en route to the Philippines, Shanghai and Nanking, where they were to visit Chiang Kai-Shek and I was escort officer for this whole trip.) Mr. Canham asked me if I thought his correspondent was leftist or communist as General Whitney was apparently telling him.

Q: Courtney Whitney?

SIRKIN: Courtney Whitney who was Chief of the Government Section and whose office wrote this very liberal constitution for Japan. I told him I didn't think so. He was just writing what he found and what he saw. Some of it was not to the mind of the correspondent entirely favorable to the occupation authorities, but many of the articles were favorable. They were very touchy. MacArthur was a very tough personality and commander and they didn't like anything that might irritate him; he was very sensitive to what appeared in the press, I gather. So I was at least able to reassure him. He didn't pull him out. Another time, Willoughby or somebody else got very annoyed with two correspondents, Tilton of The London Daily Herald, the labor paper in London, and Bill Costello of CBS. Some of MacArthur's staff wanted to get rid of these two. They weren't going to kick them out, but if they went home on leave they wouldn't be allowed back in. When I heard about this, I wrote a very strong memo to my boss, General Baker, which he apparently passed up to his guru, General Whitney. Apparently Whitney and Willoughby were at cross-purposes on many issues. My boss, luckily for me, was working for General Whitney and the end result was they weren't kicked out. I had tried to explain purely in terms of defense of General MacArthur's reputation that if something like this happened it would arouse the entire press against the General. What these two correspondents now say may be a bit negative on CBS and certainly in The London Daily Herald, not one of the biggest papers in London. This would be much less critical of MacArthur than what would arise if they were expelled. I trust other people said the same thing. To this day I think Mrs. Costello thinks I was one of the people pushing to get Costello excluded, but that was not the case.

Another case involving General Willoughby: Vice President Wallace made an anti-colonial speech somewhat critical of the British and French, but especially the British. All of this was going on right after the war. But the occupation had rules for the Japanese press: they were not to criticize any of the Allied powers. So here is the Vice President of the United States making a speech. General Willoughby's department was the censor of the Japanese press, and they were told at some point that evening after Wallace had made this speech, that they were not to use it. This was a year or two into the occupation and the American correspondents were very close to a lot of the Japanese press and used some of them as their legmen for stories. They had arrangements and would have copies of what they wrote. A couple of the correspondents knew Japanese well and the Associated Press man was Russell Grimes. I think he had actually been in Japan and knew Japanese, and I think he was one of the prisoners who were finally locked up later in the Philippines. So that evening I was in the office alone and the only one in the newsroom was Russ Grimes. He was busily picking out the story that the U.S. government was telling the Japanese press they mustn't print the speech by the American Vice President. And he

had taken it up with the Colonel who worked for Willoughby, who was in charge of the press and he was writing what this man Colonel Stratton, I believe, had said. So he was writing this story, I gathered. I didn't look over his shoulder but he was telling me briefly, "Oh, have I got a good story". I answered the phone myself and when it rang, General Willoughby was on the other end and he asked if Russ Grimes was working on this story, and wondered if he had gotten a statement from Colonel Stratton. I said I didn't know, but I thought he was there working, that he'd been writing stuff, sending it out. Russ Grimes, I think, gathered what the conversation was and who it was, so he immediately waved his hands to tell him it was too late to stop. So I told Willoughby I didn't know what I could do about it, but I would go and find out. I came back to the phone and told Willoughby, "Yes, Russ Grimes says he has written the story and has a statement from the Colonel that it is already on the wires; it's gone off". To this day, I'm not sure if it was already on the wire or if it was about to go on the wire. But I was in no position to get in the same box with this. I heard Willoughby curse; I don't know if he was cursing me, obviously very unhappy because this put him in the box. This was an ambiguous thing. He had two rules. One was the American Vice President should be able to be quoted by the Japanese press and he shouldn't be censored. On the other hand he had ruled that nothing was to be said against the British or the French. So partly because I was working for a General on Whitney's side, and maybe because of developments like this, I was not in Willoughby's good books. Ultimately it came back a year or two later when at some point Willoughby convinced MacArthur to put the press people under one of his guys and not under General Baker who was a friend of General Whitney. I was immediately packed off because I was the Chief. That was two years after I was doing this and I had had a pretty good run.

Q: What was your impression of the early days of the Japanese press?

SIRKIN: I was not a Japanese speaker or reader and I personally did not have direct contact. I had some contact with the Japanese press in Kyoto because we didn't have that division. So for a few months I got to know well the Kyoto correspondent of Mainichi and a couple of the other correspondents covering South India for the Tokyo press and the economic papers. One of the fellows I dealt with a lot from Mainichi had studied in California and spoke very good English and was a very good journalist as far as I could tell. I have no personal opinion about their enterprise. They were quite professional, they knew the system of Western reportage but, of course, unlike the American press they had very few pages in the Western press. I guess like the British post-war press they were very thin in the amount of space they had. I don't think I can give you any thoughtful response on that one.

Q: When did you leave MacArthur's command?

SIRKIN: In '48. I was a Major. I think when I started this job I was a Captain. I was promoted to Major and then I found that a lot of people took off their uniform and put on a suit. They did exactly the same job at twice the salary. Since I wasn't going to stay on in the regular Army I did the same thing and for the last year or so, I was just a civilian working for the War Department.

Q: This would '47 - '48?

SIRKIN: Yes, '47, because I left in '48. This was in '47 though.

Q: Was there any change in sort of the MacArthur hold on things? I mean did you feel it was phasing itself out at all?

SIRKIN: Oh, no. I used to have breakfast in the Dai Ichi Hotel and got to know a lawyer who was one of the main people working for Whitney drafting the new Japanese constitution. He was a Japanese speaker. The phase-out hadn't happened by the time I left; it hadn't yet transpired.

I was there for the beginning of the War Crimes Trials and played a tiny, but interesting role in one little side-light of it. The indictment for the War Crimes Trials was drawn up by another section of MacArthur's staff. It was actually a New York political lawyer type producing the indictment. The indictment was not just Tojo and his people, but it was for generals involved in Chinese atrocities and the Philippines and everywhere. So it was a big tome they had been working on, collecting material. I was getting evidence from military and others, and one of my reporters was a WAC Captain, I think her name was Captain Smith. She would keep me informed about dates and what was going to happen, how it was going to be handled. Close to the first day of the trial the question was, "How do we publicize the indictment?" This related to the crimes of Yamamoto and Tojo, and all the diplomats and military and Navy people, etc. As the date approached, I was still puzzling about how to deal with it. I think it was my boss who told me that Sir William Weir wanted to see me in his quarters. Sir William Weir was the Chief Justice of Australia and he was the Chief Justice of the War Crimes Trial, so I don't know why he didn't talk to my boss. I guess he apparently found out who ran the press show and he wanted to see me. He asked me how I planned to handle the issuance of the indictment, so I said, "Well, the usual procedure is as we go through the indictment, they put a release date on it, hold for release so the press of the world can read it and be aware of what's in it ahead of time. Then the indictment comes to them. They'll be prepared and maybe even write their stories in advance." So he said, "Yes, I know that's the way the press works and that is why I am calling. I'm trying to tell you, paraphrase me - if one word about what's in the indictment appears anywhere in the world in any newspaper or on any radio (there wasn't any TV then), anywhere in the world and I find out about it, I will declare a mistrial.

So I knew it was up to me to decide. I told him, "If I don't put something out in advance, reporters from all over the world will be coming in with photographers and they will be in your courtroom, and they will not have heard a single word about the trial, When the indictment is handed up to your desk, there won't be any copies, there won't be anything.

So he said, "Well, I understand that all I'm telling you is as a result of the way I handle the issuance to the press of the text and what is in the indictment that if anything happens that appears anywhere in the world, I will declare a mistrial." So my solution was not to put out anything in advance. I got hold of the indictment just the day before it was to be presented. I sat up a good part of the night reading it and then sitting up at the typewriter. We didn't have Xerox then, so we mimeographed. I mobilized all the stenographers from my staff and borrowed some others. I had the guards, the soldiers who generally guarded outdoors, come in to be around my office while this operation was going on the night before so that nobody could give out this information to anybody before the indictment was issued. But in order to avoid the mad scramble in the courtroom I just announced that the indictment would be delivered to the press outside my

office in the Radio Tokyo Building, about two miles away from where the trial was. A couple of the press people showed up there; the AP had three or four guys to cover the procedures. All the press was in the pressroom. I had all these things ready with complete copies of the indictment and a press release that I wrote summarizing it. It was three or four pages. I instructed Captain Smith to be in the courtroom and see when the indictment was handed to Chief Justice Sir William Weir, and to get immediately to a phone and tell me that the indictment was on his desk. As soon as I got that call, I distributed the indictment to all the press. In those days right after the war there was a lot of press competition. Editors and publishers used to run ads saying for instance, "UP beat AP by 5 ½ minutes in announcing the end of the war. So a day later I had the satisfaction of Russ Grimes coming to tell me he beat everybody, UP, INS, Reuters and the French press only because he just took my press release and handed it to the copy boy to put it on the wire "as is". Then he sat down and wrote his own version. So at least my press release was good enough to win him his five or six-minute advantage over UP, INS and Reuters for covering the trial the first day of the indictment.

Q: What was the general feeling about the trial? Later there was considerable unease, you might say, in American circles about the trial of General Yamashita for war crimes in the Philippines.

SIRKIN: I'm afraid I didn't follow it that closely. I know there were some people who were cynical as they were in Germany about the war crimes trials. These were just the victors exacting their revenge or whatever, in some illegal form or appearance of form. But, there were all kinds of stories about mitigating circumstances that somebody wasn't quite as bad as others were, and in some cases it wasn't necessarily the commander who was responsible for what some of the troops did. There were reports of some sort of benevolent or good things some of these people had done, too, during the war. So some were sort of a mixed bag and Yamashita was a very prominent figure who had stories on both sides of the ledger, but I had no personal experience about it. I wasn't able to then, and am not able now either to express any view on that.

HOWARD MEYERS
Legal Advisor to General Willoughby
Tokyo (1946-1949)

Howard Meyers was born and raised in New York City. He attended the University of Michigan and then Harvard Law School, before joining the U.S. Army in 1942. He entered the Foreign Service in 1955, working mainly in the Arms Control area. He served in several posts in England, Japan, and Belgium, as well as in the U.S. Mr. Meyers was interviewed by Peter Moffat in 2000.

MEYERS: When my time came to go back to the States and be discharged from the Army, (incidentally although we were military units in the Counterintelligence Corps we were never allowed to admit that we were in the army and indeed my identification badge simply said "Special Agent of the War Department"). At any rate, I got out of the Army in the spring. I think it was late March of 1946 and I had a very interesting job that I obtained as the legal and administrative assistant to the deputy administrator in the War Assets Administration. On the day

that I reported to work, I got a cable from Tokyo asking me to come back to one of the sections in SCAP headquarters and I did. I was, in effect, the legal advisor to the G2, General Willoughby, then switched over to the Government Section, the Courts and Law Division, as the head of the criminal affairs branch, a small group of lawyers with both domestic and foreign law experience, as foreign legal advisors to the Japanese government in the modernization of the basic Japanese law codes.

The codes had to be in conformity with the Constitution and, on this matter, the Government Section played a major role, as the history books have well recorded. The fact of the matter was that the objectives were set forth in Constitutional type language very generally and the Japanese government found, or rather we helped them find, that in fact they were really engaged in a modernization process, rather than in a substantial law review process of a constitutional nature. The objectives were stated in much more general terms than they would be in the code law of Japan, since Japanese law had drawn on various European codes basically, in order to get out from under the extraterritorial aspects of foreign government interests from the period of the Meiji restoration. The objectives were general. How to get there was much more specific, and open to all sorts of interpretations. Rather than mandating how the changes should or possibly could be made, we in effect were ring holders. It was a very interesting exposure to the complexities of the political and the legal systems of Japan, if one can draw a distinction, and I think one can, both being open to a great deal of change.

We played an important role in helping induce the various Japanese specialists, whether from the Procurator General's office or the Ministry of Justice, or the bar associations, or the law professors in helping them find ways in resolving very real differences, and only rarely carried out that mandatory role which we were actually authorized to do. The result is that in most of the reforms that occurred, and these ranged from the civil and family codes to the Code of Criminal Procedure and the Agricultural Law revision, and on and on, we were helpful rather than mandatory. It was this background, I'm describing this at more length than perhaps is even remotely justified because it was this background that led me to realize that I was more interested in foreign affairs, in more general terms, than in law as a tool to achieve foreign policy objectives. I decided to return and see if I could not find a job in the foreign affairs field in Washington.

HENRY GOSHO
Japan Desk, USIS
Washington, DC (1946-1950)

Henry Gosho was born in Seattle, Washington in 1921. Much of his career with USIS was spent in Japan. He was interviewed by G. Lewis Schmidt on January 4, 1989.

GOSHO: I was assigned to the Japan desk of what was called the Foreign Activity Correlation Division, called FC. I was there from 1946 through the beginning of 1950. In those days, the Voice of America was under the State Department. In 1950, it was decided that they would start

a Japanese language program, and they decided that I should be detailed to New York to help set up and oversee the Japanese program. Sax Bradford was then the chief of FC, and Herman Barger was the deputy.

I was in New York, and it soon became evident after several testings of those Japanese living in the U.S. that announcing Japanese was a professional job, and you needed someone who knew professional radio broadcasting. So I was sent to Japan to recruit announcers from NHK. Sax Bradford, when I arrived in Japan, was the PAO. Olcott Deming was the deputy. They asked if I'd be interested in coming to Tokyo as a FSSO. We were then a part of the diplomatic section under GHQ SCAP, and Sax was the head of the information unit. George Atcheson was designated what we would now call the Ambassador. Then he died in a plane crash, and then William Sebald took over.

I was interviewed by William Sebald, Director of the Diplomatic Section, who said, "I understand you fought against the Japanese during the war."

I said, "Well, yes, I did. That's right."

He said, "Well, that may present a problem because we submit all the names to the Foreign Office, and if they find out that you were involved in the war against them, they may turn you down."

I said, "Well, if that happens, that's what happens." But Sax Bradford and John Emmerson went to work on it, as did Olcott Deming, and eventually, the State Department agreed to process my "papers."

So they submitted my name. The Foreign Office approved, and so I was getting ready to be transferred to Tokyo from New York when they discovered that Jeanne, my wife, was born in Japan and was an alien. There was no way that you could get citizenship at that time. This was 1951. It wasn't until 1954 that the Walter McCarran -- I've forgotten the other part -- Act passed, and State immediately processed her papers. But before that, I was assigned to Tokyo on a six-month basis.

I guess it was during that era -- when the Peace Treaty was signed, the diplomatic section was abolished, MacArthur vacated the residence and the chancery, as we knew it -- and we became USIA.

WILLIAM E. HUTCHINSON
Staff of General MacArthur
Tokyo (1946-1951)

Information Officer, USIS
Tokyo (1952-1954)

William E. Hutchinson was born in 1917. His career with USIS included foreign assignments in Japan, Pakistan, Libya, Nigeria, and Hong Kong. He was interviewed by Jack O'Brien on August 10, 1989.

HUTCHINSON: At the end of the war, I came back to Honolulu briefly but was almost immediately recruited by General Douglas MacArthur's headquarters in Tokyo. There I became chief editor of the monthly reports that General MacArthur made to the American people and the world about his stewardship of the occupation of Japan and Korea and the Ryukyu Islands.

Q: That was a civil activity?

HUTCHINSON: That was a civil activity. We recorded the civil side of the Occupation. I had a crew of about a hundred people -- statisticians, historians, analysts, draftsmen, all sorts of people. We put together comprehensive monthly reports on the civil aspects of the occupation -- political and governmental affairs, the trial of war criminals and purge of many people implicated in wartime policies, economic activities, the reform of Japanese education, and so on.

Later on, the emphasis shifted to historical studies of the Occupation. We put together a series of 50-odd monographs on all sorts of political, social and economic aspects of the Occupation. Some of these individual monographs were pretty hefty, running several hundred pages apiece. They generally covered the prewar history of the topic, leading up to the situation faced at the outset of the Occupation, and then the actions taken by the Occupation authorities and the Japanese to solve these problems.

This project lasted until the end of the Occupation. At the end of the Occupation, therefore, I found myself really quite familiar with a vast array of information about Japan, and I had been in Japan more than six years.

As the Occupation wound down, I was asked by a joint delegation from the State Department, War Department and CIA to take a small group of my people and put together a draft national intelligence survey of Japan.

Q: This would have been what year?

HUTCHINSON: This was in 1951. So we produced more or less a rewrite -- a shortened rewrite -- of the work that we had done as historians and reporters over the past half dozen years.

I also helped in the allocation and disposition of the libraries and other information assets of the Occupation. These papers were distributed among the State Department, War Department, CIA and the American Embassy.

About the time this was being completed -- and my team and I had offices in the American Embassy while doing this job -- Charlie Arnot, an old friend whom I had known during the war and before in the United Press news agency, was at that time the assistant director of the press and publications service of USIA, and he had come to Tokyo to look over the newly established USIS office. Anyway, when he wandered through the Embassy, he was surprised to find me

there. He came up to me, and he said, "What are you doing here?" I told him. He said, "Why aren't you working for USIS?"

I said, "Well, nobody has invited me."

He said, "I'll see to that." So he went and talked to Sax Bradford, who was the PAO, and to Olcott Deming, who was the Deputy PAO of USIS Tokyo, and in due course, I was brought into USIS Tokyo.

My first experience with USIS was getting evicted from the splendid house I had enjoyed during the Occupation. I had had quite high rank in the Occupation as a civilian, and housing to match. The moment that I joined USIS, I lost all that and had to go out on the Japanese economy and find a house of my own. It was quite a comedown, but we recovered all right.

In due course, I was appointed to a fairly lowly position in the information side of USIS as publications officer. There was not much of a script written for what a publications officer should do, although everybody knew you had to have one, and so I improvised a good many things. I was blessed by absolutely first-rate local employees in my section who provided invaluable assistance in getting to know people in the publishing field and helping me to work on them.

Some of the things I did, such as providing subsidies for anticommunist books and other publications, were not exactly within the USIS mandate and might have been judged improper by standards adopted later, but they were thought useful and effective at the time.

Meanwhile, in this job, I met a great many Japanese editors of newspapers and magazines, especially the intellectual magazines, of which Japan had then, as it does now, a great number of all descriptions -- from far right to quite far left. And I was in a somewhat peculiar position because I was now, oh, fourth or fifth ranking information officer compared with being perhaps the number one or two level in rank in my section of the Embassy previously.

In any case, we were fortunate in having an Ambassador at that time, Robert Murphy, who was undoubtedly a great man. He took an interest in what I was doing, invited me to one of his staff meetings to explain my activities and thus brought my work and the capabilities of my office to the attention of other people in the Embassy. We got a lot of useful propaganda published in the Japanese press, especially in the magazines, which was my specialty. We also sponsored a number of original books by Japanese writers as well as American books in translation. The book operation developed into a separate branch of my operation in Tokyo.

And so things went along for about a year and a half. There was one editor in particular with whom I became friendly. He had a magazine that was slightly left-wing to my way of thinking in those times, but not very far left wing. I can't for the life of me remember what the name of the magazine was now. It wasn't quite at the top of the list like "Chuo Koron" or "Sekai," but it was about third or fourth in line among the leading intellectual magazines. But it was an important magazine. And this editor, whose name was Hara, and his given name was Katsu, became very friendly, although a little standoffish. Mr. Hara spoke a certain amount of English, and we got

along pretty well. I think it's important to realize that by this time, I had been in Japan something like seven years. I knew the ropes. I also knew a great deal of the background and the underlying causes of many of the surface phenomena that we saw in those days.

In any case, I began to notice that no Saturday would pass without Mr. Hara stopping by my house without invitation, without prior notice. He would come in, and he would smoke my cigarettes, and he would drink my beer, and he would talk and talk and talk. It always lasted an hour and a half to two hours, and it happened every Saturday, without fail.

Q: Talking about what?

HUTCHINSON: All sorts of things. Current policy, current politics, current events -- there was no limit to the range of his questions. It was perfectly apparent, however, because he didn't really smoke much, and he didn't really drink much, that he was not there to smoke my cigarettes or to drink American beer. He had some other business in the back of his mind. But I was long enough in Japan to know how to play along with this, so I told the political section of the Embassy what was going on. They encouraged me to keep up these contacts, and report back if anything interesting happened.

These meetings went on for about a year and a half. And then at length one day, Mr. Hara said to me, "Mr. Hutchinson, I have a friend, he's in politics -- well, he's not exactly in politics, but he's an important figure in the background of politics. I'd like you to meet him."

I said, "I'd like very much to meet him, Mr. Hara."

Of course, I notified the political section right away, and so in the course of another week or so, he brought along and introduced Mr. Kishi, Mr. Nobusuke Kishi.

Q: This would have been what year?

HUTCHINSON: That would have been '53 I should think, 1953. What month it was, I don't know. But Mr. Kishi I knew by reputation to have been implicated but not convicted of war crimes. He had been a member of the Manchukuo administration -- a fairly important member of the Manchukuo administration -- and he had been held at Sugamo prison for some time.

He was imprisoned for some time, but he was never indicted. Eventually, he was released and not purged from politics like so many of the pre-war Japanese politicians. We set up another meeting, and to this meeting, I invited some people from the political section.

Q: And when you first met Kishi, did he consider it just purely social, or did he say that he had something in mind?

HUTCHINSON: Oh, it was just social. But he had some political ideas, and obviously, he wanted to talk politics. And I took the opportunity to say I'd like to invite some of my friends from the political section.

Now you must understand that in those days, anybody in Kishi's position would have been watched like a hawk by the Japanese police. And anybody in the position of the American Ambassador or the Counselor for Political Affairs or Economic Counselor, anybody at the upper levels of the Embassy, would have been watched, too. But I provided neutral ground where people like this could meet without being watched.

At that time, I had never had any contact with the then Ambassador, John M. Allison. However, I found out many years later that Allison knew all about all this, had been properly informed, and gave his blessing to the whole venture.

But anyhow, we had this meeting, and to it, I invited a number of people from the political section. I don't remember them all for certain, but certainly one of them was Sam Berger, later an Ambassador, now deceased. Berger was then Political Counselor for the Embassy. Also, there was Bill Leonhart, also a retired Ambassador now, and Dick Lamb, who was Japanese language expert, he's been dead for many years. I believe Dick Finn -- a classmate of yours and mine, Jack, at the War College in 1959 -- was one of those there, I'm pretty sure. There may have been others, I don't remember, but those four I'm pretty sure of.

And we had a number of meetings in my house in Meguro, where we provided the food and drink, and I sat and listened while the dealing was done by the plenipotentiaries -- Kishi and the people from the political section.

The parts that I do remember were extremely interesting. This can all be checked up on if the historical section of State will provide us with a look at some of the messages of those days. But in any case, as I remember it, Kishi outlined his foreign policy, and he outlined his major political game plan, which was as follows: He was going to upset the then ruling Liberal Party of Prime Minister Shigeru Yoshida, and he was then going to wreck the party and rebuild it in a slightly different form. And he outlined the number of senior statesmen -- about five of them as I remember -- who would have to become prime minister for reasons of precedence before he himself could become prime minister.

He also outlined his foreign policy. Fifteen points, as I recall it, something like Wilson's 15 points, and we went down through a checklist where he showed which points corresponded to U.S. policy and which points conflicted with U.S. policy and he explained why he had chosen the policies that he had.

And all this, reporting all this was of course not my responsibility but the responsibility of the political section, which obviously did its job.

Q: Was it clear, Hutch, that he was presenting these views in order to seek the approval or comment of the Americans?

HUTCHINSON: I think it was clear that he wanted at least the tacit backing of the United States government. He didn't want objection from the U.S. government, and he wanted the U.S. government to understand where he stood because he intended -- fully intended -- for these things to happen.

Q: Did any of our people comment as he presented his plans?

HUTCHINSON: Oh, yes. Yes. But I don't think anybody challenged them particularly. I don't remember anybody challenging them, disputing the basis of his judgment of particular policy points.

In any case, in the fullness of time, it all happened exactly as he had laid it out, except I think one of the would-be prime ministers died before he could be appointed. But Kishi came in as prime minister and head of the new Liberal Democratic Party, and so these talks really laid the ground work for the past 35 years of Japanese-American relations.

Q: And it all had its origins in the Hutchinson house.

HUTCHINSON: In our living room, exactly. One curious thing that I have never quite understood is that shortly before I left Japan in May of 1954, Mr. Kishi invited Kimiyo and me...

Q: Camille? Let's identify.

HUTCHINSON: My wife and me to dinner and an evening at the Kabuki Theater.

Q: This was when he was prime minister?

HUTCHINSON: No, he had not yet become prime minister. But he invited us to this extraordinary dinner and theater party. Mrs. Kishi told me on that occasion that it was the first time in 20 years he had invited her along on one of his evening parties.

Q: But this was his way, obviously, of thanking you for your services.

HUTCHINSON: Of thanking me for my services, yes. But what made it extraordinary in my view, was that I was still an obscure officer in the Embassy. I was not somebody, a prize to be paraded. And yet, during the intermission, he did indeed parade Kimiyo and me around through the foyers of the Kabuki-za and obviously was showing us off to his political friends -- for reasons that I have never yet figured out.

I said earlier that I found out later that Ambassador Allison knew all about this deal. That's because when I was in Hong Kong many years later, in 1971 or '72, there was a PAOs' conference in Honolulu, and one of the events at the conference was a big garden party. Ambassador Allison was there. And so I went up to this little old man standing, leaning on his cane, and I said, "Mr. Ambassador, you won't remember me, but..."

He said, "Yes, I remember you, you're Bill Hutchinson. I remember you very well."

Q: Well, Hutch, before we go on to your next assignment, do you have any final observations on your experiences in Japan?

HUTCHINSON: Yes, I have two or three things to say. First of all, I think it's true, and I think it's of lasting importance that I probably would not have been chosen to be this intermediary between Kishi and the U.S. government if I had not already been in Japan about 7 or 8 years and thus quite attuned to Japanese ways of doing business. I do not think that anybody fresh off the boat or out of the plane can expect to have the sensitivity to the ways of doing business of another country that you gain through living there for a long time.

Second, I think it's important that I was a fairly obscure figure. If I had been a very prominent figure in the Embassy, I probably could not have filled this role. The moral is, of course, that junior officers can do important work if they have the confidence of their bosses.

One must recognize too, that Kishi was faced with an imperative that required him to act. It's gratifying that I was the chosen instrument. But if I hadn't been available, I have no doubt he would have found someone else.

Third, I think it's important to say this was not really a one-man show. I left Japan in May 1954, but the contacts between Kishi and the American Embassy through USIS continued, and the people who carried on those contacts were, first of all, Kenneth Bunce. And after him Bob -- your friend, Bob Beecham, who became quite close to Kishi and indeed served, I understand, as his English teacher for some time. So we had set up something that created a lasting relationship.

JOHN R. O'BRIEN
Press Analyst, Civil Information and Education
Japan (1946-1948)

Public Affairs Information Officer, USIS
Tokyo (1948-1951)

John R. O'Brien was born in Seattle, Washington in 1918. His career with Civil Information and Education and USIS included posts in Japan, Indonesia, Burma, and Thailand. He was interviewed by Hans Tuch on February 15, 1988.

Q: What specifically did you do?

O'BRIEN: The first part of it was to analyze the Japanese press and magazines. That was routine. That developed into a job which was under the policy and programs part of the Civil Information and Education section of the occupation. This section of the occupation, SCAP, as it was called, Supreme Commander Allied Powers...

Q: That was General MacArthur?

O'BRIEN: That was General MacArthur. The purpose of this section was to revise the educational system in Japan and to preserve their arts and monuments, which was well done by Ken Bunce, and to work with the Japanese Government in explaining to the people the

importance of their new constitution, their new civil code, their criminal code, land reform and the range of astonishing developments that took place in the late forties.

Q: This was in 1947-48?

O'BRIEN: Right.

Q: Under the Supreme Commander, under General MacArthur, how was that organized? You said Ken Bunce ran it. Was it an office of Civil Affairs?

O'BRIEN: Well, Ken Bunce was a branch chief. Civil Information and Education was on the same level as other large parts of the occupation. We had the misfortune of having as a chief a lieutenant colonel in the United States Marine Corps. Nothing against him, but he was up against two-star Army generals, his opposite numbers in other sections of SCAP. But he had been in Japan before the war and was a competent enough guy.

We had, then, the responsibility, as I mentioned, of working with the Japanese, both their private and government groups, in explaining these tremendously important reforms and to win acceptance for them. Now, clearly, you simply couldn't go out and say, "General MacArthur says you have to believe in this new constitution." We had to win Japanese support and develop with them information programs involving all the media that were available, and they were all available.

Q: Actually what methods, what media, what programs did you employ in this?

O'BRIEN: Well, as an example, the press, although technically under SCAP control, was fairly free. It could not, obviously, argue against the occupation, but by using our connections with the press, we would encourage interviews with people who were free of a taint of the militarism of Japan.

Q: Did you, for instance, license editors to start papers and have them?

O'BRIEN: No. The old Japanese papers were permitted to resume, including Akahata (Red Flag), the Japanese communist newspaper. Now, as I said, it was quite clear they could not declare war on the occupation. They had to mind their P's and Q's on that. But we had a determined policy that came from MacArthur himself -- freedom of the press short of saying that MacArthur is a bum.

Q: This was, at that time, under the auspices of the U.S. Army.

O'BRIEN: Yes.

Q: Approximately how many Americans were involved in this kind of a major re-education program?

O'BRIEN: Oh, gosh, Tom, I don't know. I worked side by side with people in uniform. Many

then converted to civilian status. You'd be working with the same person again. So it's hard to put a number on it. I just don't know.

Q: At that time, if I remember correctly, the whole concept of cultural centers, information centers -- in Germany, they were called Amerka Hauser, in Japan, I don't know what they were called -- also got started at that time and became a very prominent element of this program.

O'BRIEN: Our first effort was to strengthen their own libraries and to bring in books that they needed. The actual cultural centers began, as I recall, after the occupation, and as part of what USIS brought in. [Editor's Note: Before the Occupation ended, the CI&E section had established 24 libraries (Bunka Senta), all local costs of which were financed by the Army from GARIOA, local currency accounts controlled by SCAP. American center directors, books and vehicles were supplied by army appropriated funds. These 24 centers were taken over by the Department of State's U.S. Information and Education Office (USIE -- the predecessor of USIA) when the Peace Treaty became effective on April 29, 1952. Abroad USIA installations are called USIS.]

Q: How would you evaluate this overall effort? Do you think it largely contributed to the democratization of Japan, or was it, in a way, tangential or inconsequential to the overall development of the new Japan?

O'BRIEN: Well, I'm clearly prejudiced. I think that it was a remarkably successful occupation, one that you only need to turn to the *Wall Street Journal* any day and see how successful Japan is economically. We find that their democratic system works -- there are honest elections; there's a vigorous free press; land reform has certainly taken root. We introduced reforms that have become permanent. Now, the constitution is referred to from time to time as imposed; that's correct. But it hasn't been thrown out. When we take a look at Japan's recovery and its power today, I think we have to say the occupation deserves some credit for innovation, for ideas that won acceptance by the Japanese. They could not be imposed; they had to be sold to the Japanese. They were sold, and I give them much of the credit, clearly. So I look back on a joint enterprise with pride.

Q: Would you agree with me in what I said at the beginning, that I thought that these activities that we carried on in Japan -- and, of course, in Germany, too -- were among those that really started this whole idea of public diplomacy blooming, as far as the U.S. Government was concerned?

O'BRIEN: I think that's a fair conclusion, Tom. We certainly learned much in Japan that had validity later when the Peace Treaty was signed. But there was a momentum created in that period because in Japan, we were clearly dealing with dynamic people, people of great intelligence, determined to get back into the mainstream of world society. As one of my Japanese friends said, "We want to get back to dealing with respectable people." They had been cut off so long that they were hungry to get back into the mainstream. This is where, in my job, I found myself increasingly becoming a bridge between Japanese groups who were out of touch with people in America. The United Nations was the first example. The Japanese were eager, eager, eager from the beginning of talk about the U.N., to become a part of it. They saw this as a return to decency, and I found myself swamped with requests for information about the U.N. I set up a

relationship with Wilder Foote, who then was Press and Publications Chief at the U.N., and with American groups, private groups that were supporting the U.N., all of which the Japanese would have done in due time, but they were out of touch with much of the rest of the world. So it was in that sense that we were a bridge.

Q: You had experience with Japanese people and Japanese culture. Was it difficult for an American or Americans who had entirely different history and different cultural experience to relate and be able to work with Japanese?

O'BRIEN: Oh, of course. Of course.

Q: How did that resolve itself?

O'BRIEN: Oh, you simply had to rely on good interpreters, in many cases, or on Japanese who had lived abroad. It would be a truly arrogant American, with the exception of those who were perhaps born in Japan, who would say he understood the Japanese and their reaction to all things. So, sure, that cultural barrier, the language barrier, was always there, but that didn't discourage us because both sides were willing to try to make it work. This was the key to it. The Japanese saw it was in their interest to make it work, and that was the big thing.

Q: Why did we never broadcast in Japanese on the Voice of America?

O'BRIEN: We did.

Q: When did this start?

O'BRIEN: It started just after the war. Yes, and went on until, oh, it was the '50s when it was decided that the Japanese had such an astonishingly effective radio system of their own that we weren't reaching much of a market. We had at the time, also, to bring each year from Japan the fastest announcers because the Japanese language was changing. And so we had to constantly improve, but it finally became a budget victim.

Q: When?

O'BRIEN: I would say about the late '50s.

Q: Is there anything else that you find significant that you would like to mention about your Japanese experience?

O'BRIEN: Roger Baldwin, who was founder of the American Civil Liberties Union, was brought out to Japan by Douglas MacArthur. An unlikely combination, isn't it?

Q: Absolutely.

O'BRIEN: MacArthur -- people can find fault with him in many, many ways, but he was a liberal in the sense that he wanted to have the Japanese people become aware of civil rights. Baldwin

came out and worked mainly with the legal section of the occupation. Then there was this job of trying to explain who he was, what he was doing, what his thoughts were, how they might apply to Japan. That fell in my lap, and it was a wonderful experience. It was curious that Roger Baldwin, a very well educated and sophisticated man, had to be convinced that the Japanese did not attach as much importance to the rights of the individual as they did to the rights of the family, but he learned that you had to convert the idea of civil liberties into a different context in Japan and to relate it to the family importance. Roger and I became good friends, and we continued our friendship when I came back here.

Norman Cousins came out. He was editor of *Saturday Review* then. I forget how I happened to get in touch with him, but he was looking for a woman named Shizue Kato, who, before the war, had been a very active feminist and a peace leader in Japan. Through some Japanese friends, we got Norman in touch with her. There were many other people of such caliber who came through. They were often turned over to us because we had the connections with the press, with other media, so they could pass on their message.

KATHRYN CLARK-BOURNE
Military Intelligence
Tokyo (1947-1950)

Kathryn Clark-Bourne was born in 1924 in Fort Collins, Colorado. She graduated from the University of Washington with a degree in journalism. She gained an interest in international affairs after working in Japan working with the Military Intelligence as a research analyst. Ms. Clark-Bourne later received a master's degree in mass communications from the University of Minnesota. In addition to serving in Tokyo, she has also served in India, Iran, The Netherlands, Nigeria, and Cameroon. Ms. Clark-Bourne was interviewed on August 2, 1995 by Charles Stuart Kennedy.

CLARK-BOURNE: After graduation, I got a job as editor of the *West Seattle Herald*, which was a small weekly newspaper. While I was doing that, I noticed an ad in a newspaper asking for typists to work in Japan, in the Army of Occupation. I wanted to see the world, so I applied and was accepted. They sent us over to Japan on a military ship. I was assigned to G-2 under General Willoughby.

Q: G-2 being the...

CLARK-BOURNE: Intelligence, military intelligence. All the Japanese who had been prisoners-of-war in Manchuria had been brought back to Japan. We had interpreters who were interviewing them for any kind of information they could tell us about Manchuria -- about how many buildings were in the camp they were in, for example.

I was a research analyst. I had to take that data and put it together into understandable reports. If I had questions, I could call back a certain prisoner-of-war and, through the interpreter, ask

questions. When I first got over there, I was just a typist in a typing pool. But, within a week, they discovered that I had a college degree. That's why I was shifted over to research analysis.

Q: When you arrived there, what was your impression of Japan in 1947?

CLARK-BOURNE: When I first got there, some of the city had been bombed out.

Q: You were in Tokyo?

CLARK-BOURNE: I was in Tokyo, in the NYK building, the Nippon Yusen Kaisha building, which was just across the street and down a little bit from the railroad station, which had been bombed.

The Japanese were very nice. For we American civilians, practically everything was off-limits. We were not to go into any of the restaurants. We were not to go into any theaters or movies. On trains we were to go only in a car that had a white line painted on the outside. Well, of course, I wanted to see Japan -- most of us did -- and travel and do things. So, we were off-limits a lot of the time. For instance, we'd go into a movie theater and, in the middle of a movie, the MPs would come in with their flashlights looking for Americans. The Japanese were very nice about hiding us in the projection room. On the trains, they'd hide us in the baggage cars, so I managed to travel all over Japan that way. In this way, I got around a lot.

I hiked a lot. The Japanese like to go out for cherry blossom viewing or autumn leaf viewing, so we'd take a train out to the mountains and spend the whole weekend on all the trails. There would be lovely inns or rest places where we could stay overnight. I took the train down to Hiroshima, which had been completely bombed out. I left there in '49; the next time I was back was in '75. I could recognize nothing, except the Palace and the moat around it. Even Frank Lloyd Wright's original Imperial Hotel was gone. It was sort of sad.

Q: With this intelligence, what was your impression of what we were after at that time?

CLARK-BOURNE: It was obvious that we were after any information we could find about the Soviet Union, and also China, because these were Communist countries at that time.

Q: Did you get any feel for the rule of General MacArthur as it pertained to what you were doing?

CLARK-BOURNE: General MacArthur was not very much liked. He was quite imperial. I had a boyfriend who was in the military. He was a German Jew, had gotten out of Germany, come across Siberia to Japan before the war. Then, when the war came, he and his family were sent to the United States. He went to school at the University of Michigan, but as he had the Japanese language, he was sent back to Japan when he joined the Army. By this time, his father was working for a big company here in the States and he'd come to Japan and visit occasionally. They had a house up at Lake Chuzenji in Japan, so we used to go up there a lot. MacArthur and wife had a place nearby and they would come up, too. There was no fraternization of any kind.

There was a tennis court down in Tokyo, near the Palace, and whenever MacArthur would come to play, his guards would come with their machine guns pointing and get everybody off of all of the courts. Not one person was allowed on any court, except MacArthur and whomever he was playing. The one thing I remember about him is that his guards -- bodyguards, I guess you'd call them -- were all very tall. When I would walk down from where I lived to the NYK building, I would pass by his office building. Usually about that time, his limousines would pull up and the guards would form lines along both sides from his car to the entrance, and he'd march through. That's all I ever had to do with him. I can't tell you anything more than that.

Q: Was there any State Department presence there at all that you were aware of?

CLARK-BOURNE: Not in Tokyo. In Yokohama, I think there was some presence at that time. When I left Japan, I had to get a passport.

Q: I think Alexis Johnson was running the place.

CLARK-BOURNE: Yes, I think so.

Q: You left there in 1949, is that right?

CLARK-BOURNE: I left in 1949.

**RICHARD A. ERICSON, JR.
Consular Officer
Yokohama (1947-1950)**

**Economic Officer
Tokyo (1950-1952)**

**Japanese Language Training
Tokyo (1953)**

**Economic Officer
Tokyo (1954-1958)**

Ambassador Richard A. Ericson, Jr. was born in 1923. He enrolled in Georgetown University's School of Foreign Service in 1941, but did not graduate until 1945, due in part to being drafted in the U.S. Army in 1945. In addition to his service in Japan, ambassador Ericson also served in England, Iceland, and Korea. He was interviewed by Charles Stuart Kennedy on March 27, 1995.

Q: What was your assignment to Yokohama?

ERICSON: Yokohama was a very interesting post at the time. Alex Johnson was the consul

general.

Q: That was U. Alexis Johnson.

ERICSON: Yes. I thought that I would have bosses like Alex Johnson for the rest of my career and wasn't that going to be lovely. I should have known better because I had seen the guy who took us through the A-100 course. Alex Johnson was an extraordinary man. He had two more or less deputies, Tex Weathersby and Doug Overton, who were also prewar. Then he had a whole bunch of juniors who were just learning the ropes...anywhere from 6 to 8 vice consuls. The main jobs of the post were (1) to sort out the citizenship claims of some 80-90,000 Nisei who lived in Japan during the war, and (2) to service the occupation.

General MacArthur was very peculiar at that point about State Department operating in Japan. He had what he called his diplomatic section (PSQSCAP) which was staffed by Foreign Service officers and was to help him with his relations with the representatives of foreign countries. It wasn't to do a hell of a lot of reporting and was to stay out of Japanese politics. It had a consular arm but they were not empowered to do anything. They could take a passport application but could not renew the passport. Their powers were severely circumscribed. This agreed with Alex too. He didn't exactly trust the characters up in Tokyo to do right. So most of the applications that were made in Tokyo were sent down to us to process. And, of course, they came to us individually in droves. Kobe-Osaka was also open at that time and doing some consular work, but there weren't many occupationers in that area.

Before the Korean War broke out we had opened the offices in Hokkaido, Kyushu and Nagoya.

We were also doing commercial work, consular invoices primarily and the old type of seaman work, witnessing marriages and the general consular procedures. I was the visa officer in Yokohama and did some visa work, but not to Japanese who were not allowed to travel until about the time of restoration of independence.

Q: I would like to get the dates you were in Yokohama.

ERICSON: From October, 1947 until early 1951. We left Yokohama in 1951...I was in Tokyo when the Korean War broke up.

Q: You were in Tokyo when the Korean War started which was June 25, 1950, so you left Yokohama....?

ERICSON: I misspoke, we left Yokohama and went on home leave in late 1950. We left Yokohama in early 1950 to go to Tokyo when the supervising consul general was moved to Tokyo.

Q: Well, now in this 1947-50 period, let's talk about dealing with the Nisei. Later on I got involved in doing the same thing with dual Americans in Germany out of Frankfurt. What was the situation in Yokohama?

ERICSON: First let me discuss how Alex ran the post. He got us all together early in the day and said, "Look, there are three people who have rank. Me, Doug and Tex. The rest of you guys, regardless when you arrived, have no rank. If I appoint you as chief of the citizenship section and the guy under you outranks you, that is just too bad, he will be chief some day." But he rotated us all through each office. We all did everything. He was meticulous seeing that we learned what it was we were supposed to do. My first job was as general consular affairs officer...marrying Sam, doing the deposit of ship papers, notary public, etc.

Dealing with the Nisei. We had two women whose names really ought to be blazoned somewhere in gold, Yuki Ohtsuki and Yuki Weminome, both of them Nisei who had married Japanese and come back to Japan and lived there during the war. Especially Yuki Ohtsuki who was a 70 lb. little wired up bundle of energy. They really ran the program and taught every guy that went through there what he was doing.

Q: I had some Germans that did that to me too.

ERICSON: Well, they knew the Immigration and Nationality Act backward and forward and they WERE Americans. Yuki Ohtsuki was married to a professor at Tokyo University which bestowed upon her considerable social status, but she was an American and nobody ever forgot it.

Yokohama did almost all of that. We had a backlog at one point that was a year and a half of appointments. But the Nisei would inquire and it was much to their advantage, whether they wanted to identify themselves as American or not, to have identification because then they could be hired as foreign nationals by the military and the Japanese gave them extra rations because they were foreigners. It pained the Japanese to do it, but they did. If they could establish citizenship, they could go to the United States.

Anyway, we had a vast backlog of cases and we would schedule... A consular officer would schedule about 8 interviews a day. People would come from all over the country. Before the interview we would send them out the list of documentation that they had to provide...what citizenship based on, prove were born, prove you are who you say you are, get the Japanese records which shows that as well as your American birth certificate. We made it as difficult for them as we possibly could to prove that they were who they were. They had to have identifying witnesses, etc.

So these hordes of people would come up. A lot of them came from Hiroshima and Nagasaki, particularly Hiroshima. When we bombed Hiroshima we did two things. Hiroshima was the center of immigration to the United States. A large portion of the poor farmers who came to the United States came from the Hiroshima area. Many when they returned to Japan left relatives back in the United States. Hiroshima was also the center of Christianity in Japan.

So, applicants would come up from Hiroshima and after three nights on a train...Yuki Ohtsuki had a horror of little bugs that jumped around and she used to spray her office every day after the last applicant had left. They would submit a formal application and then it would be reviewed by an officer. Then we had to write an advisory opinion. The advisory opinion and the application

had to be sent back to Washington in those days to the immigration people.

Q: Ruth Shipley was one of the preeminent dragons in the civil service.

ERICSON: Speaking of the A-100 course, we each drew some distinguished guest to introduce to the class as part of our training. I drew Ruth Shipley. I was scared stiff because she had that dragon reputation. But I went over to her office and it was the most pleasant interview I ever had. She did a very, very good job for us.

Anyway, somebody back in Washington, had to approve the restoration of citizenship and then it was sent back out. This whole process could take as long as two years.

Those who did show up were not from the higher strata of society. People would usually get off the train dirty, tired and smelling not particularly attractively, so all of this stuff was carried out in the basement of the consular building in Yokohama. We all got our chance. I think it was Harry Pfeiffer, a consular office, who devised the Pfeiffer automatic opinion writing document which was a great help. It had various paragraphs which you just filled in dates and information and then sent it up to the typist saying, "Paragraph A, subtitle B, fill in this information." So you didn't have to write the whole thing out all the time. It was our first stab at automation, I guess. But it was a big job. Part of it was providing evidence and testimony to support the government in its attempts to prevent the Nisei who we had turned down from suing for restoration of their citizenship.

There was a man by the name of Mike Matsuuta who became a very good friend of mine because we saw a lot of each other, right up to the time he died a few years ago. Mike was a lawyer for the Japan-American Citizens League in the US at that time. He was the one who brought suit on behalf of a family in the United States for some relative in Japan who had been denied citizenship by us. Of course, this was post-war II, very close to the end of the war and the feeling in the States about Japan and the Japanese wasn't all that tender. But Mike cheerfully sued the government every time he got a good case. I don't recall that Mike ever lost a case. I can remember cases where young men did everything conceivable to lose their citizenship...joining the army, taking what was considered an oath of allegiance, voting in elections. The outstanding case I think was the kid who had been brought back and hadn't been registered as a Japanese so he didn't have dual nationality when his parents brought him back in the 20's or early 30's. He went through a process called Kaifutu in Japan which is restoration of citizenship of Japan...Japanese law required registration within six months after birth at that time or you forfeited your nationality. He was put through this nationalization process when he was six or seven years old. He volunteered for the Japanese Navy and was a naval pilot during which he took all kinds of oaths, etc. Anyway, the guy had done everything. And he spoke no English. There was nothing American about this guy and we thought we were going to nail this fellow. Mike thought differently. He said that the renationality was done under duress, his entry into the Japanese Navy, since he wasn't really a national of Japan at the time because the process was done without his consent, he was serving as a Japanese national. Voting was under compulsion. At that point the government decided they weren't going to fight it any longer and he went back. A few years later, of course, the Act was changed.

Anyway we had that kind of entertainment. Then we also had the other sole interesting aspect of that job which was ferreting out those who had served in the Japanese Army who claimed that they had not. That was all brought about by this guy Mito Kawakita, who had been a prison guard. He actually hadn't served in the army but he was a Nisei who had been employed as a prison guard somewhere down in southwestern Japan. He had been very brutal to Allied and American prisoners. He got his citizenship back very quickly. He got a passport, went to the United States and was recognized in a Los Angeles grocery store as one of the two Japanese tried for treason. There was a big hullabaloo over how Kawakita got to the United States. That happened fortunately before I got to Yokohama, but we instituted a system of background checks by the CIC. Every male who could conceivably have served was from that time on investigated by the counterintelligence people to determine whether he had or hadn't served in the army because what they would bring as a certificate if they hadn't served was something issued by the local village register. Everything is entered in the local register, if you served in the army it is there. The demobilization bureau of the Japanese army would also issue certificates, but their records were a mess and it was better to rely on the local record, but the local recorders got to sympathizing with these guys. Here this guy has the chance to go to the land of milk and honey and simple justice requires that I give him the certificate. When this process was first started they actually pulled 10 or 12 people off a ship who were actually on board and made them go through the process and found 4 or 5 of them who had actually served in the army.

Q: Serving in the army was considered a disqualifying factor?

ERICSON: Yes, under the Nationality Act of 1940, while a citizen. But these were Nisei, almost every one was a dual national.

That business had begun to decline by the time the call came for my transfer to Tokyo. When we went home on leave we bid farewell to the consular business.

Q: Did you have anything to do with marriages?

ERICSON: Oh yes. Before the war there were not too many Korean-Americans, but in Japan they had whore houses dedicated to the occupation within two weeks of the time troops landed. There was a lot of fraternization. A lot of it might have resulted in marriages if it hadn't been for the fact that the Nationality Act of 1940 also prohibited the issuance of an immigrant visa to a person who was 50 percent or more of specified races, including Japanese. The army found this very convenient. There was a very small business and missionary communities in Japan. Almost everyone who was an American was affiliated with the occupation and the occupation's rules. The occupation's rules on marriage was that you cannot marry anybody who cannot accompany you on transfer. Therefore all these GIs who hooked up with Japanese girls were told they could not marry unless their intended was allowed to go to the States. They would transfer people if things looked like they were getting too hot. You could be transferred from Sapporo down to Kyushu. Nonetheless, the GIs became aware that political pressure could be brought to bear to rectify the situation, so there were several periods when Congress passed special legislation which said in effect...notwithstanding provisions in the Immigration and Nationality Act foreign spouse of an American citizen, veteran of World War II, may enter the United States provided the marriage takes place within 60 days from the passage of this act. So it gave guys 60 days to

get the army to approve their marriage. That was done a couple of times, at least one very famous time before I arrived there. The army dodged giving permission and made it as difficult as possible. You had to have Chaplain interviews, parents consent, etc. So the result was that everybody who finally got permission to marry ended up sitting in the consulate yard on two or three days before the 60 day period elapsed. They tell me it was quite a sight.

There is a marvelous story involving Alex Johnson who was consul general in Yokohama where virtually all of these marriages were being done. Incidentally consular officers were forbidden in the words of the time to celebrate marriages. But Japanese law said that a marriage between a foreigner and a Japanese is not legal unless it is dully registered with the Japanese and unless the consul, the representative of the government of the foreigner would certify that he is legally free to marry in accordance with the laws of his country. That poses a problem for us because (a) we can't do the marriage and (b) a federal officer cannot certify the state law and marriage is governed by state law except for the District of Columbia. Anyway, the way around it was to enter into an agreement with the one ward office in Yokohama or Tokyo, etc., that you will let them appear before you and the American citizen will swear that he is legally free to marry. Then if you are satisfied that he is legally free to marry in accordance with the laws of the state he claims to be a resident of, then you will sign these certificates to witness to marry, take all the papers from both the Americans and the Japanese involved, so that the Japanese can then tell the Japanese is okay and the act of our giving the papers would indicate it was okay by us. Then they would enter the thing in their local ward registry and then send the girl's papers back up to her so that they can properly be entered in her home ward. Then it is all nice and legal and we can issue the certificate of witness, etc. A lot of these guys came from states where there were still anti-miscegenation laws.

Q: Also there were laws prohibiting marriage of different races. This was basically to keep whites from marrying blacks, but it could spill over into Asians.

ERICSON: There were places, Idaho for example, which specifically mentions Japanese. But, you are right, many of the southeastern states had antimiscegenation aimed at blacks, not Japanese, but they applied to Japanese because of the way the law was written.

Anyway, getting back to this Alex Johnson business, Alex was a rather imposing character. He is a little stiff. He can be frightening at first appearance unless you know him really pretty well. He is a very impressive guy. He closed the consulate for everything but these marriages in order to take care of these teeming customers and get those children out from the front yard. It was August, as I recall it, and the consulate general had a big circular desk out in front. You came in the door under the great seal of the United States and the place looked like the White House. It was deliberately built during the Hoover Administration to resemble a little White House. It was a very imposing edifice and it was a little awe inspiring when you came in. You came to this big desk and then to Alex Johnson who is standing behind the thing. One day, Alex was in short temper. It was hot. The guy was carefully instructed to come prepared with all of his papers ready and his would be wife by his side. A Negro soldier, a sergeant, came in with his girl and he approached the desk. Alex rather brusquely took his papers from him and started sifting madly through them. One of the things, as I mentioned, that had to be provided, in addition to all the Army paraphernalia, was an extract from the family census register called a Koseki from the girl

so that it could be given to the War Office and sent to her to complete the cycle. He is looking through the papers and can't find the Koseki. The sergeant meanwhile was thinking he had gotten this far but he was still not sure of making it. Here is some guy who is obviously irritated looking through his papers. Johnson looked up and gave him his cold, blue, Norwegian stare and said, "Sergeant, have you seen this girl's Koseki?" The sergeant backed off and said, "No sir, I haven't seen nothing yet. This thing has been on the up and up."

I didn't participate in one of those things, but I did do the marriages among members of the occupation who had to have much the same kind of approval. What we did constituted the only legal marriage. Getting it accepted by the War Office and registered in Japan in accordance to Japanese law establishes legality in almost every state which state that Americans married abroad must be married in conformity with the laws of the state in which they are resident. But that kind of thing uncovered the fact that there probably are quite a few people who were nurses, civilian employees, etc. who married other Americans very early in the occupation and whose marriages were not legal because they were probably done by chaplains who gave them a nice certificate saying they were married. However, if any one wanted to contest one of those marriages, they probably could make it stand up.

Q: Then you went to Tokyo for a little while before you went on home leave.

ERICSON: Yes. We established the supervisory office. Johnson had left by this time. Let me tell one thing about Alex Johnson because I think it is one of the great examples in a very small way of what makes a first rate Foreign Service supervisor. I was the visa officer. There was a man in Seattle, a Nisei, who we will call Mr. Imada. Mr. Imada was a prominent Democrat, the leader of the Seattle Nisei political Democratic community. Before the war he had been a large scale importer to the United States of scrap iron. His mother was an Issei, a first generation. She had come to the United States with her husband...

Q: Issei is first generation?

ERICSON: The Issei were immigrants. They were the Japanese who came, never acquired citizenship but settled in the United States. Nisei is second generation, born in the United States, and probably dual citizens because most of the Issei registered their children promptly and had them established as Japanese. We hated the idea of dual nationality and that is what the Nationality Act aimed to eliminate.

Anyway, his mother had lived in the United States for a few years and had given birth to this guy but they had left an elder brother behind in Japan and he turned out to be quite a successful businessman in Japan. So, in the early 30's the mother had gone back to Japan with a returning residence permit meaning she could get back to the United States as long as she kept that valid. It had a year or two period of validity. She had gone to Japan and never returned to the United States allowing her permit to elapse long before the outbreak of the war. In the three years following the war she had never applied at the consulate for anything and we hadn't heard word one from Mr. Imada either in Seattle. However, Alex knew of him. He showed up at the consulate one day intending to see Alex and Alex was in Tokyo for a meeting. So Tex Weatherby saw him and what he said was, "I have this ancient mother. She is now in her late

“70s and I feel she will be much more comfortable in the United States and I would like to get her a visa to return.” Of course it was totally against regulations and policy at that time to issue a visa to anyone who had shown no inclination to go back. She really had no claim to returning resident status. Tex told him this and he got furious. Tex came in to see me and said, “Dick, take care of this guy. I have ruffled his feathers, he is mad at me.” So I took this guy and talked to him for a couple of hours. I went over and over the regulations and instructions we had. But I told him, “Look, your mother is old and infirme. Why don’t you go back and get some doctor to issue a certificate to the effect that she needs medical attention which is not available in Japan.” I said, “I think I could probably swing a temporary visa for medical treatment and if she goes to the United States for such treatment, who knows what will happen.”

Well, he thought that was a good idea and he left the office and met Johnson on the way out. They chatted and he showed no signs of alarm or anything. Anyway, he went back to Tokyo and found a telegram waiting for him at his hotel to get back to Seattle right away, so he took the next plane. On the plane he probably absorbed a few drinks and started thinking and he got mad. He wrote a letter to his lawyer...I think he was thinking of Tex but the only name he remembered was Ericson...accusing me of everything under the sun. I had two policies with respect to Nisei and Caucasians. I treated one terribly and treated the other with great courtesy. I spent more time at cocktail parties than I did in the office. I had treated him viciously and failed to listen to the justice of his request, etc. Most of it was the allegation of dual standards. His lawyer sent it to Senator Walgren and Walgren sent it to the Department with a covering letter saying that this person was a good strong supporter of Democratic activities in Seattle and important to me and I want to know what you are doing to my constituent and what kind of punishment are you going to give this miscreant out in Yokohama.

The Department, of course, sent it on out to Alex in a dispatch saying, “We want to hear promptly what kind of punishment you are going to mete out to this guy Ericson? What is with him anyway?” There was no question in the Department’s mind that I was guilty. Anyway, Johnson sat down and started his response by saying, “Your charges are misdirected. If there was anything that went on in this office that was wrong, they should have been directed at me because I am the consul general and everything that happens in this office is my responsibility. Then if there is something further to be done I will act against the individual. But first and foremost it happened here if it happened at all and it is my responsibility so you should have been charging me and not Ericson.” Then he went on to say (he went on for four pages, I still have a copy of it), “I know this guy he couldn’t have done this kind of thing. Here is probably what actually happened. Etc.” Then he had Tex and me both write our recollections of the incident and enclosed them with his response. He said, “I urge the Department to inform the Senator and Mr. Imasda’s lawyer and Mr. Imasda that until each of them has apologized to Mr. Ericson in writing we will not take Mr. Imasda’s case out of the file.” That was the last we heard of it officially from the Department. I thought that was a rather extraordinary thing for a boss to do. If Alex Johnson had asked me to lie down on a railroad track right then I probably would have done it. The outcome of the case doesn’t show the Department in too good a light because six months later, by this time Johnson had left, I was still visa officer...it happened to be Larry Taylor, the guy who had been my leader in the A-100 course, and he took me aside and said, “Dick, can’t we do something about this? The Department still feels Walgren wants this done and can’t you see your way clear to making an exception of some sort?” I said, “No, I can’t and I

won't. If I do I am knuckling under this kind of pressure and if I don't I am being vindictive. I don't even want to hear about the case any further." Actually we had nothing against the old lady. She was a sweet old lady. She came down for her visa because he went to Jaybird Pilcher who was the consul general replacing Johnson and he suspended me as visa officer for the day and made Owen Zurhellen visa officer who cheerfully issued the visa contrary to all regulations. I was perfectly happy that Owen had done it because she was a nice old lady and what the hell difference did it really make except it was a matter of principle by that time, of course.

That was one of the things that made Alex Johnson such an extraordinary person. I was looking forward to having all my bosses be like him, but unfortunately that was not the case. In matters large and small, he was something else.

Q: Now you went to Tokyo....

ERICSON: I went to Tokyo for the first part of 1950. I was in the consulate in Tokyo when the Korean War broke out. I was sent to Tokyo with Pilcher because I had had experience of every aspect of consular work and nobody in Tokyo had and a couple of the other guys were designated to open the new posts in Nagoya and Sapporo. I wanted Nagoya very badly but didn't get it because they wanted me in Tokyo.

Anyway, we were in Tokyo when the Korean War broke out. My parents were in Yokohama. We had been stationed together for about a year and a half, I guess. Anyway, we were in the consulate and then went home sometime late 1950 and I came back into the economic section of the embassy. Quite frankly, I told Jaybird that I was not coming back into the consular section because I felt I had done it all at that level and I wanted to get some other experience and besides I had great difficulty with the man who had been running the Tokyo office and who was now his deputy. A fellow by the name of Glenn Brunner who had been a missionary before the war and when his missionary society during the impression proved incapable of supporting him any more had taken a job as clerk in the consulate at Nagasaki and had lateraled into the Foreign Service and was now consular officer in Tokyo.

Q: One of the real problems, I think, of the consular business was the lateral entry of people who had limited ability and limited intellectual prowess.

ERICSON: Amen! I won't go into detail about Glenn but he made it impossible for us. He was a niggling little nitpicker, scared of any initiative or action and he made life just miserable for us.

So when I did come back I was assigned to the commercial section. By that time the Korean War was booming along and our attitude and our policies toward Japan were very, very rapidly changing. The Peace Treaty started to be negotiated about that time and we hired on John Foster Dulles to represent us. John Allison was his special assistant for that purpose. There was considerable concern...of course the American army in Korea in 1950 was woefully understaffed. My wife had taken a job in Yokohama, I was the lowest paid Foreign Service officer going for the first two years of my existence in the Foreign Service. We had some extraordinary expenses and we had to get Johnson's permission for her to go to work. That was spurred on by the fact that between Owen Zurhellen and me we had the two most disreputable automobiles in

Yokohama and he didn't like us parking them out in front. So one of my stated desires was to buy a new car. Alex with great reluctance gave Betty permission to take a job and she became secretary to the Chief of Staff of the 8th Army and as such took the notes of General Walker's staff meetings. She would come home and tell me what was said about the state of readiness, and the lack of equipment and how everything was going to hell in a hand basket with this army of occupation. So, when the Korean War broke out we were woefully unprepared for it. The Chief of Staff, incidentally, was General Dean when she went to work. He was a friend of my father's as a matter of fact. She worked for him for about 6 months and then he got his division that he took to Korea and lost.

Anyway, we assembled the forces as well as we could, as everybody knows, and threw them into the line in Korea and we denuded Japan. There was nobody really left to run an occupation for 75 million people. And, of course, there was concern, but there was never any indication that the Japanese were going to do anything contrary to what the occupation wanted them to do, despite the fact we had no force to back it up. They remained totally cooperative and as a matter of fact set up their own national police reserve at the time which became the foundation of the current Japanese ground forces. But there was no move of any kind that would have given any American administrator basis for concern.

And then we began to rely very heavily on Japan as a base of operations. Airplanes were taking off to fight over Korea, the hospital system in Japan was devoted to caring for our wounded, and the Japanese economy which really up to that point hadn't recovered a lot, began to prove capable of doing all kinds of things in support of the action in Korea and the Japanese began to make a lot of money out of it. This was the real beginning of the revival of the Japanese economy, the demands of the Korean War. A lot of interesting things came up on the economic side and I was quite happy to be assigned to that section despite my total lack of knowledge of economics.

Q: I was economic officer and having got a D- in economics in college I was a little worried about this, but it didn't make a lot of difference. What was our mission setup at that point? You were there from 1950-52.

ERICSON: The occupation stayed until late April, 1952. So during the first two years of the Korean War the Peace Treaty negotiations were going on a pace but it was still formally an occupation. The Department people at that time were still formally part of the SCAP Headquarters. We were called by them the Diplomatic Section. We were called by the Department, the Office of the Political Advisor to the Supreme Command. There was constant war between MacArthur and Washington as to what our status really was and the occupation gave ground very grudgingly, but as it began to fade out our economic section began to take on much of the burden that the economic section of SCAP had. The consular officers were allowed to do quite a bit more. Political officers began to be able to report and we got involved a little bit in politics and it sort of gradually evolved to the point where when the Peace Treaty became effective we were really pretty well prepared and into sufficient things to start functioning immediately as an experienced and capable embassy. But MacArthur never...I don't know what difference Ridgeway made to all this...as long as he was SCAP accepted any kind of independence or activity without his authority by State Department personnel.

Q: You were there when MacArthur was there?

ERICSON: Oh, yes. I was there at the airport when he left.

Q: Did you feel the heavy hand? Did you feel like a pariah?

ERICSON: Well, remember, first of all I am an army brat and I know something about General MacArthur and his World War I incarnation. He was an extraordinary man although he went very bad towards the end as most great men do. But I have more respect for him than I have loathing and dislike. You could see why he took the attitude that he did. He was the supreme commander. That is what it said. Supreme Commander of Allied Power. None of the powers had any more rights in theory than any of the others. The British established an embassy to him. He almost felt like his own government. But his was the responsibility and he was going to exercise it strongly.

Did I feel personally like a pariah? No. Life in Japan for practically any member of the occupation was a great pleasure in those days. You could go and do anything. There was no physical danger of any kind, no crime, nothing to worry about. If you want to play golf you can go anywhere you want to. I was a member of the Kokane Country Club and well past that. What does it cost to get into Kokane today? A million dollars? You don't have to pay an entry fee but you have to buy a bond that is worth a million dollars before any individual can be accepted and you damn well better have a Japanese name.

Anyway, we were well housed, we had inexpensive servants and were reasonably well fed. The medical care was perfectly okay from the standpoint of then. The military, as long as you didn't offend any of their precepts, treated you pretty well. We had an officer who was down in Kobe-Osaka, for example, who insisted on bringing a lady into the bachelor officers quarters where apparently rules were rather rigidly maintained. They didn't know what to do about this guy so they asked to have him transferred and he was transferred up to Tokyo...and the lady followed him. You really had to step on their toes in order for them to say anything.

Q: During the MacArthur time, what were you doing?

ERICSON: Well, I was in the consulate until just before the Korean War broke out and then after home leave I returned to Tokyo and was in the economic section. The economic section was beginning to phase out and the embassy economic section was beginning to be involved in a lot of things. I was fortunate in that sense to be in the commercial section, rather than doing economic reporting. One of my responsibilities was the Japanese iron and steel industry. I can look back on those days and say, "Gee, I was personally involved and to a certain extent responsible for a lot of developments in the Japanese steel industry." For example, we were charged with issuing on behalf of the Department of Commerce, what were called priority assistance certificates. You would have a Japanese company that wanted to obtain something from the United States in the way of specialized machinery or specialized technology. Because of the strains the Korean War put on the American economy, it was usually something that was being rationed out in the United States and for an overseas client to get it required some special

effort and certifications. One of the big cases I worked on...there was an outfit called National Boat Carriers, an American company probably owned by Greeks but registered as American, which was involved in tankers and the transportation of petroleum products. Well, the Korean War put an enormous demand...one minute World War II oilers were a dime a dozen and the next minute they were gold and the demands for them jumped by leaps and bounds. Well, they wanted to start building tankers, especially to service the Korean War. The National Boat Carriers saw this opportunity and decided they would like to build them in Japan with cheap labor, marvelous facilities...they built the Yamato...

Q: The largest battleship ever built.

ERICSON: Well, it so happened they went down to Kure where the Yamato was built and where the huge Kure naval yard was. In that neighborhood was located a major Japanese shipbuilding company. The naval yards at Kure were part of the industrial complex of Japan that had been designated as reparations to the various claimants against Japan during World War II. Fortunately we didn't behave like the Russians, who denuded Korea, we didn't have to. We said to our allied friends, "Look, we designated all this stuff for reparations and if you want it, come and get it." But how are you going to move a major shipyard? So the naval yard in Kure sat from the time of the end of the war until the Korean War broke out, more or less abandoned. National Boat Carriers saw this and said, "Ah, here is where we will start building our big tankers."

What it required, of course, was the occupation to release it from reparation designation and among other things, the United States to release steel because the Japanese steel industry was not producing sufficient steel for this kind of thing. I got involved then on behalf of the embassy in investigating this and writing justifications from Japan and making the recommendation to Commerce. The next thing that came up, of course, was that National Boat Carriers decided they didn't want to build tankers of riveted construction, they wanted to build a welded ship. Well, this put an entirely different light on things because the Japanese steel industry sure as hell was not producing any welding steel ship plate and they would have to get everything they needed from the United States. So this required special exceptions. I then wrote a recommendation back to Commerce which said, "No, don't do it. The purpose for which the shipyard was released from reparation designation was to permit the employment of Japanese in the area and benefit the growth of the Japanese economy and the Japanese steel industry." The whole thing looked like a very good deal for the Japanese economy which was still in pretty sad shape. I said, "If you start letting them import welding steel, the next thing they are going to be asking for to get faster and quicker will be something else they can get in Japan, so lets draw the line here and say No."

As a result of that National Boat Carriers turned to Yawata, a big Japanese steel company, and helped Yawata invest money to produce steel of the quality they required. That I say to this day is one of the foundations that later became a major, major industry in Japan, namely, shipbuilding. Now it is not as important because they have found cheaper places to do the job, like Korea.

Q: Yes, and they are moving away from Korea to India or some place.

ERICSON: Yes. Labor is very intensive in this kind of thing and a very expensive element so if

you can get cheap steel plate...tankers are easy to build, a very uncomplicated ship, although huge. Anyway, I still think today that that recommendation was one of the foundations of the resurgence of the Japanese economy because it forced them to invest in modern technology.

The Japanese were running their steel industry much like they run everything else on a very cooperative and friendly basis. Things were rigged and jobs allocated. We, in the embassy in the declining SCAP were interested in using this Korean War to introduce the element of competition into the Japanese economy. One of the ways we tried to do it was by improving the ability of the smaller companies to compete with the big three in Japan...Nippon Kokan, Fuji and Yawata were the big three, but there were a bunch of others. We had an application from an interesting little company between Yokohama and Tokyo by the name of Kawasaki. Kawasaki Steel Company wanted to build the first really integrated steel plant in Japan. Yawata's plants and some of Fuji's could be said to be integrated, but if you were an American and visited any of these things and you saw the way the materials crossed each other and the lack of a logical flow of things. They sort of grew like Topsy and were really pretty bad yards. Kawasaki wanted to build what would be the first post-war steel production facility from the ground up with the latest technology, etc. I had the privilege of writing the justification to get release of the equipment that they needed and to get a loan. The plant was very successful.

Of course, we had told them not to muck around with this kind of thing. Don't get yourself tied down to single buyers. Find out who makes the best of whatever equipment needed and go and get it. Design the plant not to accommodate some piece of land, but design a piece of land to accommodate the plant. And they did that. They put it in Tokyo harbor and made a landfill into the harbor which was designed to accommodate the plant they had designed so ships bearing ore could come up Tokyo Bay and dump it right at the blast furnace. This was true of any other raw materials. They could be delivered right into the plant and at the other end of the plant could be loaded into ships for shipping. This was one of Japan's major economic advantages that people don't think about very much, almost all of Japanese major post-war industries is built along the sea coast and behind it is a marvelous railroad network which makes Japan really tick. So their internal economy is very well served transportation-wise, but externally also. This is one reason why the American steel industry lost out to Japan...In the United States you had to dig the ore from the Mesabi and take it down to Lake Superior, put it on an ore boat, take it over to Cleveland or Gary. Gary was pretty good because the plants were close by, but Cleveland always involved a certain amount of transshipment. Going down to Pittsburgh was another very expensive train ride. Whereas the Japanese could and did buy their much better quality ore (the Mesabi was running out at the time) than we had from anywhere they wanted to in the world and could ship it by sea right to the blast furnace. And they could export it right from the plant without having to put it on a train if they didn't want to. That was an enormous advantage and probably as much or more than what their labor costs were at that time. Anyway, Kawasaki was successful and the plant was copied then by virtually every other Japanese plant that has been built ever since.

So it was interesting, that work in the commercial section at that time. I met some very important Japanese economic people, especially in those industries which I was covering...the metal working industries, the automobile industry, etc.

Q: What was the embassy's impression of Japanese business people at that time?

ERICSON: Well, in the first place, it is a little difficult to answer that question because...you stood apart and looked at this organization and it was very different from anything you expected in the United States. You didn't see the dynamic CEO, take care sort of people. What you saw was major economic organizations run on a highly cooperative basis headed by somebody to whom everybody paid great deference, but you never saw that guy do much of anything except ceremonial things that would give you rise to believe that he was somebody due that kind of deference. But, nonetheless, within the Japanese system there was that reason, he had paid his Japanese dues and he got where he was because he was best at doing the things that the Japanese respect. In many respects that is different from what you would expect in an American. They were slow at that time and cautious in many ways. But from the very beginning they were dedicated to making a Japanese and making sure that whatever they got from abroad that they assimilated and made theirs, and then, if possible, they would not continue to rely on the outside source. I saw this time and time and time again.

Remember the Korean War was still going on and they were still crushed. It is hard for Americans to appreciate...those people who worry about a military resurgence in Japan, for example, really should have been there during this period because this country was really more or less paralyzed with uncertainty. Everything that was theirs had more or less been rejected because of the war and they were going to reassert that, but in this period they were still operating in a vacuum.

Q: How about labor unions at that time? This was the time when labor was a very big item in the American context.

ERICSON: The Japanese labor movement to the extent that it was effective was almost always company oriented. You had company unions, you had some company-wide unions. They never achieved national organizational status. They never became a major national political influence the way they did in the United States. There was no national automobile organization, for example. There were Nissan unions, Toyota unions, etc. The few that were nationalized represented institutions, which themselves were nationalized. For example, the teachers union. Everybody came under the Ministry of Education so if you were a member of the teachers union why you were a member of a nationwide organization and when you struck or sounded off well then you could make your voice heard. If you were in the railroad workers union, the national railroads covered every part of the country you were a nationwide force and if you threatened to strike well then the whole country would tremble.

But there was much more compartmentalization in unions in Japan at that time than there was in the United States. The Japanese didn't look favorably on unions and never have and it was a constant struggle for them. Then, of course, politically, the union leadership was always accused, rightfully or wrongfully, of being socialist oriented politically and that was anathema to the conservative leadership of Japanese business which really controls the country and they made it very difficult for them.

Q: How did the developing military situation in Korea with China's entrance and the eventual

firing of MacArthur hit you all?

ERICSON: After the war, the Japanese having had the privilege of being the first recipients of the atomic bomb, the American military was kind of godlike for a while, and this went right to MacArthur, himself. We were kind of godlike to the Koreans too during this period. The Koreans were not fools. Before the Korean War they knew...Koreans and I have argued in the '60s and '70s when they would say, "We knew who the power of the world was. We knew who did the bomb. We knew who supplied the Russians. We saw the Russians coming down in GM trucks and jeeps. We knew where their industrial basis was. We knew they didn't have it. We knew that if you wanted to you could have kept them north of the Yalu, but you didn't want to. You sat down there and drew this stupid line across the peninsula." But the same thing applied to a certain extent in Japan until the Korean War broke out and then this terrible weakness in the early days of the war and then the entry of China and our inability or reluctance to go after the Chinese was the first in a series of...it has been a long, slow, gradual process, perhaps we never had the respect that we had in June 1950 militarily from the Japanese. Nonetheless, when the Chinese came in there was no terrible feeling that Japan was in danger, and that was what they were concerned about, they didn't give a damn about Korea. They didn't feel that they were militarily threatened really, except perhaps down the road should we fail utterly in Korea. So, they welcomed eventually the renegotiation of the armistice and all that.

Now MacArthur. Well, I think MacArthur up to the Inchon landing was still a man for his time. After that he went down hill pretty badly. The Japanese by that time were pretty conscious of the fact that we were relying rather heavily on them. MacArthur had pretty much done his job in Japan. He did some marvelous things.

Q: Oh, yes.

ERICSON: I don't mean that he did them, but the occupation did some marvelous things. And you have to say that MacArthur did because he was very reluctant to take instructions.

Q: It was his creature and it worked.

ERICSON: The Japanese didn't understand what the issue really was. They couldn't equate Harry Truman with the Emperor and so the fact that MacArthur was defying the President of the United States and saying things that he shouldn't be saying...in Japan it would equate to some Japanese general who said that he didn't think the Emperor was right and he was going to go his own bloody way. So they really didn't understand the issue, but on the other hand, I think they basically sympathized with General MacArthur. But on the other hand, he had run his course. There is no doubt that for a long time there he was pretty much idolized. You could see this. MacArthur never went anywhere. You would joke during the occupation that MacArthur knew Tokyo from A-Z, avenues that is. We renamed all those streets in Tokyo. He went from the American embassy where he lived to the Daichi Building and then back to the American embassy again. He very seldom went anywhere else. But his time of arrival at the Daichi Building was very well known. He always arrived around mid-morning. Every morning during the time he was there, there was a goodly crowd of Japanese, 3 or 4 hundred would stand there and watch him leave his car and walk into the Daichi Building. He never paid much attention to

them.

He was given enormous respect. My father at this time was chief of staff of the Japan Logistical Command headquartered in Yokohama, one of the senior officers in what was left of the occupation when MacArthur left, and we had grandstand seats at the airport for the departure ceremony. We drove from Tokyo into the airport that morning ahead of MacArthur's motorcade in order to get to our seats in time. That route was lined all the way from downtown Tokyo, two or three deep, all the way down to Haneda Airport, which is a long ways away. Japanese standing there, some of them waving Japanese flags, standing very respectfully. I am talking 6 or 7 miles. Nobody cheered, they just stood there and watched him go. Three or four years later he might just as well not have been there at all. As long as he was there, and as long as he was behaving MacArthurish, they revered him. Did they retain any long time affection for him, I don't think so. The famous joke when Douglas MacArthur II, his nephew, was appointed to Japan, the Japanese Prime Minister was asked how he looked upon the appointment of MacArthur's nephew as ambassador, he said, "Well, he is a good man, we won't hold his name against him."

There are probably some elements of Japanese society that feel more strongly, if they know the origin of their present well being, who feel better towards him than others do. I have in mind the land reform program, for example. I think it is probably one of the more important factors in transforming Japan from whatever it was to a reasonable facsimile of democracy. MacArthur was sensible enough to bring in one of the world's great land reform experts to plan with a Japanese, who happened, incidentally, to be a socialist, the land reform program for Japan. I shared an office with Wolf for eight or nine months in the old embassy building. Wolf and this Japanese, whose name I can't remember, he was a Socialist Diet member for a long time and was then working in the Agricultural Ministry, planned the thing together and they plotted it to have certain effects. One was to destroy the wealth of absentee landowners and the other thing was to provide that land to the people who worked it. They did it by putting through legislation which required the absentee to sell...to transfer the land to those people, to give them ownership rights. They didn't have any money so this was to be accomplished by the government paying the landlords in government bonds and then making the farmer sign a promissory note to reimburse the government the value of the bond. Well, of course, this was done when the Yen/Dollar exchange rate was 50 to 1 and it ended with the Yen worth 360 to 1. The inflation was probably worse than that so in effect the Japanese government had considerable loss to itself and also there was great loss by the landowners who were paid in what was really rather worthless paper, while the new landowners paid it back at 1/10th the cost. So it was a very effective way of transferring ownership and stood up. These people until today have been the backbone of the relatively conservative element in Japanese politics...these new land owners who suddenly found they had an interest in certain political activities that they never had interest in before.

This was Douglas MacArthur. A conservative, old American military type, who probably couldn't see beyond the end of his nose in the opinion of most people, but he did a very far reaching and far sighted thing here and it has been enormously valuable to his country's interests right down to today...I mean the United States.

Q: Was there much of a change in what you were doing in the embassy when MacArthur left?

ERICSON: No, of course Ridgeway came in and the Peace Treaty was being negotiated, so the whole thing was changing gradually anyway. Well, perhaps not so gradually, rather rapidly as a matter of fact. So by the time the Peace Treaty was signed in April, 1952, the embassy was almost functioning...Bob Murphy was the first post-war ambassador and he arrived the day after the Treaty went into effect. Then came the first political explosion on May Day, 1952 when the newly independent, all of its authority in its own hands, was challenged by the left wing in the May Day riots of 1952. At that point we were a functioning embassy. By that time we had a full complement of everybody on board and we were moving back into the chancery, the Residence, etc.

The May Day riots, I think, was a test of the ability of the Japanese government to maintain the course that it had been following which culminated probably in 1960, but we will wait for that for awhile. Anyway, this was a student riot in which left wing student organizations got together and paraded. I have some great pictures. My wife had another job at that time, she was working at 5th Air Force Headquarters which was on the main drag right across from the Imperial Palace and she had a window overlooking the riot scene and she took a bunch of pictures.

That night at an affair of some sort at the embassy when Murphy was commenting on...I didn't see the riots we were over at the Mitsubishi main building by that time and my section had not moved back into the chancery...we were together that evening and Murphy made a rather astute comment, I remember, he said that he thought what had transpired in the Imperial Plaza was probably the deliberate work of the Japanese police who permitted the students to march from Meiji Park down through the streets of Tokyo, snake dancing as they went...of course you call it a riot but the Japanese don't riot. They march and are quite well organized. Anyway, they snake danced all the way down to the Plaza. They got in front of the Emperor's house and then the Japanese police moved in on them. They beat the holy whey out of them. They really were pretty brutal toward a number of the students. But Murphy's comment was that this was deliberately done so that it could be done at that place and in that fashion to show that the government is in control and is not going to allow anyone to besmirch the name of Japan, etc. Anyway, there was no aftermath. They arrested hundreds and hundreds of students and beat up a hell of a lot more. We lost a couple of cars that were overturned and set on fire. There are lots of stories. This was an internal thing. It was not aimed at Japan's support for the Korean War or anything else.

We had a guy by the name of Nelson who had an Austin Atlantic convertible, a car I envied very much, who spoke excellent Japanese. He got caught in the middle of this thing. The students started surrounding his car and rock it. He stood up and said, "I'm Nelson with the American embassy." And they all said, "Oh." And they left him there. There are lots of other stories about women getting caught up in the riots but never really physically threatened at all. It was the government versus the people who wanted to shame the government and we were extraneous to them.

Q: What was the feeling you were getting from the embassy about the Soviet threat at that time? We are talking about 1950-52.

ERICSON: We all, obviously, saw the Soviets as the instigators of Korea. The Chinese were not

blamed for this at all. After all it wasn't the Chinese but the Soviets who had put Kim Il Sung up there. But when the Soviets refused to act, or didn't act, when their clients were being pushed back up to the Yalu...the country that acted was regarded as the potential threat and even then not Japan by a long shot. In many respects the same could be said about the Soviets. After all they didn't have the atom bomb and we had a superior air force and the Soviets were realizing Korea was a pretty distant place from which to mount a military operation against Japan. So, aside from the Japanese irritation over the northern islands, and that kind of thing, I don't think the embassy was ever terribly concerned about any immediate Soviet threat to Japan.

Q: The Kuril islands were not a major issue at that time were they?

ERICSON: Well, I mean the Japanese irritation over the southern Kurils. The Japanese knew the Soviet presence there was not a threat to them in a military sense. But that was Japanese territory and they didn't want the Soviets having it, they wanted it back, but they didn't regard it as a basis for a real threat. They were something that had been stolen from them and the United States, incidentally, might be in a position to get back for them. Why didn't we? Why weren't we more aggressive?

Q: At that time was Okinawa on the horizon or not?

ERICSON: Only in a minimal sense. The time we are talking about was still a time when Japan was trying to get its basic sovereignty back for the mainland islands. Okinawa, when the Japanese had it, was a third grade society.

Q: Like Puerto Rico for us.

ERICSON: Worse, worse, because the Japanese didn't suffer Okinawans going to the mainland islands. There was no Okinawan problem in Japan as there might be with Puerto Ricans in New York.

Q: Were you getting that with the Japanese more at this time?

ERICSON: No, we were getting it from the Okinawans. Back in those days there was a fair occupation presence on Okinawa. We had Kadena and we had a military government unit down there, etc. So from Yokohama, when I was in Yokohama, we used to send Doug Overton down to Okinawa once every three or four months to sweep up all the consular work that was generated in Okinawa...marriages, renewed passports, added children to families, etc. I went down once when he was not available. Tex Weatherby went down once. There is a very famous story about Tex's trip. They wired ahead that the consul was coming down, consul Weatherby, and they wired back that they didn't want him, they wanted the vice consul!

Anyway, the Okinawans were always the ones who were a little unhappy about this heavy preponderance of American presence and the fact that they were not going back to Japan and that they were going to be orphans in the Pacific for quite some time. They were agitating more about the Okinawa situation than Japan was. And, of course, when the occupation came along it was understood that Amami O Shima would be returned to Japan whereas Okinawa would not. The

Japanese considered Okinawans third class Japanese and weren't disturbed as much about them as they were in establishing their basic sovereignty. Later, of course, that changed.

Q: After leaving Japan you went to Japanese language school. What prompted you to do that? Once you took Japanese you kind of knew that was it. I had a colleague, John Sylvester, when I came into the Foreign Service, who took Japanese and was not seen again anywhere except I think Vietnam.

ERICSON: I know John, yes. Well, I took Japanese for a number of reasons. One of them was medical. We were having a fertility problem. There was a guy at Harvard by the name of John Rock, who developed the pill while doing research primarily for fertility. At the end of our second tour in Japan, the Department came out with this announcement that they were looking for people to take hard languages and were offering certain financial incentives. I was a little tired of being the lowest paid Foreign Service officer in the Service for several years running, so I looked upon that with some favor. We realized Japan was going to be a major player in Asia and whatever came of it I would probably be doing something reasonably important and significant. And, we liked Asia. We liked Japan. From where I sat at the time it looked like this was going to be the only way that I would ever get an assignment in Washington for a long period of time. So based on these factors, we decided to go for it. And, we chose Harvard, not because of its language program, which was frankly pretty bad, but because of the presence of Dr. Rock up there.

Q: Such a Foreign Service officer's career is made of.

ERICSON: Yes.

Q: Could you talk about the people who came in...we are talking about 1952 and I like to get people's characterizations of those who took Japanese training. What may have inspired them, pushed them, what kind of people they were, etc.

ERICSON: First of all, I also got interested in Japanese because I had been studying with Eleanor Jordan at the embassy's language school. Many of us took it on a part time basis. I was under the happy delusion that it was not all that difficult. It wasn't what it was cracked up to be. I got disabused of that.

People who were studying Japanese at that time...you know, most of our best language officers were naval wartime trainees who had gone through the Boulder, Colorado Navy program. Almost all of our competent Japanese language officers came out of that program. The Army had a program, but the people we got from the Army, with the exception of Dick Lamb, were not all that competent in the language.

Q: Why was this?

ERICSON: I honestly don't know. I think the Navy was more selective of their people and it was a very, very intensive program. When I first arrived in Yokohama, about a year afterwards three people straggled in who had been off finishing off their Japanese...Owen Zurhellen, Dave

Osborn, and Ed Seidensticker. Those three were certainly among the three best of the post-war language people. They had all been through Boulder, they had been Navy people. Osborn was a linguistic genius. He picked up Chinese along the way. There are all kinds of stories about Dave. Somebody walking in on him in a dark barracks in the middle of the night coming back from a night on the town and a voice comes out of the corner and says, "Is that you Bob?" The guy says, "Yes. Is that you Dave? What are you doing?" Dave says, "Well, I am studying braille." Osborn was that kind of person. Zurhellen had a marvelous natural flair for the language. It was said that he could hold a conversation with anybody and if a word he didn't know threatened to interrupt the flow of his words, he would make one up that would sound very plausible and leaving his Japanese interlocutor with a sense of wonder...wondering what he said. And, of course, Seidensticker became the great translator of Japanese literature and got Kawabata the Nobel Prize.

The Department's own program, from where I sat, and I am not one of its products, was nowhere near as effective, neither prewar or post-war. Alex Johnson who is absolutely admirable in every other respect is not, frankly, very good in the Japanese language. The same for Jerry Warner and many others. The reasons...I wrote a critique of my own program to the Department after I finished my language program and I said what it lacked was intensity. You shouldn't send people to American universities, especially to graduate school atmospheres for area and language competence because nobody is ever going to get a program that suits him. My experience at Harvard in the area part of the thing was disastrous in terms of what I wanted to study. You look at the curriculum in the book and think you can get all sorts of courses and marvelous instructors and when you get there they are not offering that this year because they are tuned to a three year Ph.D. program and teach courses only every three years. And in my case Fairbanks was in China. The old man who ran the Yenching Institute at Harvard, chose to retire that year. He was the first Caucasian to graduate from (inaudible), and got on a boat a week after graduating and as far as I know never went back. He certainly didn't go back to revise his teaching material because his subordinate in Yenching was Ed Reischauer, who was teaching from very badly outdated prewar language materials. And they were trying to teach research scholars while the Department of State wanted me to be able to read a newspaper and hold a conversation. So we were totally out of sync and I took a lot of extraneous course which really had nothing to do with Japan but were what was available. Reischauer, I must add, was an absolutely marvelous teacher. He taught Japanese history in the survey of Asia thing and in that he was absolutely superb. His language teaching was pretty badly outdated. He revised it some years after I left. But the old man's retirement and his own wife's illness made it very difficult for him to attend very much to us. There were no other State Department people in my class that year. Kingdon Swayne went to Yale where the language instruction was much better. Yale was really the only competent Japanese language program in the States at that time, I think.

Q: Yale had a much stronger missionary influence. Did that have any influence on their program?

ERICSON: The missionaries weren't a major factor in that. Yale was strong because that is where Eleanor Jordan and Bernard Schwartz had developed the spoken Japanese program for the military services during World War II. He had stayed there and Eleanor had come out to Japan. But they were the first ones to teach Japanese from a modern scientific linguistic point of view

and that is why Yale is better.

Q: Yale through missionaries to China were also looking more abroad than Harvard was.

ERICSON: Well, their Japanese language program was better because of this peculiar circumstance. As years have gone by I guess other places have developed better and better programs and language instruction at this stage is much better than it ever was. But nobody who went through language school about the time I did really distinguished himself in the Foreign Service either in Japan or elsewhere.

Q: While you were taking this I was a private first-class in the Air Force going to the Monterey Language School taking Russian for a year.

ERICSON: Well, Monterey had a fairly good reputation.

Q: It was intensive.

ERICSON: In my opinion, that is the only way to teach a language of this kind. The best language officer the Foreign Service ever had in Japanese, at least during my day there may be better now, was Bill Magistretti. He grew up in Los Angeles with a bunch of Nisei kids and went to Saturday school with them. And then he went to Kyoto and lived with a Japanese family and went to Japanese high school and to Kyoto University before the war and studied in Japanese on an equal basis with Japanese students. He was linguistic gifted and he had that kind of background. And he carried it over into intelligence work during the war and came into the Foreign Service later. Magistretti was the exception. There were very few people who had anything like that kind of experience. But that is the way you have to do it. You have to start when you are very young. You have to have an intense interest in it that's based on something besides the language itself, I think. And you have to go and study it with your peers in the country before you can really be able to say that you...no white man can speak Japanese like a native.

Q: How long were you in language training?

ERICSON: Well, you went one year to a university and then you were assigned back to Tokyo for another year of so-called intensive language study with Eleanor Jordan. The language school still exists in Japan, but I don't know whether they still send people to universities or not.

Anyway, I went back for what was supposed to be a year and a half of full time intensive language study, nothing but, come to the office in the morning and get eight hours of instruction and go home. But, this is not terribly good either because I had...Eleanor was a marvelous teacher and we had very, very capable Japanese nationals...a wife and by that time a child...Dr. Rock succeeded...and my mother-in-law came back with us that year. Here again there were just too many distractions. If you are really doing this thing you have to do it full time and intensively.

Q: I must say that one has a certain admiration, although there were other problems, of the old

British Foreign Service where you didn't get married until about 40. They would take you and sort of throw you in a foreign country and you kinda just did that, but you can't do that with a family.

ERICSON: No, you can't. Of course there was some criticism of that system too in that there were a number of British Foreign Service officer prewar and a few Americans too who would come up with strangely feminine type statements...

Q: And Japanese being one of these places where there is a woman talk and a man talk.

ERICSON: Yes, and some of the times the men talked women talk and you began to wonder why.

Q: This is called pillow talk.

ERICSON: Anyway, I was never better in Japanese than the day I left full time language training with Eleanor in 1954. That was the absolute peak of my Japanese powers. I used it. I could read the economic section of the newspaper, I could read the editorial...the editorial in the "Asahi" looked absolutely fearsome except when you read ten of them all of a sudden you realized you could probably write the damn thing because they used the same sort of language over and over again. I could by and large read the political news on the front page, but put me on the sports page or the social page or anything like that and I was totally lost. There was something in me that resisted, as far as spoken language was concerned, the idea of using a respect language.

Q: Will you explain what a respect language is?

ERICSON: Japan, painting it with a very broad brush, is one large hierarchy. You always have a position relative to somebody else. It is not a land of equality. People sense when somebody older, or of a high caste, is speaking to them and usually acknowledge that in the way they reflect their verbs. If you are speaking to somebody superior to you, you speak in a very polite language upward. If you are speaking to somebody far below you, a servant, you use a very different kind of language. If speaking to your peers, you use a colloquial form but it also depends on whether your peers are close or not close. It can be a very difficult language to handle on social occasions and the Japanese tolerate foreigners using all the wrong forms. Nonetheless, if you don't like the idea of putting yourself in some kind of a hierarchy it becomes rather difficult.

To illustrate why this is important in Japan, because it is: I say they tolerate it, but they don't like Americans' inability to do this very well. A great example why this kind of thing is important to the Japanese. People wonder why Prime Minister Yoshida fell. Yoshida was, like many major figures in history, did some marvelous things in his early and mid career, but in his very late career he obviously had overstayed his time and the things he used to insist on weren't working any more and there was a lot of political resistance to him. The incident that really brought about his political demise took place in a Diet meeting. He was testifying before a committee...I forget which committee... and was being pressed for some budget figures. He didn't have them ready at hand and the Socialists were raising hell. He told them something to the effect, "I will give them to you tomorrow," and the room erupted. People started throwing ink pots and rushed the dais

trying to assault him physically. The police had to be called in to separate the brawling legislatures...which was not all that rare an occurrence in the '50s in Japan incidentally. If you were an American and read the translations of the news accounts, unless it was accompanied by an explanation, you didn't realize what had happened or why the Socialists got outraged when Yoshida made a seemingly reasonable statement.. "I will give them to you tomorrow". Well, the point was, he had used language saying, "I will give them to you tomorrow," of the sort one would use in telling your servant you are going to give him your dirty underwear tomorrow. To a Japanese this is much more insulting than if he had cast dispersions on the legitimacy of their mothers. For Americans who are raised in a more democratic tradition and who speak on a peer level with people who they meet rather rapidly it is difficult to get into these differences and that was terribly difficult for me.

Q: Did you understand your difficulty and all that at the time?

ERICSON: Oh, yes. I was keenly aware of it.

Q: Did some of our colleagues, I am talking about the diplomatic profession, sort of proceed rather blithely not realizing that they were running their fingernails down a blackboard with the Japanese?

ERICSON: Yes, of course, from time to time there were cases of that sort. But frankly people in the embassy didn't use their language with the Japanese in a business sense all that much. You would see that kind of thing more on social occasions than business occasions. Your primary dealings were with people in the Finance Ministry or MITI or primarily the Foreign Office and these were among the best educated of all Japanese and were the English speakers in the country and were eager to speak their English. Most Americans sort of backed off and said, Okay.

I don't think we will ever get to a point where we will have a staff that is comfortable in the Japanese language. We are always going to need an interpreter. Ed Reischauer always used an interpreter for every conversation he ever had.

Q: So you got out there in 1953. Were you part of the embassy at all during the year of language training?

ERICSON: Unfortunately, yes. I say unfortunately because I think again if you are going to study the language you ought to be separated from all other temptations. You shouldn't be meeting your English speaking friends for lunch. The school at that point was in the Mantetsu Building which was our annex about a block from the chancery. It housed the consular section, USIA, administrative section and virtually everybody except the very core of the political and economic sections. We were surrounded by embassy personnel. There were two or three rooms devoted to the language school on the floor, but you were really in with the embassy. You were living in embassy quarters. Later they took over the old consul general's residence in Yokohama for the school and that was better. The only time, though, that we were away from the embassy studying language was in the summer time when we rented a place down in Mito on the Izu peninsula and there we lived in a total Japanese setting and probably learned more about Japan and the way people live in Japan and what their problems are and the language to boot than most

of the time we were studying it in Tokyo.

One of the problems in Tokyo was that Eleanor wasn't really prepared at that time for full time language studies and she also had the idea that the way you learn Japanese was the way a baby learns it. You hear, you listen, you start formulating key phrases, you manage your vocabulary, your situations, etc. and you end up speaking and understanding Japanese. She took pride at that point in herself not knowing any kanji, no characters. And the Department, of course, wanted us to not only speak it but to be able to read newspapers and things of that sort. So she had her people preparing lessons in some cases literally one day ahead of the students. You would get lesson material that had been written out the night before and in somebody's long hand. So in my day it was not the refined thing that it became later on.

Q: It was 1954 before you actually took a job at the embassy?

ERICSON: Yes. I cut my language training short by six months at the request of Frank Waring who was the economic counselor then, a very distinguished guy in fact who I admired very much who really wanted somebody in the economic section badly to help him and do whatever Japanese language was needed in the section. The political section had seven or eight people with varying degrees of competency, but the economic section didn't have anybody. So he asked me. Frankly by that time I had staggered up to the sixth of many plateaus and was beating my head against the next brick wall and I said I would be happy to do it.

Q: Who was the ambassador at that time and talk a little bit about your impression of him at that time? And then about the situation in Japan at that time as you saw it.

ERICSON: In 1954 the ambassador was John Allison who suffered the...he was a complex guy as a matter of fact.. handicap of having been a teacher in the Japanese school system before the war. But he knew Japan. He had been Dulles' assistant in negotiating the Peace Treaty. He had been Assistant Secretary for Far Eastern Affairs. He had been, as a matter of fact, on my oral boards and when I first came into Yokohama in 1947 shortly after he came out on a trip as assistant secretary. Alex Johnson was an old friend of his so he stayed in the Johnson's apartment which was adjacent to the office in Yokohama. My desk was just inside the door that led to the Johnson's apartment so I was the first thing he saw when he came through the door. I was sitting at my desk one day and this bald head character came storming through and stopped in front of my desk and whirled around and looked at me and said, "You are Ericson aren't you?" I stood up and said, "Yes, sir." He said, "You don't know who I am do you?" I said, "No, sir, I do not." He said, "I am John Allison and I was on your selection board." This made me feel rather ridiculous at the time, but it gave me a strange hold on him and we got on personally very, very well. I think Allison was very clued in to senior Japanese. He was not good with people and he was known to his staff as the "terrible tempered Mr. Bang," because he did have a very short fuse.

He was an absolute genius at dictation. I have never known a man more capable of coming back from an important meeting with somebody to send a cable to the Department. I was duty officer one Sunday and he had gone out to talk to somebody about something of terrible importance. He came back and got in touch with me and said, "Send the duty secretary up here I want to dictate a

telegram.” So we went up to the Residence and here he was in the bathroom in his undershirt shaving. The secretary sat on the toilet and I sat on the tub while the ambassador dictated what seemed to me a very cogent, well thought out, well phrased telegram. When it was over, I said, “Thank you Mr. Ambassador, we will get a draft up for your perusal as soon as it can be transcribed.” He said, “No, no, no. Send it exactly the way it is. That’s fine.” And it was. It was a great telegram. A great little exhibition of the art of those days.

But he was terribly short tempered and he, of course, got himself involved with a female of his staff which led to her reassignment at the request, I understand, of other ladies on the staff. It didn’t do him much good either. Of course, he went on to two other embassies after that...he went to Czechoslovakia and then to Indonesia. But he was a difficult man to deal with. For example, when he gave a reception, language officers always worked the doors of the Residence. Everybody had a chauffeur in those days so it meant when a car pulled up to the door, people got out and a language officer would approach them, particularly if they were Japanese, although any other guests too, and ascertain their name, if he didn’t know it, and went to the head of the receiving line where the ambassador would always be standing and said to him, “Mr. Ambassador, may I present His Excellency, the Prime Minister of Japan, Shigeru Yoshida” and he would turn and say something like, “God damn it, of course I know who this is.” But if you failed to give him the name he would fail to remember it and then couldn’t pass it on to the next guy. So the guys in the line fought this unending...you got glares from him when you were introducing somebody who was perfectly obvious, but slip up one, well you were in real trouble. So we lived through continuing glares.

He had an excellent DCM, Jeff Parsons, for most of this period. I later worked for Jeff when he was Assistant Secretary for Far Eastern Affairs. So there was always a good buffer. Tokyo was blessed with good buffers, I think, in those days.

Q: At that time what was our view of the situation economically and politically?

ERICSON: Well, it was a funny period. The Japanese under Yoshida’s pretty strong leadership had succeeded in achieving goal one, the Peace Treaty and the restoration of Japanese sovereignty. Having done that the coalition between the Democrats and the Republicans that had achieved this political triumph were beginning to drift apart. Not that there were any very strong ties in Japanese politics along party lines, it was just the group of people were shifting and looking for what would be next. Having achieved their independence, in order to get their independence they had to agree to certain things which eventually became a real sore point. They had to agree to a security treaty which permitted us to station our troops in Japan and they had to agree to permit us to use those troops in pursuance of maintaining the peace in the Far East without their say so. The Peace Treaty was also incomplete in that we remained in full occupation of Okinawa. So from the Japanese point of view there were some loose ends there. From our point of view, of course, we had achieved what we thought...I think most American policy makers were very much surprised at a number of things in connection with Japan at the time. One was their total cooperation during the Korean War. There was never a vestige of any Japanese unhappiness with the way things were done during the Korean War. They sometimes got unhappy for example when an airplane went through the tower of the administration building of the university down in Ryukyu. They were a little unhappy about things of that kind and who

was to be compensated, how and why. That sort of thing. But these were compensation issues and not “why are you taking that airplane off at all” kind of thing.

We had a focus on the Far East and that was security. We had just been through the Korean War and we didn’t want a repeat of that. If the truth be told we didn’t fair all that well, it had damn near torn our own country apart with the MacArthur thing and all the rest of it. And also at that point Southeast Asia was shaping up as a flash point.

Q: We are talking 1952. Dien Bien Phu and all that.

ERICSON: Yes and John Foster Dulles’ massive retaliation, etc. All that kind of thing was going on in the background. And the Soviet Union, of course, was the arch enemy and the Chinese, lo and behold, under the communists were exercising rather effective control over that great huge mass of potential, so we were very antsy about the security situation in the Far East. We wanted to preserve our position in Japan very much and we very much wanted to retain the cooperation of the Japanese. The Japanese economy was beginning, also, to move and we were interested, frankly, in promoting that. One of the essentials of stability in the Far East we thought was...Japan had proven itself to be a real arsenal in the Korean War. It saved us an enormous amount of money by being able to repair...we had huge repair facilities, for example, on the outskirts of Tokyo for all kinds of military vehicles, ship repairs, R&R...perhaps the less said about that the better.

Q: All I can say is in 1953 I was in Seoul and took R&R in Japan. I didn’t get outside of Tachikawa.

ERICSON: You didn’t want to?

Q: I didn’t want to. I was a New England trained boy and had never seen anything like this. It kept my interest for the week I had.

ERICSON: Sometime around 1951 or 1952, during the Korean War when it was at its height and the number of Americans passing through at its height, before the Japanese economy had really begun to move, there was an effort to ban prostitution, to really crack down because this was a shame and a disgrace. Somebody in MITI did a quite serious report which said that prostitution was Japan’s leading export item. The R&R industry, the association of men with Japanese women, the purchasing of Yen by American soldiers to finance this kind of thing, amounted to what was then Japan’s leading export item. So they decided for economic reasons they wouldn’t pursue it at this point, and they did not.

Getting back to Japan and what was happening, this was a period when politically Japan was beginning to drift pretty badly. Having gotten the Peace Treaty during the ‘50s but having also achieved an imperfect...they didn’t know where the hell they were in the world and started casting about for a better sense of identity, I guess. This meant a lot of agitation within political parties and led to the demise of Yoshida who had lost his grip on things having achieved his main purpose in life. He was really a great man in his way. A guy who came in from being a diplomat to...

Q: He was kind of like the Adenauer of Japan.

ERICSON: He was a fatherly figure and people trusted him. He was a man of integrity. One of the things everybody says about Japanese politics is that it is among the most money fueled in the world. I would hate to say dirty, but politics in Japan runs very much on money, more so than in the United States, I think. Yoshida was above all that. He led by means of his own moral principles and he was basically a very good man. He turned a little dictatorial which was his problem.

Anyway, when he finally fell, he was replaced by Hatoyama who was an old line politician who frankly was given the job because he deserved it. He had been instrumental in bringing the party together in the post-war period and he was sitting around in second place to a man who is really not in line. Yoshida came from elsewhere, the diplomatic ranks, while Hatoyama was a homegrown, up from the ranks of politicians who had served his apprenticeship and it was time to put old Ichiro in. Unfortunately, old Ichiro was senile by the time he finally got in. Well, probably not at the time he went in, certainly shortly after he assumed office he began showing rather serious signs of incapacity. There are stories of people having to wipe his drool, mental lapses and wandering attention, etc. It was covered up fairly well for a long time. Anyway, he did very little and with that kind of leadership at the top it wasn't really possible to develop coherent programs or sit on the Socialists or whatever the conservative political party had to achieve. It was in no condition to do so under Hatoyama. In the meantime, the opposition was gaining, getting stronger and louder in their activities against the government. When a strong hand was needed there was none there. In the United States we weren't paying all that much attention to things at the upper levels in Japan at the time. Both sides were sort of drifting through the '50s and we had some very nasty incidents, of course, that strained relations severely. I think of the case of the *Fortunate Dragon*.

Q: For the record will you explain that case?

ERICSON: Well, the *Fortunate Dragon* was a fishing boat, a deep sea tuna fishing boat from a small port...I think it was based in Island of Shikoku or else somewhere down in southwest Japan anyway...not a major port. It was fishing in the south seas for tuna when we set off the first nuclear bomb at Bikini. The crew reported seeing this very weird sky and sometime later strange stuff kept falling out of the sky and they kept fishing. When they got sick...of course they were in an area which had been prohibited to them and the American military maintained that notices to mariners had been insistent and loud and clamorous to stay the hell out of the area, but nonetheless there was this Japanese fishing boat.

They went chugging on back to port with a sick crew and a hatch full of fish. When they got to port the fish were unloaded and distributed, put into the Japanese distribution system and then they began reporting to the hospital. Then it came out that this strange thing they had witnessed was the explosion of the thermo nuclear weapon and what had come down out of the sky was probably highly radioactive material and what they were sick from was radiation sickness.

Of course, in Japan, which had been on the receiving of a couple of those things during the war,

why we had this enormous explosion of feeling against the United States for having exploded the bomb and exposing the Japanese nationals to its effects, etc. The Japanese, of course, made terrible blunders of their own. They let that catch be distributed throughout the country and you could smell the fish markets in Japan for miles weeks afterward because nobody...they didn't know where the fish had gone, they lost track of distribution. Even in Tokyo the enormous fish market sold very few fish for weeks. It was a serious economic disruption in addition to being a psychological body blow to Japan.

And then, of course they made a couple of other silly mistakes, some of which didn't come to light until long afterwards. They started demanding compensation, of course. Two of the crewman died. One of them was brought up to Tokyo to be hospitalized where he was given blood transfusions which it later became clear gave him the hepatitis that killed him. He probably didn't die of radiation sickness. We in the embassy were jumping up and down and the United States was jumping up and down because the Japanese refused to allow him to be examined by American physicians. They were demanding enormous compensation from us in various forms but were not allowing us to have any part in the treatment. Perhaps we had that coming, I don't know, because all through the post-war period our policy on the nuclear weapons was in no way to acknowledge that nuclear weapons were anyway different from any other weapon of war. People would argue, where would you have rather been in Tokyo on March 13 or Hiroshima in August? In Tokyo on March 13th 80 some thousand people died in one night and they died horrible deaths. They saw fire storms coming towards them, they felt the oxygen being sucked out of the air. They went into the rivers trying desperately to escape this thing and very few of them succeeded. And that was deliberate, we did it with incendiary weapons. In Hiroshima, it all went up in a flash and if you died you really died pretty quickly and didn't know what hit you. Of course there were thousands of people who suffered for years and years afterwards.

One of the manifestations of this policy of ours was the fact that we established the Atomic Bomb Casualty Commission, a group of medical researches financed by the United States who worked down in Hiroshima and Nagasaki to measure the effects to radiation among the population. People who got sick were brought in and given physical examinations and the progress of their illness was monitored and the effects were noted and scientific papers were written, etc., but they were not treated. We were not offering any treatment and they were more or less volunteers.

It must have been some time in 1956 that we had some PL 480 money available, and I can't remember if it was a request initiated by us. I was in the economic section and since it was PL 480 money it was basically the economic section's responsibility. We had an AID mission at the time, but the director of the AID mission was subordinate to the economic counselor in the embassy hierarchy. Anyway, Ambassador Allison asked me to write a justification for using this money to construct a hospital building and equipment at the University of Hiroshima Hospital, specifically to treat nuclear victims. I remember he said, make it lurid. That money was eventually granted and the hospital was built. That to my knowledge was the first thing we ever did, 10 to 11 years after the war, we started to help with the treatment of these people. So, when the Fortunate Dragon incident burst upon us, in addition to the fact that we had dropped the bombs on Hiroshima and Nagasaki there was a lot of pent up feeling that we hadn't really been properly charitable towards the victims of what the world would recognize of course, as a rather

special use of weapons.

Anyway, there were incidents like that which were making US-Japan relations a little bit difficult. The thing that turned it around, I think, was Hatoyama was finally voted out of office and the arrival on the scene of Kishi, who to my mind is probably Japan's...he and his brother Sato certainly must combine as the two most effective prime ministers in Japan in the post-war era. Kishi came in and began to whip the Liberal Democratic party into some semblance of shape and to bring Japan out of what was a malaise internally. The Japanese political fabric was going to face rather severe tests of course in 1960 when the Security Treaty was going to come up for what we call renewal.

Q: During this period in Japan you were there from when to when?

ERICSON: I arrived in Japan in October, 1947 and left in the summer of 1958 except for the year at Harvard.

Q: You went to the embassy in 1954?

ERICSON: Yes, the next four years I was in the economic section in the embassy.

Q: Were people nervous about the Security Treaty renewal?

ERICSON: Well we constantly expected that it would be renewed and we expected that the Liberal Democratic party, despite considerable agitation on the left, was going to control things and that the treaty would be renewed. Perhaps it would be modified slightly but not significantly. And it became a growing issue with every passing day and it got complicated, of course, by Okinawa, agitation over the revision of Okinawa.

Q: I want to stick for now just to this 1954-58 period.

ERICSON: I remained working on Japan, incidentally, through 1961. When I went back to the Department in 1958 I was offered the chance to choose between working on political things in INR on the Northeast Asia Division, or taking advanced economic training and certifying myself evermore as an economist. I decided you really had to know something as an economist and you weren't going to get it in one year, which is what they were offering, one year as a university, so I chose to go back to work on Japan for another two years in INR. Then I got sprung from that and was Jeff Parsons staff assistant when he was Assistant Secretary for Far Eastern Affairs in 1960-61. That was the period when the Treaty came up for renewal.

Q: We are going back now to the 1954-58 period. During that time the Security Treaty was not like a black cloud hovering over us. We knew we would have to deal with it...

ERICSON: Well, it was a cloud on the distant horizon. It looked like a white cloud, but still a cloud. The closer it got the larger and darker it got as the opposition to a Security Treaty began to grow,

Q: How did we feel at that time about the left?

ERICSON: Well, there were a lot of very good people among the Socialists. For example, for a year I shared an office with Wolf.

Q: He is a name connected with land reform in Japan.

ERICSON: Yes. Well, he was one of MacArthur's major appointments. His staff brought (inaudible) out to Tokyo to accomplish the land reform, which was probably the most significant act of the occupation and maybe the most enduring in assuring that Japan would remain a stable Japan style democratic nation. But in doing this he worked with a man who later became a Socialist member of the Diet and was a major critic of American politics. But the two of them combined to devise the land reform program in Japan in the late 1940s which probably saved Japan from an awful lot of political turmoil by getting rid of the absentee ownership system, by turning land over to those who tilled it and providing a very substantial base for the conservative parties that ruled Japan and still more or less do almost 50 years later. They did this very cleverly, incidentally. They limited the size of anyone's holding and forced those who held more than that and did not occupy it personally to sell to those who did occupy it on a sharecropper basis. They issued government bonds with which the sharecroppers were to pay the landowners and they would be redeemed the next year. In the meantime the inflation wiped them out. The bonds became worth about 5 cents on the dollar, so the new landowners got his land eventually for about 1/20th of its value, and the owners received about 5 percent of its value. The thing was accomplished, a lot of people lost a lot of money, but many of them probably could afford to, and the sharecropper really did benefit.

This man was, of course, not a wild communist...

Q: Was there nervousness on our part about the Socialists

ERICSON: No, not really. There were times, I should say when there was a great deal of nervousness in the government in Washington about the communists. There was a famous confrontation between Dick Nixon when he was Vice President and when he came to Japan as the first really senior American to visit Japan, and this would have probably been in 1954. He came out and gave a famous...among us embassy people...he stood on the balcony on the old chancery and addressed the entire assembled staff down below in which he told us in effect that the greatest danger facing Japan was from communist usurpation of the powers of government. That the government ministries were shot full of communist sympathizers and Communist Party members and the country faced a real danger of revolution. Well, this was pretty contrary to all of our experience. We hadn't seen all of these fellows and we wondered where he got his information, frankly. Sam Berger was the political counselor and he took him on in a closed meeting apparently in the ambassador's office and argued the fact that Japan was relatively stable. There were communists but they were not a threat, etc. Nixon got so enraged, the story is, that he had Berger transferred to New Zealand, which put him safely out of harms way, I guess. However, it was there where he met Phil Habib who was just a junior officer struggling along and might never have emerged if he hadn't been brought together with Berger who took him to Korea.

Q: Sam Berger, I might just say for the record, is famous for the fact that he was the labor attaché in London and when the Labor Party took power shortly after the war he was the only person who knew people. He was a key person.

ERICSON: I was told that he was the only person in the embassy who Attlee would speak too.

Q: Later Sam Berger became ambassador to Korea and also deputy ambassador in Vietnam. He was my boss in Vietnam.

ERICSON: He was a feisty little guy who didn't hesitate to speak his mind and was a lot of fun to be around. Anyway Sam and Phil ended up in New Zealand and were later together in Korea.

I don't know how many people in Washington actually shared Nixon's view, but it was totally wrong. We didn't see anything of this kind. We knew they were potentially dangerous, yes. And we knew that the Socialists had a certain amount of following. Reischauer at the time, incidentally, was writing that if you extrapolated from the Socialists 2 percent gains in every election every year since 1920, sometime around 1965 they are going to take over the government. We didn't believe that either. But they were strong enough to be real nuisance value especially if the central government were weak, ill organized and unable to develop effective counter policy. The Socialists seemed to us to be much better organized and, of course, had the labor unions with their enormous organizational ability behind them, so there was some concern about them but fundamentally the country was not socialist, certainly not communist.

Q: I might just point out that Richard Nixon as vice president started off very right wing, but this was early Nixon on the national scene because later he developed a reputation for really doing his homework and listening to people and not taking off on this type of thing. He got very savvy. But this sounds like one of his earliest trips.

ERICSON: A little later I am prepared to comment on Mr. Nixon in his presidential years and his dealing with Japan because I saw a fair amount of that kind of thing. But you are quite right, he didn't ever go to this kind of extreme again. He was really pretty successful with a lot of things he did with Japan later on when he became President. He had one terrible flaw, however. This comes much later when we get to Kissinger and Nixon, but Kissinger and Nixon believed, I think having watched them operating in Japan, that the way you conducted relations with a foreign government was to find the people, the man, who could really get it done and then you dealt with him. They continued to search in Japan all during the Nixon Administration and they never found the man, of course, because there wasn't one.

Q: Kissinger in his book, "The White Years," talks about Italy as being a place...obviously he couldn't relate to Italy because there wasn't a man.

ERICSON: Yes, they did this all over the world. It was true in some places, but not in Japan and I will take your word for Italy.

Q: In my interviews of people who worked on Asia during this period, the very firm hand of

Walter Robertson played a major role. I was just doing an interview of somebody who was in Korea during this time. The ambassador realized the embassy could say nothing evil about Syngman Rhee who was a very inept ruler and was building up trouble for himself because he was the darling of the right. Was Japan out of the Walter Robertson orbit?

ERICSON: Well, I think Walter Robertson was, despite the fact that Dulles negotiated the Peace Treaty, he didn't seem to pay much attention to Japan when he was secretary of state, and Walter Robertson was probably the strongest Assistant Secretary for East Asian Affairs that we have ever had. He did have a great, great deal to say about American policy in that part of the world and in Japan. He and Allison had a very bad relationship. Robertson announced a visit to Japan at one point during this time and Allison simultaneously announced his intention to be absent from the country. Not only that, but he conceded with great reluctance to having Robertson stay in the Residence in his absence, but he said, "Put the Cadillac away, he will not ride in that car."

On that visit, for example, Robertson came up...

Q: This would have been about when?

ERICSON: Oh, this would have been 1955 or 1956. Anyway, Robertson came out on the visit and we had a reception for him including many Japanese political leaders. He had his business meetings but I didn't attend those and don't know what went on... but at this party a very prominent Japanese politician, a liberal democrat and elder statesman of considerable influence as a faction leader and generally thought of as the next foreign minister, although he never made it...I can't remember his name but he was from Kyushu, I know that, and that may possibly explain this...somehow Japan had got to make friends with China. It was obvious to him that the Communist government in China was going to last and it would behoove Japan now, in the early 1950s to start making friends with China and as a matter of fact the United States should too. Under Japan's leadership the three of us should get together and do something. Anyway, he asked for a meeting with Mr. Robertson but he didn't get it in the normal course of events. But at this party it developed that Mr. Robertson and this man and a Japanese from the Foreign Office who was going to be the interpreter, were wandering off towards the ambassador's study. Allison got me literally by the ear and threw me in the direction of the study and said, "Now you go in there and you make sure that the interpretation was going to be right." He wasn't going to be in the meeting himself. He didn't want me to interpret but to make sure there were no mistakes in the interpretation because interpretation is an art and a problem, as you know and you had to be particularly careful with this particular Japanese.

Anyway I went into the library and the conversation went along fairly predictable lines. I didn't know what was coming, frankly, but I heard the man say that he was advocating and Mr. Robertson should give some consideration to means where Japan, the United States and Communist China should get together and reach a modus vivendi for each one's benefit and mutual prosperity, etc. I broke into the conversation at that point and asked him to repeat his cast of characters. I heard it fairly plainly but I didn't want there to be any mistake that he was talking about Communist China because I could see that red was beginning to appear in Mr. Robertson's neck heading for his face, he was getting angry. So he did.

Robertson then turned on me and said something to the effect that I was a fool and that anybody could see that that was what he meant, that he meant Communist China. I tried to assure him that I was just making absolutely sure that there was no mistake because of the importance of the point. Anyway, he ended the conversation very abruptly, quite angry at the turn it had taken. He felt he had been sandbagged. He hadn't been warned that this was likely to come apparently. I was not there to take notes and hadn't been taking notes but he asked me for a verbatim transcript of that conversation to be on his desk by 8:00 the next morning. He was going to come down and sit in the ambassador's office and he wanted a verbatim transcript of that conversation, verbatim mind you without notes. I did the best I could. You know I can't remember to this day whether his middle initial was Walter H. or Walter S, but I had him down as Walter H. as a participant. He got very angry at that and didn't read the memorandum at all but he did pick up the point that his middle initial was wrong and dismissed me very abruptly.

Not a very pleasant man. But he certainly had more influence than the ambassador did about the way things were done in the Far East and he was very conservative, very right wing and he wanted no truck with the socialists or communists.

Q: One sort of had the feeling that the Eisenhower Administration wanted to strengthen NATO in Europe that being where they saw the great danger. The right wing of the Republican Party had a fixation on Asia and China. In a way it almost like Asia was tossed to the right wing of the Republican Party with Robertson running it, while Dulles and Eisenhower could deal with really a very European centered program regarding particularly NATO and all.

ERICSON: I personally think the end of diplomacy, as it used to be, came with the jet aircraft. In the days when you had to take a sea trip or a punishing propeller plane, not too many people were willing to go. Once the jet came in travel just expanded and everybody started showing up on your doorstep, including the very most senior people. I can't remember whether Dulles visited Japan during that period...I'm sure he did...and Eisenhower...

Q: But he wasn't there during your time.

ERICSON: Eisenhower, no. His famous trip was 1960.

Q: We will treat that later. A little point, you mentioned that Allison said you were to sit in on this Robertson meeting but you also mentioned that Allison was going to be out of town at the time. Was this a different time?

ERICSON: This was a different time. I guess Robertson must have been there a couple of times.

Q: Did you get any feel from our political officers, I assume the economic officers wouldn't be involved in this, that they felt they had to say the right things because we don't want to extol the Socialists or something like this?

ERICSON: Not that I recall specifically. You are right, the economic officers lived a part in that period. During almost all of the period we had Frank Waring as economic counselor. Waring was a very competent, totally grey man. He even dressed grey. He was very reserved but very

strong willed and very experienced. He had been appointed economic counselor...he had been the administrator of wartime relief in the Philippines in the Truman Administration and had been given the economic counselorship in Tokyo in lieu of an ambassadorship when it became apparent Truman couldn't get him approved. We were lucky because Waring was a very fine person. But the ambassador and the DCM focused almost entirely on political activities and left Waring to run the economic and AID business almost all by himself. So we weren't afraid of offending Walter Robertson because he wasn't interested in economics either.

However, most of my friends were in the political section and I did not get from them the sense that they feared the great dragon back there in Washington.

Q: Well, in a way Japan was not a problem whereas you had Vietnam, Korea, Taiwan, etc.

ERICSON: Despite the sense of drift and all that, it was a sense of drift and not a sense that we were in any maritime battle. We may not have been going in the right direction but it wasn't very exciting except for those episodes like the Fortunate Dragon.

Robertson's departure wasn't missed. But he was still in office until Eisenhower left in January 1961.

Q: As economic officer during these four years, what were you doing and how did you see the economy there?

ERICSON: There were terrible problems in the economy in those days. Japan had enormous trade imbalances, negative ones believe it or not. But looking back on it is almost laughable because in retrospect we are having exactly the same kind of problems in the trade field with Japan as we have with them today. That is the question of whether Japan would open its market to American goods, give us a level playing field. We didn't really start running serious deficits with Japan until some years later, but even then there were a number of complaints about Japan.

One was automobiles. One of my functions was to accompany the economic counselor to the Foreign Ministry for a weekly meeting of the American economic counselor and the chief of the Economic Affairs Bureau of the Foreign Ministry who had a standing meeting on Thursday. We would go over every Thursday to discuss our mutual problems. Our mutual problems were always the same. Japan wasn't buying our cars or anything else for that matter, and setting up all kinds of informal trade barriers and the Japanese distribution system was all loused up and calculated to favor Japanese and the exclusion of everybody else, etc.

And then there was the Japanese deliberate penetration with specific goods in order to break down some of the structures of American industry. On the latter point we were talking about textiles. We were having trouble with Japanese dollar blouses. They were flooding the country with blouses that sold for a dollar and this was very bad for American industry. Gingham exports to the United States were ruining the gingham section of the American textile industry. We had cotton velveteen. We used to argue for hours about the Japanese having laid waste to the American cotton velveteen industry by deliberately concentrating on that segment of American industry so they could move on to the next segment and eventually expand their control all over

the American textile industry. Of course textiles remained a major problem right through the Nixon years. Things like thermometers, umbrella frames, bicycles, sewing machines are variations on the problems with Honda, Toyota and whatnot of today.

The Japanese really were not buying American automobiles. They were content to buy and import all the American automobiles they needed by buying the cars of members of the occupation, the armed forces who went back to the United States. That took care of their requirement of cars that could be chauffeur driven, for the barons of Japanese industry. So they were not interested in buying other American cars.

And, of course, the Americans for their part...American importers of Japanese goods, people like Sears and other major American retailers, were assiduous in coming out to Japan and saying, "We know that you can make camera lenses as good as the Leica. Now what we want you to do is give us a camera to such and such specifications which we can sell through our outlets in the United States." American retailers very quickly saw that Japan was a marvelous place to have a very wide number of products made in Japan and of good quality, because the Japanese had believed our lectures about quality control and were beginning to turn out some quite impressive stuff. Not cars, but some pretty impressive stuff.

If somebody writes a history of American trade problems with Japan they ought to give a lot of credit to the major American importers of Japanese goods who really came to Japan much more than Japanese went to the United States to find sources for the kinds of goods they wanted at the prices they wanted.

In the meantime, American exporters did very, very little to develop markets in Japan. No American car maker put out a right-hand drive car designed to drive on the left hand side of the street. No American auto manufacturer ever prepared a brochure in Japanese. No American manufacturer ever tried to set up a sales force in Japan or looked for a Japanese partner. The same thing applies to refrigerator, stoves and electrical appliances. And the Japanese, of course, were happy with this because it reduced the appeal of American products, but they also borrowed assiduously from American products.

I remember one major incident in 1956. The then president of the EX-IM Bank, an Omaha banker who was one of the first presidents of the EX-IM Bank, came to Japan with the enormous sum of \$14 million in his pocket to be dispensed primarily to the Osaka Power Company. He had his vice president with him and I was detailed to accompany him to Osaka to make sure his trip down there and meetings with the businessmen there went satisfactorily. I must say it was the most marvelous visit I ever had anywhere because the Osaka people went all out to impress this gentleman. We visited the site for the machinery which this \$14 million was suppose to finance. It was a new generation, high pressure Westinghouse or GE steam turbine, something new and radical in the power generating business. When we looked at the site there were stands for four or five of these things. This one was obviously not the only one that was going to be put there. Eventually very similar things were put there but they didn't come from Westinghouse or GE, they were all domestically manufactured to specifications developed by Japanese engineers after looking very carefully at what they had been furnished. There were many incidents of that type where they would exploit American industrial prowess to their own ends. You can't blame them,

but this kind of thing did happen.

Q: Did you make any effort to inspire American manufactures to make more of an effort to sell in Japan?

ERICSON: Not really from the embassy that I can recall. Actually this would have been primarily the business of the Department of Commerce or somebody back in the United States. We wrote a lot about the subject, about what was necessary, but the embassy itself, as I recall, did not organize anything. Groups which come out, textile manufacturers would come out, the Cotton Council people would come out, but certainly the automobile manufacturers and people like that were not and probably would not have. We used to think that these were important problems but when I put it in context, what we are talking about were fairly minor, but they were very irritating to the people involved. But to the automobile manufacturer it didn't matter a damn whether they sold another 10 or 20,000 cars in Japan. Hell, they had the American market all to themselves and a good part of Europe. So they weren't terribly interested in it. But it was very clear to those who were working on the problems, if these things had kept on going it would apply in a major way to much bigger things, as it does today.

Q: Did you get involved in trade disputes?

ERICSON: In the very early years when I was in the commercial section I got involved in a couple of those things but not...one of the interesting things I did get involved in for example, which focuses on American attempts to get into the Japanese market, RCA got very interested in Japanese television. There was no Japanese television, The television that had established a foothold in the United States at that time was still black and white, color was just on the horizon, but there was still no television in Japan. They asked for a market survey of the potential for their type of product in Japan. Was there going to be television in Japan, and if so, how successful would it be? I was detailed to do this thing and as part of it I went to interview the man who took over the (inaudible) newspaper after World War II and threw out the communists from the newspaper staff. This caused a tremendous brouhaha in Japan because most of the Japanese press is well represented by Marxist thinkers on the staff. It was a major stink, but he stuck to his guns and developed...it was the number 3 newspaper then, today it is the biggest paper in the world... He was spearheading the idea that television should be brought to Japan and of course it was, both commercially and by NHK. I went to interview him, had a great deal of fun talking to him, but it seemed to me that the country's economy at that time was so weak and personal incomes so low, and television equipment at the time was so expensive, that if there was to be television it would be a long time coming, probably five to ten years at least for major network activities. I felt that color was very far down the road and that on the whole it would probably be a very struggling industry before it got going. I also put a date to it as the earliest possible date for any commercial broadcasting in Japan. They started about a week after that date.

So, we did have Americans who were interested in the Japanese market. Incidentally, RCA did quite well originally at the beginning with studio cameras and the broadcasting equipment. But they lost it fairly quickly.

Q: Is there anything else you would like to talk about this period before we move back to

Washington?

ERICSON: Yes, in a sense the change that came along in 1957, which I think is a fairly critical year. I remember I went for some reason with, I think it was Ambassador Douglas MacArthur II, to call on Kishi. I can remember Kishi getting up and embracing this man who he had known for many years and saying, "It is great that the two of us should come together at this time." Ambassador MacArthur was much reviled in many ways because of his right wing political leanings, I suppose, and because he is identified with what some people refer to as the Security Treaty fiasco. He, however, to me was very much a man of his times...Allison was not a very forceful advocate, he was much better as a reporter and observer and that kind of thing, it seemed to me...MacArthur, on the other hand, was very much an activist and he came at a time when Japan was beginning the post-Hatoyama era. Kishi had just become prime minister and it was quite obvious that something had to be done if we were to face this thing, the Security Treaty, three years down the road. Mr. Kishi was very much his counterpart on the Japanese side, also a man for his time. Between the two of them I think they got things pretty much in order to face the confrontation that was coming over the renewal of the Security Treaty, which was really a tremendous break point not only in Japan's relations with us, but Japan's whole orientation towards the world.

Anyway, MacArthur was a hard working guy and was always in the office and expected everyone else to be in the office too. Under MacArthur it got to be Saturday morning, Sunday, it didn't matter, if you weren't around and he wanted you, there was something very much wrong with your attention to your business. Fortunately by that time we also had a marvelous DCM, Outerbridge Horsey, who is probably the world's great buffer. Thank god for Horsey because he saved us down the line an awful lot of grief and absorbed in the process a great deal of the ambassador's pressure to get things done.

Later, after I had left, Bill Leonhart came as DCM and he was a man cut from MacArthur's own bolt of cloth and between the two of them they made life about as unpleasant for the staff as any two ambassador/DCM combination ever have.

But policy wise he saw the importance of Japan and saw the drift and he knew something had to be done about it. He worked very closely with Kishi.

Back to the meeting with Kishi, Kishi was bemoaning the fact that they had just been appointed, that the two of them had come together at this moment. Something was going on but I can't remember. It might have been concerning the Fortunate Dragon incident.

RICHARD B. FINN
Political Officer
Tokyo (1947-1949)

Vice Consul
Yokohama (1949-1950)

**Vice Consul
Sapporo (1950-1951)**

**Political Officer
Tokyo (1951-1954)**

**Japan Desk Officer
Washington, DC (1954-1956)**

Richard B. Finn was born in 1917 and raised in New York. In addition to Japan, his career in the Foreign Service included posts in Washington, DC, France, and the Philippines. He was interviewed by Charles Stuart Kennedy on April 8, 1991.

Q: How did you get into the Far Eastern Commission? Was that the first thing that you did? Did you just go to the State Department?

FINN: No, I had a good friend who was made the number two staff man, Sam Stratton, who was later a Congressman for many years. He asked me if I would be interested. I said I would, and so through his good offices -- they were organizing the staff, which was pretty much of an American show for the first few months anyway -- I got a job. I was the Secretary of the Committees of the Far Eastern Commission that dealt with the Constitution and legal reform, which was something that a legal background was useful for.

Q: Were you involved in working on the Japanese Constitution, or was this pretty much in the hands of MacArthur?

FINN: The Constitution was written by MacArthur's staff without telling the State Department. It came as a considerable surprise to the State Department and to the Allied members of the Commission when the papers announced on March 6, 1946, that Japan had drafted a new Constitution. General MacArthur later told Washington that this was a Japanese initiative and that his staff only helped them. That was, shall we say, an elaboration of what really happened.

We then took part in consideration of some of the Amendments. A number of changes and Amendments were made, and they went through the Commission. They were made over the rather heated opposition of the General, who continued to insist that this was a Japanese initiative, and we would spoil it by our intervention -- by the "threat of Allied bayonets" -- if we kept it up. But I think people in Washington sensed that it wasn't quite that simple a situation.

Q: Did you have any contact while you were doing this? I mean, here you are writing the Constitution, supposedly under the initiative of the Japanese, but obviously MacArthur's headquarters was heavily into it, if not predominantly into it...

FINN: The government section of SCAP Headquarters wrote it.

Q: Was anybody along the way -- either your Commission or MacArthur -- talking to the

Japanese?

FINN: Oh, yes, MacArthur's headquarters did so after they had written it. They took one week to write it in secrecy. It was then handed to the Japanese. The Japanese were working on a draft of their own and had given some preliminary thoughts to MacArthur's headquarters, which found the Japanese ideas very reactionary. The Government Section said that if we don't tell the Japanese what to do, they won't ever do a decent job. And in addition this, new Allied Commission would have Russians, British and everybody else telling us, the United States, what to do. So MacArthur thought that was a pretty good argument for doing it himself. He didn't even tell Washington what he was going to do. This is all a matter of public record. I had no intimate involvement in it.

Q: After working on this for a while, were you then sort of amalgamated into the State Department?

FINN: I took the FSO exams in December, 1945, as part of my idea of getting into the Foreign Service. I was accepted the following summer and left the Far Eastern Commission and took training at the Foreign Service Institute. I thought then that I had had enough of Japan and felt I would like to go to Europe. Of course, I was immediately sent off to Japan. So I became a Japan type.

Q: When you got to Tokyo in 1947, what were you doing then?

FINN: Our office had two titles. One was the Political Adviser's Office (POLAD) -- as such we were a State Department Office -- and the State Department representative in Japan to MacArthur's Headquarters. MacArthur would accept the State Department's office only on condition that it be a SCAP military headquarters' office under his control, and it was called in that capacity the Diplomatic Section. So the office and the man in charge really had two hats -- the State Department hat and the MacArthur Headquarters' hat. MacArthur dealt with it only as part of his headquarters. No telegraphic messages were allowed back and forth to State in Washington. You could send airmail reports back and forth, but it was very much under MacArthur's control. It wasn't oppressive, but almost everything you did was known to headquarters, and every now and then there was some unpleasantness because the State Department view that the State Department thoughts were going directly to its representatives were in fact being read by MacArthur and his staff.

One has to point out that the State Department had a similar office in Germany that was very powerful. It was really the policy-making office for American political and economic policy toward occupied Germany. Our office in Japan had nothing like that kind of autonomy.

Q: It was HICOG, I think.

FINN: It became HICOG after the military command was dissolved. Military people, Eisenhower, and then Clay, didn't want to get into this job. They didn't want the American military wasting its people and talents on military occupation duties. MacArthur loved it, and he felt he was pretty good at it, which he was.

Q: Yes, but what about his staff? What was your impression of his staff? You think of people like Willoughby et al. History has not been very kind to many of the people around him.

FINN: I think that is fair to say. The history is very ambivalent, even about the top man himself. But in my opinion, MacArthur was an excellent supreme commander. He was not an excellent representative of the United States because he thought he was on his own. He liked to act as if he were the Allied Commander responsible not to the United States only, but to the ten other allies as well, and he occasionally made that point very clear to the State Department, which did not like it, but which was not in a position to fire him or even argue with him.

Willoughby? Willoughby was in many ways a brilliant man. He was a remarkable diplomat, a remarkable linguist. A reactionary man politically, but he foresaw the Cold War before many people foresaw it. He probably had foreseen it all of his life being a German-born and bred, a military man. I rather admired Willoughby, but he was thoroughly military. He kept close tabs on CIA, for example, which I think is not the way the U.S. government should operate.

And of the other people, they were all terribly loyal to MacArthur. MacArthur came first. We all got along with our own level people quite well. The general officer level tended to be suspicious of the State Department. Several of the Chiefs of Staff looked upon our section almost as if we were the enemy.

Q: Well, what sort of things were you doing?

FINN: We had a Political Section, a Consular Section, and an Administration Section. We were, for want of a better description, the substitute Foreign Office for the government of Japan. Japan had no foreign relations, no foreign representatives. They couldn't communicate with the Japanese nationals in Brazil, for example, or anywhere. We did all that work for them.

My own work was more semi-political, political-diplomatic. The Japanese had all kinds of problems with their relations with foreign countries. The neutral nations of World War II, for instance had not been at war with Japan. At first, Japan wanted to deal with them. That was not permitted. Anything Japan wanted to do through its Foreign Office involving foreign matters had to go through our office. I did a lot of work on the Korean minority in Japan, which was a knotty problem.

Q: It still is.

FINN: Yes. Then there was the Taiwanese minority. There were a lot of Japanese scattered around Southeast Asia and in China. I suppose the main contribution that I made was to try to work out some kind of arrangement that would take care of the Korean problem. One, to minimize friction with the Japanese, and two, to encourage the Koreans to go back and live in Korea. MacArthur decided about half way through the occupation, and I think rather wisely, that the United States ought not to be solving Japan's problem with the Korean minority.

The Japanese would have loved to put them all on a ship and send them to Korea and not let

them back into Japan. We didn't believe in doing that. They had the rights of liberated people in Japan. But the Korean minority was a rather activist, if not obstreperous, group in Japan and to some extent still is. They were hard to handle. MacArthur said that we are going to just get along with this problem and let the Japanese handle it when a peace treaty comes along -- similarly, with the Taiwanese minority.

My own opinion was that it has been very good for Japan to have a minority. One of Japan's great problems in the world is its isolation and lack of easy relationship with the outside world. Japan had, of course, nurtured this isolation for centuries. Many of the Koreans were born in Japan and have lived all their life there. The Japanese are bit by bit doing much better with the Korean problem, but they are a long way from treating the Koreans equally and fairly.

Q: Did you get involved at all in trying to get the repatriation of the Japanese from the Soviet Union?

FINN: Oh, yes. That was another major function of the (Sebald) office. I was sort of the briefcase carrier for Ambassador Sebald on that. There was an organization called the Allied Council of Japan. The Far Eastern Commission was an 11 nation allied body in Washington, supposedly making policy. The Allied Council was a four nation body -- the U.S., France, the U.K. and the U.S.S.R. -- in Japan which was supposed to advise the Supreme Commander on the implementation of policy, and refer back to their governments any issue where they could not agree with MacArthur.

Very few issues were ever sent to Washington for advice or ever seriously debated in Tokyo. MacArthur broke the back of the Allied Council in a matter of half a dozen meetings, so they only considered what he wanted them to consider or what he would let them consider. The Council did not have anybody to report back to and was relatively impotent. MacArthur did not attend the meetings and delegated his power as chairman to the POLAD/Chief of Diplomatic Section. He used the meetings to do what he wanted done, and one of the things he wanted done was to put pressure on the Russians to repatriate Japanese from Manchuria and elsewhere. The Council had its most tense and, to some extent, effective meetings dealing with the issue.

Q: Did you have any relations with your Soviet counterpart in that?

FINN: Not personally. I didn't deal with any Soviet. Only a few Americans dealt with the Soviets. My boss, Ambassador Sebald, did, and a few people in the G-2 section of Headquarters did.

I was in Japan for three months right after the war as a Naval officer, returned to Washington for the year with the Far Eastern Commission and then returned to Japan in September, 1947. By that time, diplomatic relations had solidified into the semi-Cold War relationship between the Russians and the rest of the diplomatic community.

Q: Who was your civilian boss at that time?

FINN: In the State Department office?

Q: Yes.

FINN: A man called Cabot Coville, an FSO-3. Mr. Coville was a diplomat of the old school, but he was extremely knowledgeable about Japan.

Q: So it was a pretty low ranking...an FSO-3 in those days would have been about the equivalent of Colonel.

FINN: Yes, that is right. Ambassador Sebald was the head of our office after 1947. George Acheson, a China hand and career FSO, was the first POLAD.

Q: So it was deliberately, I assume by MacArthur, kept at a pretty low level.

FINN: MacArthur didn't worry much about personnel or ranks or things like that. His staff always resented any civilian who claimed a high rank because that was a particular strain on housing. Mr. Coville, however, who was divorced, had a room in the Imperial Hotel, which was supposed to be for general officers, so our office did have a little clout in getting nice things like housing.

Q: During that time, you were there from 1947-54, how did things evolve for you? What were you doing while you were there over a period of time?

FINN: I spent two years in Tokyo to start with, doing what I consider pretty interesting and useful work, like the Korean work, and helping on the Allied Council and starting to get ready to at least think about a Peace Treaty. Then I spent a year and a half as a Consular Officer. The State Department felt that every young officer should have a variety of duties.

Q: In Tokyo?

FINN: No. Consular work was headed up by a Consul General in Yokohama. I was in Yokohama for about a year, and then I went up to Sapporo -- northern Japan -- for half a year. I went on home leave and came back to the Embassy in Tokyo. By that time, the Peace Treaty was an important issue, and I was again sort of the bagman for keeping the files and doing the initial drafting on telegrams about the Treaty. The Treaty didn't go very far for some time until Mr. Dulles took over in mid-1950.

In my opinion, Mr. Dulles' greatest contribution to American diplomacy was the Japanese Peace Treaty, which he negotiated not solely by himself, but he was the master hand of the whole thing. He did it before he became Secretary of State.

Q: John Allison was with him?

FINN: He was his number two man.

Q: To go back a bit, when you were acting as Consular Officer in Yokohama and then Sapporo,

what type of problems were you dealing with?

FINN: The biggest problem I recall handling was the expatriation of American *nisei*. We had a very tough nationality law, and a tough lady called Ruth Shipley, who was head of the Consular Division in the Department. If a person had served in the Japanese forces, or voted in an election or taken an oath to Japan in any capacity, we were to make out a certificate of expatriation and send it in, and they were all automatically stamped "approved."

The *nisei*, after a couple of years, got some American lawyers on the job. Pretty soon the tide turned, and later in the occupation, all of these certificates of expatriation were torn up, and certificates of citizenship were being issued. So we had a fine time first expatriating for a couple of years and then repatriating them thereafter. That I won't say is typical of Consular work, but it doesn't give you the most happy impression of the paper mill.

Q: Did you also get involved with GI marriages?

FINN: The State Department would not let American citizens in Japan marry Japanese nationals as long as Japanese were not entitled to become United States citizens. Then when legislation was approved allowing Japanese to enter the United States, the State Department removed the ban on marriages, and many were performed.

We had a fair amount of visa work. For a long time, Japanese were not allowed to go abroad, but in 1949 or '50, the U.S. started letting them go abroad. A lot of students were sent to America; leaders under the USIA-sponsored visitors program went. Visa work was fairly routine. One problem we had was that G-2, Army Intelligence, had taken a lot of Japanese records; anybody who had given the Japanese government trouble prewar had a record with the Japanese police. G-2 made extensive use of that kind of information, and this was something visa officers had to consider.

I know one case of a man, who became a very good friend of mine, named Tsuru. Tsuru had been sent to America as a teenager by his family in the mid-30s because he was a radical in high school in Japan, and they wanted to get him out from under the Japanese police so he wouldn't be put in jail. He ended up with a Ph.D. from Harvard, but he had a police record in Japan. He couldn't get a visa to the United States for many years. He spoke excellent English, but he had this alleged red background in U.S. files. This may be an extreme example, but it is again the type of unpleasantness you got into.

Q: I was at the other end a little later in the Refugee Program, and I think the military did tend to accept the judgments of basically the enemy power of who was for and who was against you. It was ironic, but that happens.

FINN: For that matter, G-2 began to look around at Americans, and there were a lot of Americans who had liberal records. If you had been a member of the Institute of Pacific Relations, you were suspect in their view. One of the experts in our office in Tokyo was a very bright man of whom I thought highly in many ways. He had been in G-2 before he came to the State Department. He wrote Willoughby's memoranda to MacArthur saying that we had 15-20

communists working in headquarters, mostly in the Economic Section, the Government Section and the Newspaper Section, and we ought to fire them. MacArthur paid very little attention to these memos.

Q: After your Consular work, you said you came back to Tokyo and worked sort of as a bag carrier working on the Treaty. What was your impression of the role the Japanese were playing in this Treaty? Was this really a joint Treaty?

FINN: The Japanese, early in the occupation -- a few months after it started, realized that there was going to be a Peace Treaty some day. They wanted it as soon as they could get it. They set up study groups in late 1945, studying issues like reparations, territory, overseas assets, everything that goes into a peace treaty. For several years, they gave us their memoranda on these matters. We would say thank you very much and send them to Washington. Washington said that while all this was very interesting, there was not going to be a Peace Treaty for a long time, and when the time did get nearer, the U.S. was going to decide the territory or the reparations issue and not the Japanese. So the Japanese views did not count for much.

But the Japanese were realists about it and continued to send us drafted treaty proposals before Dulles came along, and they did two or three quite miserable drafts calling for such things as 25-year Allied Commission, or a council of Ambassadors to oversee implementation.

MacArthur, to his credit, thought that these Washington drafts were poor stuff. MacArthur knew his place in history was going to depend in good part on his work in Japan. I would say he was the first person to believe in a short, non-punitive treaty, not cluttered with all these restrictions. This was very much to his credit. He was not a diplomat. He had some funny ideas about diplomacy, but he wanted an early, liberal peace treaty.

He envisioned soon after the occupation started that he might have a good shot at the White House. He knew that what he did in Japan would be quite important in selling himself to the American people. He had a time table: there was going to be an election in 1948; he would have to get things pretty well wrapped up by 1947, have a peace treaty and then return to the U.S. in time to campaign and cash in on his glory. So he wanted about a 2-year occupation -- get it all done and out of the way.

I think MacArthur secretly -- and maybe not so secretly -- thought highly of the Japanese. He had only been to Japan a couple of times, but in his eyes, the Japanese were disciplined people, and they were good fighters. The Japanese GI did what his officer told him to do, didn't ask questions, and did it to the death. That is an appealing kind of psychology for a military leader.

So he wanted a peace treaty quickly, a non-punitive one. The bureaucrats in the State Department could not really come up with one. By the time it got through everybody in the State Department, the lawyers, the reparations people and the Pentagon, everyone wanted something from the Peace Treaty with Japan. But MacArthur's views were something to conjure with. When he said we should do this and not do that, the chances were this would carry the day. When Dulles came aboard, he and MacArthur saw eye to eye. It was a happy marriage from the point of view of liberal Americans, who wanted a quick and non-punitive treaty with Japan.

Q: As a practical measure, you look at the other side of the equation -- the German one. Didn't we just sign the Peace Treaty this year?

FINN: Yes, in effect, that is right. We never had anything resembling a peace treaty with Germany, but the German solution was reached quite intelligently, in my opinion. First of all, Washington put the economic and political roles in the hands of the State Department, and the State Department extensively relied on German experts. You had a man like Ludwig Erhard making German economic policy by 1948. The U.S. had a Harvard professor by the name of Carl Joachim Friedrich, who advised the Germans on what a democratic constitution should say. He was German-born, and he worked easily with the Germans. He by himself was the equivalent an entire government section as far as our occupation of Germany went. The Germans got a basic statute by 1948, and that, in effect, led to a partial peace settlement with the Germans. That was when McCloy and the American civilians came in and took over from the military. So de facto, we had a Peace Treaty by 1949. We didn't get it in Japan until 1952 because MacArthur decided that he wanted to stay in Japan until the Peace Treaty was signed.

Q: And, of course, MacArthur did not do very well in the 1948 Republican campaign. There was a trial balloon in some primaries in Wisconsin and somewhere else. It just didn't come out very well.

FINN: Exactly. He got nowhere.

Q: When you were working with Dulles...one of the things one gathers about Dulles was that he was a good lawyer, but he really didn't understand other cultures. There is always the phrase, "Why don't you, the Israelis, the Jews, sit down and talk this over like Christian gentlemen?" You get the feeling that he saw things in common "us versus them" -- but not culturally sensitive. But peace treaties are very culturally sensitive documents.

FINN: I think that is two-thirds true. Dulles never quite understood the Japanese. I think they were strange little men to him. But on the other hand, he relied quite heavily on people like John Allison, who knew Japan well. Shortly after Dean Acheson gave him the job, he sat down and wrote a memo on what kind of people the Japanese were. He said in this memo that the Japanese were people who tended to stick together. They were a very group-minded people. They were also susceptible to leadership that would lead them in ways that they, not being a very sensitive or sophisticated people, might not want to go. In this sense, the Japanese were very much like the communists -- subject to dictation and leadership by a few strong people. And there is a fair amount to that kind of observation.

He had a number of things in his essay of that sort. I think most of the people in the State Department felt that Dulles was a smart enough man to learn that he was over-stressing certain aspects of Japanese psychology. And I think that is true. He and Yoshida, who was the leader of the Japanese government during the last half of the occupation, didn't get along at all well, really. But the saving grace was that they had pretty good staffs on both sides, and they were able to do a lot of good business together, with Allison on our side and several senior Japanese on their side. Many of the important, early decisions and drafts were done by the staffs. They were doing

what Dulles and Yoshida wanted done but were not quite able to pull it off themselves. Dulles was, somewhat as you defined, not an easy man to deal with on this sort of thing. But, on the other hand, he was a master diplomatic craftsman.

Dulles and Yoshida had a lot of trouble with the defense arrangements. The Pentagon had certain requirements. Dulles was able to work with MacArthur on defense issues, but it took a lot of hassling to determine the exact security arrangements we should have. The Japanese were willing to give us bases as long as we didn't make them rearm. The Pentagon wanted both. How to handle that was a tricky problem. Dulles finally sat down, and, in the course of a couple of hours, wrote off a Security Treaty he thought would do the job. He didn't want to clutter it up with all the stuff about legal jurisdiction, bases rights, customs, whether tanks could use highways, etc. He said those things would come later. He drew up a short, simple and neatly-done draft.

It was a model for the Japan Security Treaty, the Philippine Security Treaty, the ANZUS Security Treaty and later the Korean Security Treaty. Dulles was good at this. Likewise, he was very good on the peace treaty. The issues were up his alley. He was an expert on reparations, property and the like. So I must say that two men who did an outstanding job for their country on the Peace Treaty and deserve good marks in the history books were MacArthur and Dulles.

Q: How long were you involved with the Peace Treaty?

FINN: I came back from home leave in early 1951. Dulles by that time was in charge. So I worked on the Peace Treaty from about April, 1950, until April, 1952, when it came into effect, and for many months after on problems related to the Peace and Security Treaties. This story about Dulles is, I think, probably true. In 1950, the Democrats and Republicans in Washington were having problems with a Democratic President and strong Republican representation in both houses of Congress...somebody said that more bipartisanship was needed. So John Sherman Cooper and John Foster Dulles were prevailed upon to take high positions in the State Department. Dulles didn't have to be prevailed upon really. So Dulles came in and did odd jobs in the Department for a few months, and he finally went to Acheson one day and said, "You know, you are getting nowhere with the Japanese Peace Treaty. What you ought to do is give one man responsibility, tell him you will give him one year to get it done, and if he doesn't get it done in one year, you fire him and pick somebody else."

In effect, Acheson said, "Okay, you are it."

Truman wasn't happy. Cooper was more of a gentleman and liberal scholar, while Dulles had a real strong partisan strain in his makeup. But they gave the Japan job to Dulles. There was very little partisanship in what he did. And even when MacArthur got fired a year later, and it looked as if this might spoil the whole treaty arrangement, Dulles was a good soldier. He stuck with Truman and Acheson and finished it off.

Q: What was the effect of what you were doing on the Korean War, which started June 25, 1950, and then leading up to and through the firing of MacArthur about a year later or so?

FINN: The Korean War was a strange experience for us out there. We didn't feel any particular tension or worry about our safety. I think the feeling that America was invincible, as it had shown in World War II, was still very much a part of our own attitude. Much less did we think that the local forces out there could give us the kind of trouble that they ultimately did. Even when the American forces were forced down the peninsula to the perimeter around Pusan in the summer of 1950, we didn't think there was a Dunkirk in the offing, although in retrospect, we were not all that far from it.

Q: It was a closer run thing than I think we realized at the time.

FINN: We all had confidence that our side would win out, and, of course, MacArthur did it again with the Inchon landing, a superb military achievement that seemed to almost end the war. Then, of course, in late 1950, the Chinese came in, and we were in danger of repeating the same performance we had gone through a few months before. That shortly led to the firing of MacArthur.

I don't think any of us felt that the occupation of Japan would fall apart, or fail or would be greatly damaged when MacArthur was ordered out. By that time, the peace treaty was moving along. Dulles had gotten a draft by February, 1951, that the Japanese had happily accepted. The Allies hadn't even seen it. This was a very curious way to run the negotiation of a treaty -- to get it through your enemy first and then go tell your friends what you have agreed to, and please don't upset the apple cart. Some of them didn't appreciate that kind of dealing. But it was America's show; we ran it our way, and they knew we were in charge. I think we were prepared to go and sign a treaty with Japan alone if that should be required. The Allies could have done little to change it, but we never came very near to that.

Q: But also the Allies really weren't playing much of a role. Unlike in Germany, where you had contiguous territory and occupation troops and all that. Japan was all our show.

FINN: The British, in fact, wanted our occupation to end in a hurry because they felt the longer we stayed, the more their commercial interests in Japan would be reduced, which, in fact, was the case. The British had been top dog in East Asia for a century. Here, we came in, and after World War II, we were now on top. They didn't think that was a great deal for them.

Q: When MacArthur went, then everybody wasn't running around wringing their hands?

FINN: No, I wouldn't say that. Bill Sebald, who was my boss and the head of the office, was certainly concerned. Just a word about Sebald: he was an Annapolis graduate, became a language officer in Japan, was in the Navy during the war as an intelligence officer; he left the Navy in the mid-30s to become a lawyer in Japan, where his father-in-law had been a prominent British commercial lawyer and had a Japanese wife. Sebald rejoined the U.S. Navy after the war started and became an intelligence officer. The State Department hired him after the war and sent him out in late 1945 as a lawyer to serve in the diplomatic section. When the man who was the head of it, a China expert, George Atcheson, was killed in a plane crash in 1947, MacArthur said he wanted Sebald for the job. The State Department didn't want Sebald for the job, of course, because he was not a State Department career man. They wanted to put Maxwell Hamilton in,

but MacArthur's view prevailed. So Sebald was somewhat beholden to MacArthur. The State Department didn't make an issue of his appointment. Dulles thought well of Sebald. Sebald made his own reputation and did not have to depend on MacArthur to stay in his job.

Q: The treaty was signed when?

FINN: The treaty was signed in September, 1951, and went into force April 28, 1952.

Q: As an airman first class, I was occupying Japan one day and was defending it the next. What did you do after the treaty came into effect?

FINN: We did almost exactly what we did before. I think we had to give up our house. That was one thing that hit most of us. All the enforced takeover of Japanese housing and buildings in the Tokyo area was reversed. So we all had to look around for some other places to live. But fortunately, the U.S. dollar was very strong, so with our money, we could go out and rent good places to live. Many of the Japanese who had nice houses that had been occupied by the Americans, for which they got very little in the way of rental from their own government, were now able to rent out their places on a commercial basis to Americans after the treaty. We went back to the same house we had when we first came to Japan in 1947. The treaty meant very little difference. We were all a little nervous, but the Japanese seemed to feel the situation was about the same after as before the treaty. They were, of course, relieved the treaty was in effect. Their top leadership got along well with our people. There was no animosity or bitterness, little friction. The Japanese are a pragmatic, purposeful people, in my opinion, and they set themselves about repairing the damage and getting back on their feet.

Q: As I say, I came in due to the Korean War just out of college, and I was just a GI there, and everybody loved it. It was great duty, and we liked the Japanese. We certainly liked the Japanese women. There was not the feeling that they were sort of the under class.

FINN: To cite one mundane example...we no longer had MPs directing traffic downtown, but the traffic moved along fine anyway. Where were you stationed?

Q: I was stationed at Johnson Air Force Base, just outside of Tokyo. Now what sort of work did you do after 1952 to 1954?

FINN: I became, as so many of us seemed to in those days, a political/military officer. After the Peace Treaty came into effect, of course, there was a Security Treaty along with it. We set up a Joint American-Japanese Committee consisting of military people and the Japanese Foreign Office people. We still have something like that sort going in Japan today, 40 years later. I was the State Department officer advising the American General or Admiral -- whichever -- on this Joint Committee.

A lot of the problems were diplomatic. There were many knotty problems. Criminal jurisdiction posed some delicate issues. The Japanese, to their credit, did not want to surrender all jurisdiction over crimes and offenses by American GIs. They wanted some division of jurisdiction that would be very much like the NATO arrangement, figuring that the NATO one

would be an equitable type. The Pentagon didn't want to give it to them. It took a year before the U.S. finally agreed to give the Japanese the NATO formula on criminal jurisdiction.

Part of the formula was that the Americans would request waivers for any criminal cases they considered important and that the Japanese would give sympathetic consideration to that request. That has been going on for 40 years. Any time we want to get a GI back, they will give him back to us. And to our soldiers' credit, they did not go around murdering Japanese, although there were a couple of unpleasant offenses. For example, on a target range once, a GI shot and killed a Japanese farm woman who was picking up the brass shell cases, which were quite valuable. The Japanese didn't go for that kind of thing; we didn't either. I don't think the soldier, his name was Gerard, spent anytime in jail, but he was tried and found guilty of a criminal offense, but his sentence was suspended, and he was sent home.

Q: Did you have any problem with our military adjusting to the new status? Often everybody at the top agrees, but there are certain perks which suddenly are no longer there at lower levels.

FINN: I don't recall that. I would think for a lot of people their status was pretty much the same. I know of no incidents or grumbling psychology. Even the top general moved to a much nicer house than the American Embassy residence where he had been living. We retained several rest hotels in downtown Tokyo so that the fellows could still get 25 cent martinis and a good steak dinner for very little. No doubt there were plenty of individual cases of unhappiness, but it wasn't a big thing.

Q: Again and again the theme has come through that when you are trying to negotiate something, particularly status of forces, the country and the Americans there can usually come up with a pretty good way, but when it gets back to the Pentagon, the lawyers there seem to take a very extreme, unresponsive view. They don't seem to be knowledgeable or very good at dealing with the situation.

FINN: That is very true. I mentioned the matter of criminal jurisdiction. Those of us on the spot said, " Why not give the Japanese the NATO formula? Give it to them right away. The Japanese aren't barbarians." The Pentagon seemed to think that they were Hottentots. The military feel an obligation to get all foreign countries to treat our men abroad just as if they were in the United States. Well, they are not. They are in a foreign country, and the Japanese and the Europeans would never cede to us on that kind of issue.

The military wanted another provision in the status of forces agreement: in case of an emergency, the American top military commander would take command of all forces in the Japan area -- Americans and Japanese. Of course, the Japanese only had a kind of token force at that time. But the Japanese didn't want that. Dean Rusk argued right up to the end to try to get it, but the Japanese refused. Finally, the Pentagon agreed not to insist on it and say that if there were an emergency, the two sides would consult on what they were going to do.

Q: So after the peace treaty went into effect, you became a sort of political/military officer. Were there any major problems indicating any resentment on the part of the Japanese during your four years?

FINN: There were a couple of provisions in the Security Treaty that they didn't like. One of them was that in case of a large scale internal disturbance in Japan, our troops would be authorized to intervene, if the Japanese government requested it. That was something that we or the Pentagon, I am not sure who, wanted. In effect, we would be interfering in their local affairs if there was some kind of demonstration or communist riots. They didn't like that. We gave up that right in 1960.

There were several things on that order. The most difficult area was the security arrangements we wanted to get, in particular an MSA, or Mutual Security Agreement with Japan. We had them with all the NATO countries. In effect, an MSA agreement means that the U.S. would supply military equipment if the other government would agree to build up its military forces and cooperate with us in meeting the common threat posed by international communism. Well, the Japanese didn't see then -- as they don't really see today -- any great threat from international communism or other sources. To get them to sign the agreement took a lot of arm-twisting. The diplomatic people in the Japanese government thought that this was a nice way to get a lot of weaponry cheap. And further, they would not have to worry unduly that they would be sent off to fight the Chinese, or Koreans or somebody. The Americans would really be agreeing de facto to defend Japan. But a lot of the liberal Japanese, and certainly the left wing, felt that an MSA agreement tied Japan to the American capitalist, imperialist structure. They were not happy about that. That feeling eventually dissipated, but it lasted for about ten years in Japan.

Q: Was it an Embassy in 1952?

FINN: Yes.

Q: How did you see the "Soviet menace" at that time in regard to Japan?

FINN: Japan never had a strong communist movement. The Peace Treaty came into effect on April 28, 1952. Three days later was May Day. The labor movement had a big demonstration in Japan on May Day. We, the Americans, got the Japanese to prohibit the demonstration downtown by the Imperial Palace, so the demonstrators had their first initial demonstration several miles away near Meiji Shrine and then marched downtown anyway. There was a clash with the police. I think I read that one person was killed. The workers threw a couple of GIs in the moat around the palace along with a couple of American cars. There was some fear that the communist revolution was here, and things were going to be tough. Could the police control them; are we in for trouble?

There was one view in the Embassy that wanted to send a telegram back and scare the hell out of the Joint Chiefs by saying that we cannot count on keeping large military forces on the ground in Japan. We should prepare to remove them and keep only token forces. Cooler heads prevailed, and the telegram did not go out.

I did not personally see any great threat. My boss, Sam Berger, thought there was. And I still felt that America was number one, and we weren't going to have to worry about any threats inside Japan. And, frankly, I didn't see any great threats from outside, despite the Korean War.

Q: Well, Berger had just come out of being a very important figure as labor attaché in the UK, where he was sort of our contact with the Labor Government. He was coming from European context on this, probably.

FINN: Sam was a fine officer and learned a lot about Japan. He was the Political Counselor, and I suppose it was his job to see potential threats. Bob Murphy was the Ambassador and a tough-minded man. But when a country with Japan's background has a riot three days after the nation regains independence, and nobody knows really which way the cat is going to jump, you are well advised to look pretty hard at the situation.

Q: This was a real test?

FINN: Yes, it was.

Q: What was your impression on how it was handled in say, five days retrospect?

FINN: My suspicion is that the military -- remember we hadn't sent one GI home because of the Peace Treaty -- felt, one, they were in pretty good control of anything that could happen in Japan, regardless of whether they had authority to intervene or not, and two, they had considerable confidence in the Japanese. The Japanese later developed their own military force, and our military trained and worked with them. I think our officers felt the Japanese could rapidly muster four or five divisions of quite competent soldiers if they had to. Of course, Berger and the Embassy were thinking more of the long term political situation. If you got bloodshed with the communists fighting the Japanese defense force, you were in for trouble. But I think most of us were oblivious to the communist threat or felt that the threat wasn't great.

Q: Robert Murphy had probably the most distinguished career in the Foreign Service, actually coming out of the old Consular Service and then moving on. How did he run an Embassy? In a way, it would seem that he was a fish out of water since he was such a European hand.

FINN: I liked Murphy, and I thought he ran the Embassy quite well. He arrived the evening the Peace Treaty came into force, three days before the riot. He asked me how many men there were in the Tokyo police force. I said that I thought there was about 20,000. He said that that was interesting, since New York had 22,000. That was a natural question for a new Ambassador to ask: What are the local security forces like?

There was one thing about Murphy's style of running things which puzzled me a little. He was awfully nice to the middle and lower officers, but was quite tough on his senior officers. He wouldn't quite chew them out in public, but you could see when he was not pleased with their performance. I suppose top officers in any system have to solve that problem -- how you handle people under you. Sometimes you can't handle them all equally well.

Q: Did you have any feelings about how he dealt with the Japanese?

FINN: Murphy was very good with people. He had all the charm of the Irish, and he used it. A

man like Dulles was rather impersonal and somewhat of a cold fish. John Allison could be that way, too. Murphy was a very personable fellow. He always had cigars, and the Prime Minister, Yoshida, liked cigars, so they always had a fine time together. Yoshida told Murphy the Emperor advised him to give up smoking, and he said he wouldn't do it. Murphy was six feet two, and Yoshida was about five feet tall...Mark Clark, who was the senior general by then, was about six feet four...so it was something to see when you got Mark Clark and Murphy with Yoshida. But Yoshida was a shrewd fellow. His English was good, and he knew the West pretty well. They got along well. Murphy got along from the start much better with Yoshida than Dulles did. Dulles and Yoshida were perhaps forced to get along well because Yoshida was the Prime Minister afterwards, and Dulles became Secretary of State. I know Dulles once said that he couldn't understand Yoshida's English. I think Dulles was the kind of person whose antenna did not work well with foreigners speaking bad English. I may be exaggerating some of these things and showing my own prejudices, but I thought Murphy did quite well. He was a great fellow with people.

Q: Were you getting instructions at all from Washington? I mean, did you find the State Department almost intrusive in your work? This was a very peculiar setup with the military in Japan.

FINN: Actually, we didn't have much trouble. When MacArthur was there, nobody told MacArthur anything, and anything that came from State in the way of an instruction had to go through the military. When George Kennan negotiated a new national security policy for Japan in 1948, Marshall Green and the fellows on the desk thought SCAP was going to really cut back on some of the policies, like the purge, that had gone too far. They wanted to give the Japanese more freedom to run things their own way. So they drafted telegrams to that effect, that we were going to reduce the purge -- we had eliminated thousands of Japanese, mostly military, from holding public office -- and sent them over to the Pentagon. The Pentagon didn't want to clear them because they knew MacArthur wanted to stick with what he had done. He didn't like to be second-guessed by the people in Washington. Those things were not pleasant, and the State Department couldn't do much about it. By the time the treaty came along, we still had a situation where the military was the preeminent arm of American policy in Japan. So the State Department was not unilaterally able to run policy for Japan.

Q: During this period we are talking about, we have a corps of men who were working at our Embassy in Moscow and dealing with Soviet Affairs -- Russian experts -- and they were quite an elite in dealing with the Russians. What about the Japanese hands, the people dealing with this at the time? This is a very important time, and I wonder if you could talk a little about some of the personalities?

FINN: Bill Sebald, who left Japan shortly before the Peace Treaty came into effect, was an old hand on Japan. He had lived there for ten years before the war. His wife was half-Japanese. We had three or four people, older officers, who had been in Japan before the war and knew Japan and the people well. They were not anti-Japanese or tough about Japan, but in my opinion, quite realistic. The same thing was true of the military attachés. A lot of the senior military people had been in Japan before the war. They had a lot of Japanese friends. Yoshida's daughter knew them all when these men came back as part of the occupation. They used to take her out to dances and

things like that. She knew English well and was very Westernized, as was her father. I guess I would say that we never had a large number of Japan hands. We never really had enough people to get spread around the Japanese government politics in a broad, deep way. But we always had enough people to get the minimum job done, and more and more we got trained people who knew the language and were familiar with the country's record and the attitudes of the Japanese.

I would have to say partly that I think the State Department and Dean Acheson were not helpful. They did not like Japan hands. Dean Acheson, in September, 1945, said he did not want to have anybody like Joseph Grew or Eugene Dooman, who were Japan hands, come out to Japan as the State Department representative. Acheson, in effect, said that he didn't have confidence in the old Japan hands. He appointed George Atcheson, a China hand, who went down in a plane crash in 1947, to be the head of the State Department office. And somewhat that same psychology seems to prevail even now. Take Mike Mansfield, by all accounts a very successful Ambassador. He did not know a word of Japanese when he went there, and I doubt if he knows more than one or two words now. Ed Reischauer was an exception in the post-war era, like John Allison and Alex Johnson. But in general, Japan hands are not highly thought of. I think that is a conclusion you can draw from American diplomacy in the last forty years.

Q: Thinking about it, this is true. You have people who are called in who really don't come with a great deal of knowledge of the area. As kids, we hated the Japanese, having just fought a war, but later we fell in love with Japan -- the food was interesting, the beer was great as were the girls. Do you think this worked against Japan because there was a suspicion that the guys had gone too native or something?

FINN: Before World War II, the Far East Division of the State Department was headed by a man called Stanley Hornbeck, who had very little familiarity with Asia, but what he had was China. He had the Chinese attitude toward the Japanese. Look at Joseph Grew, who was the Ambassador for ten years. He probably didn't know more than a couple of words of Japanese himself. He was very hard of hearing and probably couldn't hear what was said to him in any case. The feeling was that we hadn't been well represented there before the war, we were not tough enough, we did not tell the Japanese that they were going to get into trouble if they continued doing what they were doing.

Q: I guess when you think about it, our Russian hands were basically pretty tough. It was a difficult regime, and it was easier to be tough. And that goes over well in the American political complex. You are not letting your side down.

FINN: Certainly under Bush and Baker, the present President and Secretary of State, the expert is not highly thought of. Even though one would have thought that Bush would have seen it a little differently, having been an Ambassador twice. I don't think Reagan and his team either felt sympathetic to the career people. Baker is supposed to have said that all foreign policy is domestic politics. To have your foreign policy succeed, you have to have a successful domestic policy. It is true that if you have Congress against you, you are going to have a lot of problems. But on the other hand, I do think knowing what the foreign government thinks, and what foreign people are like, is worth something in foreign relations.

Q: You came back to the State Department from 1954-56. I wonder if you could tell me what you did then?

FINN: I was the so-called Desk Officer for Japan for those two years. I had three or four officers under me, and we were the Japan political/military side of the operation. There was a separate economic office. We were the primary State Department office for Japanese political affairs. The big things were to assist Japan, which had become independent two years before, in 1952, to rejoin the world and to help the Japanese with some of their problems...getting diplomatic recognition, becoming members of the United Nations. We were also negotiating a number of treaties consistent with Japan's new independent status -- many on the political/military side, like the Mutual Security Agreement.

We also negotiated an Atoms for Peace agreement, which I think was something of a breakthrough. Japan, having been atom bombed during the war and having this allergy about atomic weapons, was still very interested in the science/technology side of the nuclear discovery. They were happy to have a nuclear peaceful use agreement, which they have made very good use of. It has assisted Japan, among other things, in developing so rapidly as an economic power.

That, I think, is in a nutshell what we did. It was a busy office and a busy time. The Japanese are busy people and a business-making people, so we had lots of things to do.

Q: How did you find dealing with the Japanese? At that time, it was the Japanese Embassy. Were you dealing on equal terms, or did you have to do some confidence-building?

FINN: The Japanese, in my experience, are different in some ways from a Western nation in terms of negotiation and handling problems. That doesn't mean that they are obsequious, or deferential or give in, but they don't engage in straight man-to-man on either side of the table, laying it on the line or working out a compromise. The process is much more circuitous in trying to divine on each side what the other one has in mind and what he wants and trying to adjust the two positions accordingly. Agreement comes gradually.

In my view, that is a rather admirable trait of the Japanese, and I think probably other nations have it, maybe other Orientals. The Japanese more than most. The Chinese, in my experience, are much more like us in laying it on the line and cutting down on the differences and then reaching an agreement. The Japanese felt then, as they do today, that America is terribly important to them. We were important to them because they had lost the war, we had occupied them and then had tried to help them get back on their feet. We are important to them today because we are a very rich, powerful country, and we have opened many doors for the Japanese economy, and Japanese activities generally, to enter and be so successful, as we have all seen. The Japanese, in my opinion, are not going to fight or be difficult with Uncle Sam when they see we take a strong position. I am getting away from 1954, but the point I am making is that I think the Japanese are deferential -- no, obliging, certainly not obsequious, but on the other hand, they want to be very careful that no situations in their dealings with the United States become hard obstacles that lead to a threat to the good relationship they think they have, and we, for the most part, think we have. That doesn't mean that we don't have groups -- we didn't have any in Washington in those days, but we have them today -- who are somewhat inclined to say, "By

God, they have no place to go, we will turn the screws on them to get them to agree." We didn't do that. I think our American policy toward Japan has been remarkably good. Many people would say it has been too soft, but I think it has been rewarding for both sides. This was the beginning of that kind of relationship.

Q: Did you have any problems interpreting the Japanese way of dealing with the Americans, like the legal side of the Pentagon or others who were used to doing things their way? Cultural sensitivity certainly was not part of our diplomatic armory in those days.

FINN: One good illustration of the problem has constantly surprised me and disappointed me a little bit. The Americans feel -- they felt it during the occupation and even more so after Japan's independence, and they feel it today -- that the Japanese are still somewhat the *samurai*. They have this military tradition. They had the Kogun, the Imperial Army, in the 30s. The Pentagon and any number of senior people -- diplomats -- George Ball, Dulles and others, felt that we had to restrain the Japanese. Some in the State Department and the Pentagon felt that all we had to do was to unleash them and let them go, and they would have a big army and would be our policemen in Asia. That has been a very prominent characteristic of American thinking about Japan since about 1950.

Mr. Dulles got the Germans to rearm officially and legally, and he could never understand why he couldn't get the Japanese to do the same. There was a lot of feeling that the Japanese and the Germans were the same kind of people. They were strong, organized, tough, purposeful people who would not only build up their economies but would build up their military forces and would be powers to reckon with in the world. But the Japanese said that they did not want to build up their military force and preferred not to be a military power in the world. They had seen it was not a good policy to have in the 30s.

That was one theory. The second is not directly connected. There was a lot of feeling about the nuclear issue that the Japanese had been so shocked at the damage by the two atomic bombings that they were going to have a nuclear allergy indefinitely. This was somewhat inconsistent with the first theory, but it was particularly true in the case of the Atoms for Peace program. A lot of people could not believe that the Japanese would want to have any kind of dealings with nuclear energy. But that wasn't so.

Q: At this time, when you were dealing with the Japanese in this '54-'56 period, did you have any impact of McCarthyism at that time?

FINN: No. I think people who had any China connection felt it much more. Some of them were on McCarthy's list -- John Service, Robert Barnett. We did have some touch of it though, now that you mention it. The only and prominent example was John K. Emmerson, who was a career FSO and a Japan specialist. Emmerson, I am confident, was never a communist in either a legal or card-carrying sense, or in a philosophical sense. He was also a man who believed that Japan had a very reactionary type of system before the war, and it had to be cleaned out, revised and modernized. He was close to a Canadian diplomat, who was equally a prewar expert on Japan, Herbert Norman. Just one episode: Shortly after the surrender, we had ordered the Japanese to release all political prisoners. The Japanese weren't all that eager to release their communist

political prisoners, but we told them they had to. John Emmerson and Herbert Norman went out to a prison in the suburbs of Tokyo, Fuchu Prison, and interviewed a group of communist political prisoners. They brought several of them back to GHQ to interview and talk about things before they were officially released from jail.

That became a cause celebre in Japan, especially among the rightists in Japan and the right wingers, like the McCarrans and the McCarthys in the United States. They claimed Norman and Emmerson were communist sympathizers who were urging the Japanese to go communist and abandon their good relations with the United States. Emmerson and Norman were not doing any such thing. Herbert Norman committed suicide finally, in 1957, shortly before McCarran was about to start another hearing about communists and communist foreign policy pressures in the United States government. They were going to interrogate Japanese and Americans who had served in Japan. Emmerson's name was mentioned. He never made Ambassador; I think the State Department probably felt a nomination would just not get through the Senate. But that did not affect me or the desk particularly. It did affect John Emmerson. Ambassador Reischauer brought him out as his number two in 1961. By that time, the anti-communist storm had pretty much blown over, but it left a mark.

MARSHALL GREEN
Japan Desk
Washington, DC (1947-1950)

Ambassador Marshall Green was born in 1916 in Holyoke, Massachusetts. He received an undergraduate degree from Yale University in 1939. In addition to his service in Japan as secretary to the ambassador, Ambassador Green was posted to in Australia, China, Indonesia, Hong Kong, and South Korea. He was interviewed on March 2, 1995 by Charles Stuart Kennedy.

GREEN: The next "tranche" of my Japan career was when, in 1947, after less than two years as Third and then Second Secretary of Legation in Wellington, New Zealand, I was assigned to the Japan desk in the State Department. I served there from 1947 to 1950 as a Japan desk officer, working very closely with Bob Fearey, who was my successor as Ambassador Grew's private secretary. He had not served in the military because of a detached retina. He probably knew more about current US-Japan relations than anybody in the State Department at that point, because he worked [on Japanese affairs] right on through World War II. Bob and I were very close friends in those years and have been ever since.

We worked under John Allison, who was the "chief" of NA (Northeast Asian Affairs). The deputy "chief" changed and was replaced by Max Bishop. The head of the "bureau" -- FE [Far Eastern Affairs] -- was W. Walton Butterworth. Walt Butterworth "took a shine" to me, and I found myself in his office a great deal. This created some problems with John Allison, who was diplomatic enough to know how to handle that one. Anyway, it was largely through Walt Butterworth that I was assigned as George Kennan's only traveling companion to Japan in February, 1948.

This trip turned out to be extremely important. What had happened was that when the occupation of Japan was undertaken in 1945, it was our expectation that it would only go on for two or three years, and then there would be a peace treaty. Meanwhile, to jump ahead a little, John Foster Dulles had been "brought aboard" in 1950 to try to negotiate the peace treaty with Japan. Until there was a peace treaty, Japan would be under Allied occupation. Since it appeared that the occupation period was going to be extended much longer than had earlier been anticipated, it was strongly felt in the Office of Policy Planning in the State Department, especially by George Kennan, but also by John Davies, Walt Butterworth and Secretary of State George Marshall, that occupations can go sour. It was felt that, in the case of Japan, we had to be very careful.

So George Kennan was sent out to Japan in February 1948 by Secretary of State Marshall to discuss with General MacArthur how the emphasis in the occupation of Japan could be shifted from "reform" to "economic recovery." The idea was to normalize things as far and fast as one could to stave off growing, nationalistic resentment against the occupation.

At that time we had various mechanisms for dealing with Japan and with the occupation. In Washington there was the Far Eastern Commission, on which all of the countries that had been enemies of Japan had their representatives. We met in the old Japanese Embassy here in Washington about once every two or three weeks. I used to go to those meetings. Another international mechanism was the Allied Council in Japan, on which representatives of the Great Powers sat. It met periodically and discussed the broader issues. However, neither of those bodies carried any weight with MacArthur. MacArthur "ran the show" the way he wanted to, and to heck with all these other people. He had a little bit of the same attitude toward the White House. He felt that Japan was his exclusive domain. Of course, we came to learn a lot about that in Korea later on.

Now, when George Kennan was sent out to Japan to talk to MacArthur about changing the emphasis of the occupation, he was treated, on his arrival in Japan, just as though he was a visitor from a not too friendly power. He was almost seen as a "spy" from the State Department. MacArthur held him at arm's length. Of course, he couldn't ignore Kennan. George Kennan had his orders, but MacArthur kept him at arm's length and wouldn't meet with him, except socially - for example at a dinner party.

It was interesting to see how Kennan operated. Kennan got through to MacArthur two ways. The State Department already had a representative in Japan in SCAP [Supreme Commander, Allied Powers] headquarters, William Sebald. Bill Sebald was the head of the Diplomatic Section of SCAP. There were 14 Sections in SCAP -- including Sebald's Diplomatic Section answerable to Major General Fox who, in turn, was deputy to General Almond, a four-star general, who was chief of staff of SCAP. So the State Department's representative, Bill Sebald was "way down the line."

George Kennan eventually got through to MacArthur by casually observing to Major General Willoughby, head of SCAP Intelligence, that MacArthur should not be too concerned about the views of the Far Eastern Commission in Washington, whose work was now largely complete. MacArthur was in the best position to judge what now needed to be done in Japan, and Kennan

could be of help to MacArthur in getting MacArthur's views across in Washington.

Through Willoughby and through my intervention with General Babcock (an old friend from our service together in the Embassy before the war) it was arranged that Kennan would discuss the origins and current nature of Soviet conduct in the SCAP HQ briefing room where some 100 top brass were present.

I found Kennan's presentation -- and I suspect most others attending would agree -- absolutely brilliant. It was as though we were at one with eternity like that old advertisement of the Rosicrucian Society, where an eye is seen, piercing into eternity. Of course, all the clouds rolled in afterwards, but there was a transcending moment of truth.

Now, MacArthur recognized brains when he soon heard about the speech. After that, all doors were open to Kennan. In fact, MacArthur provided us with a railroad carriage of our own to go wherever we wanted to go. I'll come back to what we wanted to talk about, but I just want to say that we did go down to Kyoto, where I was left for a week to write our report at the Miyako Hotel. Meanwhile, Kennan went on to Korea and the Philippines and then came back to Japan, where we rejoined and returned to Washington. I did some of the writing of the report.

To return to the fundamentals of what Kennan was saying to MacArthur. He said that we have to move as far and fast as possible toward a more normal type of relationship with Japan and toward putting Japan much more on its feet and taking care of itself. We must be aware that if we move too slowly, nationalism will overtake us, and heaven knows what will happen. This was always presented in terms suggesting that MacArthur knew this better than he did. Kennan never lectured MacArthur. The kinds of things he wanted to end as quickly as possible -- and it was carefully targeted -- included the reparations and decartelization programs. He called for an end to the "purges" immediately or as soon as possible. He said that the Japanese should have some kind of economic representation abroad. (This last point I was to take on as my own responsibility and work very hard on it.) Improvements should be made in communications channels. Kennan placed the greatest emphasis on setting up better internal security in Japan. He was appalled to see how the Police Force was all divided up. The Japanese had inadequate means to maintain law and order in the country on a national scale. He made some recommendations on how to strengthen a democratic Police Force and establish a Japanese Coast Guard that could protect Japan against smuggling, illegal entries, and things like that. There was quite a long list of things that had to be done. All I can say is that our report covered all of these points. So we returned to Washington.

Meanwhile, Kennan suffered from a terrible case of ulcers. Walt Butterworth, with my help, really had to put this report through the National Security Council in Washington, which we did.

Let me go back to give you an illustration of one of the things that happened, while it is still clear in my mind. While I was in Kyoto, writing up the report, I was asked by some Navy friends to come down and see the Osaka docks. They thought I would be shocked by what I saw. And there -- stacked all down the docks -- was dismantled machinery from Japanese industries. The machinery was being greased, crated, and shipped -- at great expense and effort -- to North China, as part of a reparations program to China. Meanwhile, North China was being overrun by

the communists. The whole thing was ridiculous. The American taxpayer was paying for taking machinery out of Japan, which we were meantime supporting, and taking it to China, which was falling into the hands of the communists.

It will not surprise you that Kennan not only spoke extremely effectively but wrote even more effectively. The telegrams which Kennan sent back to Washington were really bristling.

Q: Well, here were MacArthur and Willoughby, who was his "guard dog," you might say. Here were two men with tremendous egos, particularly MacArthur. Here came Kennan -- bright, and all that, but was he criticizing MacArthur's handling of the situation?

GREEN: No. What he was saying was that we want MacArthur to remain in charge, but we wanted to anticipate and head off whatever kinds of forces that might undermine his authority and effectiveness. I think that this appealed to MacArthur, because MacArthur was an intelligent man. Now, where we were running up against problems was with the architects of these policies in SCAP headquarters, for example, the Political Section, which was headed by General Whitney...

Q: Courtney Whitney?

GREEN: Yes, Courtney Whitney. His principal deputy was Colonel Kades. These people had been the architects of the "purge program," for example. They hated to see it dismantled and resisted our efforts to end the purge, even though it was the expressed will of our National Security Council.

Q: Could you explain about the "purge"?

GREEN: The purge involved removing from public office or from top positions of influence, in business or in government, those who were considered to be responsible, in any major way, for the war effort. This meant, basically, anyone in a prominent position was "purged." Kennan was opposed to this way of tarring everybody with the same brush, without any kind of examination of the individual's record. By the way, he had also been opposed to "war crimes trials," but they were all over in Japan by the time he got there.

Anyway, I would like to finish the story of the "purge," because we had difficulty ending it. Meanwhile, Walt Butterworth had been replaced by Dean Rusk in 1949 as Assistant Secretary for Far East Affairs. So after two months of frustrated efforts by Washington to end the purge, Rusk asked me to draft a personal message for Marshall to MacArthur. I thought my draft was "pretty hot stuff," but Rusk said, "Do you think that this will turn the trick, Marshall?" I said, "No, I don't think so, Mr. Secretary, but this is putting it on the record." He said, "The object is not to put it on the record. The object is to stop this damned thing." He added, "I suggest you go back and rewrite this 10-page telegram and make it no longer than a page and a half. Make the point that MacArthur thought originally that the purge should end by this time and that we'd been reluctant as had other governments in the Far Eastern Commission. However, now we've come to see the wisdom of his earlier position, he should go ahead and do it."

So I wrote the telegram accordingly. I gulped pretty hard because I come from New England, where we have strong consciences. I knew that MacArthur had never said this, but we attributed it to him. That did the trick. The purge was ended 48 hours later. I reminded Dean Rusk about this, many years later. He said, "Marshall, I hope you don't go around telling people that story. It casts me in such a cynical light." I said, "Not at all, Mr. Secretary. It casts you in the light of somebody who knows how to get things done through diplomacy."

Q: What was your impression of Kennan? You traveled with him. He was a complex personality. He was my Ambassador in Yugoslavia. I regarded him as a great intellectual, but I was not impressed with him as an Ambassador. How did he strike you?

GREEN: I've always admired his eloquence and his ability to write and speak. His mission to Japan was a great challenge to him. He rose to it, and that's why he succeeded. Now, you know in his "Memoirs," he recalls all this. He says that he thinks that that trip to Japan was probably the most important thing that he did, after the Marshall Plan. Then he went on to say, "Perhaps it was even more important than the Marshall Plan, in the long run." So he attached great importance to this, even in retrospect.

It was marvelous to see how he operated. I mentioned how he "co-opted" people on MacArthur's staff who paved his way to MacArthur. But there was also the way that he drafted reports and telegrams. It was something to behold. He would sit down and start dictating. One of my jobs was to "look intelligent." He would speak to me, while Dorothy Hessman, his secretary, took it all down as a telegram. So he was basically dictating a telegram to Washington while speaking to me. The result was that the telegram had a kind of conversational flow that made it far more effective. When he was through, he didn't have to change a word of it. Articulation is something I admire in any diplomat.

Q: What were you getting? How was the occupation? Did you think that it was close to "going sour?"

GREEN: No, I don't think so. I don't think that it had gone that far. Some of the reforms had been very successful -- the land reform, particularly. Wolf Ladejinsky had been largely responsible for that along with Bob Fearey. There were other things that they had done that were successful, and MacArthur himself did very well in his handling of the Emperor and the Japanese people, and the respect that he showed them. This was really most commendable. On the other hand, I do think that Kennan's concerns were valid. We simply had to move, "or else." We had to move in a timely way. Then you don't have to act out of weakness, in response to demonstrations or protests.

Q: Did you have anything to do with John Foster Dulles at that time?

GREEN: Not on this trip. Of course, John Foster Dulles "came aboard" on the Japanese problem in 1950. It was in the course of that year and the beginning of the next year that he managed to put together the Japanese peace treaty. He handled this issue with great effectiveness. I was, perhaps, the first person to brief him when he came to the State Department. They gave him an office near the Secretary of State's office on the fifth floor of what was called, at that time, the

"New State Department Building."

First of all, we put together briefing papers for him with the help of Bob Fearey and INR (State's intelligence division). I had done the paper on the political situation in Japan and was briefing him on that particular aspect. He was sitting there, in a deep chair -- kind of a sofa-like chair -- his arms clasped in front of him. His head was nodding. He looked to me as if he was going to sleep. Finally, his breathing got so heavy that I thought that he was asleep. I just tiptoed out of the room. That was my first connection with John Foster Dulles. [Laughter] I didn't have much to do with him because shortly thereafter I went to Sweden. That was the period when most of the work was done on the peace treaty with Japan, with Bob Fearey being Dulles' principal assistant on the critically important and successful project.

Q: What about Japan's role in the Far East? What kind of position did we see for Japan, with the Cold War on?

GREEN: That's a very good question. Actually, I've seen very little written about it. My recollection was that George Kennan favored a "neutral" solution for Japan. Of course, General MacArthur did, too. You'll remember that MacArthur talked about Japan being the Switzerland of the Far East. There was a kind of visionary and unreal "latching on" to this idea of neutrality as the solution to Japan's future, with the United States and other countries serving as guarantors of Japan's neutrality. It was felt that that was the way we should proceed. Of course, that would have fitted in closely with the mood of Japan at the time. Meanwhile, under its constitution, Japan had been denied having armed forces. Of course, much changed with the Korean War. Even so, my own feeling was that this was not a solution for Japan. If you think about the Far East, you have the four great powers of the world there -- the United States, China, and Russia, with Japan potentially as one of them. With such power converging around Korea, the idea that anyone was going to respect Japan's neutrality seemed crazy.

The Korean War just rubbed all of that out. If there hadn't been a war in Korea, I don't know what would have happened. Nobody ever knows about things like that.

Q: Were you still on the Japanese desk on June 25, 1950?

GREEN: Yes, I was.

Q: How did the Korean War hit you? Was it a surprise to you?

GREEN: Oh, yes. It was a surprise. I was struck by how little we knew about Korea. In our Office of Northeast Asian Affairs we had one officer working on Korea who knew little about it. The fact of the matter is that, during World War II, when I was in Navy intelligence, nobody in my intelligence circles was concerned with or about Korea. The same was true before that, when I was in Japan with Ambassador Grew. The ignorance about Korea! Even to this day there is still the supposition that the Chinese Communists first came into the Korean War when MacArthur appeared to be about to cross the Yalu River. The Chinese were across the Yalu River a long time before that. The ignorance about Korea continues to this very day.

Q: Mr. Ambassador, why don't we cut it off at this point? This makes a good point to break off. I thought that we might then take up the period from 1956 to 1960, when you came back to deal with Japanese affairs.

EDWARD L. ROWNY
Plans Officer, Far Eastern Command
Tokyo (1949-19??)

Lieutenant General Edward L. Rowny was born in Baltimore and attended West Point from 1937 to 1941. He served in the U.S. Army during World War II including a special assignment to Liberia. He has also served in Vietnam, Tokyo, and Korea and participated in NATO Military Committee and the Strategic Arms Limitation Talks. Lieutenant General Rowny was interviewed by Charles Stuart Kennedy in 2000.

Q: Well, when you got out of Yale, you were sent as plans officer to the Far Eastern Command.

ROWNY: Yes, I was.

Q: The Far Eastern Command was based in Tokyo, wasn't it?

ROWNY: Yes, it was.

Q: Now, what was your impression and what was the reputation that you'd gotten inside the military of Douglas MacArthur at this point?

ROWNY: Oh, he had a very high reputation. Of course, when I was in the Pentagon, in addition to my other duties, I had been the MacArthur desk officer, so I got to read his cables. Of course, MacArthur was a legend. He had been a division commander in World War I and earned a Medal of Honor and had a distinguished career throughout the years. Except for overzealous lobbying for more forces in the Pacific, he conducted himself quite admirably during the war and with his island hopping ideas avoided a large number of casualties. I was delighted to be assigned out to his command.

Q: Well, how did you find the atmosphere on his staff? One always thinks of this "coterie," a term that might be used to describe the people and atmosphere that surrounded MacArthur. They were extreme loyalists, and I would think that, as a plans officer, it'd be difficult. I'm talking about just before the Korean War. How did you find this?

ROWNY: It was a difficult situation. Sometimes we envied the civilian side, which was redesigning the entire Japanese government. Their relations were quite smooth. On the military side, we found that there was some tension among officers and, generally, it was caused by the simple fact that you were either an old friend of MacArthur's and part of his personal entourage or you weren't. If you were, you could do no wrong. If you weren't, you'd have to fight for your

positions. We'd find that atmosphere in the staff. There wasn't an open revolt or anything but it was there nevertheless.

Q: When you arrived as plans officer, this was November 1949.

ROWNY: Yes, it was.

Q: How did you view the potential military situation in your part of the world? What were the threats and what would be our responses?

ROWNY: We were really preoccupied with the Soviet Union and China and, particularly, what would happen if the two combined forces against us. For the first 30 days I was there, I traveled around Japan accompanied by one of the members on the civilian staff, a professor, Edward Morrow, who was both a Japanese historian and an anthropologist. I had a wonderful tour and first hand look at what was going on in Japan. I wrote a trip report that we were wasting our assets by having troops out in so many villages and provinces. That view was not original with me. It was a view that was held principally by the people who were not among MacArthur's selected few. This idea of withdrawing and pulling back our troops into central training camps was opposed by people like Willoughby, MacArthur's G-2.

Q: In a way, it was still an occupation, which no longer needed to be an occupation, wasn't it? Was it the idea of local uprisings, or was it just more for comfort?

ROWNY: The traditional view, or fear, was that there would be uprisings and, perhaps, difficulty in these various places; therefore, we needed American presence in large numbers but that proved not to be not the case. The emperor had good control of the situation but we did need some armed forces because there was no such thing as a Red Cross over there to handle disasters and fires and maybe even riots. The building of a Japanese self-defense force was essential to replace the U.S. Army, which was being pulled back. I wrote the first outline plan for the self-defense forces for the Japanese army.

WENDELL W. WOODBURY

Vice Consul

Tokyo (1949-1950)

Vice Consul

Yokohama (1950-1952)

Wendell W. Woodbury was born in South Dakota in 1920. He attended the University of Iowa and then served in the United States Army. Mr. Woodbury joined the Foreign Service in 1949, serving in the Dominican Republic, Algeria, Japan, and Denmark. He was interviewed in 1993 by Virginia Crawford.

Q: Your first assignment was Tokyo. Were you given any choice in that assignment?

WOODBURY: Yes, some choice. I was very much interested in the Marshall Plan in Europe, and I assumed that because I had so much training in that area, the Foreign Service would consider me for a position where I could use it. Incurably naive! Hence, I put down Europe first, then Latin America because I thought Spanish would be easier to learn, and I am not a great linguist, and last Japan. I had spent three years working to defeat the Japanese Empire, but I had never gotten there (except Okinawa). Perhaps because it was the only specific country requested, I was assigned to Japan, something that I hadn't really thought much about even though my war-time service was directed there.

The occupation was still in force and was the entire time I was there. If I had thought about that, I probably wouldn't have gone. I had already served under General MacArthur as a soldier. They had the Office of the Political Advisor from State, but MacArthur wouldn't allow it to be called that; he called it the Diplomatic Section of the Supreme Commander of the Allied Forces, his Foreign Office so to speak. He wasn't about to take advice from anybody, especially the State Department. There was really no role for us to play except for the Consulates doing Consular work and routine liaison with foreign missions. I helped eight hundred G.I.'s marry Japanese girls, and then I issued two thousand visas to Japanese wives and their children after I went down to Yokohama. SCAP was very upset by the thought that we might be doing any political or economic reporting not under their control. Our role as the nucleus of the future U.S. Embassy was especially troubling as a threat to their pleasant life.

Q: So there was no Embassy there because it was under occupation, and you just had the consular functions?

WOODBURY: It wasn't quite like that. In Europe, you may recall, the State Department ended up running Germany. So far as I know, this worked relatively smoothly as the military was glad to give up the political functions. But not MacArthur, it was his world out there; he was the blue-eyed Shogun. So after a year in Tokyo, I asked to go to Yokohama. There I did Consular work only, a sort of hazing process to teach us humility. It was interesting applying the 1940 Immigration Act to Japan. It didn't go into effect until January 1, 1942, just after Pearl Harbor. There were many questions of comparative law because the Japanese had no nationality law per se; the Japanese are Japanese are Japanese, and everyone knows they are Japanese. There was no requirement, for example, that you had to be a Japanese citizen to be Emperor or Prime Minister. According to United States law, if you had dual citizenship and accepted a job of trust where you had to take an oath of allegiance to a foreign government, you were expatriated. Such a concept was completely unknown to the Japanese, one race, one people, one nation, and one language.

Q: Could we just get your dates straightened out? You went to Tokyo in 1949?

WOODBURY: Late 1949, just in time for Thanksgiving.

Q: You stayed in Tokyo about a year?

WOODBURY: Yes. Then I went to Yokohama at my request because I wanted to get married, and they didn't have housing in Tokyo, but they did in Yokohama.

I took the job of a language officer who was going up to the Consulate in Hokkaido. I took over his job, his house and his staff of five servants who were furnished us by the Army. Incidentally, he was a Harvard law graduate, and his legal training was put to good use. He did some very complex work in comparative law on nationality questions while he was a very junior officer, a third secretary and a Vice-Consul (Richard B. Finn), relating to the initial application of 1940 U.S. Immigration Act. His daughter also graduated from Harvard Law forty years later, and he was wryly amused that her entry salary was higher than his FSO-1 final salary.

Q: What was the situation in Japan at that time? It was still under the occupation.

WOODBURY: Just a week after we left in April, 1952, the occupation ended officially. When I arrived there in 1949, Japan was still devastated. Yokohama was almost destroyed, about twenty-five percent of the people in Japan had active TB. There was general malnutrition. But then in June, 1950, the Korean war started. I was up in Hokkaido when I heard about that, sitting in a hot bath in a country inn. Our Japanese interpreter, a graduate of Northwestern and a Presbyterian minister, stopped talking to us for a while and listened to the Japanese bathers. He told us they were excited because a war had started in Korea. We were far out in the mountains and forests of this largely wild island. He said that the Japanese reported that the North Koreans had attacked and asked if that could be true? I said, "I am sure that is a wild rumor." It took us three days to get back to Sapporo, where we found out that yes, it was true. That changed a lot of things; the Japanese became a valued resource because they had the industrial manpower. They were often used illegally; they not only built the minesweepers, but they manned them in Korean ports, which was contrary to the treaty. That was the beginning of the Japanese prosperity, which was also helped greatly by the war in Vietnam.

Q: If there was no Embassy that you were responsible to, who was your superior?

WOODBURY: The U.S. Political Advisor, (U.S. POLAD) was its formal designation. Bill Sebald was POLAD with the rank of Ambassador. He had been a naval officer before the war -- a Japanese language officer -- and he had made the mistake of marrying a woman who was half Japanese (her father was English). The navy was incredibly racist in those days, so he was forced to resign. He got a law degree and went into partnership with his father-in-law, a well known lawyer, just in time for the war. He went back into the navy then and came into the Foreign Service after the war because of his linguistic abilities. He started as the deputy U.S. POLAD. A very experienced senior Foreign Service officer was U.S. POLAD initially. Apparently, he was one of the few FSO's that MacArthur liked or trusted, so he had considerable influence. He disappeared when his plane was lost flying back to Japan from Hawaii. We never learned what happened to him. MacArthur used that opportunity to say that Sebald was perfectly satisfactory - a nonentity with no diplomatic experience. Whatever influence State Department had on policy pretty much went out the window.

Q: What was the man's name who disappeared?

WOODBURY: Atcheson, I believe -- not quite Acheson. I never knew him. Sebald went on to other Ambassadorships and to be Assistant Secretary for East Asia. He was a competent man but

not somebody who could stand up to MacArthur. Most occupation officials thought it would have to go on for a hundred years to teach the Japanese democracy and how to run trains and build ships. When people told me this, I couldn't believe it. I don't have many kind words for General MacArthur, but in many ways, he was a great statesman. I thought Forrestal summed it up brilliantly in his diary when he first met MacArthur in the Philippines -- "Enormous ability mortgaged to his vanity." That covers it, both the plus and the minus. He insisted that, despite the Korean War, the occupation should end as scheduled because no one ever taught a country self-government under military rule (especially under a man as authoritarian as he was). He was absolutely right; he went ahead and got Truman to appoint John Foster Dulles to get the support of the Republicans -- the Dewey-Rockefeller Republicans -- which would be enough to get the treaty through the Senate. Dulles did great work on that; he had the prestige. MacArthur, always a partisan Republican, let it be known in 1948 that he would gladly take over and clean up the mess in Washington, but even more openly in 1952, an unusual situation to put it mildly -- shades of General McClellan!

Q: The Peace Treaty was being negotiated while you were there then?

WOODBURY: Dulles came out when I was still in Tokyo. George Kennan was there, too. He had a famous comment which I don't think he ever put in any of his books. Any official who came to Tokyo would be briefed by MacArthur's staff about how everything was coming up roses. This went on for two days. Kennan was asked his view of the situation in Japan after his briefing, and he said, "It all began to blur -- one chart after another. All I remember is that all the statistics and charts were going up and up and up, except that of the venereal disease rate of U.S. troops was going down and down and down."

The occupation of Japan was a great success, I think largely due to the Japanese. They were horrible in war, but they were wonderful in the occupation because when they change, they can change absolutely. As far as I know, there was never an attack on an American soldier, even in the earliest days when they went ashore with their weapons loaded and cocked. MacArthur landed at Atsugi airfield and went to the Grand Hotel in Yokohama, which fortunately had not been hit by American bombs -- neither had the nearby American Consulate. He had a food taster there just in case. That suspicion lasted only a few days, and within a week, Americans were wandering alone all over that huge city.

Q: Did your work in Yokohama, being of a different nature -- Consular work -- give you a different insight into Japan? Did you have more contact with the Japanese people?

WOODBURY: Yes, but only for business. It must be remembered that non-fraternization orders were in effect until MacArthur left Japan, long after they had been lifted in Germany. There was a constant stream of people with everyday problems, especially when our soldiers were given permission to marry Japanese nationals. In a way, it was more interesting. As a trained economist, though, I worried I was wasting my time.

I was first assigned in Japan to handle natural resources; the Economic Counselor there, my boss, came from the Commerce Department, and he addressed mainly routine commercial work. He sent the press releases of SCAP to Washington without comment or analysis. He had only one

other officer working for him who did the trade negotiations; Japan could not trade or deal directly with other countries, so SCAP had to do it for them, and they needed a diplomatic officer for that. His staff doubled when I came on board, but he didn't know what to do with me. So I didn't have much of anything to do for about six weeks. He promised to take me over to the Natural Resources Section of SCAP because that had not been covered at all. It had agriculture, fisheries, forestry and mining -- none of which were top boiler issues. My boss was so busy sending in his press releases that he never got around to take me over, so for six weeks, I read everything. It is amazing what comes over your desk. I was learning a lot, but I didn't see much point to it so I kept after him. Finally, he said, "I'm just too busy, why don't you go over and introduce yourself to Colonel Schenk," who was head of the section.

Of MacArthur's section chiefs, Colonel Schenk was the junior man -- the only one who was a colonel -- the rest were all major generals. And not entirely by coincidence he was the only one who had any qualifications for the job. So I went over to see Colonel Schenk, who had been a professor of geography at Stanford. He was pleased that U.S. POLAD, the future U.S. Embassy, was interested enough to assign an officer to his section. He invited me to his staff meetings and briefing, and I won his heart at a meeting in which Colonel Schenk was explaining the basis for the land reform in Japan. A newly-arrived colonel said he thought this was a terrible thing, pure socialism. In Nebraska, if you worked hard, you could homestead and then acquire more land than others as his grandfather had done. It was a matter of hard work, and that is the way it should be in Japan. There was and is no question in my mind that Japan has (or had up to now) a conservative pro-American government because of the land reform; it was the foundation of parliamentary government because people had a vested interest in the system. I told the colonel that my grandfather had been a homesteader in South Dakota as his grandfather had in Nebraska but that the situation in Japan was entirely different and explained why. When they left, Colonel Schenk said he was most grateful, "You explained it perfectly, but I couldn't say that." So because of that incident, I became a friend. Fortunately, civilians do not wear rank on their business suits so the good colonel did not realize I was a lowly third secretary.

Colonel Schenk later asked me if I could help get a SCAP population report released. Professor Ackerman of Harvard had come out to Japan to study Japan's scarce resources in relation to its population problem. His report stated that for the economy to be viable, there would have to be population control, but he made no recommendation as to means. There was a great fuss over that comment because MacArthur had refused to let the public health officer introduce any family planning in Japan -- he was running for president and didn't want that issue raised -- so the whole report was ordered sequestered, fifteen hundred copies of it. I wrote a report to Washington, and there was some pressure from there so they finally let the report out, but they took out the addendum that contained the reference to population. I got a copy of the original report and reproduced that section for the Department. This would be just a mildly amusing story of military heavy-handedness except for one thing; when the Japanese finally did begin to control their population, to catch up with the lost years, they had to resort to abortion, free and unlimited abortion. They had no experience nor training in family planning at the end of the occupation. The Japanese government is always embarrassed by this in international meetings.

It shows, at least, how much influence a third secretary can have or can't have. It took me weeks to get that report out of the office because my boss knew it was a hot potato, so he just kept it in

his in box. Finally, he went on home leave, and his temporary replacement came to me with my report and said, "Let's get it out; he isn't going to be back for two months." So it went up to the DCM, and I got called up to see him, a starchy gentleman out of the old Foreign Service. "I understand you wrote this, and from your conclusion, I understand you to believe that censorship has been improperly used to keep this report from being released."

I thought I was in for it but managed to say, "Yes, sir, that is the conclusion that I draw."

He smiled suddenly, a rare event, and said, "Well you are right, but you have got to write it more clearly so that people will understand it." That was one of my best days. So I polished it up, and it went out, but by this time, it was too late to have had much influence. Once MacArthur made his opinions known, it was like an encyclical from the Pope. At least the Pope admits that he is a man, MacArthur never did.

JULIAN M. NIEMCZYK
Office of Special Investigations
Tokyo (1950)

Ambassador Julian M. Niemczyk was born and raised in Oklahoma. After graduating from Oklahoma University, he entered the National Guard Artillery Division. In addition to serving in Japan, Ambassador Niemczyk served in the Philippines, Poland, and Czechoslovakia. He was interviewed by Charles Stuart Kennedy on December 16, 1991.

NIEMCZYK: My assignment was to take a team of five into Canton via White Cloud airfield and to open up the Consulate and accept the surrender of the Japanese element there. An Army Air Force C-47 flew us in and it was the fastest landing and take off that I had ever seen. The crew took some risk in flying in because neither they nor we really knew what to expect there. We unloaded, threw our dufflebags off and the plane took off immediately. I remember vividly this wood panel station wagon filled with half a dozen Japanese coming from what appeared to be an operations building for this airfield called White Cloud which is Canton's main airfield today. There was this station wagon coming towards us and we had no idea whether it would do us in or what. The word was out as to how the battle was going and the first atomic bomb had been dropped on Hiroshima by that time.

Q: This was before the one that was dropped on Nagasaki?

NIEMCZYK: Yes.

This group of six Japanese got out of the station wagon. There were salutes. I had a five-person team, as I said, myself the leader, a communications person with hand driven radio, and a Nisi American to handle the language. This Japanese Colonel came up and we saluted and through our translator/interpreter he said, "We are prepared to surrender the White Cloud airfield and offer any services and transportation." Well that was quite a relief and to this day I have his

saber, which was presented to me.

We went into Canton and found satisfactory, if not pleasant billet. The Swiss had been the caretakers of our Legation there in the Shameen district of Canton. Within a week or ten days the State Department officials came in, took the keys from me and opened up. I went about my business of identifying Chinese collaborators with the Japanese. I remained there three or four months and after the termination of the war, went to Shanghai where I was doing odds and ends just waiting to go back home.

That started me into the intelligence field. When I returned to the States I had a long 90 day rest and recuperation and then went back to the artillery processing center at Ft. Sill again...back home to mother's cooking again and that sort of thing.

Having been with OSS I received an assignment with G-2 (the intelligence branch of the US) the US Army in the Pentagon. At this high level in the Pentagon, at this point I had been promoted and was a captain, my first permanent assignment in Washington and subsequently had a number, 3,4, or 5 over a 31-year period in the Armed Forces. I spent about eight months doing staff intelligence work.

Then I was assigned to go for one year of duty with the Joint Task Force of Operations Crossroads (the joint atomic bomb tests). I didn't go out to where the tests were being done, however. My job sent me from Washington to Hollywood where I was doing security work with Technicolor, MGM and Hal Roach Studios. What was I doing there? These highly secret, at that time, films were being flown in from Eniwetok, turned over to a group of five of us. There was a major who was in charge, I was a captain, one of four. We worked with these Hollywood studios developing this classified film. It was a pleasant task that lasted almost a year.

Q: I might just as an aside say that much of that film was on TV showing our people blithely taking motor launches around all these ships that were radioactive as all hell and many of them are suffering the consequences today.

NIEMCZYK: Yes, that is dreadful in those instances where after effects set in over a period of years. As a matter of fact one of the four of us, an army major who became colonel, picked up leukemia and died from it while he was on active duty. His wife has often wondered whether handling these boxes of films had anything to do with it. The rest of us had nothing like that.

That job kept me in the security business. After that I was assigned to the Army Counter Intelligence Corps. I worked with Counter Intelligence for a year and a half until the Air Force became a separate department. I had a friend who assisted me in making a departmental transfer from the Army to the Air Force.

Q: About 1948 wasn't it?

NIEMCZYK: Thereabouts, actually 1947. I moved simply from a billet in the Counter Intelligence Corps at Ft. Meade, to a billet in the headquarters of the OSI in...back to the Pentagon, back to Washington, where a person who became a dear friend of mine, Joe Carol,

who was with the FBI and had been handpicked, appointed a Brig. General, to organize, establish and get moving the Office of Special Investigations for the Air Force. General Carol became a three star General over a period of years and died just a year ago.

I spent a year and a half in the Pentagon with OSI and was assigned to Far East Headquarters as the director of OSI's Counter Intelligence Division, in the Meiji Building in Tokyo.

Q: As a historical footnote, was counterespionage at the beginning completely devoted to Soviet efforts or were you looking elsewhere too?

NIEMCZYK: I had orders in my hand in April, 1950 to go, accompanied by my wife, to Tokyo, the Far East OSI Headquarters. In 1950 the Korean War broke out. My wife and I were disappointed that she had to stay in Washington. I went over for a one-year unaccompanied tour and then she joined me. To answer your question, the focus out of OSI Headquarters was primarily North Korea and the movements of the Chinese Communists.

Q: I was really thinking earlier on when you first got into counterintelligence, '46 or '47. The Cold War hadn't fully set in, but what was your attitudinal feeling? Was it the Soviet Union and their efforts in the United States?

NIEMCZYK: I understand what you are saying. I can remember some of the case histories at the Army CIC in 1947, early '48, that we would use, in Trieste, for example, and that part of the world, clearly bringing in the Soviet potential, the positioning of agents or personnel, etc. So as early as that there was a focus of the counterintelligence, espionage towards the Soviets. However, my relocation to Tokyo again put me back into the focus of the North Koreans, Chinese and their movements, etc.

WILLIAM G. COLMAN
Economic Cooperation Administration, Technical Assistance Division
Tokyo (1950-1951)

William Colman earned his M.A. from the University of Missouri and took a commission in the U.S. Navy in 1942. After the war, Mr. Colman served as Personnel Specialist in the American Mission for Aid to Greece, in Athens, and worked for the Economic Cooperation Administration in Korea and Japan. He was interviewed by Melbourne Spector in 1996.

COLMAN: No. I arrived in Japan/Korea shortly after the second allied retreat from Seoul. What was the name of the river up there at the border?

Q: The Yalu?

COLMAN: The Yalu; the retreat from the Yalu was going on. Chief Meyer and I went over to Seoul, Korea. No, we didn't go on the same plane, but we got there roughly at the same time. We

went over to have a session with John Muccio, the US Ambassador to South Korea. The Chinese and North Koreans were getting pretty close and Chief Meyer went into Muccio's bedroom and saw that all over the Ambassador's bed were valises packed, leading Meyer to think he was ready to get the hell out! Meyer recalled his prisoner period with the Japanese. In the meantime there was a big row going on in the U.N. about the critical military situation in Korea. Meyer said that he was not willing to undertake this assignment and would I be willing to stay in and run the show?

Q: *Wow!*

COLMAN: I said all right, provided that Edgar Johnson and people back in Washington would okay the arrangement. They did and Chief Meyer left in a few days.

Q: *When you say, "run the show," what was the Economic Cooperation Administration Program doing at that point?*

COLMAN: On the point of partial liquidation because it looked like South Korea might very well be, if not defeated, occupied. We had all kinds of contracts out for raw materials and various other things. On the logistical side we worked hand-in-glove with the G4 part of the military establishment of MacArthur's. The US Military occupation of Japan (SCAP) was still in existence. MacArthur was still "God Almighty," and Japan hadn't yet formed its own government. That didn't come for a year or so later. We had to reduce our personnel. We had to cancel contracts. We had to divert shipments headed for our Mission in Korea to Manila, Hong Kong, Taipei and other ECA missions.

MARGE: Bill, you are forgetting that meeting in Manila right after you got there. You went down to Manila and met with the Mission Chiefs and everybody wanted cars. They didn't care about two by fours. They all wanted cars.

COLMAN: Yes. That was both an information and deal making conference. We had the Mission Chiefs from the Far East in there. We explained the situation to them, "Here are our orders and here are the personnel and so on, and who wants what?" Then about a month or two or three or four after that we had a similar meeting with the Mission Chiefs in Tokyo, to wrap up some more things. Essentially it was to protect property and to get out of there in an orderly way and get the personnel redeployed. Of course there were some ongoing things in which part delivery had been made and where it could be made by getting into the Pusan Harbor. That was the only way you could get it over there. The Japanese were very cooperative in some respects. They would transfer funds over there via the Japanese and Korean banking systems.

My time was about two thirds in Tokyo, maybe three fourths, and the rest over in Pusan. The dozen or so staff members in Pusan were under the immediate supervision of Allan Loren, who reported to me. There was a get-away plan that if Pusan got overrun, Korean military and civil personnel would go to Chegu.

Q: *This was an island off of Korea obviously.*

COLMAN: An island off of South Korea. I saw it in the paper, reading about it the other day. The plan was for the officials and the records and so on, both Korean and US in the office over in Pusan, to get on this ship. One of the staff people took me to the ship and I've got a picture of it. In fact I've got a whole album of pictures of these countries that I'm describing. Anytime your curiosity gets overpowering I imagine I have a picture of the get-away ship and many other things and people.

Q: *Okay.*

COLMAN: We've got a picture of departure day for MacArthur en route to the airport, having got his butt kicked out of SCAP leadership. Well, pictures that you would naturally take at exciting times. Edgar Johnson wrote me a highly complimentary letter about how well the liquidation had been executed. I ran onto the letter, I had forgotten all about it, here yesterday or the day before, when I was going through these papers.

Q: *May I interrupt you? Harlan Cleveland wasn't associated with the program anymore at that point. Is that right?*

COLMAN: Harlan ran the China program.

Q: *China. I see. So he had nothing to do with the Korean?*

COLMAN: He had nothing to do, at that time, with the program. Now when I went back with Ty to help set up a new mission in South Korea Harlan was in a position up, I think, in Bissell's earlier post of Assistant Administrator for Program. During my first tour in Tokyo and Korea, Paul Hoffman had been succeeded by William Foster and ECA changed to MSA--Mutual Security Agency.

Q: *That's right. I didn't mean to get you off your stride here.*

COLMAN: I remember writing a letter to Harlan in that capacity that he was in from over in Seoul about some things that I thought were going badly wrong in the Far Eastern setup, mostly political, stuff about Chiang Kai-shek and so on. Harlan was not in the picture at the time of my first tour. Edgar Johnson was, you might say, the equivalent of a State Department Desk Officer for Korea, and the Far East was in the charge of Allen Griffin.

MARGE: Harlan was with UNRRA.

Q: *Before that, yes.*

MARGE: ...in Shanghai because that's where I first ran across him and then he went to the, what we called the "Gravy Train," in China--the China Program. He was over there in a civilian capacity.

COLMAN: He was running the China program when I was in the Technical Assistance Division, I think.

Q: *I see. So when you finished...*

COLMAN: Harlan was in a back and forth situation with UNRRA and running the ECA aid to China.

Q: *When you finished in Korea you came back to the States?*

COLMAN: I came back to the States.

WILLIAM J. CUNNINGHAM
SCAP Diplomatic Section
Tokyo (1950-1951)

Vice Consul
Sapporo (1951-1952)

William J. Cunningham was born in California in 1926. After serving in the Navy from 1944-1947, he received his Bachelor's degree from the University of New Mexico in 1948 and his Master's in 1950. He joined the Foreign Service in 1949 and his career has include positions in Prague, Paris, Tokyo, Taipei, Phnom Penh Saigon. Mr. Cunningham was interviewed by Charles Stuart Kennedy on March 17, 1997.

CUNNINGHAM: I arrived in Tokyo on Christmas Eve, 1950. I had been two evacuations in one year in the Foreign Service. By this time I had been through three posts in my first year and a half in the Foreign Service. I was then assigned to this Field Office of the American Mission in Korea and continued to work with the personnel people there. It was located in the San Shin building in downtown Tokyo not far from the Dai Ichi building where MacArthur had his headquarters. As a matter of fact it was very close to the Provost Marshal's office where I first checked in the previous November.

I enjoyed working with those people very much, but the office was shut down then at the end of February, as I recall. The question was, what was going to be done with these Field Office people? Some were going to be sent to Korea. I wanted to be sent back to Korea because that is where I had been assigned. No, they couldn't use me in Korea. They were reducing staff at this point because they didn't have room for them over there in the Embassy, again located in Korea and reduced from the size it had been in Seoul a few months previously. They didn't want to maintain this office in Tokyo any longer either. Things had stabilized somewhat. I was then transferred to the office of the Diplomat Section of SCAP, which was run by William J. Sebald, career FSO, Japanese Language Officer and with the rank of Ambassador at that time.

Q: *This was the Supreme Allied...*

CUNNINGHAM: The Supreme Command for Allied Powers, Japan, Douglas MacArthur's headquarters. Japan was still an occupied country. MacArthur was still in the Dai Ichi Building down the street. The Diplomatic Section was what passed for the American embassy. Japan did not have foreign relations. In fact all of the other countries had missions that were accredited to the Diplomatic Section of SCAP and it served as kind of a conduit to the Ministry of Foreign Affairs.

This time I was assigned there to the general services section of the Diplomatic Section. We were trying to recapture some of our State Department property from the grip of the occupation forces and to acquire additional property for the eventual American embassy in Japan. I worked on some of that with the property manager and did various things that were not particularly interesting to me.

Q: You were in Tokyo from when to when?

CUNNINGHAM: From December of 1950 until April of 1951.

Q: You were saying you were doing general services type work.

CUNNINGHAM: Yes, in the Diplomatic Section of SCAP from the end of February until April. One day during this period I was down in the coffee bar and James Byrd Pilcher, who was at that time the consul general in charge of the consular section, came up to me and he said, "Young man I've been watching you." This was the kind of comment that always made a young fellow apprehensive, but Mr. Pilcher (or Jaybird, as his friends called him) was a cheerful and generous man with a bouncy personality. He said, "How would you like some really good consular experience?" I said, "Well, what do you have in mind Mr. Pilcher?" He said, "We need a vice consul up in Sapporo and I think you would do just fine in that job." Now I have a habit, and it occurred many times in my life prior to the Foreign Service, where I would hesitate and say, I'd like to think that over, so that's what I said to Mr. Pilcher. He said, "Why sure, but I've got to know soon." I said, "I'll come see you tomorrow."

I went home and I talked with my roommate about this. I have a habit of always asking roommates about this kind of thing. He said, "Why don't you take it?" I sort of relied upon my old navy experience and the slogans there was that you get more experience on a small ship and more responsibilities than you do on a big one. It is better to serve on a destroyer or on a minesweeper than it is on a battleship or an aircraft carrier.

I went back the next morning and I said, "Okay, Mr. Pilcher, I will do this." I had no idea what Sapporo was like. I had all of these experiences in Korea, Japan, and so on. I said, "Okay, I will do it."

Q: You might explain where Sapporo is.

CUNNINGHAM: Sapporo is the principal city of Hokkaido in northern Japan, in the far north. The entire island of Hokkaido is a single prefecture, and by far the largest in area of all of Japan's prefectures. Sapporo is the Prefectural capital, and the principal city on the island. We

had a two-man consulate there. Off I went to Sapporo.

But before I did something else happened during this period in Tokyo that was very important and influenced the rest of my career. As I said I went to Korea with no background in Asia whatsoever and I didn't really even know what to expect. Despite the fact that it was a war zone, despite the fact that things were terribly troubled, I was quite fascinated by what I found in Seoul and I liked it. I reacted positively to it.

I was very impressed by what I saw in Japan. I am from California and there was an anti-Japanese bias that was rather strong in California to which I had been subjected, to debunk the capabilities of the Japanese. When I got to Tokyo I saw how by 1950 the Japanese had recovered to that point, restored their city, restored manufacturing capabilities, and were redeveloping their economy. In other words there was a level of development in Japan that impressed me strongly. I compared it to what I had seen in Western Germany where the destruction from wartime bombing was evident everywhere in major cities at that time; it was not evident everywhere in Japan at that time. There were a few places where you could see the damage but you had to look for it in Japan at that time. I was impressed by the industry, by the civility of the Japanese people, and by the sophistication of their whole economic system. I thought this is something important.

At that time Sophia (Jochi) University, which is one of the principal private universities in Japan, a Jesuit institution founded by German Jesuits, was conducting what they called the International Institute. It was night school. The Department of Army civilians who were working in Occupation Headquarters would conduct courses at Sophia University after work, as they do here in Washington, DC at George Washington and American University.

I decided to enroll in a couple of courses out there. I had time on my hands in the evenings. There wasn't all that much to do and I didn't have that much money to spend. I enrolled in two courses for the spring term at Sofia. One was a course in economics and the other was a course in the history of the modern Far East taught by a man by the name of Lawrence Battistini. Battistini was a Ph.D. in Chinese history from Brown University. He was also the head of the historical division of SCAP. Battistini was a real Sinophile and a man of great enthusiasm and real dramatic flair so that every lecture was a memorable event. He particularly stressed the achievements of Chinese civilization and the great advances that they had made, and how Asia had suffered from the colonial and imperialist intrusions of the late 19th and early 20th century. That was a very strong theme in his course. He made a very deep impression on me. I was not able to finish the course because Pilcher's offer came along in mid-semester so I had to leave to go to northern Japan. That was an experience that really crystallized an interest in Asia in me. Battistini's course started me doing a lot of self-study and reading, and accumulating materials on Asia.

I went to Sapporo and this was a good experience for me because it gave me a chance to finally do what I considered to be really professional Foreign Service work; the kind of thing that I wanted to do. I wasn't especially interested in doing administrative work because I was more interested in the diplomatic side. In Sapporo we were a very busy consular office. There were just the two of us. The late David Osborn, who later became ambassador to Burma, was the

consul there. He was the second consul. William Magistretti had opened the consulate about a year previously. I got the chance to do consular work and Osborn said to me, "Well you took this course in economics at Sophia University so you might as well be the economics reporting officer also." I took a course though I hadn't finished. That was the extent of my qualifications. We had a young army corporal for the first five or six months that I was there who served as the secretary for the consulate. We had four Japanese local employees including Homma-san, the driver; Takeuchi-san, the principal clerk; Aoki-san, one of the Visa clerks; Takahashi-san, the other Visa clerk; and Terashima-san, principal translator and analyst in the Consulate. Aoki was a war veteran – he had been with Japanese infantry in Burma. His father-in-law was a legal U. S. resident – a dentist in Ogden, Utah. Terashima-san was a debonair man with a Continental air. He was fluent in French and an amateur photographer. He was an older man - - in his fifties. Takeuchi was a young fellow, probably too young to have served in the Japanese forces. He was very Western-oriented and was a square dance aficionado, president of the Sapporo square-dancing society.

Just at this time the legislation that permitted the regularization of unions between American soldiers and Japanese women had come into effect so we had a steady stream of them coming in. There was a regular routine that had been set up and it was already in operation by the time I got there. There was a military camp on the outskirts of Sapporo, Camp Crawford, and that was where many of these military personnel were stationed. Others of them were stationed in various offices around Hokkaido and in fact northern Honshu. I'm not sure whether our consular district extended there or not.

The regular routine was they would come in with the necessary documentation to have their marriage regularized under Japanese civil law. They would sign documents in the consular office and we would then execute a certificate of witness to a marriage, which provided an official American documentation of this union. That would be the first day. The second day they would come back and file in many cases a report of birth for one, and frequently two children, to certify the American citizenship to which these children were entitled through their fathers. I executed many reports of birth for the children of these unions. The next step was to prepare the non-quota immigration visa for the Japanese spouse and to take an application for a passport. We did not have authority to issue passports. That was reserved to the Consular Section of the Diplomatic Section in Tokyo. We did over 100 of these cases in the one year that I was in Sapporo in that consulate.

There were all kinds of situations so I really got an exposure to that kind of work. David Osborn did the political reporting. He was a Japanese language officer, and an extremely skilled one; I was not. I took care of the administrative work. After a time the army corporal was transferred elsewhere and we had no one to act as a typist or a secretary so what we really did was our own typing. If there were strikeouts in diplomatic dispatches, there were, that's all there was to it. We couldn't do anything about it. That was a good experience.

Q: You were there from April of '51 until when?

CUNNINGHAM: Until May of 1952. During my first tour in the Foreign Service, which lasted almost three years, I was in five posts and had about six different jobs. I covered a lot of

administrative work and consular work. There was one complication with this appointment to Sapporo. I may have been an FSS-12 by the time this took place. Osborn needed a signing officer, someone with the authority to sign all the consular documents we processed in connection with these marriage cases, so that he could go on field trips and devote himself to political reporting, which was the main reason why he was there. Sapporo was a lookout post - - watching for signs of Soviet efforts to infiltrate either from Sakhalin or the “Northern Territories” – the four islands claimed by Japan and occupied by the Soviets off the Northeast tip of Hokkaido

I got up to Sapporo and they started to process an appointment for me as a vice consul and lo and behold I didn't have sufficient rank to be appointed as vice consul. I had to be at least an FSS-11 or something like that. What they worked out finally after I got there (this was discovered only after I got there) was a temporary promotion to an FSS-10 so that I would have sufficient rank to be made a vice consul and could do the signing work for Osborn. That was very nice because that meant of course some additional pay and I think there were a few allowances that came along with it. I lived in an occupation hotel. The army assigned us billets in those days in downtown Sapporo. I learned to ski while I was there; that was a new experience too. I really enjoyed the whole year in Hokkaido.

Q: You mentioned the marriages and all, and coming from California. During the war, there had been a great anti-Japanese prejudice built up, with sufficient reason, after the attack on Pearl Harbor and all, but I think one of the great phenomenons was that American troops, basically American men, came and fell in love with Japanese women. It wasn't just sex; it was the culture and all of that. You might say the prejudice and all didn't last very long at all.

CUNNINGHAM: There were some other very important things that happened as a result of the occupation. People like David Osborn, who was one of the “Boulder Boys,” Owen Zurhellen, Richard Finn, Ed Seidensticker, Robert Scalapino were others...

Q: You're talking about Boulder, Colorado?

CUNNINGHAM: Yes, Boulder, Colorado. They were guys who were trained in intensive programs in Japanese language by the military services to be interpreters for interrogating Japanese prisoners of war, and also to work on breaking the Japanese codes. These people after the war, and there were others like them... There is a man by the name of Jack Seward, who lives in Houston where I live now...

Q: Let me just stop for a second. You were saying there was something else?

CUNNINGHAM: Yes. The people who were trained in Japanese for intelligence purposes during the war, in many cases afterwards became Foreign Service officers. They also became some of our leading scholars on Japan. They were all people who were in the military services, army, navy and so forth, and they became a very important contribution to our society.

I have had the experience recently of seeing the offspring of some of these unions between Americans and Japanese in the occupation period come back. There is a program now operated

by the Japanese government to recruit English tutors to serve in Japanese high schools. In Texas where I have been one of the interviewers for candidates for this program, there have been several who have come through and said, "My mother is Japanese. I was born there. I want to go and see what my mother's country is like." In some instances the mother never spoke about the country at all. In some instances the mother retained a strong attraction to the country or association with the country, and the children knew their cousins and their grandparents there. This is another element in American society that provides a link to Japan that is coming about as a result of this occupation experience.

Something else that is happening too is that the World War II generation of Japan experts, people of my age, are all passing from the scene now. They are really out of the active business of fostering and nourishing the American-Japanese relationship. The program the Japanese government has instituted to bring young Americans to Japan as English language tutors has been going on now for about 11 or 12 years, and eventually is going to replace that generation. One of my students went on that program to Japan, and he has now passed the Foreign Service examination and has qualified in Japanese. He will be in the next A-100 class in July of 1998. I see that as part of an on-going continuum that is developing in a very interesting way.

Q: By the way while you were in Hokkaido was there any feeling about a communist movement up there or not?

CUNNINGHAM: Not so much about a communist movement though we were very conscious of the Soviet presence in two respects. The island of Sakhalin is just across from the northern tip of Hokkaido, and Wakkanai was a major intelligence listening post for the interception of electronic transmissions from Sakhalin.

Q: I almost got assigned there. I went to the army language school and took Russian just about the time that you were there. In '51 I was doing that and I was sent to Japan. I sure as hell didn't want to go to Wakkanai.

CUNNINGHAM: It was a bleak place. The other thing was that the northern territories, the four islands off of the northeast coast of Hokkaido, were a constant issue. We were always hearing about incidents where fishermen were taken captive by the Russian patrol boats up there. I remember Osborn made a couple of trips up there to report on the situation. There was not so much a feeling of a communist movement, as very strong consciousness of a Soviet presence, and in a way a kind of a Soviet menace. By this time, 1951-52, the war in Korea was fully under way, we were deep into the Cold War, and the divisions of Asia were becoming quite fixed at that point.

I'm trying to recall the governor of Hokkaido at that time, someone whom we knew. I think he may have been a member of the Socialist Party but I'm just not sure of that. I would have to check the record on that because I could be mistaken about that. He was a very personable man and, I suppose, a competent politician. There was a very strong army counterintelligence group there but I think that was directed more towards concern of some kind of Soviet attempt at penetration rather than concern about a subversive movement in northern Japan.

WILLIAM N. STOKES
Reporting on the Chinese Embassy for the Office of Northeast Asian Affairs
Tokyo (1950-1952)

William N. Stokes attended the University of Chicago and Columbia University specializing in mathematics and physics during World War II. After joining the Foreign Service in 1946, Mr. Stokes served in China, Japan, Morocco, Tunisia, Thailand, and Washington, DC. He was interviewed by William Knight in 1992.

STOKES: Well, in relationship to China when I came back from having been under incommunicado arrest in China the Department said, "Well, what would you like in the world as an assignment that would give you, within reason, anything you want." This was bewildering to me and I remember getting a call from Alex Johnson who was then Director of Northeast Asian Affairs and he said, "Bill, we'd like you to go to Tokyo and do a peripheral report on China, reporting on China in the embassy, and I had two wonderful years in Tokyo in which that was part of the assignment. And the Zaibatsu never forgot their interest in China and their roots there, interestingly enough the head of MITI had been in Manchuria when I was there and he had been President of Manchu heavy industries and we befriended him in the consulate and we helped arrange the evacuation of terribly mistreated Japanese civilians to Japan and his name was Tagisake. And when we came out of China he arranged a reception for us in Japan and so my whole assignment in Japan I had free access to the Zaibatsu through Tagisake. It was also the time of the negotiations for the peace treaty. John Foster Dulles came out and I was assigned to assist him in various ways, there were many others, Bill Sullivan was there, we had neighboring homes. I remember one day hearing from Bill of the replacement by Truman of General MacArthur. MacArthur, of course, was unapproachable, nobody ever got near him and, however, I had a chance to meet him. We were coming out of China having been expelled, and all the world was noticing this and there were headlines in all of the papers. We landed in Yokohama, I mentioned that Tagisake greeted us, we were driven in his limousines up to Tokyo. We were invited by General MacArthur for lunch. We were on our way back to the United States, Mr. Ward and myself. We came, General MacArthur was late and when he came in, we all sat down to lunch and we thought the purpose was that the Consul General had briefed General MacArthur about all the events in Manchuria and what it actually was that General MacArthur gave a long account, it must have been 25 minutes long, of what was happening in China to Mr. Ward. At the end of which he turned to Ward and said, do you agree, Mr. Consul General? And I'll give Ward a lot of credit, "Not really, General, not really." And you could hear a pin drop. I thought the generals were not even breathing then. And after what seemed like an interminable silence MacArthur stood up and said, "Well, back to work." and turned and walked through a door.

Q: Closed mind.

STOKES: So, I contrast that with one day when I had been in Tokyo about 18 months and MacArthur had been removed and General Ridgway was the new Supreme Commander, the phone rang, it was Bill Sebald who was the Chief of Mission.

Q: My Ambassador in Canberra.

STOKES: And he never spoke to me, I mean I'd been to his home and all of that, but the idea that he would call me on the phone, the political section, was very unusual. He said, "Bill, there is an officer from General Ridgway's staff here and General Ridgway wants to see you" and I naturally went with the man, I think he was a colonel of some sort and I went in his staff car over to the Daiyichi building, went through all these corridors and finally came to this door and the colonel said go in. I opened it, it was General Ridgway alone at a desk. "Oh, you Stokes? Come on in. I want to talk to you." I sat down, he said, "Look, you were in Manchuria, right, for four years?" I said "Yes." He said, "Well, you know there's a lot of people who say (the Korean war was in full tilt at this time) that we should bomb the Chinese side of the boarder, especially the railway to interdict the supply of the Chinese armies." (Every Chinese had nearly at the gates of Seoul at this time) He said, "What do you think about it, what is your experience say, to this question?" I said, "Well, General, during the fighting in Manchuria, as we both recall, the national government armies, American trained and equipped had removed by rail with the US Marines as their guards, and supplies transported by rail supported the National armies. They were beaten by armies that had operated for 15 years without access to any rail lines of any kind at all. And never in my experience did I see any significant tactical resupply of the communist armies by rail. And I've also seen the rail lines lie devastated for nearly 10 years. When we were leaving Mukden they had barely restored the main rail lines up from mainland China. I doubt that communist commanders ever paid much attention to railroads or are deeply reliant on them. I said, if they are they certainly feel perfectly comfortable with alternative means of supply, and I think if the railroads magically could be erased tonight it wouldn't probably affect, from what I can tell as a lay person, that the Army's performance on the ground much at all for any length of time." "Okay, that's what I wanted to hear, thanks Bill." He got up, shook my hand, walked with me to the door. I thought, this is quite a guy, Ridgway. I did as it turned out have something, I'd done a report on the Chinese railroads in Manchuria and that was probably as good information as you could get.

NILES W. BOND
Deputy Political Advisor
Tokyo (1950-1953)

Niles W. Bond was born in Massachusetts in 1916. He received a BA from the University of North Carolina and graduated from the Fletcher School of Law and Diplomacy in 1938. His postings abroad include Havana, Yokohama, Madrid, Bern, Tokyo, Seoul, Rome, Rio de Janeiro and Sao Paulo. In 1998 Charles Stuart Kennedy interviewed Mr. Bond.

Q: I've got you going to Tokyo in August of 1950.

BOND: Yes, that's right. In 1950, I had had several other assignments that didn't work out, that were canceled because of the Korean War. I'd been assigned as DCM to Baghdad just before the Korean War broke out. My successor had already arrived in the Department and I was clearing

things up when the Korean War broke out, and that canceled Baghdad and everything else. So I wrote to Dean Rusk. He was then either secretary or assistant secretary of the Far East. I wrote and said that, in view of my Korean background, I thought I should stay in that area, either physically or at least in terms of work. And that's how I was assigned as MacArthur's deputy political advisor.

Q: You went to Tokyo in August of '50 and you were there until '53. Is that right?

BOND: That's right.

Q: What was your job in Tokyo?

BOND: Well, Bill Sebald was the political advisor and was head of what MacArthur called the "diplomatic section." It was, in effect, the State Department mission to SCAP. Bill Sebald's deputy had just left and I replaced him. One of the reasons I was given that job was so that I could keep a watching brief on Korea, because they didn't have anyone in the political advisor's office who knew anything about Korea. I stayed there until after MacArthur was fired, until after the truce was negotiated. Then I went back to the Department, if I remember correctly.

When I was in the political advisor's office, I didn't spend very much time worrying about Korea. I was available if anyone wanted to ask questions about it. The political advisor's office was a pretty busy place, not giving political advice, because MacArthur didn't take anyone's political advice. I said once in an interview that being political advisor to MacArthur was tantamount to being ecclesiastical advisor to the Pope. There might not have been much to do except that he used us for all sorts of other things. In his mind, the principal function of the Diplomatic Section, also called the Political Advisor's Office, was to keep the diplomatic missions accredited to him off his back. If he had complaints from the French mission, or anyone, he would have nothing to do with them. He would refer them to us. Eventually, the missions got so that they didn't bother him; they came directly to us.

So we had to handle all sorts of things. We acted as go-between diplomatic missions and the SCAP bureaucracy because the diplomatic missions were dependent for almost everything on the Army. You couldn't get a house; you couldn't get food; you couldn't get anything without going through SCAP. So we spent most of our time doing that. And then, as the peace treaty developed - it was already being drafted and re-drafted by that time - we got involved in that to some degree.

Q: Was Dick Snyder there at the time?

BOND: Yes, Dick was there.

Q: He was working on the Treaty, wasn't he?

BOND: I believe he was, yes. I remember seeing Dick... Is Dick still alive?

Q: No. No, he died about five years ago or so, rather suddenly.

BOND: Oh, did he? I'm sorry. Yes, I remember him... Foster Dulles was the President's chief negotiator on the Treaty and the chief State Department guy was John Allison. They both moved out to Tokyo to be closer to the Japanese negotiators. And so we got involved in some of that. I'd worked for John already and I'd worked for Foster Dulles so we all got along well, and finally got a Treaty.

There were other treaties being negotiated with which we got involved, inadvertently. For example, the Italians and the Japanese were trying to negotiate a peace treaty. They were stuck. There was a snag about the fact that Italy started out in the war as an ally of Japan and ended up as an enemy of Japan. The Italian and Japanese negotiators didn't know how to word that so they asked Bill Sebald if they could borrow me for a week to try to do something. Which I did. And that's the way that Treaty came about.

The Korean War was still going on for part of the time we're talking about. The peace treaty negotiations were starting. I was also involved in the negotiation of a "Status of Forces" agreement with the Japanese for non-U.S./UN Forces based in Japan. I was still negotiating that at the time I was transferred to Korea but it was eventually finished up by my successor.

MABEL MURPHY SMYTHE
Professor, Shiga Daigaku
Hikone (1951-1953)

Ambassador Smythe was raised in Georgia, and earned her B.A. in economics and sociology from Mount Holyoke College, her M.A. from Northwestern University, and her Ph.D. from the University of Wisconsin. After having worked around the world on numerous professional exchanges and while her husband was Ambassador to Syria and Malta, she was appointed Ambassador to Cameroon in 1977. She was interviewed by Anne Miller Morin in 1986.

Q: You stayed two years in Japan?

SMYTHE: Yes. That was our first overseas experience.

Q: What were you--or your--husband doing?

SMYTHE: This was 1951 to '53. The Japanese educational system had been thoroughly exploited by the war. Students were taken out of classes to work in factories and that sort of thing. So thirty-five American university professors were sent to Japan to serve, one in each of thirty-five national universities--at least the American input into it was going to democratize education. So I went to one university and my husband to another.

Q: So you were two of the thirty-five?

SMYTHE: Yes. We were two of thirty-four, actually, in the beginning. They found the thirty-fifth after we'd already been there a year. And we were the only married couple where both were appointed to work in this program. It was an interesting experience and, in many ways, the foundation of our overseas work and interests. In the first place, we enjoyed it in Japan. We enjoyed the Japanese people, the pace of living, the kind of dignity and perseverance in the people, the hard work that the students put in, and one's sense of humor gets a good working out in Japan.

Q: Where were you located?

SMYTHE: I was in the center of Honshu, on the shores of Lake Biwa, in a little town called Hikone. Have you lived in Japan?

Q: Yes, two years. We were in Kobe, and I went to Lake Biwa for a holiday.

SMYTHE: Oh, that's *lovely*. Well, I was where the castle stands above the lake. People were so appreciative of children, and Pam was with me. She was three when I went; five when we left. She quickly learned to play with the kids in Japanese. She would watch the way they sat, and when she was speaking Japanese, she sat on her feet with her knees out in front. She went to a Japanese kindergarten. She was way bigger than the children. She was younger than some, but taller than all of them. When they'd have foot races, all of them would put her out, "You run for us." And they'd say, "*Kee-aren-chan ichiban!*" [Karen is number one!]

Q: What did they call her?

SMYTHE: *Ki-ya-re-n-chan*. Her first name was Karen. It was Karen Pamela, and when she was little we called her Karen. I don't know why they thought *Ke-yah-ren* was more "Karen" than "Kahren". I would have assumed it was *Kah-ren*, but they made it *Kee-yaren*. Of course, she could outrun everybody, because she was bigger. She was as big as many of the nine-year-olds, and her best friend, in fact, was nine. Chesuko was slightly larger than she was, but this little child and Chesuko hit it off very well. She had been exposed to a lot of things before we got to Japan, and Chesuko enjoyed having a younger girl follow her around and take her word as gospel, and the two of them were just a perfect combination. Years later, Pam and I went back to Japan--ten years after we had left--and went to see our house and looked up the street and saw Chesuko, now a nineteen-year-old, putting her key in the lock. I said, "Chesuko?" and she said, "*Ke-yaren-chan!*" The two of them liked each other as well as they had as children. It was an interesting experience, because the kids liked to play school, and Chesuko, of course, was about a second-grader.

We had a playroom. It had beds in it--they used the beds for benches--and it had a blackboard, about 4 by 5, a nice big one. Chesuko would get to the front of the room--she was teacher--and she stood by the blackboard and taught the littler ones, who lived in the neighborhood and didn't know as much as she did, how to read and write *hiragana*, and so Pam learned to read and write those syllables.

One of my Japanese students wanted to study in the United States, and his English was the best I heard on campus. So, at his suggestion, I sent a letter to an old family friend, the president of Morehouse College, and said, "Would you think it's time for Morehouse to have a Japanese student?" This guy went over. He was a stone's throw in front of Martin Luther King. No, after Martin Luther King, right after Martin Luther King. I think King graduated about 1951, and he went to Morehouse in 1952. He graduated with honors from Morehouse. He is now the foremost economic development economist in Japan.

I have seen him very often, because he used to come to the U.N. the way Americans would go to Europe, every year or two. Well, he got so he was coming twice a year. I came home from work one day and found him asleep on the living room sofa, because he had become a part of our family. My parents sponsored him when he went to Morehouse, and they saw him through appendicitis and other trials of being away from home. When they went to Japan, he entertained them. He was really very gracious.

Q: It is a mind-stretching experience to absorb an eastern culture. Were there many other women on the faculty?

SMYTHE: No.

Q: You were the only one, weren't you?

SMYTHE: There was one woman who was a sort of part-time dean of women, but I never saw her. Nobody ever saw her. She didn't go to faculty meetings. Neither did I. I went to a faculty meeting, and they said, "What are you doing here?"

I said, "I understand there's a faculty meeting today."

They said, "Oh, yes. Well, we'll introduce you to the faculty and then you can leave." [Laughter]

Q: I think "chauvinist pig" was invented for Japanese men, don't you?

SMYTHE: It was. We didn't have but three or four girls on the campus as students.

Q: And the dean didn't have too much work, did she?

SMYTHE: No. I don't know what her assignment was, but this was only a part-time thing.

Q: What was the name of the school that you were at?

SMYTHE: I was at Shiga Daigaku [Shiga University] in the Kansai Gakabu, which is the "economics college", which is why I was there. I think I was the only economist in the group of thirty-five. They wanted me to teach a course in foreign trade and a course in labor relations, and then fill in with English. They needed English teachers, and I didn't really mind because I had had some background in the international phonetic symbols. They asked would I take on an additional assignment to teach the girls who worked in the silk mill, Omikenshi. It was a silk

company. They had started the Omikenshi School for the girls who worked in the silk factory so they could continue their education. So I agreed to do a class once a week and taught there, and I went to Otsu once a week and taught a couple of classes on the other campus that was associated with this one in Hikone.

Q: You were in Hikone?

SMYTHE: Yes.

Q: And your husband was--

SMYTHE: He was in Yamaguchi. His subject was sociology, but he was also teaching English. The president of his university was a very distinguished man who had spent some time in the United States, and he was horrified when the war began, because he knew what might be available in the United States. He took home some movies he had made of the United States and showed them around, and people realized that they might have underestimated U.S. power. The government was not too keen on his movies and prevailed on him not to show them too much.

He was a distinguished authority in Noh chanting and taught a group of people how to do it. He invited us to watch them when they came to do this. I met his daughter when I went to Japan in 1984, and he had passed on. He was already a man considered up in age then, but a very distinguished gentleman.

We have many happy memories of Japan. Times have not always been easy; challenges have always been there, but I was never really depressed. I tend to find the possibilities in a situation and look on those, and not fall on the seamy side too much. Otherwise, I suppose I wouldn't survive.

Q: What do you feel you took away from your experiences in Japan?

SMYTHE: I got involved in international education when I was there. I started out, like many Americans, seeing the world as a pyramid, with us at the apex and everybody else at the bottom struggling to get up, but I began to understand that there are people who had pride in their own way of doing things and didn't really want to become Americans. They wanted what Americans had, particularly the power, but they didn't necessarily want to wield it in the same ways. I still have a feeling of comradeship with Japan over some of the things that the Japanese like and do and think. I think their ability to concentrate on what they want to accomplish and just brush hardships aside and go ahead is a marvelous thing.

Q: How did you feel about the way they educated their children, the amount of drill and pressure on them?

SMYTHE: At the time, I didn't know a great deal about education, but I had grown up in a semi-progressive school in the South and the rigidity appalled me. It didn't appall me that children had to get their pails and brushes and wash the floors after they had finished. I thought, "My goodness, we would do better if we had our kids share in some of the real tasks that have to be

done." I think we make a mistake in thinking that children are benefitted when everything is made easy for them. So I liked the discipline and the hard work and the perfectionism. I tend to be a perfectionist myself, so I understand that. But I really did gag at seeing small children allowed to do anything, even slap their mothers in the face and call them "fool," and then a year later having them squashed if they said anything out of line.

Q: The boom is dropped on their heads at a certain age and that's it, isn't it? It must make them quite schizophrenic, I should think.

SMYTHE: I would think so. I came home one day and found Pam scared of the--what do they call them, the bogeyman?

Q: Oh, yes. I can't remember.

SMYTHE: The feeling that you are cruel if you spare the stick and scare kids to death, that horrified me terribly. And, yet, I found that people were understanding and kind, and could be. One Japanese said to me, "We can be terribly cruel people." He was old enough. He was one of the graduate students we got, a public school teacher, actually, who was doing graduate work on the side, that we helped to get a scholarship to come to the United States. He said, "I remember seeing someone who was in the Army with me, and he used the wrong pronoun in speaking of the emperor, and instead of explaining that he made a mistake, they simply knocked him senseless. Of course, he never made that mistake again, but did you really need to be that drastic to drive your point home?"

Q: Well, with the emphasis so heavily on coming in ichiban, it makes them do some rather underhanded things.

SMYTHE: One of my students committed suicide the summer after my first three or four months in Japan. Came back at the end of the year and here he was no more. I had them come over to my house every Thursday night, or whatever day it was, and I would make cookies and have tea, and we'd sit around and drink tea and eat cookies and talk. We spoke in English and they loved having practice, and they had an opportunity to sing songs in English or whatever else. I enjoyed that. But there were so many different kinds of things: this business of having everybody stand when I entered the room and then sit down when dismissed, was very strange to an American, and there were other things.

Q: But you must have had great respect because you were a sensei.

SMYTHE: Yes. And the fact that I was a woman didn't really seem to handicap me with the students.

Q: The title was enough.

SMYTHE: That's right.

Q: How did your household help treat you and your husband? Was he first always? Because you were both teachers.

SMYTHE: You know, I don't have a real recollection of that, because he was mostly in his own place. We were up to a fifteen-hour train ride apart. But they gave him one of these City University schedules so that he taught three days a week, and if he wanted to spend three days, he traveled two overnights and had three or four days.

Q: I didn't realize that was fifteen hours apart.

SMYTHE: Well, it isn't now.

Q: No. But the roads were so appalling then. Yamaguchi, is where, exactly?

SMYTHE: That's down near Hiroshima. It's between Hiroshima and Nagasaki on the train line.

Q: So he was able to come back more often that you could go down?

SMYTHE: Yes, because I had the baby. I didn't travel except when we had vacation. When we had vacation, I went to his house because he had the more pleasant house. So we spent the long vacations at his house and the weekend ones at mine.

Q: Were they Japanese houses you lived in?

SMYTHE: Mine was designed by an American missionary. It had a *tatami* room, but it was really intended to be an American house and it had American furniture. The bathtub was really something to tell about. They had built sort of a concrete bathtub, and it was a great big thing; it was like a trough. I guess they found that it was just too rough on the human body, so they got an old clawfoot bathtub and set it inside the other. [Laughter] You could run water in it, and when you pulled the plug, the water just ran out into the other tub, because there was no pipe connecting them. But it worked all right. It was not easy to clean well.

Now, Hugh's house was a Japanese house, except that they had floors in it and he had regular Western furniture. He had *tatami* somewhere--I can't remember where--and their concession to heat--we had stoves for heating. He had a very modern kind of stove. We had been afraid of how I would take care of Pam's milk, so I brought a little two cubic foot electric refrigerator from the States and it was duly installed and we made do with that. They bought Hugh a six-foot refrigerator made in Japan. It worked perfectly well. Mine never made ice cubes. The president of the university said shyly one day he would appreciate it if I would send him my surplus ice. I had two ice cube trays, about six inches long, making cubes less than an inch in diameter, but I never got ice cubes because the current was off fifteen minutes of every hour. As soon as you got cold enough so it started freezing, it would melt again. I never knew how to explain tactfully to him that I never had surplus ice because I never had ice. But he learned, because when I left he asked if he could buy my refrigerator.

Q: What did you heat in the stove? You burned wood, did you, or was it gas?

SMYTHE: We had bottled gas to cook.

Q: How did you heat your house?

SMYTHE: A stove. A stove was in the living room, and we had an oil heater, I think kerosene or something like that. I was very careful with such things.

Q: I didn't know if you had to use hibachis.

SMYTHE: No, we were spared that.

Q: Because the smell of charcoal is so bad, for children especially.

SMYTHE: Quite suffocating, yes. We were all right there. We didn't have any of those pits in the floor for you to put your feet over them. I remember going visiting, putting my feet down there, and at 120 degrees, they were perspiring so and my back was freezing. [Laughter]

OLCOTT H. DEMING
Public Affairs Officer, USIA
Tokyo (1951-1953)

Olcott H. Deming was born in New York in 1909 and was raised in Connecticut. As a Foreign Service officer, he served in Thailand, Japan, and Uganda. Mr. Deming was interviewed by Horace G. Torbert on April 20, 1988.

DEMING: Well, we had home leave, and I was then posted directly back to the Far East, to Tokyo. It was interesting that all my effects had come from Bangkok, through Tokyo, to Hawaii, to Baltimore and then back the same way to Tokyo. We went a long time without the things we had been living with in the past years.

I was sent to Tokyo as Deputy to Saxton Bradford, who was Counselor of Embassy for Public Affairs. At the time, we had a Political Advisor, Mr. Sebald there, because a peace treaty had not yet been made with Japan. Sebald, was a Foreign Service Officer assigned to General MacArthur's staff as Political Advisor with the rank of Ambassador. Actually, Saxton Bradford, the Counselor for Public Affairs, was Counselor to the Political Advisor. As his assistant, I was there to see the transition of Japan from an occupied country to independence under the Peace Treaty worked out by John Foster Dulles.

On the day the Peace Treaty came into force, the Department sent Ambassador Robert Murphy to Tokyo to replace Gen. Mark Clark as the principal representative of the United States. He was a very strong Ambassador. As assistant to the Counselor for Public Affairs, I accompanied Ambassador Murphy around Tokyo and to nearby cities on speaking tours. He said, "I am going to impress upon the Japanese that they are now an independent sovereign country, and the

occupation is over. There will be no more military processions when I go out." The Japanese had become accustomed to, and no doubt impressed by, MacArthur and the military presence. Ambassador Murphy said that period had passed, and we must do everything to show that Japan is now sovereign, equal. We want to help them, but they're free to help themselves, and they're no longer an occupied land. Not literally quite true because we had then and still have large bases in Yokosuka, Yokohama and on practically all islands as a defense umbrella for Japan and for us. I much admired Robert Murphy and his determination to demonstrate the difference between a sovereign country and a military occupied country.

Q: Do you think there was any downside to this at all? Did it create problems in keeping forward momentum in the improvement of Japan and U.S. relations?

DEMING: I think it came at about the right time. Let's see, 1945 I believe was VJ day, and I was there from '51 to '53. It was a fairly fast rapprochement after the bitterness and the terrible toil on both sides of that war to hand over independence, although under very strict protocols. We retained continued rights to military bases, navy bases, air bases and support assistance. I think it came at a very good time, but it probably frightened and startled the Japanese a bit. "You mean, you're leaving us alone? You're casting us out?" Japan was still a pretty crippled country at that time. Tokyo was still very much of a mess from the bombings, and it had not recovered economically or from the cultural and emotional wounds of war. There was a pundit who observed that if you are a developing country and really want to get ahead fast, you should go to war with America. They will destroy you and then rebuild you. However, I do believe that Japan was ready to take off.

Q: There is some evidence in that direction. What was your particular function then? Was it entirely in the Public Affairs field?

DEMING: My entire assignment was in the Public Affairs field. Actually, the Counselor for Public Affairs, a very able man who is now deceased, had his office over in the Embassy very close to the Ambassador and his advisor. He did not wish to get involved in operations we had inherited from the military - 23 libraries, which were set up all over Japan. The State Department-USIA took over the administration and the running of those 23 libraries. And I, in effect, was administering a very large USIA operation, practically without interference. The most interesting or difficult decision was whether to reduce these libraries or cut them out completely. I traveled around Japan with a bilingual American, and we visited about ten of these libraries. I was handed many petitions in Japanese and in English not to close the libraries because they were the principal places for learning about America and because they were the cultural centers for their impoverished districts. When I came back to Tokyo, I talked to Ambassador Murphy. He said that the Embassy was under a great deal of pressure to close the libraries to save money. I said I thought there were about five that could be eliminated because they're near enough to another library. So we agreed to cut them down to 18. Even so, 18 USIA libraries in one country was an unprecedented intellectual and information presence. I felt that that was the right thing to do. The time would come when the Japanese would indicate that they no longer needed them.

USIA also administered a large Japan-American cultural exchange program. We brought in such literary stars as Hemingway and Faulkner. The Japanese were so anxious to reeducate

themselves on Western culture that they would turn out by the hundreds to listen to Faulkner or any American speaker or musician. It was very stimulating to see the cultural enthusiasm of Japan for the country that had been their bitter enemy.

JOHN M. STEEVES
Political Counselor
Tokyo (1951-1953)

Ambassador John M. Steeves was born in North Dakota in 1905. His career in the State Department included assignments to India, Japan, Indonesia, and Afghanistan. He was interviewed by Charles Stuart Kennedy and Thomas Stern on March 27, 1991.

Q: You left Delhi in 1950 and were transferred as Political Counselor to Tokyo?

STEEVES: I was sent back to the National War College from Delhi and then was sent to Tokyo.

Q: That was 1951. You were talking about imperial people -- Douglas MacArthur was still holding forth there?

STEEVES: I ran into Ambassador MacArthur during my second tour there when I was stationed down on the Islands as the Consul General at Naha and Political Adviser to the Ryukyuan Command. That is where I got started in my political-military role, after the War College and after my tour of two years in Tokyo at the Embassy.

Q: When you were in Tokyo, Robert Murphy was the Ambassador most of the time?

STEEVES: That's right. I was there during the last year of the Occupation and then with the first Ambassador under independence, Bob Murphy.

Q: Robert Murphy and Loy Henderson were probably the two major figures in the Foreign Service. How would you describe Robert Murphy's style of operation?

STEEVES: Bob Murphy, you must remember, was well named -- he was an Irishman. We used to have a signal that we gave each other as we were going down the hall toward morning staff meeting. If Bob Murphy was in a good mood, we would smile; if we knew he wasn't, we would put our hands on top of our heads. He could be a Tartar in demanding things that he wanted done. I was the Political Counselor under Bob Murphy, and my window looked out on the road that led down to the administrative office, where the communications center was and from where the morning cables came. I would watch for that courier, and the minute he got into the door I would grab him and look over those cables right away because I knew it would only take about sixteen minutes before Bob Murphy's squawk box would yell, "John, what are you doing about so-and-so?" One was always under that type of pressure.

But along with all that exacting pressure and expectation of near excellence of performance, as far as Bob Murphy was concerned, there was also that great big open armed magnanimity and good nature that you just couldn't escape. I used to play golf with him. We would have a very rough day, and along in the afternoon he would call up and say, "John, what do you think? Lets go have a game of golf." It was his way of kind of saying, "Let's forget everything else that is going on today."

Q: How did he get along with the Japanese? This is a brand new government, and he was the first Ambassador.

STEEVES: Very mixed...some, like Foreign Minister Okazaki, he liked, and they got along very well. We used to joke about everything we told Murphy that he didn't accept. He would always say, "Okazaki didn't tell me that," and that was that. Many of the other typical Japanese he didn't understand too well. The Japanese are never very direct. They speak in metaphors or in "oblique ways" all the time. They never tell you anything directly. Bob Murphy was exactly the opposite.

Q: What sort of things were you reporting on? Political movements were just getting going again after Independence.

STEEVES: Yes, by the time Bob Murphy was there, you see the aftermath of the Occupation, when labor and the Communists were making their first trouble for the Liberals, which, in Japan, are really the Conservatives.

One of the things that took a lot of my time was that I was the Chairman of the Committee made up of Embassy personnel and from the military command to negotiate with Japanese on the Administrative Agreements required to be worked out under our Treaty with the Japanese. These agreements were to govern our cooperative arrangements under our Mutual Security Treaty and Occupation relationships as long as they would apply.

In passing, it is interesting to observe that forty years later, as I speak, the Treaty provisions still govern our conduct in Japan for our forces stationed there.

An anecdote to tell you how difficult some of those provisions of the new Treaty were to initiate: the next morning after the 29th of April, when the Occupation ended, somebody called up and said, "Say, that MP is still down there (naming a main square in Tokyo) directing traffic. Will you send somebody down there and get him out of there." Here the Japanese had been training for months, and they were itching to show off those fancy dances they do in directing traffic, and some dumb military person down the line hadn't gotten the word. These MPs didn't see anything different between yesterday and today, and they were still directing traffic. So it was an awful hard time to get these nuances across to the Americans.

Q: You got this in spades later on when you were in Naha, but I would imagine one of your major jobs was dealing with the American military, which had been living very well. While you were negotiating about these troops, I was a trooper. I was an enlisted man in the Air Force at Johnson Air Force Base then. I know how the enlisted men lived, so I can imagine how the officers lived.

STEEVES: The house that I was given under the Occupation arrangements was a solid block square with the most beautiful stone fence you ever saw around it, a Japanese garden that would make your mouth water and a staff to run it. Fresh flowers were delivered to my door every morning. These were the perks we got under the Occupation.

Q: It must have been really a cultural shock dealing with this?

STEEVES: It was a case of them getting tough. General Lawton was the man I dealt with a lot. He became very stern on this business of getting instructions out for people to get into their place and to respect the Japanese rights. It was difficult for the Americans to knuckle under and gradually give up fifty cents a round for the championship golf courses and luxuries of that nature.

Q: How did we view -- again we are talking about the '51 and '52 period -- the Soviet threat in Japan?

STEEVES: There was a communist element. There was a communist paper, I think it was called "The Red Flag," which was an annoying nuisance but not a great problem. The American security, and later on the Japanese security, saw to it that it was handled pretty effectively. I am surprised that after Independence and years afterward that they haven't landed on them more severely than they have. You take the demonstrations that they are having out at the airport -- I don't quite understand how they allow that type of thing to happen. It is completely un-Japanese for them to allow it.

The only challenge there was to the Yoshida (prime minister) types were the Social Democrats, led by someone I can't think of right now, who was growing somewhat in popularity. I remember when Nelson Spinks (the officer I replaced as Political Counselor) had the head of the Socialist Democrats over for dinner to his house. He had become a bit of a problem and was getting quite a bit of the vote even before I left Japan.

Q: Going back to the times when the Social Democrats were a party, we didn't want to see them take over. Did we have a bias toward the Liberal Democrats?

STEEVES: We had a kind of paternal interest in the Yoshida people. P.M. Yoshida was the one that MacArthur had put in office, and he was such a cooperative fellow to deal with. He understood Americans so well, as did the people that were in his cabinet. He epitomized like none other that I can think of right off the Japanese ability to get along with those who defeat them. As you know, there is no people in the world who know how to do that better and turn that into an asset. You would think that the Japanese were our devoted allies the way they cooperated with the Occupation. So Yoshida epitomized that attitude on the part of many Japanese and became very popular. The people who followed on after him had very much of that same attitude. The people who became the political football in later years, and those who became subject to scandal and corruption, were something we really didn't know in our early days at all.

Q: How did you find the staff of our Embassy at that time? Was it one that was responsive to

Japan?

STEEVES: Yes. We had a very high-class staff. Certainly in the leadership that I knew. Dr. Waring was the head of the economic section. He was opposite me. We had Dick Lamb, who knew Japanese like he knew English -- he had a Japanese wife, Dick Finn and Bill Sullivan, a young officer. Bill Sullivan was a young, brilliant officer with a great sense of humor.

Q: From a different mold?

STEEVES: From a different mold. One morning, somebody said that somebody had just deliberately disagreed with the Ambassador when he had said some rather harsh things about President Syngman Rhee of Korea criticizing the Japanese. In a comment in a passing telegram, our Ambassador in Korea, Ambassador Muccio, had agreed with Rhee! Sullivan, the brash, young fellow that he was, walked into the big "bull pen" that we used before moving over to the Embassy and said, "Hurrah for Muccio!" Someone thought this was pretty brash because it was just the opposite of what Murphy had been standing for. Murphy heard about it, and, of course, that was heresy for Murphy for anyone on the staff to disagree with him. Pretty soon I got a call from Murphy, who said, "Did I hear something about Bill Sullivan that I ought to know about?"

I said, "Well maybe you should, what did you hear?"

He told me what he had heard and said, "Send him up here."

So I said to Bill, "Bill, I think you are in trouble; you had better figure what you are going to do because the Ambassador wants to see you."

"Well, that's okay," he said, "I never saw one Irishman afraid of another one any day."

I might say that Bill Sullivan went on to quite a distinguished career in the Foreign Service. He was a very bright officer.

ROBERT LYLE BROWN
Chief, Economic Section, Kobe
Officer-in-Charge, Osaka
(1951-1954)

Robert Lyle Brown grew up in Ohio. His career in the Foreign Service included posts in New Caledonia, Morocco, Japan, Belgium, and Taiwan. Mr. Brown was interviewed by Charles Stuart Kennedy on February 5, 1990.

Q: Your next assignment was in Kobe-Osaka from 1951-54 as chief of the Economic Section in Kobe and Officer-in-Charge in Osaka. Tell us about that.

BROWN: I said earlier that I intended to leave the Foreign Service after serving in New

Caledonia. When I got the offer of an assignment to Morocco, I couldn't refuse. Casablanca sounded like such a far away place. So I said to my wife, "Just this one more time. Then I'll have had enough and can go to law school." In Morocco, I got orders assigning me to advanced graduate economic training at Northwestern University, which is really what I wanted. I had studied political science. I knew also that as an Foreign Service staff officer, I was still not a full-fledged FSO, and if I were to move up in the Service, I would have to get out of the political area. I had moved up as a staff officer to such a level that I couldn't afford to go back to the bottom of the ladder as a career FSO. I thought that economic training would have been useful to me whether I stayed in the Service or went into law, banking, international trade, etc. I would have more assets. Naturally, I decided that I couldn't quit when the Department was offering me advanced graduate economic training from Northwestern University, so it was on to Kobe, Japan.

I had done some economic work at Syracuse. I really didn't need the sophisticated advanced training in micro and macroeconomics, statistics, projections, analysis, etc. for my assignment to Kobe. When I got to Tokyo, the Embassy wanted me to stay there. But Kobe was a Consulate, and then there was also a sub-Consulate in Osaka. It was a big Consular district -- steel, shipping, textiles and lots of money. So I decided to go to Kobe. The Supreme Allied Commander, MacArthur, was still running Japan, and this in itself created a unique situation. The Japanese government was following our directions and policy guidance. With MacArthur's departure, all of this suddenly stopped. It changed the whole situation, including the beautiful house that we had -- owned by the tenth richest man in Japan. It sat on the mountains. It had a boiler room, which needed engineers with graduate certificates in order to operate it twenty-four hours per day. It was like a ship with a conveyor belt to load the coal into the furnace.

The transition was interesting because then we had to start to use our abilities and wits to influence the communities in which we were assigned. As I stated, the most important industries in the Kobe-Osaka area were textiles, shipping and steel. American business, knowing that Japan needed everything, flooded into Japan. We need to watch to make sure that this business was in the U.S. interests and that it would foster positive and progressive Japanese economic development. The Japanese had limited finances for expansion. The basic challenge was grass roots work at the industrial-business level to bring U.S. and Japanese business together in a manner which would complement each other -- importers and exporters, for example.

Q: Did you see any glimmerings then of the problems that have occurred in the 1980s?

BROWN: I did. In fact, I remember that despite the basic level the Japanese were working, they were gradually tooling up. I could see the quality starting to come out of a primitive post-war setting. One could project that every day was going to be better for Japan. In addition, all they needed was a blackboard and chalk to improve their science and technology. They were dedicated and determined. It was just a matter of organizing. You could see that coming. I found many vignettes of knowledge, as I called them. We all had to write reports, and that I did. But I also picked up a lot of vignettes every week that were slivers of relevant information. I was sure the same thing was happening in other places throughout the world. I initiated a series of monthly economic notes transmitted through the Embassy, as it insisted. The monthly economic notes became a weekly and a world-wide requirement through a new directive. It was a great

way to report substantive bits of relevant information which wasn't being reported in any other way.

EDWIN CRONK
Chief, Japanese Financial Trade Affairs
Washington, DC (1951-1956)

Edwin Cronk was born in 1918. His career in the Foreign Service included assignments in Japan, Korea, West Germany, Australia, Singapore, and Washington, DC. Mr. Cronk was interviewed by Charles Stuart Kennedy on November 7, 1988.

Q: You were a civil servant in the Department of State, dealing with Japanese affairs. We're talking about the early '50's. I have you here from 1951 to 1956 as Chief of Japanese Financial Trade Affairs. What were your concerns in dealing with Japan on an economic basis in the early '50's? The Korean War was in effect. How did you see Japanese-American financial relations -- economic relations -- in those days?

CRONK: At the beginning part of that period, when I came over from the Pentagon, the Japanese were still quite desperate for financial, economic assistance to sustain themselves. We used to kind of despair...how are we ever going to solve the problem of the Japanese economy? The AID program was essentially a relief operation; it wasn't a development program. We wondered, you know, what would it take to put the Japanese back on their feet so they could begin manufacturing and exporting and getting more or less self-supporting.

Well, the Korean War eventually solved that problem because Japan became the source of an enormous amount of material needed by our forces in Korea. Just the ordinary things like cement, and barbed wire and thousands of items. The Japanese began to crank up their small industry to supply these things. They had a shorter lead time in getting it delivered, and they worked like the devil to do it.

There was never anything like the Marshall Plan to provide them the wherewithal, but we supported this gearing up for wartime supply exercise by seeing that the orders were provided to the Japanese and generally encouraged the whole effort. And at the end of the Korean War, they had, in effect, recovered from the devastation of the war. Small industries grew, and they were in pretty good shape at the end of the war. It was the wartime requirements that did it rather than our AID program.

And, in the State Department, we played a role in encouraging this process.

Q: Did anybody, while you were there, see any cloud on the horizon that this might turn into a Frankenstein monster, as far as the United States is concerned? I'm referring, of course, to the Japanese growth and the fact that it has become our principal competitor and rival in the economic world.

CRONK: No, I don't think, Stew, any of us foresaw the kind of development that's taken place. We applauded the fact that they had helped in the war effort, and that they had benefited from it because over time, that reduced the obligation we had, or we felt, to supply them with economic assistance. It wouldn't be until at least fifteen years after that period that they became a worldwide competitor in such a broad range of products.

There was one area where we had some apprehensions, and that was in investment and trade policy, particularly in the investment area. A lot of business men would come to me and say, "We would like to set up a widget factory in Japan. Can you help us?"

And it was quite evident early on that the Japanese -- unless they needed something rather desperately, some technology or a business with a built-in export market attached to it -- there was resistance to foreign investment and any kind of foreign involvement that they didn't think was necessary to their own economic growth.

Of course, we've seen that pattern develop ever since. They have not, essentially, had an open market for foreigners, and foreign investment is still a very difficult proposition for our people. So that was an increasing apprehension. There weren't a great number of American companies interested at that time but a good many suppliers. I would have one or two in every week saying, "Give us some advice on how to go about this." And I did the best I could. Many of them came back rather disappointed, saying, "Well, they've got this requirement, and I've got to do this," or "They just won't talk to me." That was a concern, which I guess was well founded. It turned out to be the real thing.

Q: I'm going to come back to this particular subject several times here. But again, looking at the early '50's, what was your impression of the calibre and the effectiveness of the people dealing with economic affairs in the State Department? This has always been a matter, as you know, of controversy. Often people say, you know, the Foreign Service and the State Department really don't pay enough attention to economic affairs. How did you find it at that time?

CRONK: Well, I guess I would have to say that the calibre of people, or the depth of the talent in economic matters, was pretty limited. For example, in this Office of Japanese Economic Affairs - - or in the whole office under U. Alexis, who was Director of both Japan and Korean affairs -- there wasn't really one trained economist. I was the closest to it because I'd at least had some training and a good bit of experience dealing with these matters. But I was no Ph.D. in economics, and there wasn't anybody anywhere near the level of competence that I think was needed.

And dealing with other people in the Department on problems -- I would have to get cables cleared, and whatnot -- I found a shortage, really, of talent and understanding about economic matters. And you can understand this because before the Wriston Program -- and before World War II -- the Department didn't have a great deal of economic responsibility. And political, consular officers predominated -- administrative people. A crackerjack economist was pretty hard to find. Now, I think, since then, the Wriston Program helped. It was a step forward because it brought in a lot of people who had been working on economic matters here and there in the

Department. But I think since then we've gone ahead quite nicely and have more and more people who understand economics and can deal with it effectively.

But at that time, it was a pretty sorry state of affairs. I remember going to Korea. I don't think there was a person in the Embassy -- and it was a fairly sizable Embassy -- that really knew much about economic affairs. I was new to Korea, new to the Foreign Service essentially, because this was my first Foreign Service assignment. And I could write a telegram about anything almost and get it cleared without any difficulty; the Ambassador or the DCM would look at it, smile and say, "That sounds good." There was no expertise, but I think that has changed somewhat.

G. LEWIS SCHMIDT
Executive Officer, USIS
Tokyo (1951-1956)

G. Lewis Schmidt was born in Washington in 1915. He served in Japan, Brazil, and Thailand. Mr. Schmidt was interviewed by Allen Hansen on February 8, 1988.

Q: When you left the Budget Office, you ended-up in Tokyo. How did that come about?

SCHMIDT: Well, to give you a little background on that, Henry Ford soon left the position of Budget Division Chief, but before leaving, he had made me Deputy Chief of the Budget Division. Then he briefly left to become the Executive Director of the Near East Bureau for the Department of State, and so for a time, I was left as the Acting Director of the Budget Division.

About that time (late 1951) the Peace Treaty with Japan was signed, and it was obvious we were soon going to take over the Army information operation in Tokyo (then called the Civil Information and Education (CI&E) program of GHQ SCAP). USIA was looking for someone who had both Japanese experience and also budgetary and administrative experience. So we struck a bargain. I agreed that I would like to go back to Japan in that capacity if they felt that I was the person to handle the job.

Q: Where had your Japanese experience come from?

SCHMIDT: It started in 1938 or even earlier. I was the American Chairman of a University level student organization called the Japan-America Student Conference. It was an exchange program between U.S. and Japanese university students completely organized, planned and run by students -- no senior support or controlling group. I had attended the fourth annual meeting of this program in 1937 at Stanford University. I was elected chairman of the U.S. delegation for the fifth conference to be held in Japan. So, I organized the American delegation in 1938 and led it to Japan for the summer meeting of 1938. After the conference, we traveled extensively in Japan, then to Manchukuo, which was at that time under Japanese control, and Korea.

When I came back to the States, I had gotten a fairly wide exposure to Japan. Of course, no real knowledge in depth. Because of that experience, when the war came on and when the American Army was preparing after VE Day, or even before VE Day, to invade Japan, they were looking around for military officers who had had exposure to Japan. You can imagine that in 1944, '43, '44, nobody in the Army -- or at least a very few people in the Army -- had ever had any first hand knowledge of Japan at all. Because I had been there, even though briefly, the Army picked me up for the Military Government operation, and I spent nine months studying the Japanese language and Japanese area studies. Eventually, I went to the Philippines, and from there, into Japan after the armistice was signed in September, 1945. I spent nine to ten months of the first year of the Occupation in Japan, during which time I was the Economics Officer for the Military Government Section of the Headquarters of Sixth Army located in Kyoto and in charge of all Southwestern Japan during the early Occupation. Again, in 1951, there weren't all that many people in the Department of State with my background who had been in Japan. And so when we were getting ready to take over the program from the Army (as it was then known), they were very happy to have me go out and assume the position of Executive Officer, USIS/Japan. It was my duty initially to manage all logistics for the takeover from the Army of the CI&E Program, with 24 field offices, 900 Japanese employees, a \$7,000,000-\$8,000,000 budget plus.

Q: Well, you certainly had the background for it. It must have been a tremendous logistical problem providing the administrative needs for a major cultural and information program in what was enemy territory.

SCHMIDT: Well, it was. The Army had set up very extensive information and education programs in what they called the CI&E, or the Civil Information and Education Program, under the headquarters which was known as GHQ SCAP -- General Headquarters for the Supreme Command for the Allied Powers in Japan. They had twenty-four field offices of the program located all over Japan. Two of them were in Tokyo. They were designated as libraries, though they also were conduits for cultural programming. When the USIS took over, we changed the name to USIS Cultural Centers. The Japanese have been intrigued always by the concept of culture and held suspicions about anything called "information." That word to them (as in Europe) was often synonymous with "Intelligence. So when we took over, we called them cultural centers, or *bunka senta* in the Japanese language. There were libraries but also an extensive program of cultural activities, including lectures and motion picture showings and all the paraphernalia that USIS frequently employs or did employ then (and to a large extent, still employs today) in its centers abroad.

There were over nine hundred Japanese employed by the CI&E either in Tokyo or in the various cultural centers around the country. Each one of the centers had at least one vehicle as sort of a mobile unit which they could take out into the boondocks and show movies. And they had, of course, substantial libraries of anywhere from three to five thousand volumes each, plus, of course, all the necessities of supporting a staff of that size. Each center was manned by at least one American. Only one or two of them had more than one American. And the rest were all Japanese employees.

The task fell to me alone at first because I, at that time, was the only executive officer there. I was all by myself in what was then the Diplomatic Section of General Headquarters SCAP.

Shortly thereafter, however, I was lent a young man by the name of Joseph Womack, who was a junior officer in the Administrative Office of the Embassy. He became my assistant and was with me for the next year and a half. It was a great help to get him. He was very good. We soon began to acquire a very excellent Japanese staff, as the official take over date (April 29, 1952) approached.

We screened every one of the nine hundred Japanese employees. We made a decision to close the second center in Tokyo, so we eliminated the facilities that were there and kept just the one main center in the central part of downtown Tokyo. Initially, we kept all the other centers and eventually took on about eight hundred fifty of the Japanese who had been in the CI&E operation. And believe me, screening eight hundred fifty employees in the three months time was quite a job in itself. I should add that the treaty was supposed to have become effective early in February. And I arrived about the 21st or 22nd of January.

Fortunately, because I don't think we could have achieved the takeover in that short period of time, there were various reasons, which I don't need to elucidate here, for the delay in putting the treaty into effect, and it did not actually go into effect until the 29th of April. This gave me and Joe Brown, who was the Chief Administrative Officer for the CI&E operation, a chance to sort things out. We were able to take advantage of a lot of the so-called GARIOA funds (Government and Relief in Occupied Areas).

Although the Army didn't actually transfer this local currency to us, which had become available under the terms of our giving money to the defeated country and their putting up bank accounts in Japanese yen for the equivalent amount, they did, at my request, give us a great deal of purchasing power against the Army budget while the Army was still in control. As a result of that help, we were able to expand our library collections, get a lot of more modernized equipment, make considerable repairs or improvements at various centers and get them in good shape before we actually took over.

We also had to screen all the Japanese in the CI&E central headquarters in Tokyo. We did that and selected, I would say, more than two-thirds of them to come over and work in the operation that soon became USIS in Tokyo.

Another thing fell to our lot. Not knowing exactly how many people we would need to handle an operation of this size, which, except for Germany, at that time was by far the largest overseas operation USIA had overseas, Washington had set up one hundred thirty-five American positions for Tokyo. We wanted to hire quite a number of the people who had been in similar positions in GHQ SCAP CI&E operation, so we began selecting them. I would say that we probably selected about two-thirds of the Americans who were in positions there to come over to our operation. This included a number of the people who were in cultural centers around the country.

Every one of these people, of course, had cleared the security requirements of the Army back in '45, '46 and '47 when they came aboard with the Army. But by 1952, Senator McCarthy had begun his depredations on the American side. Fortunately, just as an aside, we were never afflicted with Mr. Cohn and Mr. Schine in the Orient. They preferred to dangle around Europe.

Nevertheless, about half the requests that we sent in for the transfer of these people from GHQ SCAP into our operation were turned down by Security. Security had become highly sensitized by the McCarthy raids, and if there was anything even remotely that might set off some accusation of "left-wingism" or immorality by Security (SY) definition or whatever it might be, they turned them down.

Q: So you undoubtedly lost a lot of good people.

SCHMIDT: We lost a lot of good people.

Q: Some that spoke Japanese?

SCHMIDT: Yes. Unfortunately, we didn't have anybody in the motion picture area, and we were about to embark on a rather large motion picture program, including production. We had bought quite a lot of equipment and were ready to start producing some of our own films. Security turned down the first two people requested from the Motion Picture Section of the Army operation that I wanted to get. Finally, they turned down the last one. I was really not only exhausted but utterly turned off by the whole process. I knew this man, and I couldn't see how in the world they could turn him down.

So I persuaded Sax Bradford, who was the head of USIS in Tokyo at that time, to send a telegram which I had drafted and which I felt was rather important. Sax was a bit skeptical at first, but I sent it anyway. (And he was pretty mad himself.) So the cable read, "Your security turn down of George Gierke (the third man in question) completes destruction of the USIS motion picture program in Tokyo. If you can't find some way to send this man over to us, will you please furnish someone of your own choosing?"

The net result of that was that they did renege. They cleared Gierke. He arrived late in 1952 and was our motion picture officer for the next two years until he had to go back to the States for reasons of health.

Well, on the famous day of April 29th, we were at last in business. We had covered or had filled I think somewhere in the neighborhood of eighty or eighty-five of the authorized American positions. We never did reach the full one hundred thirty-five. I'll get into that later.

Q: And when you say the famous day of the 29th, you mean when the treaty was signed?

SCHMIDT: That's when the treaty became effective. It had been signed the preceding autumn in San Francisco. Up to that time, the man who had the personal rank of Ambassador and was the head of what was then called the Diplomatic Section of SCAP was Bill Sebald, who himself was an old Japan hand. But because this was to be a new era, the Department didn't want Sebald to stay on after the Occupation had been terminated. So Washington sent out Robert Daniel (Bob) Murphy. The Department of State withdrew Sebald and sent out Robert Murphy as Ambassador. Murphy had made his reputation in the Foreign Service by being the man sent ashore in advance of the Allied invasion of North Africa in 1942 and early '43 and had negotiated the arrangements with the Vichy French Government representatives there, which facilitated the Allied landings.

He was quite a man and an excellent diplomat, although he himself didn't have any prior experience in Japanese affairs. They sent Sebald out the night of April 28th. Murphy arrived early in the morning by plane on the 29th and became our Ambassador. We went into business as businesses opened on the morning of the 29th as USIS Japan.

Murphy later wrote a fascinating, and best selling, book about his experiences and activities on this historic episode. It was titled Diplomat Among Warriors.

At that time, we had filled probably eighty to eighty-five of the one hundred thirty-five American positions that were authorized, and we spread our own people out all over Japan. Several of the people who had been heads of centers in various places around the country during the Army program were still there. A number of them remained in position for the next year to fifteen months, some of them decided they had had it and wanted to go back to the States. Whereupon we sent our own recruits, newly arrived USIA personnel, into the centers, very few of them had had prior Japanese experience.

Building up a program from scratch was facilitated, of course, by the fact that the Army had done a superb job, but we wanted to put our imprint on it. We wanted to start wide scale radio programming, a wide ranging motion picture program and to expand field programming generally.

Most of the Jeeps that the Army had been using for mobile units in the various centers belonged to the GHQ SCAP. The Army took back most of those Jeeps when USIS took over the Information program. We were faced with the necessity of replacing the returned Army vehicles with our own.

Replacement was another story. In Washington, USIE (through The Department of State) controlled large amounts of local currency in European countries. France had just gotten its automotive industry back into operation and were producing something called a Delahaye.

Q: This was a van wasn't it? Or no?

SCHMIDT: It was a van. It was a very large, cumbersome, extremely heavy van. And, of course, there was no power steering in those days. About half of our center directors in Japan were women, some of them quite frail. I had never seen a Delahaye. I didn't know what the darned thing looked like. So I said, fine, if we can get twenty of those sent out here as soon possible, please send them.

Well, it took about five months before they began to arrive. When the first three or four hit the pier in Yokohama, I went down to look at them and was appalled. I didn't know how in the world some of the women who were supposed to operate these things were ever going to be able to control them. One of the funniest pictures I remember is a little woman, who at that time was our Center Director up in the Japanese city of Niigata on the north coast of Japan. She was about five feet tall. I don't think she weighed more than ninety-five or one hundred pounds soaking wet. And to see her behind the wheel of this Delahaye trying to wrestle that non-power steering mastodon around was really something.

Also, their speedometers were all calibrated in kilometers. We were supposed to report our mileage in miles. That posed another small administrative problem. But we did operate for, I would say, nearly two years with these Delahayes.

In addition to that fact, they were the first products off the French assembly line when they began manufacturing. They weren't too well put together, and they began breaking down very rapidly. There were no facilities in Japan to repair Delahayes -- and worse, no parts! In fact, there weren't any facilities to fix much of anything in Japan at that time except those operated by the military. So we had our troubles. Eventually, over a period of my nearly four and a half years out there, we replaced all of them. But for the first year and a half or two years, we had to operate mostly with these monstrosities and then finally junked them. There was no market for them once we were ready to get rid of them.

As I've said before, the motion picture program was the hardest to get underway because it took more than seven months from the time we started operation until George Gierke got out to Japan. Therefore, we started rather slowly. However, George did produce some excellent movies. One of them particularly, called "The Arts of Japan," which was premiered in one of the major theaters in Tokyo in the Fall of 1954, was a masterpiece. It received accolades throughout the USIA program in many parts of the world. It was in its time a remarkably sensitive movie which was a tremendous hit in Japan. USIA in Washington thought it was great and gave all sorts of compliments to George for his success.

He produced a number of other films, but I think that one was the jewel in his crown. He was subsequently diagnosed as having throat cancer and had to come back to Washington. He was replaced in Tokyo by Harry Keith. Harry, who came out on 1953, was really a genius at producing documentary films. I'll talk a little bit more about him later on. But he did an excellent job. Some of the best agency films produced during those years were put out by Harry Keith in Tokyo. Japan had developed a fine mopix capability in pre-War years. Largely under the tutelage of Army personnel, it was, by 1952, recovering well. Thus, USIS could produce films on contract without having to build its own production facilities. We were especially fortunate because, with Army assistance during Occupation years, Japan had developed excellent color processing capabilities in Tokyo. Keith devised and directed, using Japanese talent and production equipment.

We were also blessed by the fact that, just as we were taking over from CI&E, Germany was winding down its immense HICOG operation. As the German operation phased down, a number of fine officers became available to fill our crying needs in Japan. Even though they did not have Japan expertise, they had obtained excellent grassroots informational and educational experience in their various roles in the German occupation and knew what they were doing.

One of the best of these was a remarkably talented woman by the name of Patricia van Delden. Pat often raised hackles among male officers, particularly her superiors, because she was smarter than most of them, and she was an absolute fountain of extremely good ideas, some of which weren't necessarily endorsed by higher ups when they were first suggested. But Pat was so good at logical argument that she usually persuaded her superiors (occasionally against their will) to

put her ideas into effect. This didn't necessarily endear her to her superiors, who felt that she was rather a pushy woman and perhaps was exceeding the bounds of her "proper place" in USIS. One of those who especially came to feel that way was USIS Director Sax Bradford -- but more of that later.

However, we made her the supervisor of the field program, which put her in charge directly of all the remaining twenty-three centers in Japan. I might add also that with so many Centers, we decided there ought to be a regional office in Kobe, where there was also a Consulate General, a regional office for the Tokyo area and a regional office for Kyushu.

Since we only had one center in Sapporo, on the Island of Hokkaido, we felt we didn't need a regional officer there and handled that center out of Tokyo. Of the three regional officers that we had was an old Japan hand, Walter Nichols, who had been born in Japan, grew up there until he was about fourteen or fifteen and spoke Japanese quite fluently. Walt was designated the Kobe Regional Officer. He had the largest number of centers under his general jurisdiction but was also operating under the supervision of Pat van Delden. I must say, I have forgotten the names of officers who were in charge elsewhere. I suppose if I had tried hard enough and tried to look up their names, I might remember. But at the moment, I do not.

Well, I said earlier that Pat van Delden was a virtual fountain of ideas. Since I am speaking about her here, I will at this point discuss one of her most successful ones, even though it developed in 1953 and thus is a bit out of sequence here in the discussion of what constituted the formative stage of USIS/Tokyo. This was the highly popular and effective summer program that came to be known and recognized throughout a good part of academic Japan as The Nagano Seminar. Although a few others of us assisted in developing the final venue and format, Pat conceived the idea of staging a seminar on American literature in some quiet, smaller city of Japan, away from the distractions of Tokyo. We would select a manageable number (twenty-eight was decided for the first summer, and thirty-two thereafter) of top Japanese professors of English and American literature, support them for a full four weeks of study and discussion under the guidance of American professors of literature and generally exchange ideas with them on a wide range of subjects both during and informally after seminar sessions.

We selected the charming and historic cultural city of Nagano, located about one hundred miles northwest of Tokyo in a softly beautiful setting at the foot of the Japan Alps, which includes, near its (then) northern outskirts, one of Japan's lovelier and more spacious Buddhist temples. From the USIS/Japan budget, we paid the participants' complete board and lodging for a month in Nagano's two top-class Japanese *ryokan* -- in those times, not an overly expensive undertaking. Applicants for the limited slots greatly exceeded the number of openings USIS could offer.

In the first year, we relied on competent American professors who were teaching American literature in Japanese universities to be moderators or discussion leaders since it was too late in the spring to obtain name persons from the U.S. through the Exchange of Persons program. We brought the moderators and the professors to Nagano at the beginning of August. I took two or three of our administrative office Japanese employees up a few days ahead of the opening and went up myself to handle the logistics of getting the program under way. The Japanese stayed

throughout most of the seminar.

In the years after 1953, the Exchange of Persons office in Washington furnished name figures of American literature to perform as discussion leaders at the seminar. The most famous of these was William Faulkner, whose participation in 1955 made headlines all over Japan and whose visit provided one of the most memorable sets of events in my career. But that is a story for later in this interview.

The seminar paid off handsomely in the spreading influence the professors exerted on their students and the publicity the program gave to the American academic reputation. Unfortunately, USIA's 1957 budget disaster, occasioned by the animosity of then Senate Majority Leader Lyndon Johnson for newly-nominated USIA Director Arthur Larson, so curtailed Agency funding that the seminar was dropped and has never been reinstated.

Q: There was a motion picture made about his visit also, wasn't there?

SCHMIDT: Yes, there was a motion picture. USIS made a film up there which was produced by Harry Keith, named, as I recall, "William Faulkner in Japan." It was a great hit and was extremely successful in our Japan motion picture program later on.

I will talk a little bit more later about Mr. Faulkner's visit, which had a number of interesting and often disturbing sidelights. I want to go back now to an earlier period and talk about the development of the Information and Education program in Japan after it became a USIS operation.

I went ahead of our USIS program story in Japan because I wanted to say a few words about Pat van Delden and about some of the other people who participated in building what I thought was one of the finest programs with which I've ever been associated.

So now let's resume near the beginning. One of the developments that provided our first small crisis in the program was that our Tokyo cultural center, located right in the heart of downtown Tokyo, just off the Ginza, was about to be reclaimed by the Japanese. As soon as the Occupation was over, the Japanese began to pick up a little courage and to express their desires as an independent country, which is not only natural but I think desirable. And they wanted our center building.

So we were faced with the necessity of finding a new location. Tokyo had been to some extent rebuilt. But it was still a partially-ravaged city, even in 1952. Vacant space for the type of operation that we needed was not readily available.

So our Director, Sax Bradford, went to see the Foreign Ministry to determine what kind of help they could give us in finding a location that would be an adequate substitute. They had their troubles. I don't know whether the building that they finally came up with as a suggestion belonged to the Foreign Ministry or whether it belonged to the Mombusho, the Ministry of Education.

Anyway, they said we could have this building, providing that we would rehabilitate it, that it was in bad repair because nothing had been done with it through the whole period of the war and even the Occupation. One favorable thing about it -- it was over in the Kanda district of Tokyo, which is not far from Tokyo University. It's also near the location of many art and book stores frequented extensively by student populations, which we were trying to reach and many of whom were radically inclined. So we thought that would be a good location.

Well, Sax went over to look at it and discovered that the whole thing was occupied by -- I don't know how many, we never did count them -- a substantially large number of students from Manchukuo. The Foreign Office was appalled. They didn't know these students were still in Japan -- especially in Tokyo. The Japanese Government brought them over in the period shortly before and during the early part of the war as exchange students under the Japanese exchange program. I don't know how many people will remember that Manchuria had been taken over by the Japanese Army in 1931-32. The Japanese civilian government shortly thereafter broke it off from China and set it up as a puppet state of Manchukuo.

The Japanese were interested in getting as many as they could of the university students over from Manchukuo to be educated in Japan. Rather large numbers were brought over, and many of them were housed in this building, which the Foreign Ministry had just told us now, after many years of use, that we could have. The situation soon turned into a comedy. There were at least a score of ex-students there. As I say, we never counted them. But there were at least a score of them. Most of them had either married or at least were cohabiting with Japanese women or with Manchurian women students who had come over. And here they were after five years of war and six and a half or seven years of Occupation, still living in this place unbeknownst to the Foreign Ministry and/or the Ministry of Education, both of which were embarrassed to find out that they were still in this building. What was even more unnerving was that this group was at the heart of one of Tokyo's black market operations.

We were disgusted at the appearance of the building, which would have cost so much to rehabilitate that we decided against using it. I never did find out what happened to the long-occupying Manchurian students; presumably, the Ministries found some way to clear them out and perhaps sent them back to Manchuria. But that's the last we heard of them.

Shortly before the center search episode I just spoke about, Tokyo, and all Americans then living there, experienced something that few if any of us had anticipated. It was just three days after the Peace Treaty went into effect -- May Day, 1952. The MacArthur Occupation had, among other things, made a point of writing a new law code governing labor and allowing the unions the sort of freedom they had never enjoyed under the former Imperial Government. The new freedom had allowed a fairly substantial infiltration of Communists into the labor unions, and the majority of the union membership was at least partly leftist in orientation.

Each May 1, since the Occupation began, the unions had been staging May Day parades and celebrations. I am not sure what the Japanese Government expected for this first May Day outside the restricting confines of the Occupation. Probably more militancy than had been in evidence before the Treaty freed up the country but also probably not what erupted. When the parade began, I wasn't up on the roof of our building, the Mitsubishi Shoji Building near the

Imperial Palace moat, and in the heart of Tokyo. The first I knew of the mounting riot was when one of our officers came into my office and told me I had better get up on the roof to see the rioting.

It was frightening. None of my past experiences in Japan had prepared me for seeing the Japanese perform like that. The police were clearly unprepared. If there had been any semblance of a parade to begin with, it was out of hand by that time. Mobs were running about with no apparent destination in mind, carrying (obviously inflammatory) banners, attacking anyone or anything they could see for no apparent reason. The police were outmanned but doing the best they could to beat back attacks either against themselves or hapless bystanders. Fires were being set. Automobiles overturned. The mob grew in violence and numbers as the afternoon wore on. By around 3:30 p.m., there was a sea of humanity rolling all along the moat and onto the outer plaza leading to the entrance to the Imperial Palace.

Our then Cultural Attaché, Margaret Williams, I learned later, had decided when the rioting seemed to be building that she had better get home while flight was still possible. That proved to be a mistake. Her driver thought he could get through the mobs by detouring off the main streets through the narrower passages in the downtown theater district. By the time they reached that street, parts of new mobs were coming down toward them from the opposite direction. The crowd suddenly attacked Margaret's car with stones and long wooden poles, pulverizing, but fortunately not shattering, windshield and car windows and extensively denting the car. By some miracle, perhaps police arrival, they finally managed to get through and tore home. Several other Americans had similar experiences and suffered extensive car damage. There were no severe American casualties, but this sudden explosion of violence toward Americans, who had never experienced much but gratitude from the local citizens, really shook up the resident yankees. It sure shook me. Ultimately, the riots were quieted, but it was a long time before a lot of us could feel the same sense of friendliness and security we had known earlier.

It was not long after my arrival in January of 1952 that I began to sense a cool aloofness in Sax Bradford's attitude toward me. There was no overt hostility, simply an attitude of superiority and almost condescension. I began to feel that he considered anyone in an administrative assignment as somehow less intelligent or intellectual than officers holding other substantive positions.

Later developments and incidents, which I'll mention at the appropriate points in this interview, confirmed my suspicion, but one small episode reinforced my belief early on that I was correct. At a small informal social gathering we both attended one evening, he began a conversation with me and a few minutes later, rather abruptly without any seeming relationship to what we had been discussing, began to tell me about a time a few years earlier when he was heading a delegation to some conference in Mexico City. A State Department administrative officer had been assigned to the delegation to handle logistics and finances. Sax had ordered this officer to pay a rather substantial amount of money for something, the nature of which I have forgotten. Anyway, the officer argued with Sax that the expenditure was a violation of both Departmental regulations and Federal appropriation language, and he couldn't legally pay it. Sax insisted, and according to him, the officer became very emotional about it. As a result, Sax sent a rough telegram to Washington. The officer was recalled and presumably reprimanded. The incident was told clearly to illustrate the single-minded blindness of the administrative type to matters of

higher importance.

Although I never mentioned the fact to Sax, it happened that the man in the story had been a classmate of mine at the Harvard Littauer Graduate School some thirteen years earlier. I recalled that he had suddenly left Government about the time Sax was describing. I had thought it strange then because he already had fifteen years invested in Government service and so far as I knew, hadn't any intention of resigning. He returned to his hometown of Denver. Later, I learned that he had had a nervous breakdown, but recovered. It may not, of course, have had any relation to the incident described by Sax, but again, it might.

Not too long after that, another USIS officer brought me a copy of a memo written by our Cultural Attaché, Margaret Williams, to Sax. I don't know how he got it, but the subject was interesting. She was complaining to Sax that "Our Executive Officer" was assuming excessive responsibilities in the area of program priorities and resource allocations and wondering if it was right for an administrative type to "meddle" so deeply in substantive matters.

There were, of course, grounds for her contention that I was deeply into program. I had been at first surprised and later disturbed that Sax seemed to be little concerned with the details of USIS program operation. He had set up his office over in the Chancery. In the early days of USIS operation, all of USIS, except Sax and his secretary, were in the Mitsubishi Shoji Building, which was more than two miles away on the edge of the financial district near Tokyo Station. Later, USIS, again except for Sax, moved to what was designated the Embassy Annex, the Mantetsu Building, about two blocks from the main Embassy building. If I hadn't been living in the same Embassy residential compound, I would have seen him only infrequently. He almost never came down to USIS offices, and staff meetings were not regularly held.

The date for our assumption of the Army's CI&E program was getting closer. Our budget and program responsibilities were about to take a quantum leap. Sax seemed utterly complacent. In the absence of any direction, I began drawing up organizational and staffing plans, as well as proposed resource allocation by program unit. At our occasional staff meetings, I would present these proposals. Sax seemed to accept them without question. Having been accustomed in Washington to considerable program officer participation in budgetary allocations and other administrative decisions, I found this attitude strange. As spring and summer progressed, I began more and more to consult directly with newly-arriving and already on duty unit heads concerning their program plans and resource needs and making advance budgetary allocations accordingly. At staff meetings, I told Sax what I was doing and received his okay, but no comment. As a result, before long, all the officers, except Margaret Williams, were coming directly to me to discuss their plans and requirements.

An even more peculiar and upsetting development took place during the summer of 1952. Washington sent out a request to draw up a complete detailed program plan of operations together with cost tags attached, descriptions of goals and methods of reaching them. This was far more than the standard budget document of those days. It was what I suppose was the forerunner of the country plan and management by objectives approach that was used in later years and was to apply to our newly-born USIS operation in fiscal year 1953. It seemed to me that it was a document that screamed for PAO participation. Sax treated it as something beneath

him that he should sign when the peons had finished it. By this time, Pat van Delden was aboard. She and I took the initiative, consulted all the program heads, and undertook to write an extensive plan that ultimately ran to over one hundred single-spaced typewritten pages.

When we had it in final draft, I sent it to Sax for his okay. He read and signed it, sending it to Washington without change. A few days later when I met him in the Chancery, he said to me, "Those guys did a pretty good job on the program paper, didn't they?" I had planned and written almost the entire document. There was no recognition on his part that I had had any part in it. It's an understatement to say that I was let down.

Q: You mentioned earlier that you would discuss some other parts of the USIS effort getting under way in the early days of USIS/Japan.

SCHMIDT: Yes, now I want to get back to some of the other program activities that were under way in spring and summer of 1952. Particularly, let me talk a bit about the radio program. One of the few men from CI&E not disqualified by Security was Bill Meredith from their radio shop. He transferred to us immediately after April 29, 1952, as did all the Japanese employees whom, during the late winter months, we had already screened and decided to hire from the CI&E. Meredith was a capable man but not overly energetic. We needed more spark.

A couple years before, Sax had met Henry (Hank) Goshō, who had worked on some projects for VOA in New York. Hank was unique. He was an American Nisei whose father had sent him to Japan at pre-high school age to be educated in Japan. Hank went through middle and higher school there and the first year or so of college. Seeing the probability of oncoming war, his father brought him back to the States on one of the last ships coming to America before Pearl Harbor. Hank's Japanese schooling had made him bilingual in Japanese -- probably the only American in the Information program with that qualification. He also had acquired extensive radio experience. However, because his wife was not yet an American citizen, she couldn't accompany Hank to Japan, and Hank wouldn't take a regular assignment without her. Sax arranged for him to come on a six month TDY, and he provided the spark that got the USIS Radio program going. His wife, Jeanne, finally got U.S. citizenship, and Hank later returned for a regular assignment that lasted several years.

At the time the Peace Treaty became effective, and for some years thereafter, Japan had no national radio network. I don't know exactly how many stations there were then, but I would guess there may well have been two-hundred or more in various cities and towns around Japan. Most of them had a very weak signal -- not more than fifteen or twenty watts. Only a few had even one hundred watts, and I doubt if any were as powerful as five hundred or one thousand, though I'm not sure. Their low power severely limited their range, so stations could proliferate without interfering with one another's frequencies. They wanted to broadcast several hours a day but had little capacity to produce programs and so were frantic for material to fill broadcast time. This gave USIS a tremendous opportunity.

Under Hank's planning, he and a couple Japanese employees traveled frequently around the country, establishing a large and enduring clientele of radio outlets delighted to use USIS-taped material. The response was enthusiastic. USIS began an operation that eventually (when we

acquired enough tape dubbing machines to satisfy the demand) saturated the Japanese airwaves. I don't want to describe this work in detail. Hank himself will be interviewed and give a thorough explanation of what USIS accomplished. It is enough here to say that this sort of saturation went on for several years, until the Japanese finally got back into network coverage. Then the USIS role wound down and terminated.

Toward the end of my first year in Japan, Bill Meredith went home and was replaced by Victor (Vic) Hauge. In late 1953 or early '54, Hank came back for a regular tour, worked closely with Hauge during Vic's years and remained for some years after Vic's return to Washington. The Radio effort at its peak demanded an ever-increasing amount of USIS resources. Besides, we were being cut back from our early affluence. When we first took over from CI&E, our annual budget was something like \$7,000,000 or \$8,000,000, which was a tremendous budget in the early '50s, though not so much these days. Earlier, we had been pretty well able to fund almost anything that we wanted to do. But we were beginning to get progressively restricted, and even though we were by that time closing many centers (a situation I'll discuss later), we still were running rather tight on money.

I managed however to reprogram things enough as we gradually closed centers so that I could give more money to the radio operation. Vic Hauge performed wonderfully. We had probably an average of two or three hours, and sometimes more, a day on almost every radio station in Japan for a period of several years. A large amount of it was music. I think, for better or for worse, we probably played a fairly large role in indoctrinating the Japanese on American popular music. But in any event, there were other programs that carried more program freight than that. The fact that we had this opportunity was heaven-sent. Vic and Hank did a tremendous job in satisfying their requirements and getting programs on the air for the Japanese at a time when every radio station was receptive.

Q: And you had the staff and facilities to carry it out?

SCHMIDT: Yeah, we had a large radio staff. We had three or four Americans. And Hank was a god-sent at a most critical stage. He had incidentally served in the China-Burma-India theater with the Army and had therefore been rehabilitated as an American citizen. Well, actually I don't think he had to be because he went back from Japan -- went back to the States just before Pearl Harbor -- and therefore was not in Japan like many of the other nisei who temporarily lost their citizenship because they were in Japan during the war and naturally worked for the Japanese war industry, the only way they could survive.

He came with a tremendous amount of experience. He knew Japan intimately. He knew radio perhaps even better than Vic Hauge did. He had this bilingual capability in Japanese and was a superb negotiator with the Japan radio stations. He could always deal with them as if he were a native. We also had superb, highly-intelligent staff, not only among the Japanese who were highly-skilled, but among our two or three top Americans in the radio section. We were also without the sort of competition that would have made such success impossible. At that time, television had not started. It was just beginning to come into Japan when I left in 1956. I don't think there was more than one station in Japan, and it broadcast a very limited amount of time. There probably weren't more than one hundred receivers in the whole country. None of them

were owned by individuals. They were all in the hands of restaurants or businesses or something of that sort. And people, of course, were getting very excited about it.

Q: And before you left in 1956, weren't you acting Country Public Affairs Director?

SCHMIDT: No, I had been acting before that, and I'll come to that shortly. But by the time I left in May, 1956, Joe Evans had come to be PAO, and Art Hummel had come out to be deputy PAO.

Q: Art Hummel, who later became ambassador to Pakistan and China?

SCHMIDT: That's right -- as well as to Burma and Ethiopia. He was Assistant Secretary of State for Far Eastern Affairs for a while. Since you've asked the question, however, I'll go ahead and discuss that part of my Japan experience now, although it involves jumping ahead in sequence nearly three years. Sax Bradford had been named to a new, powerful position in Washington in late 1953. His replacement was Willard Hannah, who, in mid-year 1954, resigned. Ken Bunce had been named Acting Director when I was on home leave in the summer of 1954, and Willard Hannah resigned. Ken remained in that capacity through the balance of '54 into the early spring of 1955 when he came to the end of his tour. By then, he had spent so much of his career in Japan he felt he didn't want to return, and he went back to the States. He later became PAO in India and never did return to Japan in an official capacity.

I became Acting Director at that time and was Acting from either April or May, whichever it was -- I think late April -- until Joe Evans and Art Hummel arrived in October. Several rather significant events occurred during my short stay on the "throne."

I'll come back a little later to the William Faulkner visit to Japan, which in time preceded the exhibit. Commercial atomic energy was just coming into existence. There was only one functional reactor in the world then, the one at Shippingport. The Eisenhower Administration wanted to make the world aware of this great new power source and America's leading role in its development. I believe our exhibit in Japan was the first ever undertaken by USIS. By the time the exhibit opened in November, Joe Evans and Art Hummel had already arrived, but the staging period all took place during my brief reign. Frances Blakemore, who was our USIS artist, a very creative and imaginative woman, was the chief force in planning the entire show, although ably assisted by a skilled Japanese staff and "Tom" Tuch who came out on TDY from the Agency's Exhibits Office. Tom had been in on the ground floor of the Washington planning for these shows and was a great help.

Atomic energy was such a brand new means of power that people could really not comprehend its potential nor all the dangers of atomic generation of electricity.

The Japanese were fascinated, but they were also scared of atomic energy anywhere except -- or maybe even -- in a reactor. However, at that time, they thought it might be a good solution to some of their own power problems. They were hungry for information about it.

A man by the name of Shoriki, who was one of the principal developers of and then editor of the

newspaper *Yomiuri*, which had under his direction become one of the two most powerful papers in Japan, wanted more than anything else to be the first head of Japan's Atomic Energy Commission.

Realizing this, our information section prevailed upon him and his paper to sponsor the exhibit. He enthusiastically agreed and saved USIS tremendous expense. *Yomiuri* owned or controlled a large auditorium, which Shoriki placed at USIS disposal to house the show. He also put a lot of money into it, furnishing much labor and material. Of course, Shoriki was present at the exhibit opening and got all sorts of accolades for having sponsored it. He later did become the first director of Japan's Atomic Energy Commission.

My first meeting with "Tom" Tuch took place at that time. Tom was then a young junior officer in USIA. He was working in the exhibit section in USIA in Washington. He came out on TDY and was extremely helpful because he had a lot of information about what Washington wanted to get across by means of the exhibit, and he stayed for about two months until we got the exhibit well mounted. Then he returned to Washington. I don't believe he was there when the exhibit actually opened, though my memory is not clear on this point. But he was there for a good part of the summer while it was being put together and was highly instrumental in its successful conclusion.

So Shoriki realized his ambition to be the first director of the Atomic Energy Commission in Japan. The exhibit was a tremendous success. It stayed open somewhat longer than had originally been planned because it was so popular. I don't know how many thousands of people went through it. When Joe Evans and Art Hummel arrived in late October, I, of course, returned to my official position as Executive Officer and turned the program back over to them. I remained until the spring of 1956, at which time I was transferred to Brazil. Before I leave this discussion of my short period as Acting PAO, Japan, I would like to speak briefly about two other events which occurred which I think were very instrumental in making the Japan programs a success in those early years and which also gained a certain degree of notoriety with a bit of humor and dismay on occasion.

The one was the visit of William Faulkner as the person who was sent out from Washington under the exchange of persons program in 1955 to be the moderator of the Nagano Seminar. We had thirty-two Japanese professors of English at that meeting. The competition for participation in that year's session because of Faulkner was tremendous. He had won the Nobel Prize a few years before and was a legend in Japan among those who knew anything about literature. His coming was highly heralded.

I'll not go into all the details of Mr. Faulkner's visit, but nobody in Washington had told us that he had trouble with alcoholism. When he arrived and got off the plane after a twenty-two hour flight from the States, he obviously was under the weather. I was in Nagano handling the first stages of logistics and setting up the arrangements for registering all the professors and getting the seminar ready to operate, taking care of the hotel facilities and what not. I got a call from Tokyo saying, well, you better come back...Mr. Faulkner is here, and there are some problems.

So I left Nagano and got back to my office the next day. Leon Picon, who was our Book

Translation Officer and Assistant Cultural Attaché, had been designated as the man to meet Faulkner. Leon was going to be the resident American from the Embassy at the seminar in Nagano because of the fact that he was deep into the book program.

Well, Leon was pretty resourceful. He, of course, had come out in an Embassy car. When he got Faulkner off the plane and realized his condition, he managed to get Faulkner back to the International House, which a few years earlier had been established under Rockefeller Foundation auspices. John D. Rockefeller III had made sort of a career of charities and ran the Rockefeller Foundation. He was a Far Eastern specialist himself and had given a large grant of money to the Japanese government and the Japanese cultural operations to set up this International House, which still exists and is an extremely important part of the cultural and exchange program with America today. It is completely independent of the Embassy, but the PAO sits on the board of that center while he's active in Tokyo, and for years it housed the Japan Fulbright Commission offices. The House has hotel-like facilities for visiting cultural personages staging cultural conferences, providing study space for visiting scholars, etc. It's sort of an exclusive hotel arrangement. They even have their own dining room.

Leon got into a conversation with Faulkner, who, despite the fact that he was quite inebriated, handled his liquor fairly well. He was just a charming person, a real Southern gentleman, polite, gracious, absolutely a delightful individual. But, of course, somewhat slurred in his perceptions when he was having this difficulty.

He finally confided in Leon, who had a great capacity to establish rapport with people quite quickly. On the way in to the International House, he virtually broke down and almost tearfully said that he did have a problem with alcohol, and he was going to rely on Leon to keep him at least relatively sober so he wouldn't disgrace himself. So Leon said, okay. By this time, they were on the Leon and Bill basis. He said, "Why don't you, Bill" -- Faulkner is Bill -- "Why don't you let me have any liquor you've got with you?"

He said, "I'll do that."

When they got to the International House, he opened a suitcase which was full of bottles of gin and gave all the visible bottles to Leon, who took them away and sort of tucked him in for the night. Leon said, "Well, we've got a program starting at 9:30, when you have an appointment tomorrow morning with the Ambassador. I'll come by and pick you up about 9:00 or a little before in the morning. See you then." He then took off with his armload of gin bottles.

Leon went back to pick Faulkner up the next morning, and Faulkner had obviously secreted some liquor elsewhere in his luggage because he was once more pretty well under the influence and was stark naked, wandering around the halls of the International House in the altogether. Leon got him back in his room, and they got him dressed. Leon phoned me. By this time, I was over in Ambassador Allison's office waiting for them to arrive. I think the appointment was actually at 10:00. This was about 9:30. He called me in the Ambassador's office and said that he was having a little trouble, but don't worry. They would get there.

Faulkner and he arrived about fifteen minutes later. The International House is not that far from

the Embassy. Faulkner had sobered up a little bit but not all that much, and he plunked down in a great big overstuffed chair, not very communicative. The Ambassador's number two secretary, a young girl who was in her first overseas post, came over and said -- very awed at having Mr. Faulkner, a Nobel Prize winner there -- "Mr. Faulkner, can I get you a drink?"

And he said, "Yes."

And she said, "What would you like? Water?"

He said, mischievously, "No. Gin."

The poor girl was completely nonplused. She retreated in confusion, but she did bring him a glass of water.

At about that time, the Ambassador showed up at his outer door and said, "Okay, come in, Mr. Faulkner. Bill couldn't get out of the chair. So Leon and I hoisted him out, and each one got under an armpit. We guided him into the Ambassador's office and sat him down. The interview proved to be a disaster. The Ambassador didn't immediately recognize that he was almost incommunicado, and he began directing a few questions at him to start the conversation. Faulkner's responses were at least uncommunicative, usually about two or three words, or yes or no or something like that. And it soon became obvious that he wasn't going to be able to make a successful interview at all. I could see the Ambassador getting very fidgety.

So I finally said, after about ten minutes, "Well, Mr. Ambassador, we thank you very much for your interview. We'll leave now because we don't want to take up more of your time, and we'll see you this afternoon." (The Ambassador had agreed to give a party for him at the residence to which we had invited quite a large number of the American press, some of the cultural big wigs of the Japanese government and some from the universities.) So again, Leon and I hoisted him out of the room, and we got him over to the Embassy annex where the USIS offices were and into the office of Don Ranard, the head of the Exchange of Persons Program.

Well, Bill was supposed to speak to the Foreign Press Club at 12:30 that day and didn't look like he was going to make it. Leon and I stayed with him trying to get him sobered up in the meantime. However, I wasn't sure he was going to make it at all. He kept passing out. So I got hold of my wife by phone. She was a nurse. She came over with a lot of antidotes for fainting and that sort of thing, plus our air mattress, which we blew up and put down on the floor and got Bill stretched out on the mattress.

Meanwhile, Leon went down to the Press Club and tried to pacify the press. As 12:30 approached, when he was supposed to speak, everybody wanted to know where Faulkner was. Leon kept phoning back reporting on the situation, and we kept reporting to him that we weren't sure Faulkner was going to get there. But Faulkner kept saying, yes, I'll do it. So we told Leon well, maybe we'll get him down there, but we'll be a little late.

Finally, about 12:30, when he was due at the Press Club, he sat up straight on the mattress, but promptly threw up all over himself and all over the floor. And that immediately, of course, meant

he wasn't going to get to the Press Club. So I got hold of Leon, who had the outline of remarks that he had made for Faulkner to speak from. Faulkner was terrified of speaking anyway. He hated public speaking. And Leon had to give a talk.

The Press Club audience was infuriated. There was an article that appeared in *Time* magazine the next week saying that Faulkner had chickened-out and had come inebriated to Tokyo and hadn't been able to perform. And that while the Press Club was filled with people who'd come in from all over the Far East to listen to him, Faulkner "was bedded down with a nurse somewhere in Tokyo" which was, I guess, literally true, but not the implication that they meant -- my wife being the nurse.

So anyway, we had to take him up to our apartment in the Embassy compound. Leon went up and got a fresh set of clothes for him up at the International House. We got him in the shower, washed him off, put him to bed for an hour or so. Then we got him up around 4:00 p.m. He got dressed in his fresh clothes and really had come out of it pretty well by that time. We had a lovely conversation with him. Wonderful guy when he was sober. My children came in, met him and got his autograph. He was gentle, gracious, kind.

We got him up to the Ambassador's in time for the reception, around 6:30. I told the waiters up there, "Now, don't give him anything alcoholic to drink." I had no sooner gotten him into the receiving line when the waiter handed him a very tall and strong gin and tonic. I glared at him, but I didn't want to make an issue because the guests were already coming in. I made signs not to give him any more. But Faulkner began bowing over the hand of every woman who came in -- and bowing very low in his Southern fashion, and kissing her hand. About that time, another waiter brought in another gin and tonic. I watched Bill carefully. He hadn't completely recovered from the morning, so I knew that this was going to be damaging. But I couldn't take it away from him. Every time he bowed, he bowed lower and lower. I was afraid he might collapse face-forward on the mats. And as soon as all the guests had arrived, or most of them, I got him out of the line, and we put him over at a table nearby. This was in the main reception salon of the Ambassador's residence. Several tables were placed around the hall.

Mrs. Allison came over and sat down and started to converse with him. By that time, they'd given him another gin and tonic, a brand new one. Fortunately, at least he was by this time in conversation with Mrs. Allison and wasn't drinking it. Well, I don't think they'd been talking more than three or four minutes when Mrs. Allison asked him a question. Strangely enough, although he was a little tipsy, he was still quite rational. He was explaining something, and suddenly he swung his arms open in a wide gesture, knocked over this tall gin and tonic and it all drained over into Mrs. Allison's lap. She was wearing a brand new, specially tailored Chinese brocade that the Ambassador had ordered for her from Hong Kong and had been done by her dressmaker. The drink splashed all over her new suit, cocktail suit. Obviously, she was very angry, and so was the Ambassador. All in all, it didn't make for a very successful party.

We had to stay a while. But I finally got Faulkner out fairly early. The party broke up. We took him out to the Army Officer's Club and fed him a good meal. That sobered him up a little bit, and we took him back to the International House.

The next morning, the Ambassador sent me a letter by courier saying, "I want to know what idiot in USIA or the Department of State ever thought of sending this lush, this drunk over here to participate in a nationally-advertised seminar. I want you to give me one good reason why I shouldn't put this character back on the next plane to the United States and cancel his whole visit." That was about 10:00 in the morning.

Of course, all the professors had arrived at Nagano, waiting for the great personage to show up. And I debated what in the world to do to satisfy the Ambassador. Finally, about 3:00, I wrote him a letter back. I said that I was very sorry this had happened. In his letter, the Ambassador had said, "I never expected that he would embarrass me and my wife to such an extent, et cetera, et cetera." I wrote back and I said I was very sorry all this had happened, that I had no idea that anything like this would occur and I had thought I would be able to deliver to him a perfectly sober Nobel Prize winner. But I felt that we couldn't send him back now and terminate the program as far as we were into it -- that I thought we could keep him under control, and he would make a great contribution.

I hadn't heard anything back when the work day ended. It happened to be the day on which the Ambassador was giving a big party for the Embassy staff. He did this two or three times a year so he could get closer and more familiar on a friendly basis with his staff.

The Embassy population was pretty large, and when I got there, the party was already well underway. I could tell by the decibel count that several drinks had already been served. When I got up to the party, which was being held on the roof garden of the apartment in which I was living in the Embassy compound, the Ambassador was there in an aloha shirt and in a fine mood. He had another drink in his hand. I went over to him, wondering what in the world I was going to get as a response. And he said, "Lew, you were right." He said, "I lost my cool. I'm sorry. The guy can stay. But I'm going to hold you responsible, and he better perform all right."

Well, Leon managed to keep Bill under control, not always, but for most of the time he was a relatively sober guy. His performance in Nagano was tremendous. The Japanese kind of like drunks anyway, especially if they're artists -- celebrities of one type or another. He was vastly successful in making a tremendous impression on the Japanese who were there. He got excellent press, as we mentioned earlier. Harry Keith stage managed a picture called "William Faulkner in Japan," which was beautifully done. It was narrated by a then JOT, who now is the PAO in Tokyo some thirty years later, Jack Shellenberger, who had been a radio announcer before he came into the USIA program. All in all, it was a tremendous success.

After Faulkner had returned to the States, we were having a staff meeting -- the first Ambassador staff meeting after Faulkner's departure. I reported that the Faulkner visit was over and that it had gone very well, that we had had a great response, that the press reports were all favorable, and the Japanese were enchanted and what not. So Andy Kerr, the rather cynical number two man in the Economic Section said, "Well, was it because he really was all that good? Or was it just because he had a big name having won a Nobel Prize?"

I didn't think very fast. And I said, "Well, it was a little of both. But anyway, his was an effective program." Afterwards, I thought what I really should have said was, "Andy, you're missing the

whole point. It doesn't make any difference what the reason was. The fact that he got that kind of coverage and made that kind of an impression was the important thing. And it was a tremendously successful program." But I wasn't quick enough on the trigger to have said what I ought to have said. At least it *was* a successful program.

A second thing that I would like to mention just very briefly: Margaret Williams had long since returned to Washington. We had as our cultural attaché at that time a man by the name of Glenn Shaw. He had been an educational missionary in Japan and had lived practically all his adult life, except during the war, in Japan. He spoke Japanese fluently. His accent wasn't all that good, but he was perfect in his syntax, and knew Japanese like a native.

He also was absolutely steeped in Japanese culture. He probably knew more about Japanese cultural arts than the Japanese did themselves.

On one occasion, in the -- I think it was the spring of '55, some sort of a cultural fair was being given by the Japan prefectural office up in Kanazawa. A lot of people gathered up there. At that time, the Japanese Communist party, although not a legal party, was still very active in Japan, and they had all kinds of representatives at the fair. They had infiltrated the organizational committee and managed to get much of their material included in this cultural program.

We hadn't realized the extent to which they were infiltrating. Our branch PAO, Paul Bethel in Nagoya, who at that time was responsible also for managing the north coast part of our USIS operation, had gone up to attend this fair. He soon realized what was happening, so he sent an emergency call down to Tokyo to get Glenn Shaw up there. Glenn went up and extemporaneously gave a series of discussions through the afternoon citing all sorts of Japanese cultural achievements, bringing down the house, and thus very effectively counteracting the communist surge. There was nobody on the communist side that had the kind of background that he had or the knowledge of Japanese history. Since then, I think the Russians have trained many more people in usable Japanese. But at that time, they didn't have them. So Glenn largely rescued us from an otherwise unhappy and overmatched situation. He also received more press coverage than the left wingers did.

Well, I jumped way ahead of the chronological story, but I now will come back to late 1952. The Director of IIA, or I guess it was by this time the General Manager, had changed again. The new man was one of the Compton Brothers. Two of them were a famous scientist and a university professor. The third was a rancher, I believe in eastern Washington. There is a story, perhaps apocryphal, that when a new General Manager was to be appointed for IIA, the intent was to appoint either Arthur or Karl, the physicists. By mistake, the third brother was called, accepted, and could not be dismissed after the error was discovered. I can believe it. I do not recall this Compton's given name, but in any event, he arrived with several other officers from IIA for a Tokyo visit just before the November election in 1952. He asked for an appointment with Ambassador Murphy.

I have mentioned Murphy earlier. He was a brilliant man who didn't suffer fools easily. The Ambassador agreed to see Compton not in his office but in an anteroom at the residence at about 8:00 a.m. I don't recall why I was the one who escorted Compton to the Residence. (Sax was still

PAO, but this must have been the time he was on home leave. However, Olcott Deming, his deputy, was in Tokyo.) Compton appeared to be absolutely stupid. He talked discontentedly, made childish remarks, couldn't address a significant subject, and worst of all, seemed to have no idea what he should say to the busy Ambassador, of whom he had requested an audience. I could see Murphy getting edgier and edgier, and finally really angry. Somehow I managed to make an excuse to conclude the interview and get Compton out. Murphy must have thought poorly of the caliber of IIA if he judged it by its then chief.

Compton wasn't through with his absurdities. A couple days later, Eisenhower was elected. Compton called an ad hoc meeting of the top USIS officers and told them that, "Don't worry! The election of Eisenhower won't make any difference. I'm a life-long Republican, and I will be kept in my job." In less than a month, he was dismissed.

From Tokyo, he and his wife, who accompanied him, went to Southeast Asia. A conference of some sort was being held in Rangoon, which Compton was to attend. While he was conferencing, some of the Burmese employees tried to entertain Mrs. Compton with a sightseeing tour that included Burma's famous and historic Golden Pagoda. To make conversation, one of the Burmese ladies asked Mrs. Compton how she liked it. Her reply: "Yes, it's lovely, but don't you think it is rather extravagant for such a poor country?" That story is not apocryphal.

I'll back up now to the point where Sax Bradford went on home leave some months before he became the Assistant Director of USIA for Far East. When he left, we were already under pressure from Washington to start cutting back on the size of the Japanese program. He realized we would have to close several -- at least eight, and probably ten -- of the cultural centers. Before he left, there was a session with him, Pat van Delden as the Field Program Head and Olcott Deming, who was the deputy PAO. Deming was a State Department officer but on loan to USIS, USIA. And with Sax's suggestions, and with their recommendations, they finally determined on eight that they would definitely offer to close and two more that they would close if they had to.

There was great reluctance. Pat van Delden, Olcott Deming and I were at the meeting. I was there because I would have had to handle all the logistics of the center closings. I was upset at the number that were to be closed, but I said very little at that time.

Olcott and Pat argued with Sax about the closings. Sax said, "Well, I don't like it either, but we're going to have to close them, I think, because Washington wants us to cut back on the size of the Japan operation."

So he went on home leave thinking that the closing of eight or ten centers was settled. He assured everybody in Washington that he had selected the ten centers that would be closed but that they wouldn't be eliminated before the end of the year.

While he was gone, Pat began to rethink this whole problem and felt that she just couldn't bring herself to close ten centers. They would close four of them, but they would ask Washington to permit them to retain the remaining nineteen, having closed one of the two in Tokyo already early in the game.

She and Olcott got together one evening, spent about half the night plotting what they were going to do, and finally sent a telegram to Washington saying, "We have decided we cannot close eight or ten centers. We propose to close only four of them. We'll examine the others later on. For the time being, we're going to retain nineteen."

Well, Sax was not only on home leave, but he was at his hometown in Phoenix, Arizona, at the time this cable came in. Of course, it went directly against anything that he had just gotten through telling the people in Washington he was going to do.

When he got back to Washington -- I guess they phoned him and said, "What's going on here?" - he rushed back to Washington and was apoplectic about this reversal. He just said, "Well, when I left, I thought we had agreed on these closings. I'll have to take care of it when I return."

When he returned, he blamed me for the whole reversal. He said, "Boy, you guys really undercut me on that policy. I'll never forget that as long as I live." He was rather hostile to me the rest of his tour of duty, both as PAO, Japan, and as the Assistant Director for Far East. Actually, it was Pat and Olcott Deming, not I, who had altered the closing plan. But I didn't even try to dissuade him. I felt I had to roll with the punch. To do otherwise would have seriously undercut both Pat and Olcott and look as though I was attempting to save my own skin by blaming them.

If I remember correctly, we finally did get down to fourteen centers--and later closed another two. Twelve remained. Not very long after Sax left Japan to become Assistant Director of USIA for the Far East, Pat van Delden developed a health problem and was returned to Washington. Walt Nichols moved up from Kobe to succeed her as Field Supervisor. We retained the Kobe Regional Office for a year or more after that with newly-arrived Jerry Novick as Regional Officer. After my departure from Japan, Washington ordered more centers closed and the Kobe Regional Office was eliminated. Ultimately, USIS eliminated all regional offices and ran the field program directly from Tokyo.

I don't remember exactly when Sax returned from home leave -- probably late in 1952 or early 1953 -- and he was there for several months before being called back to Washington.

Meanwhile, through much of 1952, we had been continuously trying to fill as many as possible of the one hundred thirty-five positions originally authorized, but it became obvious, as indicated by pressure to close centers, that there would have to be some cutback. I doubt if we ever filled more than eighty-five or ninety of that initial authorization. Then came the Eisenhower inauguration in January, 1953. As is always the case with a new administration, particularly one involving a change from the political party holding the White House, the Republicans believed the government in general, and the Foreign Service in particular, was vastly overstaffed. The resulting cut-back fell pretty heavily on USIS Tokyo. We lost all the unfilled American positions and five or six other Tokyo headquarters jobs besides. One casualty was my young assistant.

The heartbreaking part of the roll back was the need to eliminate a substantial number of Japanese jobs. I remember having to call a meeting of the entire Japanese staff. The rumors of coming dismissals had been circulating for some weeks, and the whole staff was terribly upset.

Japan had not yet gotten out of its economic trough, and finding new employment threatened anyone dismissed with real hardship. Before the meeting, I had determined pretty well how many we were going to have to prune and realized that if we were forced to close as many centers as we apparently had to, we could satisfy a large part of the RIF there. We still had to lose some from the Tokyo contingent. The meeting was long and painful, but I think we managed it as well as could be expected under the circumstances. The few we had to let go were given some help in the transition, and things calmed down after a few weeks.

Of the Americans outside of Tokyo, one was the man who had been running our cultural center in Kanazawa on the north coast of Japan, a fellow named Robert Flershem. Flershem was an interesting gentleman. I would say he was in his late thirties or early forties and was sort of a loner. He enjoyed living alone -- away from other Americans -- and he especially enjoyed being on the north coast of Japan, where he got a minimum of attention from headquarters. The Japanese all liked him, and he was doing a very creditable job there.

I have already discussed the impending center closings, and so we decided that Flershem's job was one of those we might eliminate. His name went on the list of those to be returned home. He took the plane out of Tokyo to Seattle. Those were the days of prop planes. It took about twenty-two hours to reach Seattle. TransPacific travelers were entitled to a one night stopover en route to Washington. Flershem chose Seattle. He was scheduled out the next afternoon on a Northwest Airline flight to DC. He boarded the plane. It taxied down the runway and burst into flames. There was an emergency evacuation. No one was killed, but Flershem was rather badly burned and had to be hospitalized.

It was some time before he got back to Washington, and because of his injury, he was still technically an employee of The Department of State and entitled to State-supported medical care. He was later moved to Washington and hospitalized there. By the time he was released, the administration had decided they'd made a mistake and had eliminated too many slots in the Foreign Service. The Department of State issued authority for us to rehire people in about a half dozen or so positions from our Japan program. We hadn't closed Kanazawa after all, and so suddenly, Flershem was rehabilitated, remained on the rolls, and went back to Kanazawa, owing his longevity in service to his unhappy accident of being burned in a plane disaster in Seattle while on the verge of separation.

Q: Could I ask what happened to the center that had to move out of Tokyo when you didn't get the funding?

SCHMIDT: Well, we finally -- I forgot to mention that -- we finally did get a building which had been a Japanese women's cultural club, sort of a -- it's a *Kaikan*. They called it the *Joshi Kaikan*, which in free translation means the women's club. It was a cultural club to which the young women of the country or the city could belong. They could have meetings there or hold conferences, programs, etc. in the center. This was not under our control. This was completely Japanese.

But the organizations had faltered during the war and the occupation period. The *Joshi Kaikan* was not greatly in use, and while its location was not as desirable as the one that we had had in

downtown Tokyo, they eventually did turn it over to us. I understand now that there is a new one that is a much better center...the Tokyo Cultural Center is the *Joshi Kaikan* reopened, I think, about the middle of -- or in early 1953 and operated for a number of years at that location.

Somebody else will tell the story of the transition from the State Department USIE to U.S. Information Agency. I believe that someone is going to interview Abbott Washburn, who was named the first Deputy Director of the new U.S. Information Agency. He was, to appropriate the title of a book written by Dean Acheson, Present at the Creation. So I won't try to go into any of the details. Anyway, I was not personally present. but it, of course, affected us out in the area. The State Department, still treating all Information Officers as inferiors, immediately decided that we were no longer a State Department entity. Our program, as of August 1, 1953, because an independent agency reporting directly to the President, was called the U.S. Information Agency (USIA). I should note that more than a year before this change over, USIE had been reorganized under The Department of State as a semi-autonomous entity -- a status not unlike that of AID today -- headed by a general manager and titled the International Information Administration (or Agency, I have forgotten which) and known as IIA. We operated in that fashion until Eisenhower issued the August 1, 1953 Executive Order creating us an independent agency.

Up to that time, there had only been two types of passports. One was the regular tourist passport, and the other was the diplomatic passport. State -- largely at the imperious suggestion of Mrs. Shipley, who then controlled all The Department of State passport issuances -- created a so called special passport with a red cover, and those are the kind under which USIA had to operate for the next several years until Mrs. Shipley retired from the Consular and Security Office of the State Department.

Q: Was that called an official passport then?

SCHMIDT: It was called a special passport, I think, and it was given to people like us heathens - - the USIA and what is now AID personnel -- who, when it came into existence, had to operate on the special passport. As I say, that went on for a number of years. I've forgotten just when it was that they finally conceded. Mrs. Shipley left, and a new head of the passport operation came in. And from that point on, we went back to diplomatic passport entitlement.

Q: At one stage, did you replace Sax Bradford, or were you Acting Director of USIS in Tokyo?

SCHMIDT: Well, yes, in a way, but that's a little different story. I didn't replace Sax Bradford. I'll cover that one now since you've asked the question. Eisenhower created the new independent agency as a result of the so-called Jackson Committee Report. C.D. Jackson had been asked to head an ad hoc committee to study the matter of U.S. overseas information programs. His report recommended that the information program be taken out of the Department of State, which didn't want it in those days. Dulles was adamant about that. The committee didn't confine itself just to recommending separation -- it went on to propose a good deal of the internal reorganization of what was to be USIA. Ted Streibert was named USIA's first Director. He accepted the committee report almost in total. Perhaps the most significant element of the reorganization which Streibert adopted was the one that set up four regional offices. These were to be -- and for many years were -- the most prestigious and powerful units in USIA. Streibert looked for men who were

considered to be the officers most capable of heading up these elements. Each one was to be designated Assistant Director of USIA for their region.

He selected Sax Bradford to be the head of the Far East, Bill Clark to direct Latin America and Hunt Damon for the Near East and North Africa. I do not remember who, if anyone, headed Europe at that time, but soon Bill Clark was moved over to direct the European region, and his deputy, Frank Oram, succeeded to the direction of Latin America.

So Sax left quite suddenly. His deputy, Olcott Deming, had already gone, so for two or three months, we had no Director -- or designated Deputy. I was not named Acting PAO at that time.

Shortly thereafter, Willard Hannah came out to be the PAO. He had a fine academic background, and he was also a very competent administrator. He had been PAO in Indonesia for about four and a half years and had proven his worth out there by ingratiating himself with Sukarno. In fact, he was practically on a first name basis with Sukarno and all the top officials of the Indonesian government as it took over from the Dutch and began its period of independence. He was an unusually capable officer -- very intelligent but somewhat short tempered. And this provides an opportunity to give us another example of some of the things that happened.

When the Eisenhower Administration took over, they wanted their own man as Ambassador in Tokyo. And much to the disgruntlement of Bob Murphy, who thought he was going to be Ambassador out there for at least three or four years, the Department told him he was going to be replaced.

Dulles had been instrumental in drafting the Peace Treaty with Japan, and as his assistant in working on the Peace Treaty preparation, he had taken John Allison, who at that time was the head of one of the regional bureaus -- or rather one of the divisions in the Bureau of Far Eastern Affairs. Allison so impressed Dulles that he apparently decided if the opportunity ever arose, he would make Allison Ambassador to Tokyo. When the Peace Treaty went into effect in April, 1952, the unit that had been the Diplomatic Section of GHQ SCAP became the Embassy. As indicated earlier, Bob Murphy became Ambassador. However, shortly after Eisenhower's inauguration, Dulles became Secretary of State and appointed Allison Ambassador to Japan.

Allison was a rather touchy man, and he had minimum respect for USIA. Above all, he was extremely wary of the press and didn't want to have anymore to do with it than he could help. Worse, he had the erroneous idea that if he withheld information from the press on any problem facing the Embassy, the press would somehow refrain from reporting anything about it. Two incidents occurring during Hannah's incumbency illustrate the difficulty for USIS of operating with Ambassador Allison.

In the late spring or early summer of 1954, the American Government conducted the second of its atomic bomb tests in the Pacific. They gave prolonged radio notice to mariners that a very large area of the sea around Bikini toll, on which the test was to be conducted, would be forbidden to shipping. But Japanese fishing vessels operating in the area were in those days without any radio contact, so no one got word to them that they would be anywhere near where the atomic explosion was to be detonated. One such boat with perhaps a dozen fishermen aboard

was "The Lucky Dragon." The boat sailed directly through the radiologically contaminated zone. The first thing they knew, the ship began collecting a blanket of grey-white ash. They had no idea as to its source, and so they started picking it up and brushing it off the boat. Finally, there got to be such a mantle on the boat that they got out their brooms and swept it off. Still they kept picking it up and looking at it, trying to figure out what it was and where it was coming from.

At last, they sailed out of the fallout area. They had pretty well gotten their catch anyway, so they started back for Japan. Well, the trawler they were on was a rather slow moving ship, so it took them about a week or ten days to reach Japan. Before they did, they all became violently ill. None of them died, but they were all just deathly sick. Understandably, they couldn't imagine what had happened to them. Of course, what had happened was that the ash from the atomic explosion had gone up into the stratosphere and then precipitated back out, landing on the Lucky Dragon.

When they hit the small fishing port down on the southwestern coast of Honshu, they reported in to the nearest medical center. It happened that there were some medical people nearby who had taken care of some of the survivors of Hiroshima. Immediately, of course, they determined what the difficulty was.

Well, the word got to Tokyo about a day later, and the whole foreign press took off for this small village, including practically every American correspondent, in fact every American correspondent who was there, as well as British, French, German, everybody else. They were all down to this small village.

They weren't permitted to get near the ship when they got down there. The Japanese authorities screened them off because they didn't want them to get in touch with the people who were suffering from the atomic fallout. I don't know whether any of the fishermen actually died. I don't think they did. Undoubtedly, it affected them in later life because they had suffered a severe dosage.

Well, Mr. Allison -- Ambassador Allison -- decided that if we didn't tell the press anything about it and refused to comment on what had happened that they wouldn't have any story. Therefore, the problem would simply go away.

Willard Hannah, having handled the press very extensively, realized that this was the worst thing that one could possibly do -- that it would simply pique the curiosity and raise the anger of all the correspondents who had been denied information. Willard went to see Allison and had a tumultuous session with the Ambassador, trying to persuade him of the necessity of doing something about it. Allison steadfastly refused to talk to the press or allow any information to be released by the Embassy at all.

So Hannah had to go down to the Foreign Press Club and face the whole gamut of press people. He couldn't even tell them that it was Allison who refused; Allison had forbidden him to say that this was an order from the Ambassador. He simply had to go down and tell them, "No comment."

So Hannah faced the press with no logical defense. Of course, the press was irate. They blamed him for covering up information. It was a very rough session. He came back utterly exhausted by the whole thing and terribly depressed.

The next day, he went back to Allison and tried again to persuade him that what was going to happen was that his refusal would erupt into a terrible brouhaha in the press -- that the whole Embassy would be denigrated for being uncooperative. Allison still wouldn't budge. The result was that he and Willard got into a real shouting match. I wasn't present at the match, but Willard came back and said, "I'm afraid that I got rather profane, and the Ambassador was even more profane. We just called each other a whole series of unprintable names."

I was about due to go on home leave. I was supposed to leave for the States about the first of June, and this was mid or late May I think. Willard came back and went into a long session with himself. By the time I left to go back on home leave, he had just about decided that he couldn't live under Allison's regime -- that he was going to resign. I tried to persuade him not to resign, but as it turned out, he did. While I was on home leave, he submitted his resignation not only as PAO in Japan, but from USIA -- went off and joined the American Field Service, where he subsequently had an excellent career as sort of a roving reporter who went all around the world making contacts with high level people everywhere, especially in Indonesia, and never returned to government again. The Agency lost one of its finest officers.

Ken Bunce was in Japan with USIS at the time that Willard left. I was away on home leave, so Willard appointed Ken as acting PAO during the absence as a new PAO being appointed for Tokyo. Willard proved to be extremely prophetic and absolutely correct. A terrible brouhaha had erupted in the press, and the Embassy and Willard personally were vilified as being restrictive, disruptive and non-cooperative. The press raked the whole Embassy, and especially Willard, up and down for failure to cooperate. It was a very unhappy time.

I've forgotten now whether it was somewhat before that or somewhat after that -- I think it was before that -- when our Press Attaché had a similar unhappy experience with the Ambassador. A group of governors, twelve of them, were visiting Tokyo. Of course, the Ambassador had to entertain them and spend a good deal of time with them.

The big party was to be a dinner for the visiting governors at the Ambassador's residence one evening about midway through their week and a half in Japan. Naturally, the American press wanted an interview with the governors to get their impressions of Japan.

John Henderson was our Press Attaché. John actually had been a USIA employee who had been integrated into the State Department Foreign Service under the Wriston Program in 1953 and '54. But he was nevertheless assigned back to USIA or USIS, and he was serving as our Press Attaché.

He went up to the residence early in the evening, before the dinner but while the preliminary cocktails were being served. Because he knew the press was coming up, he had told the Ambassador (or at least he claimed he had done so) that the members of the press wanted to meet with the governors, and he asked if he could bring them up to the residence. According to John,

the Ambassador had rather grudgingly said, ah, bring them up for a few minutes -- words to that effect.

So the press arrived while the cocktail party was in session, and John went in to tell the Ambassador that they were there. By that time, the Ambassador had had a couple of drinks himself along with the governors. I don't really know what caused him to act as he did, but he said, "I'm not going to interview those sons of bitches."

John started to argue with him and said, "You can't do this to the press. You know you'll have a big problem if you do." The Ambassador was utterly adamant.

Finally, both John and the Ambassador walked out of the main salon, where the governors were and where the cocktail party was proceeding, into the anteroom, where the press were waiting. And there John and the Ambassador proceeded to have a profane shouting match at one another. And the Ambassador in effect said, "You're through."

The next morning, John came into the office and said, "I'm sorry, but I'm going to be removed as the Press Attaché. I've got to go elsewhere." Within less than a week, he was out of Tokyo and was assigned as Press Attaché in Indonesia. Fortunately, he didn't get cashiered from the Foreign Service. But he had to leave Tokyo, and we were several months without a Press Attaché because of that episode.

So, you see, it wasn't very easy to operate under Mr. Allison if you were a USIA officer. Because he didn't have much use for the press, he didn't have much respect for us either. He was not terribly cooperative with the press under the best of circumstances, and these two episodes indicate some of the difficulties we had. Before I left on home leave, Willard Hannah called me in and told me he was going to recommend that I be appointed Deputy PAO for Japan. Knowing Sax Bradford's attitude toward me, I thanked Willard but told him I doubted his recommendation would be accepted. He felt that with his recommendation, there was a good chance it would be. We left it at that.

Another incident had occurred earlier which I felt sure would make Willard's recommendation ineffectual. In the spring of 1954, I had received a letter from the Agency's personnel office, noting that my first tour was concluding and what preferences did I have for my next assignment? It had been no secret that I had wanted to be DPAO. A number of officers of some rank had spoken favorably about such an appointment in Washington. When I received the letter, I was pretty sure that the idea had been vetoed. I wrote a long reply, saying, in substance, that I had long hoped for such advancement, that the personnel letter was the veiled answer that my hopes were not to materialize and that, given those circumstances, I would just as soon return for a second tour as Executive Officer in Tokyo. This request was granted.

I learned later that my letter had created quite a stir in the Administrative Area in the Agency and resulted in a renewed push in some quarters to give me the DPAO job. Before long, I received letters from friends in Washington, saying that everyone who knew about the situation, exclusive of Director Streibert, who left all such decisions to Area Directors, and, of course, Bradford, had unanimously supported my appointment. This was especially true of the head of Personnel and

the Administrative Area in general. However, Bradford had vetoed it, and, given the power of Area Directors, that was it.

Just two or three weeks after those letters from Washington friends, Bradford made one of his periodic visits to Tokyo. I knew he had to say something to me during his visit. However, he studiously avoided me, even keeping a discreet distance at a cocktail party at which we were both in attendance. Finally, on his last day, only two or three hours before his plane was scheduled to depart, he appeared in my office. It was after hours, and no one but myself was there. He entered and sat down. I don't remember his precise words, but the following is a pretty good paraphrase of his story. Smiling unctuously, he said, "Lew, I wanted to give you a summary of what happened to your attempt to be named DPAO. You had extensive support throughout the Agency, including from me, but those doggone characters in Personnel and the Administrative Area just nixed it. I guess they are jealous of anyone from Administration getting this type of promotion if they don't."

I sat there for a couple seconds, thinking, "The liar! Do I or don't I have the guts to call his fabrication?" Before I had time to lose my nerve, I looked him right in the eye, and said, "Sax, within the past few days, I have had several letters from friends in Washington telling me that as far as anyone else in the Agency is concerned, I could have the job. This includes everyone in Administration. But you are the one that nixed the deal!"

The Bradford reaction was startling. I had read of such physical changes in fiction, but I had never seen it in the flesh. He was absolutely silent for several seconds, during which time every drop of color drained out of his usually rather ruddy complexion. His face went to a sallow white. His eyes, which were naturally a rather pale blue, almost literally lost all color. I kept my eyes on his, so I don't know if he trembled, but without regaining his color or composure, he said, "Well, that's the way it is," and got up and left. I knew my promotion goose was cooked as long as he remained the Assistant Director of USIA for Far East.

I left on home leave at the end of May and returned during the first week in September.

Q: Had a new PAO been assigned to Tokyo by that time?

SCHMIDT: No, and it was to be a full year before one was assigned. As I said earlier, Ken Bunce had been appointed as Acting PAO while I was away on home leave, and he remained in that capacity until his departure from Japan in late April or early May of 1955. I returned to my assignment as Executive Officer, which, among other duties, involved handling the logistics of some further Cultural Center closings.

In some cases of proposed closings, the Prefectural Governors became terribly exercised. One of them, from Takamatsu on the north coast of the Island of Shikoku, came to Tokyo to plead his case personally. He saw Ken Bunce and wanted to see the Ambassador. I can't remember whether we actually got him an appointment with Allison or not. In any event, his pleas were effective enough to cause us to leave an American Officer (Harry Kendall, who was already there) in that Center. In one or two other cases, we agreed to keep the centers, support them at a lesser level, and leave the running entirely to the Japanese staff. In those instances, the

prefectures agreed to pay some of the operational costs.

As I mentioned earlier, when Ken Bunce left in the spring of 1955, I was designated Acting Country PAO. I have already mentioned the preliminaries of staging for the Atoms for Peace Exhibit, the immensely productive 1955 Nagano Seminar with William Faulkner as the *piece de resistance*, and the saving of the American reputation by Glenn Shaw at the fair in Kanazawa, all of which occurred during my "acting" period. Also during that summer, we presented the Tokyo performances and Japan-wide tour of the Symphony of the Air, mentioned earlier. And I personally take credit for another musical coup. I cannot recall whether the three musicians involved had come to Japan as part of the Symphony or as part of another -- a chamber music -- group. In any event, I knew that many smaller cities in Japan had longed for the visit of an American musical ensemble. Neither the Symphony nor the larger chamber ensemble had considered it sufficiently important to visit any of these smaller cities. In talking to three members of whichever group it was, I learned that they had no immediate commitments in the U.S. and would like to stay on a bit after their group concerts were completed. I arranged for them to constitute themselves as a chamber group: pianist, cellist, and violinist. We christened them "The American Trio" and sent them out on a twenty-four town/city tour. Their audiences were wildly enthusiastic, the press coverage was ecstatic and the men themselves had a wonderful time, enhanced doubly by their enthusiastic audiences.

Q: Do you have any other points you wish to cover regarding the Japan program?

SCHMIDT: Well, I wouldn't want to leave the discussion of Japan without mentioning briefly some of the work done by other highly competent officers who were part of that unusually fine group in the Japan program. The most unique experience and performance was probably the one by a man named A. Fazl Fotouhi.

Fazl was Iranian by birth, a naturalized American citizen, married to a charming American woman. A very friendly sort of individual. We were lucky. I don't know whether he was employed by USIA already -- I think he had been -- but anyway, he spoke both Iranian (Farsi) and English and had a very slight accent in English. He came out to Japan to be one of the Center Directors, and we sent him down to Hiroshima.

By that time, Hiroshima was partially rebuilt, fairly well rebuilt from the atom bomb attack. And it was the center of a medical research program, still run at that time under the auspices of the American Army, for the rehabilitation and treatment of victims of the atom bomb. Already there were the beginnings of the resentment which later became very strong in Japan about the Americans having dropped the first atomic bomb in history on the hapless city of Hiroshima.

So Fazl went down there. We told him he would likely have a rather tough row to hoe because of the growing resentment. Well, I don't think there was anybody except Glenn Shaw in Japan who became so beloved by the Japanese as did Fazl. I don't know what it was, but he just thoroughly immersed himself in Japan and things Japanese. He went to every function that the Japanese officialdom gave. He was always available to them. He sent his daughter, who at that time was only about six or seven years old, to a Japanese public school, where she learned Japanese pretty well -- children's Japanese anyway. Instead of sending her to one of the available American

schools, he sent her to the Japanese school. He was there, I think, in all about five years. When he left, you'd have thought they'd lost their father confessor. He was so feted by the Japanese in leaving that many years later they still talk about him, and they still talk about his departure from Hiroshima. He was a complete hero to the people down there and thoroughly converted that whole segment of the area to a pro-American viewpoint. So I think that was another great success story which probably happened by accident because we were lucky in getting somebody who could establish that kind of rapport with the Japanese. Great praise should go to Fazl for having done such a marvelous job of getting that segment of Japan, in an area where it could have been disastrous because of the resentment of the atomic bomb, pretty well oriented toward things American. And I don't know of anybody anywhere, perhaps there are others, who did as complete and successful a job as Fazl did in that five year period he spent in Hiroshima.

Well, I think I've probably talked enough about Japan. There are other things that could be said about how the program went. I left in late May of 1956. I never went back officially to Japan, although I have been back there probably twenty-five or more times since and spent various periods of time. It's a country of which I will always be extremely fond. I fell in love with it when I first went there, and I am very grateful for having had the experience to spend those four and a half years with the Embassy. Let's cut this off at this point.

Q: Before we leave Japan, I wondered if you would comment a little bit about what the goals or objectives were of USIS when you first arrived there?

SCHMIDT: Well, I must say that we had a general objective in mind which, of course, was to make the Japanese thoroughly familiar with American cultural and economic achievements and also to continue the process which had been so well begun by the Occupation of converting them into a favorable attitude toward the United States. I've got to give the Army and the MacArthur regime tremendous credit for having done a number of things. MacArthur overrode the objections of a lot of highly placed persons in government in deciding to keep the Emperor as a nominal head of government. That proved to be a tremendous decision. I agree with scholars and historians who say it is the glue that held Japan together in those crucial post defeat days. It's been talked about often, and I won't go on further here.

But above all, he decided America was not going to go in as a tough occupying power. These people had been defeated. They were hungry. They were already disenchanted with their own Army and their own secret police, which had treated them abominably. By the time the war was over, they hated their military. They hated the secret police, the *Kempeitai*. At first, they were scared to death because they had been saturated with propaganda to the effect that the Americans, when they came in, were going to rape all the women and tear down the whole Japanese governmental structure, generally oppress the populace and so forth.

Since I was there almost at the beginning of the Occupation, I can tell you that the Japanese were scared stiff. The first day I was in Kyoto, which was only about eighteen or twenty days at most after the armistice was signed, we were the first people -- except for a small four man landing party -- in Kyoto. We were told we had to go armed with our pistols because we didn't know what was going to happen. And so I was wandering around Kyoto while the headquarters that we were going to occupy was being set up in a partially finished concrete skeleton building in

downtown Kyoto, on which construction had stopped when the war began. Having been there in 1938, I was trying to find a couple of places in Kyoto that I had visited then. My memory was not entirely accurate, and I didn't immediately find them. But in the process, I headed down a residential street not far from the locale I was trying to find, but not the place I was looking for.

When my roommate and I, both of us with a pistol strapped on each hip, started down that street, the street was full of kids, and every shutter was open. The Japanese had wooden shutters on their windows, which they always opened during warm days and slid the windows open. This was early fall -- still pretty warm. They were airing out the houses. I don't think we'd walked twenty steps down that street when every child had disappeared from sight, and practically every shutter had snapped shut. By the time we walked through that street, you would have thought it was a deserted city...absolutely nobody on the street. Once in a while, you could see somebody peeking through a shutter, but they were frightened to death.

Well, after about three days, they discovered that none of this propaganda was true -- that the Americans were really going to help them. And the Americans, being naturally friendly anyway, started giving chocolate bars to the kids -- they hadn't seen chocolate in years -- and giving some of their *sake* rations to families that they were getting in touch with. Soon all that fear disappeared.

The basic gentleness with which the Occupation handled the entire operation was, I think, tremendous. I don't think any other occupying power had ever before done anything like it. The Japanese were so grateful that an American could do no wrong. It was almost ridiculous. I won't take the time here to discuss a number of interesting situations that occurred in my experience during that first year of the occupation. The good treatment continued. I want to reiterate that the Army had done a tremendous job, and even though they had carried on the tradition of treating the Japanese well, if perhaps a little patronizingly, but nevertheless, with kindness and understanding. And USIS picked up where they left off. We wanted to expand on it. We wanted to increase the knowledge that we inculcated into the Japanese as to the cultural background that the United States had and give them extensive information about our cultural achievements. We wanted them to understand that we were going to continue to treat them as friends and that generally, we wanted to win their allegiance to the United States. That was our major overall goal.

Now, there were a couple of other ones that were related to that. One was the extent to which the Occupation had given the Japanese a freedom they had not previously known and interfered as little as they felt they could afford to with the Japanese return to normality. In short, we hoped to assist in guiding them further toward democracy.

Incidentally, the Occupation had openly allowed labor unions to form again. Japan had never really allowed truly free labor unions to exist. Occupation authorities didn't realize at first the extent of liberal thinking existing among many of the young officers managing the labor union rebirth. There may even have been a few people in the Occupation who might have had a communist background. I won't say there weren't. But even if there was no communist influence, there were a lot of very, very liberal young people who were writing the labor code and who didn't want to interfere with the formation of unions or the activities of unions. The unions

therefore had a very heady beginning and in some areas, were for a long time rather well infiltrated by native communist party representatives. I mean, Japanese Communist Party representatives.

In fact, I think it is possible the Japanese unions may have started the sit-in. I say this because in my role in Japan in the first year, I was in charge of the economic activities in the Military Government Section of first 6th Army, and later I Corps, Headquarters which controlled Japan to the west and south of Nagoya. And through my office had to come every Japanese corporation in the area that wanted to convert from war time operations to civilian manufacturing. Their permit had to be issued from my office. We had to investigate their intentions -- see what they were going to do before granting the permit.

One of the big corporations represented in that area was Mitsubishi, which had had a large aircraft engine manufacturing plant on the outskirts of Kyoto. I became very closely acquainted with the top management of that particular region of the Mitsubishi operation. They were wanting to reopen several plants in the area.

Eventually, we did give them permission by the early spring of 1946 to start resuming operations, and as soon as they did, their new labor unions went on strike. This was the first experience that the Japanese industry had ever had with a really full fledged strike, and they didn't know how to handle it. So at first, they were trying to act as they always did before whenever anybody came up with a labor proposal. They were going to stonewall it.

The next thing they knew, the Japanese unions had moved in. They had about a thousand people sitting down in the Mitsubishi factory and offices, and they wouldn't get out. So the management all descended on my Military Government office in Kyoto, pointing out this terrible phenomenon that had occurred and what could they do with it? I had not been blessed with any organized labor experience previously, and I don't know that I helped very much. But I did give them a few suggestions. I told them they'd have to stop this stonewalling, that they would simply have to negotiate some of their requirements -- some of the demands of their labor. And I thought that if they were reasonable in their handling that, they probably would come out all right. As it turned out, they did.

I think the Japanese labor was so surprised that they got a favorable response and some understanding and concessions that they themselves were amazed, and they withdrew. I still think that was probably one of the first, if not the first, examples of a sit in of the labor movement. For Japan, I am sure it was.

Well, that's a long way of saying that later on, by the time we neared the end of the Occupation, the communist influence had infiltrated quite a bit of the labor movement, particularly the seaman's union and, to a lesser extent, the civil service unions. Although Communists were still an illegal party, they were managing to make themselves rather obstreperous, and they probably had a hand in the May 1, 1952 riot I talked about earlier. They didn't get much support from the general public. Even though the elections were not managed, Communists didn't score highly. They couldn't stand for election. They were not permitted to put up a ticket at that time but tried to make their power effective through the Socialist Party.

We were worried about their growing influence in certain quarters. So one of our objectives was, of course, to try to counteract the influence of the Communist infiltration of various important areas of the Japanese business and industry and also political front.

A third objective stemmed from the fact that the Japanese were not terribly well convinced that America was all that culturally advanced. And so another one of our objectives was to impress them with the cultural achievements of the U.S. and the widespread concern for and capabilities in the performing arts and arts generally in the United States. I think we were reasonably successful in that regard. One of the things we did not too long before I left Japan was to arrange a visit to Japan of what was then called the American Symphony of the Air. It had been the NBC Symphony Orchestra, and I think Stokowski had at one time been conductor. NBC had just a short time earlier decided to discontinue their contract with the orchestra. They were no longer going to broadcast regularly for NBC, so they struck out on their own, renamed themselves the American Symphony of the Air and sought engagements. They had no initial commitments within the United States, so we negotiated a trip for them to Japan. and we scheduled them all over the country. Many people don't realize, or at least didn't in those days, that the Japanese were not only great students of their own music, but were tremendous aficionados of Western classical music. They're nuts about it and had little chance to enjoy it during the war years. No top flight symphony orchestra had performed in Japan at least since some years before the war. I am not sure one had ever visited Japan. So when we brought the Symphony of the Air to Japan, the demand for tickets was enormous. The climax of their visit was a joint concert with the Tokyo Symphony Orchestra in Korakuen Stadium, a huge baseball stadium in Tokyo which normally seats about 60,000 but could only seat about 40,000 people for the orchestral performance.

The demand for tickets was so great that people stood in line for fifteen hours starting the night before at the box office to get tickets. The 50,000 were completely sold out. People stood throughout the concert. Some climbed trees outside to view and listen over the walls. As I noted earlier, Harry Keith shot another notable motion picture around the Symphony Orchestra's visit, which was widely successful in Japan.

We scheduled them not only in Tokyo but in I think about twelve to fifteen Japanese cities. It was probably the single most successful cultural event USIS staged in Japan. It went a long way toward convincing the Japanese that the Americans weren't just a bunch of shallow cultural people -- that they didn't put on or were incapable of staging excellent cultural performances.

So I think those were basically our efforts at that time. We did have subsidiary ones based on trying to convert or at least soften editorial writers and other press representatives who were pretty well left wing oriented and who really were taking off in the Japanese press against anything American. We had mixed results there. I won't say that we were as successful in that regard as we were in some other activities.

But we did have a few minor successes, one of them brought off by the same Paul Bethel that I talked about in connection with the episode when Glenn Shaw went to the Kanazawa Fair. He spent about six months cultivating a major columnist for the newspaper in Nagoya that was

giving us a bad time -- both by extensive personal contact and providing him extensive pertinent information setting forth the American point of view. He had some success. He didn't convert the man, but I think at least he tempered his anti-U.S. editorials a bit. At least for a time, the editorials seemed to be less vitriolic. I think Paul had a reasonable degree of influence on them. There were a couple of other episodes of that nature when we were working out other columnists with individuals assigned to them.

I should mention one further thing, and that is the Japanese had not yet in those early days resuscitated their cultural magazines. Later, they flourished and became very important. But Leon Picon as the Book Translation Officer was greatly successful, not only in getting a large number of books translated into Japanese, but in getting them distributed and sold through Japanese book stores and introducing them into Japanese schools. He also established a magazine called the *Beisho Daiori*, which was devoted to book reviews (almost entirely) of American books in translation. The publication caught on and was well accepted in Japanese cultural circles. It was still in existence in 1970, even after Japanese cultural publications had long been flourishing once more, but it was finally superseded by the present magazine printed at the USIS Regional Service Center in Manila -- a much fancier, slicker magazine than the old one. Leon's came at a time when Japan was only beginning to recover its cultural publications production and went a long way toward introducing and popularizing American books in translation in Japan. I give full credit to Leon. It was an imaginative approach at which he worked very hard and successfully. In the process, he became reasonably proficient himself in the Japanese language. He was, and still is, a highly alert and intelligent man of wide ranging interests and accomplishments.

Two other programs, ones that are more routine to USIS operations and therefore not so noticeable, were ably run in Tokyo. While Bill Hutchinson was the Director of Press Operations in the first two years of USIS, our placement in an always resistant Japanese press was good, and our publications program moved along productively even though up against a growing Japanese magazine industry that now probably eclipses any other in the world. Bill's successor was not as imaginative or as energetic, and I believe we were less successful in this area after his departure.

The Exchange of Persons Program with Japan was unusually large. It did not compare with the resources devoted to this operation in Germany, but as other USIS operations go, it was large. It was supervised by Don Ranard and was a separate unit within USIS Tokyo. To this operation, among other things, can be credited our getting William Faulkner for the Nagano Seminar in 1955 and the American Symphony of the Air that same year. Those were the two more spectacular achievements. Don's unit also cooperated extensively with the Fulbright office, organizing volunteer help to assist in student counseling, giving the annual Fulbright competitive examinations and negotiating with the Japanese government for expanded exchanges. The Fulbright program today is 50% funded by the Japanese government, and although that development matured after Don's time, he can be credited with having laid the groundwork for later success.

WILLIAM C. SHERMAN

**Vice Consul
Yokohama (1951-1955)**

**Vice Consul
Tokyo (1955-1957)**

William C. Sherman was born in 1923 and raised in Kentucky. In addition to service in Japan, his career in the Foreign Service included posts in Korea, Italy, and in Washington, DC as Deputy Assistant Secretary for East Asian Affairs. Mr. Sherman was interviewed by Thomas Stern on October 27, 1993.

SHERMAN: I wanted to go to Japan and that is where I ended up.

But I didn't want to go overseas immediately. Mary Jane and I had been separated for fourteen months when I first went to Korea and that had not been a pleasant experience for either one of us. If I were to go overseas, I wanted the whole family to go together. I had been assigned to the Consulate General in Yokohama, but since SCAP was still running Japan, the State Department had to follow its rules which barred families from accompanying an officer until a specific house had been assigned to him or her. State representatives, until April 28, 1952, were just the diplomatic arm of SCAP. They were not part of a State Department operations. That was true of the Consulates General as well as the Tokyo operations. All were part of SCAP, although on most matters, we operated independently. But when it came to basic rules, we were all under the control of the Supreme Commander Allied Powers.

By chance, I found out that the Army was still running an exchange program with Japan. It was about to bring to the United States five senior members of the Japanese Diet. This delegation was to attend the Peace Treaty signing and then spend three months touring the United States, studying it in depth. The Army needed a bilingual escort officer, who could also serve as interpreter. I volunteered and was in fact assigned to that task. We went to Washington, New York, Boston, Chicago meeting with academics, business people, and politicians. It was a great period during which I learned a lot. Eventually, I had to leave them in Chicago while they went on to the West Coast. The Consulate General in Yokohama, to which I had been assigned, was getting a little impatient. So, in March, 1952, I arrived in Yokohama and Mary Jane and our two kids joined me at the end of the following month -- the day after SCAP no longer controlled State operations in Japan.

Our first home was in the old Consulate General building in what had been the Consul General's apartment. It was quite luxurious for a Vice Consul. It took us a long time before we had accommodations as good as those again.

Q: How large was the Consulate General in 1952?

SHERMAN: I would guess that there were about ten officers and five or six clerks. It was a sizeable post, particularly for that time. Our consular district included three very active prefectures. I was assigned as the politico-military officer, reporting directly to Washington. In those days, the constituent posts sent their airgrams and despatches and the rare telegram directly

to Washington, with copies of the reports sent to the Embassy.

When I first went to Yokohama, I was an economic officer in the Consulate General and one of my jobs was if you can believe it, to expand Japanese exports to the U.S. We had a Consul General, whose job was primarily representation. The deputy, who was supposed to be running the operation, was an old consul (non-career), Charlie Stephan, who didn't do much of anything. He was an old fogey who had all but retired. We had a citizenship officer, a shipping, protection and welfare officer, a visa officer and two administrative people -- an administrative officer and a general services officer.

Soon after I arrived, the Department went through some major down-sizing after the advent of the Eisenhower administration. That reduction left Yokohama with no clerks; all we had were Foreign Service officers. We did have a number of resident Americans - Japanese with American citizenship. They were not hired as local employees because they were American citizens, even though they lived in Japan. They fitted into a general world wide category of personnel called "Resident Americans" which had been established for Americans living overseas. They obtained a regular security clearance so that they could handle classified material, although we used them essentially as local employees. They were not subject to transfer to other countries in the world. In the Japanese case, the resident Americans were people who had gone to Japan before the war and had stayed because of family ties.

Since they were all totally bilingual, we used them mostly in consular work. In the 1952 reduction-in-force, they were all fired. Our "Shipping and Seamen" officer position was deleted. By the time the decimation ended, we had a Consul General, his deputy, four or five Vice-Consuls, and an administrative officer. My duties as reporting officer were quickly ended and I was put in the consular section, doing visa, shipping and welfare work. The shipping work was interesting in some aspects. Sometime later, a Foreign Service Staff position was re-established which enabled the Consulate General to return to doing some political and economic reporting. But I stayed with the Consular section.

Shipping would not normally have been a problem in Yokohama, although there was considerable American traffic in the port, much of it due to the Korean War which was still being waged in 1952. Under an agreement with the Seamen's Union of the Pacific (SUP), headed by Harry Lundenberg, a crew would receive a bonus as soon as the ship crossed the date line because it was then deemed to have entered a war zone. As soon as it left a Japanese port, the ship was deemed to be in a combat zone and the crew received another 100% bonus. So it was quite possible for an ordinary seaman, on a ship that shuttled back and forth between Japan and Korea, to make triple his ordinary salary which added up to a considerable amount. We had about twelve cargo ships called "Knot" ships because they were all named after different knots -- the "reef", etc. They shuttled regularly between Yokohama and Inchon or Pusan carrying supplies for our troops. Of course, none of these ships were in any danger because neither the North Koreans or the Chinese had any intention of engaging the U.S. Merchant Marine at sea. In view of the bonuses paid, getting jobs on these ships was very competitive. Theoretically, if a seaman had to be left behind by his ship because of illness or other reason, it used to be the responsibility of the American Consul shipping and seamen officer to find him another berth. The American union set up a hiring hall in Yokohama and declared that it would become

responsible for the placement of American seamen. My predecessor in the Shipping officer position had said that he would not accept that process and vowed to fight it tooth and nail. The union began to publish a little four page weekly newspaper -- "The Harbor Light" -- which was a scurrilous and quasi-pornographic rag. It kept referring to the "Communist" Consul General who was providing jobs to the Harry Bridges' union people. Harry Bridges' union was a competitor of the SUP. There were vicious attacks in that monthly paper on the Consul General and his staff. The "Shipping and Seamen" Section of the Department was never as active on any issue as it was on the hiring function in Yokohama. It was obvious to me that the Department was trying to find cover because in the early '50s, seamen's unions were politically very powerful. By the time I took the job, my instructions were to make peace with the SUP, which I did. We basically let the SUP operate its own hiring hall, even though that practice was legally suspect. We didn't try to block their activities. The shipping laws, which were written for the protection of seamen, govern the employment of any seaman who was seeking employment in an American port or any American seaman seeking employment in any foreign port. These laws placed the responsibility for assuring that the seamen were properly assigned and hired in the hands of a Foreign Service Consul. A ship captain could not hire a seaman unless a Consul was present. The Consul had to put his stamp on the employment contract; all the papers relating to the ship's register and the employment had to be deposited with the Consulate. These laws were passed to prevent the shanghaiing of seamen or forcing them into assignments that were not suitable. A very elaborate structure was established to protect the seamen. Any change in the ship's crew, as stated in special articles, had to be done in the presence of an American Consul. That is the way the law was written and I think might still be. I don't think there have been many changes, although in light of the demise of the American merchant marine, the consuls' workload has been greatly reduced. Foreign seamen also needed transit visas as their ships sailed to the United States, which required lot of documentation.

We were also busy with visas. These days was before the McCarran Act was passed in 1953. The Japanese were viewed as "aliens ineligible for citizenship" and therefore not permitted to immigrate to the United States. They could only go to the U.S. as visitors for short periods of time or as students or members of other special legal categories. Because they were ineligible for immigration, we had to be particularly careful about the issuance of temporary visas to make sure that they were *bona fide* visitors, students or some other on-immigrant category who would return to Japan upon the expiration of their visas. That meant that every applicant was screened thoroughly and investigated by the Consular Section. There were a number of Japanese who even in the early '50s had enough resources to visit the U.S. In addition, we had a lot of requests for transit visas because many Japanese were immigrating to Canada and Latin America. These countries were interested in recruiting particularly farm laborers from Japan. This was the period, for example, when many Japanese immigrated to Argentina. These people had to transit the United States on their way to Latin America. Visas in those days required considerable processing. If one ever watched the Menotti opera, *The Consul*, you can get an idea of how complex the system was in those days. People would come to the Consular Section and be asked to come back again because they didn't have the right size photograph or were missing some document or didn't have a police certificate or they didn't have a health certificate. It was painful. Some didn't get visas because their children might have had TB which made the parents or siblings ineligible. The processing of a visa application could take months -- many, many months in some cases. There were people who applied over and over again without any hope of

approval. It was a different occupation from that of a visa officer today.

Q: What was the economic situation in Yokohama in the early '50s?

SHERMAN: It was recovering from the war's devastation, but still bad. Yokohama was particularly hard hit because the city's principal activity were the export of tea and silk. Silk became an increasingly minor factor after the invention of nylon. The tea business was also in a depressed state. The Yokohama port had been almost entirely taken over by the U.S. military; there were very few private facilities left in the port area. The city had been decimated by our air raids during the war. The Occupation Forces had established a large logistic depot in Yokohama after bulldozing large tracts of land. Property lines became non-existent. In most cases, that was not an important factor because much of the property had been requisitioned by the military; very little had been returned at that stage to its owners. Other Japanese cities, where the U.S. Army was not such an overwhelming presence, managed to rebuild at a much faster pace than Yokohama. Yokohama was a special case. To this day, the impact of our war bombing and our post-war presence has turned Yokohama from the flourishing export-oriented city it was before the war to essentially a bed-room community of Tokyo. Its industrial and commercial base has never really returned.

The port has revived, but ships now stop in Tokyo as often as they do in Yokohama. The port of Shimizu, which is just a little south of Yokohama, has expanded greatly, as has Kobe. Yokohama has lagged far behind other ports in its recovery; the government has been and still is active in trying to further develop it, but in fact Yokohama never really recovered from the war and its aftermath. It seems more like an old time museum -- not a live town.

Politically, Japanese cities have never been very powerful. There are only rare instances of regional political powers. National politics are the major interest. The various prefectures have governors' races; the cities and towns have mayoralty races. But local officials do not have a great deal of authority and have to depend on the central government for financial support and direction. They can be very obstructive. For example, during the early '70s, the Mayor of Yokohama, a socialist, decided that heavy vehicles could not cross the city's bridges because it was not safe in view of the bridges' condition. That happened right during the Vietnam war when we were sending our heavy trucks and jeeps back to Japan for rehabilitation. Once repaired, those vehicles were transported to Yokohama for shipment back to Vietnam. So a complete deadlock developed. The Mayor wouldn't let the repaired vehicles down to the port area and we had no other port immediately available. The Foreign Office finally worked out a complicated by-pass arrangement which involved driving a very circuitous route over roads that were barely passable, but at least did not cross the Yokohama bridges and finally led to the port area. Local officials had therefore a negative power, but in general were greatly dependent on the Tokyo bureaucracy.

Q: Tell me how you felt living, as an American, in a city that we had damaged so heavily and whose citizens had suffered greatly at our hands. What was your relationship to the local citizens?

SHERMAN: The relationships were very good. The Japanese response to the occupation was

completely cooperative. They behaved entirely in a friendly fashion. We never met a hostile population in Japan. In Yokohama as well as in the rest of Japan, we had an active information program and an active American-Japanese Society. There is hardly a Japanese locality that doesn't have a sister-city relationship with some American city or town. We never noticed any resentment about the damage that we wrought. The city government would periodically seek return of certain properties or facilities and by the mid '60s, almost all of the free standing facilities had been returned to the city or the original owners. Our presence became increasingly consolidated in base areas.

There were problems of course during this first tour in Japan from 1952 to 1956. They were called "base problems" which involved such matters as camp-followers, some theft and other low level criminal activity that tends to congregate outside a base's perimeter. The citizens were not happy with this. A number of Japanese movies were made, dramatizing and sensationalizing these conditions. The Socialists, the Communists and some of the labor unions used these conditions for their own political purposes. But by and large, the population was not terribly unhappy. We still have problems. We have noise problems created by night landing practices on carriers, we have problems caused by too many people in spaces too small, we have problems created by our large presence in places like Okinawa. But in general, the Japanese towns that are supported economically by our military presence, like Yokosuka, are cooperative and there is certainly no real tension between Japanese and Americans. It was true in the early '50s; it is true today.

Q: You left Yokohama in June, 1954 and were assigned to Tokyo.

SHERMAN: That is correct. There is again a story behind that assignment. Mary Jane I had gone to Tokyo in July, 1953, at the invitation of Bob Blake, then a member of the Embassy's Political Section, to have dinner with him on July 3. Then, the next day, we were his guests at the customary Fourth of July reception at the Embassy. We also served as unofficial translators between American and Japanese guests. There were a lot of Japanese political leaders there and needed all the translators they could find. At one point, I found myself translating for Mosaburo Suzuki, who was then the leader of the left-wing Socialist Party. Sam Berger, who had just recently arrived to be the Embassy's Political Counselor, had been trying mightily to make contacts with the Socialist Party and the Sohyo, the largest Japanese labor union. So I interpreted for Sam and Suzuki and in the process I managed to convince Suzuki to set up an appointment for Berger with the head of Sohyo, a Mr. Takamo. Everybody was very happy with the event. I went back to Yokohama and shortly thereafter I heard from the Embassy that I was to be transferred to the Tokyo to be a member of the Political Section. So, after home leave in 1954, I reported for work at the Embassy in Tokyo as second secretary in the Political Section.

I was assigned to follow internal political matters. The Liberal Democratic Party was just being formed so that Japanese politics were in a state of turmoil. Later, I became the principal contact with Kishi Nobusuke, who was the main founder of the L.D.P. and a subsequent Prime Minister. That was an interesting experience.

Japan was not yet principally a one-party state, although it was clear that it was headed in that direction. Japanese politics then, as now, was very much a matter of individual leadership with factions springing up here and there. Politics were not essentially a matter of ideology or policies; they revolved more around individual leaders. The battle at the time was between Yoshida, who had been the leader of the Liberal Party, and Hatoyama, who had been his predecessor as leader of the Liberal Party. Hatoyama had had a stroke and had to step aside for a while; when he had recovered, he wanted to reassume his position which had been taken over by Yoshida. Eventually, with an election looming, Hatoyama split from the Liberal Party and formed his own group, which was victorious, making Hatoyama Prime Minister. The Liberal Party lost its majority status and just became one of several conservative parties.

The role of the individual leaders is a matter of historical tradition in Japan. It was so even before the war. It really goes back to feudal days and the rise of clans. This system of factions, formed around individual leaders, is still true today in one guise or another. We were not really concerned with this form of politics. We were very concerned with the power of left wing parties and factions and were very much opposed to them. In those days, the Socialists were much more of a threat than were the Communist Party, which was stable in size and not growing. In terms of policies, it was the Socialists, and particularly the left wing elements, that seemed to us to be closely linked with the Communists. That was a large party, depending primarily on the resources of the Japanese labor unions.

There were efforts made to establish a more democratic socialist movement -- analogous to a European socialist party -- and to inhibit, to the extent possible, the growth of the far left. A split did develop among the socialists -- left and right wings. A man named Nishio, probably with the assistance, both overt and covert, of the United States established a more democratic socialist party. The term 'socialist' in Japan meant the same thing it did in the West -- a system in which the major means of production were state owned and operated. The left wing socialists were essentially Marxists in terms of philosophy. They did not look to the modern versions of Marxism, like the Soviet Union, as models but rather went back to the early days of socialism for their philosophical base. We are of course discussing events that took place at the peak of the Cold War and therefore the United States tended to look at issues, such as Japan's political situation, in rather black and white terms.

At the same time, a more democratic labor council was established to combat the influence of the radical Sohyo I don't believe that the AFL-CIO had a full time representative in Tokyo at the time and were not very active, although periodically a representative would come through. The Embassy had a Labor attaché and the CIA had people who covered the labor movement.

Also the conservative forces in Japan united under the flag of the LDP. They were of course never truly united, but at least marched under the same flag.

Q: How large was our Tokyo Embassy in the mid-50s?

SHERMAN: There were probably about 125 Americans there although I can't be sure because there were so many other agencies' representatives in Tokyo that it was hard to track the number of employees in the Embassy.

As I said, Sam Berger was the Political Counselor and therefore my boss. His deputy was Bill Leonhart. The DCM was Jeff Parsons, the Ambassador was John Allison. Jules Bassin was our Legal Advisor. It was an active Embassy that worked well. When Allison arrived he decided that there was an over-abundance of reporting and particularly an excess of airgrams. He felt that the reporting should concentrate on the major issues and that not all luncheon conversations needed to be reported. The Embassy had been a prolific papers producer; after Allison took over from Bob Murphy in 1953, the production rate dropped markedly. Much of the Embassy's work fell in the politico-military sphere related to our military presence in Japan. The Japanese military efforts were greatly impeded by their no-war constitution which kept their military capabilities well in restraint. Furthermore, there was not then, in the mid-50s, nor today, any popular support for rearmament or the building of a major defense establishment. In those days, even putting a machine gun on an airplane was viewed as an aggressive military action that the Japanese people strongly opposed. It took years of academic and public discussions to reach agreement that Japan had a right to maintain "self-defense" forces. In the mid-50s we were primarily interested in maintaining absolute freedom to operate as we saw fit from our bases in Japan. Dulles was very anxious to consolidate an eastern arch consisting of countries opposed to the "red" threat. China was a big issue for us at the time. We sought Japanese political support for our Cold War policy positions as well as logistical support for our military activities.

The Japanese were nervous about China. They looked to us to provide the "nuclear umbrella". The question was always whether the "umbrella" leaked. I always thought that the question was whether it was raining or was about to rain. We felt that it was raining at the time. We were seriously concerned about the mainland Chinese. The Korean War had just ended in an armistice that has lasted until today. The Soviets had a presence in Tokyo although their people had not been granted diplomatic recognition. They dealt with the Foreign Ministry as an unrecognized foreign entity. The Soviets had established a mission during the SCAP days and had never left even after the end of the military government. There were no formal relations between the USSR and Japan. The Soviets were in effect represented by an unrecognized mission. They maintained their SCAP car license plates and all the other benefits that they had acquired during the military occupation, but in fact did not legally exist in Tokyo. The Soviets have never signed a peace treaty with Japan. This anomaly did create some interesting events. In the mid '50s, ECAFE held its annual meeting in Tokyo. Ambassador Allison gave a large reception for all the delegates. The Soviets were members of the organization and therefore showed up the party even though uninvited. I was at the door and had never seen any members of their mission. The Soviet that showed up was a Mr. Dominsky, who was the head of their unrecognized Tokyo mission. He introduced himself when I met him at the door; I then took him to introduce him to the Ambassador. Dominsky and his colleagues mingled with the guests for a while and then departed. We didn't have regular contacts with the Soviets, although the Foreign Ministry had a Soviet section which kept in contact with the unrecognized mission on an *ad hoc* basis.

During this same ECAFE conference, we showed a cinerama film in one of the large Ginza theaters. Cinerama was a big deal at the time; very few people had ever seen it at that time. After the show, I noticed that Dominsky had been in attendance; so I went over and asked him how he had enjoyed the show. He said that it had been very nice, but that the same technique was available in Moscow, except that there were no lines on the film, as there had been on the one we

had shown.

We were in frequent contact with other Western Embassies, particularly the British and also the French, Australians and Canadians. We taught the Canadians, Australians and New Zealanders at our language school in Yokohama. The British had a different tutorial system which they had maintained for many years. At one point, the French asked whether they could send some of their officers to the Yokohama school, but we decided that our training was designed for English speakers and that from a tutorial point of view, it would be very difficult to assimilate speakers of a third language.

Q: In general, would you say that the Embassy in Tokyo in the mid '50s was an effective operation?

SHERMAN: I was still a very inexperienced officer. This was my first embassy assignment. I thought the Embassy was a good one. We worked well together. We had some brilliant officers assigned there. Sam Berger was essentially removed after a visit by Vice President Nixon in late 1953, before I had actually been assigned to the Embassy, although I had some liaison responsibilities for the visit because of our military presence in the Yokohama district.

Nixon visited Japan and gave a speech urging Japan to amend its constitution to remove the "no war" clause in light of the great threat to civilization posed by the communists. The speech went over like a big lead balloon. The Japanese wouldn't even consider such an idea, although it was American policy to push them in that direction. During that visit, Nixon had Embassy briefings that are normally provided to high ranking American visitors. I am told, not having been present, that during one of these briefings, Berger was alleged to have said that the Communist Party in Japan was not a threat, but rather it was the Socialists that were a danger. Sam was a conservative on foreign policy issues, having been a member of the AFL-CIO. His claim to fame had been that as Labor Attaché in London he was the only person in the Embassy who had any connections with the Labor government when it took power. That situation is supposed to have changed Foreign Service policy about having regular contacts with opposition parties.

Nixon was reported to having taken serious offense at Berger's views, stating that anybody anywhere who thought that a Communist Party or member was not a threat to the United States had no business being in the Foreign Service, much less a Political Counselor at a major Embassy. He also is said to have indicated that in any case there were too many Jews as Labor Attachés and Labor Counselors. I heard this story directly from someone who was present at the meeting. So shortly after I reported for duty at the Embassy, Sam Berger was transferred as DCM in Wellington. He was replaced by George Morgan, who had been the author of a major piece published in *Foreign Affairs*, which was a follow-on to George Kennan's famous article. George was very scholarly and not very imaginative. He had none of the flamboyance that Sam had. That made the Political Section a somewhat duller place and it ran at a slower pace.

Q: Did the officers stationed in the Far East feel neglected by Washington, which has always been accused of being Euro-centric?

SHERMAN: Not really, because Dulles had a great interest in the Far East and particularly

Japan. That was not always a benign interest from Japan's point of view. The recent State Department Historical Office's release of its series on Asia (1955-57) includes a long memorandum of conversation which I wrote after attending a meeting between Dulles and the Japanese high command. At the time we had considered and had decided to return the Bonin Islands to Japan. This was a small group belonging essentially to the Ogasawara Island chain, which we had occupied with a small contingent of Navy personnel. They were supposed to be of some strategic significance; they were supposed to have had some submarine pens, which eventually was discovered not to have been the case, but the Navy had been determined to hold on to them. The process leading up to the decision to return the islands was a big inter-agency battle, but finally common sense won out. There had been about 500 people on the Bonin Islands who had been evacuated to Japan, and after a number of very cold winters in Tokyo wanted to return to those forsaken but nevertheless warm dots on the map. They wanted to return to their homes, such as they were. We had permitted repatriation only of descendants of so-called original settlers -- Portuguese and some people from Massachusetts. The original settlers had of course inter-married with Japanese, but their descendants had names like Gonzales and Savory -- certainly not Japanese. We had somehow reached the conclusion that people with names like that had been the descendants of the original settlers and were therefore eligible for return, but that was not to be so for people with Japanese family names.

So Dulles came to Tokyo and, as recorded in my long memorandum, met with senior Japanese officials. I was not the official interpreter, but I was asked to attend the meetings under the guise of being the note-taker so that I could overhear and understand what the Japanese were saying among themselves. Dulles started by saying that we had reached the decision to return the Bonin Islands, but that on his trip to Japan he had changed his mind. That caught everyone's attention, although it was not received favorably by the Japanese. Everybody was wondering what was going on because the Japanese had fully expected a "done deal". Then Dulles proceeded to say that the U.S. government had decided to make available to the Japanese a certain amount of fissionable material to be used in research reactors. That was supposed to be a sop to the Japanese, who had been interested in having such material, but it was not certainly an acceptable alternative to the return of the Bonin Islands. Hatoyama was the Prime Minister at the time. A Diet member, Frank Matsumoto -- a native Japanese, raised in the United States -- was being used as a translator. He was of course bilingual. At one moment in the discussion, Frank looked over to me and said: "Bill, what is Japanese for "fissionable material"?. I had no idea how that term was expressed in Japanese, but I had been reading the newspapers' headlines which had been discussing enriched uranium. So I suggested that the term "enriched uranium and things like that" be used to explain fissionable material. All the Japanese nodded their agreement. Dulles turned and looked at me, with an approving glance. Walter Robertson, who was then the Assistant Secretary for East Asia, passed me a note saying that it was most important that the discussion be translated accurately. My reputation was made! There was never any question thereafter about my Japanese language competence.

Q: Just one more question about the 1954-57 period. How would you characterize U.S.- Japan relationships during this time?

SHERMAN: I would say that those relationships were positive. The U.S. still considered itself as the mentor and the Japanese, at least in part, accepted that view. They saw the U.S. as its

principal ally -- its only serious ally. They saw their fate totally bound to U.S. policies and were determined to maintain a close relationship at all costs. They did have their own agenda with their own objectives and were beginning to move towards them. They were looking forward to the day when they could exercise their complete independence, when their economy would be self-sustaining, although they never in the 50's foresaw or even aspired to become a world power, certainly not in military terms or even political.

On the economic front, the Japanese were rebuilding their base. The advent of the Korean war certainly provided an additional boost since Japan was used as a logistic base for the U.N. operations, but I can still remember that during my Yokohama tour, we were providing free advertising space in Department of Commerce publications for Japanese looking for export opportunities to the U.S. I actually went looking for Japanese to use this free service, especially among those firms that were already in the export business, like paper flowers or handicrafts. At times, I even suggested some approaches to increase exports to the United States. Dulles maintained that there wasn't anything made in Japan of interest to the American consumer. It's amusing to see how well he understood what was beginning to happen.

WALTER NICHOLS
Public Affairs Officer, USIS
Kobe (1952-1954)

Public Affairs Officer, USIS
Tokyo (1954-1958)

Walter Nichols was born in Tokyo in 1919 and was raised in Japan until the age of 15. He attended Harvard University but never completed his degree, accepting a commission in the U.S. Navy just before the outbreak of World War II. Mr. Nichols worked for USIA and the majority of his assignments were in Japan. He was interviewed on October 10th, 1989, by G. Lewis Schmidt.

NICHOLS: That didn't take as long as I thought it would, and about a month after we had returned to Washington, I was signed on at State, given three or four days of general--very general--orientation, and packed off to Tokyo with my family. That was in April, 1952, and all I knew about my first assignment was that I was to be stationed in Kobe at the Consulate General there.

Q: Did they provide you with much orientation as to the nature and mission of USIA?

NICHOLS: Virtually none. It was about 100 percent standard State Department stuff that had very little relation to what I ended up doing.

Q: Well, I hope we were able to brief you sufficiently about USIS, and our plans for the Japan program during your week of orientation with us in Tokyo en route to Kobe.

NICHOLS: Oh, you needn't ever have worried about that! I'd like to say right here for the record that of all the senior officers I served under during all my years, in that Japan program, I owe my greatest thanks to you, Lew, for all your help, particularly in my first year or so in USIS. That was because though I was technically supposed to relate directly to the staff of Pat Van Delden--the Field Operations Supervisor--and of course owed a lot to her, too, for excellent guidance on program development--I quickly discovered when I got to Kobe that we had at first to resolve a mountain of logistic, financial, and purely operational problems before we could hope to develop much in the way of substantive programming. And those were considerations Pat wasn't particularly interested in or capable of handling. So I appreciated her allowing me to go directly to you for help in such matters, which, God knows, would have driven you mad if you didn't happen to be such a knowledgeable, competent and resourceful person.

Q: When the tape ended, you had just arrived in Kobe to take over this new assignment.

NICHOLS: Right. I had learned in Tokyo that the field program outside Tokyo was, as you know, based on the operations of what we call the American Cultural Centers. Formerly the military libraries during the Occupation which in each consular district were handled by a public affairs officer stationed at the consulate general, the consulate. So I was in charge of the Kobe consulate general program for the consular region of the Kobe consulate general, which included all of the prefectures, eleven prefectures, I believe it was, from Wakayama--you want me to give all these?

Q: I think if you say...

NICHOLS: We had seven centers in key cities: Kyoto, Osaka, Kobe, Hiroshima, Matsuyama and Takamatsu and Okayama.

Q: Didn't you have--you didn't have Kyushu?

NICHOLS: No, from the border of Hiroshima/Yamaguchi south and west was under the jurisdiction of the Fukuoka consulate general. But I had the area with the largest number of centers, and the largest amount of territory. And that was--I spent two interesting years down there, very interesting. I got to like the work very much, I was learning it as I went along. I think probably one of the reasons I got along so well was I had the unbelievably helpful support of a secretary who seemed to know everything about USIS, Charlotte Loris. I'm sure you may remember her.

Q: As a matter of fact, we interviewed Charlotte just a couple of months ago when she was here, when she was in Washington for the annual USIA Alumni Association dinner. And I just turned in her interview to the recipients about a month or so ago.

NICHOLS: That's interesting. Well, believe me, I was sitting down there way down in the southern part of Japan, far away from Tokyo, with only a general orientation that I'd been given, and no previous experience dealing with any of the administrative aspects of the Foreign Service and the State Department or anything. I had the consular staff that could help me out with those things, of course, but any time I was up the creek I'd just turn to Charlotte and say, "Well, how

do you do this kind of thing?". And she'd say, "Let me take care of it," or she'd take care of it. But I learned that way really from someone with her experience sort of how to handle the administrative aspects, which I'd never had to handle before.

And as for the program, it was a fascinating period in U.S.-Japanese history. The Japanese were on their own now. But even after the peace treaty, they relied very heavily on us for lots of things, especially help and advice in things like education and development of libraries and things like that. Of course our program was more politically than culturally oriented, but we didn't have any problems in that connection at that time.

Q: Let me ask you, you must have had a lot of contacts in Japan, both by virtue of your having grown up there at least about to the middle of your teens and also by virtue of having lived in the Kobe-Osaka, I mean Kobe-Kyoto-Osaka area--the Kansai. And then you must have had some contacts based also on your work for the religion section of GHQ SCAP. Did those contacts stand you in good stead during the period of your service there in Kobe? Or did you have a chance to utilize them?

NICHOLS: Well, yes and no, Lew. I'd have to say no, they didn't serve me any good stead in respect to the contacts I'd had as a child, because I'd just gone through ninth grade there and had been in the boarding school. So I didn't know many of the parents of the students who were there, and of course they'd all scattered to the four winds and those people were gone, too.

And as for my family's contacts, I think at the age of 15 and having been in boarding school since the age of 9, that I didn't have any personally strong contacts with any of the people they'd known, or even--I couldn't even say I knew a great many of them at all by name. The contacts I had during the Occupation were very useful, but in a limited sense because they had been primarily with religious people. People in this walk of life swing a lot of weight, and in places like Kyoto, particularly, I knew both the abbots of the Nishi Honganji and Higashi Honganji, the largest Buddhist sects in Japan. And they were about as political as you can get. But it was more in the cultural sense that these contacts were useful, because as you know the famous shrines and temples usually are the seat of cultural and artistic matters; that's where you find the great gardens in Kyoto and things like that. So I had access to an awful lot of openings through those contacts.

Q: Through contacts that you'd made during the Occupation with the religious...

NICHOLS: That's right. And these were not contacts that my parents had made because I don't think they ever had much in the way of contacts with Shinto.

Q: I'd like to ask you another question in this regard. You of course had a very useful capability in the Japanese language. Now at one point you told my wife, Kyoko, that your Japanese did not, perhaps, have the kind of depth that would enable you to enter into extensive discussion of deep political or economic subject matter. It was a useful conversational Japanese but not in that kind of depth.

NICHOLS: That's true.

Q: My question is, despite this fact, did you find that your knowledge of Japanese was of great utility to you in carrying out the duties that you were undertaking in the Kobe area?

NICHOLS: That it was useful? Oh, yes. Well, basically, though, Lew, what I think I told Kyoko was absolutely true. Even to this day, I think, my ability in Japanese isn't sufficient to enter into a very serious discussion of things that are philosophical or very difficult political subjects. But as the language--I forgot to say that of course during the period of the Occupation my Japanese language had increased by leaps and bounds as my vocabulary expanded tremendously. Vocabulary expansion also occurred during my war experience in Naval intelligence. Because when I left Japan at the age of 15 I was just a kid and it was a child's language I was speaking, whereas during the Occupation after all that time and during this period in the USIS in Japan, in the early days, I was exposed to an awful lot more adult conversation and picked up a greatly increased vocabulary that enabled me to get along with people and get into subjects I could not have handled earlier, but still, not complex subjects in much depth. But I could understand much more than I could say. This is the real difficulty. I could absorb and understand pretty well what someone else might be saying. The difficulty is in producing it yourself. Because unless you know the language very, very well you have to just use sort of--you skirt around the subject by trying to explain it in A, B, C terms rather than using the more sophisticated terms that are requisite for a certain level of intelligence. And so it's very difficult.

Q: Of course Japanese is an unusually difficult language because of all the permutations, the nuances, and various levels and of address...

NICHOLS: You know how I solved this problem? It wasn't a solution but I was fortunately in a position to do that. I had a very good assistant, who lived in Kyoto by the way and commuted daily from Kyoto, named Kumagai. He just showed up in my office one day and volunteered. He had been educated in the United States and he was a very wealthy man. He was at loose ends and he was still young and hardy and he was interested in public affairs, interested in politics. He was interested in culture. He was just the perfect assistant for me. But his English was also good enough so that he could understand me and convey it in Japanese, in appropriate Japanese, whatever I wanted to say on a subject. So I found more and more that I was relying on myself for understanding what somebody was saying, but always having him with me or someone like that with me, but preferably him because we worked as a team. Now if someone else were talking about a subject and got into difficult things I could generally follow it pretty well but I'd sometimes say, did I understand this correctly, this, this and this. But then I spoke, I spoke in English and Kumagai would interpret. And even later when I transferred to the embassy to work that is what I did, with Sen Nishiyama as my interpreter most of the time. I could really understand almost everything. There it wasn't quite so difficult. It was mostly talking about administrative things. Sometimes, for example, subjects were a bit too complex, but most of the things I could understand, and most of the things I could explain my position on, but not when it came to something really deep. This is what I'm trying to say. ...

Q: Do you have any particular recollections as to any especially effective programs that you've carried out during that period that you were supervising the area of Kobe?

NICHOLS: Well. Let me say, I was only there for two years in the Kobe area, Lew, which is a short time, when you figure that the program was starting from scratch, that nothing was being done till I got there. You may recall, you were already--you had already leased properties for the center in Osaka and things like this, but I mean the program hadn't gotten underway in the sense of coordination of any kind. And we had--every one of our centers was directed by a lady, a woman, you may recall, except for one.

Q: During the Occupation period.

NICHOLS: Because they were the librarians for the CI & E libraries. They were very good librarians and they were very fine people. But for the kind of program that we had in mind, they just obviously weren't going to ultimately be the kind of candidates we were looking for. But it took quite a time to replace them adequately with male officers. And I don't mean that I'm--well...

Q: No, given the Japanese culture, its understandable.

NICHOLS: You have to face it, in Japan--yes. You have to face it, the Japanese are ill at ease, men are ill at ease dealing on an equal level in any sort of administrative or substantive sense with foreign women. Or any women. That's changing a lot now, believe me, but in those days we had a real handicap there. So it was very slow developing in terms of the cultural centers. We were trying to convert them more to information libraries, you may recall. They had thousands and thousands of books that really made them very good libraries, but we were getting to the point of trying to weed them out so they were less impressive in terms of their size and more useful in terms of the content and the selection of material for public information purposes, let's say.

So the development of the libraries was very slow. But I feel that the programs that developed around the centers was the most important thing we did in Japan in those days, except for the key things done in Tokyo, of course, that no field office could ever do.

But in terms of the outreach to the general public, I think those libraries were absolutely effective and extremely useful. But the answer to your question would have to be, I think the most useful thing that I was able to do, I felt that I had accomplished, if you want to put it that way, was the grant program, the exchange grant program. Because my area was rather large, I got a very substantial slice of the grants allocated to the field posts.

There was a big question of how to go about utilizing these grants. This is not really my idea at all, it originated with Mr. Kumagai, so I'm going to give him all the credit. But we discussed and discussed and discussed how to use these relatively small number of grants intelligently in such a large area. I think he came up with a brilliant idea and it worked out very well in the long run. He said, well, of course we should give some grants, say, to maybe a journalist and maybe to some promising young politician or somebody, well, things like that, but basically he felt the most effective way to use a limited number of grants would be to establish a long-term program in the academic field, operating out of Kyoto University.

Now, he, you may recall, lived in Kyoto and had a lot of very important contacts there, including the heads of all the universities in the area. And his point was that all of the academic positions, you might say, of importance in that general region were subject to Kyoto University in the sense that all the deans and professors who held those academic positions had been Kyoto University students and had been nominated by their professors from Kyoto University. In other words, just as Tokyo University has heavy influence on all the other Japanese universities, Kyoto University had the greatest impetus, you might say, or influence through the universities in that whole Kinki area, so whatever happened at Kyoto University was going to affect them in the long run.

And so to give one or two grants maybe outside, maybe to a professor at Hiroshima University, or so forth, but to concentrate over a period of years by allocating, say, at least one grant a year or two grants a year to Kyoto University on a highly selective basis. And the problem was how to select these people. I agreed in principle that--this involved a plan for about four or five years, each year selecting somebody, at least one, from Kyoto University. We said we ought to start at the level of promising professors who were highly recommended by the senior faculty. Well, the serious question that then came up was how we could go to the faculty and ask for nominations when we couldn't guarantee a visa, because of the security clearances. This was the McCarthy era, you may recall.

So we discussed that and he finally said, well, I can get us around that. I said, well, what's that? He said, we'll go to the president of the University, and I want you to come with me and we'll level with him, tell him what our plan is and I'm sure he'll be very pleased and think it's a good idea and be very much for it. And you're going to have to tell him that what you want him to do is to nominate from his own faculty each year someone he really considers a real comer for the future in Kyoto University, but not to tell him he's nominating him until we find out if we can get a visa for him.

I thought, boy, if there's anything verboten, that's it. But I said okay and I went along with him. So we went over and called on the president of the University and, by God, he said, I quite understand, after all, he reads the newspapers. And we explained. He understood what we were trying to do and he said he approved and appreciated it very much. So he said, I will do that, and I don't tell anybody about this discussion, I won't tell anybody that he's been nominated until you come and tell me you can give him a grant. So that's what we did. I put in an advance on his nominations, his names, and got this thing started. It ran right through Cliff Forster's tenure as Branch PAO in Kobe. But, my God, you know, by about the fifth year he nominated young people who weren't deans yet, you know, but every single one of these from Kyoto University ended up as deans, every single one, and none of them ever knew about this program until we could give them a visa.

They learned a hell of a lot from this kind of exchange exposure to America, and we had a very good thing going for us in the academic field down there by approaching it this way, which was really not "according to Hoyle." I was terrified that this would leak out at some point and the next thing you know you'd be reading a newspaper about some big arrangement. But it never leaked. Never did. And Cliff Forster, if you ever talk to him about this, will agree that he was the beneficiary, because when he got there, the dean of economics, the dean of history, all these guys had been on this grant program.

As I say, that wasn't my idea, but my feeling was that the decision I made to go along with Kumagai was right, and I take credit because I don't know that anyone else would have made that decision--it was really risky. The president could have kicked us out, just said no, but Kumagai said, no, I know him very well and I'm sure he won't. But, boy, what a gamble. What do you think would happen today?

Q: In the pre-war period of course there were a great many of the professors who were pretty far to the left...

NICHOLS: Yes.

Q: ...and there was still a large number of them in that category, even in the immediate post-war period who managed to shut up about their views and listen.

NICHOLS: Yes.

Q: And I would guess that that same situation existed even at the time you started this program.

NICHOLS: Oh, very definitely.

Q: So it would be understandable that there might be a number of them who wouldn't pass muster, particularly in the McCarthy and immediate post-McCarthy era. As far as you knew...

NICHOLS: I think we had one case, I think we did. I think we had to go back to him and say, very sorry. And he said--well. I think there was one case.

Q: As far as you know, these people who finally got the grants to the United States, if they weren't necessarily pro-American after their Stateside exposure at least they were understanding and were probably a great plus for us in the...

NICHOLS: Oh, yes. They weren't blatantly pro-American at all. The president picked them on the basis of merit. We had asked him to find people that he thought genuinely could benefit from such an exposure and that was one point, this was essential. If he didn't think they could benefit from it, there's no point in our admitting them. The second point was that there were no strings attached. If the person could get a visa, we were not concerned about his politics, because we'd take it for granted that he'd been a member of the Communist Party or something that the fact would show up somewhere during his security check. We weren't concerned whether he was oriented left, right or what, but we wanted the president's assurance that in his opinion this was a man who had all the capability of rising to the top in the structure of the university. And he said, okay. And they--every single one of them ended up as deans.

Q: I wonder--the assumption must be that since the deans of Kyoto University spread out their appointments of their prize students and their prize underlings to other universities, at least some of this influence then penetrated the other universities to which they were ultimately assigned.

NICHOLS: This was exactly Kumagai's theory, that instead of, say, giving a grant to Okayama University, somebody we picked out of a hat, just because the center director knows him and says he's a great guy, I'd like to have him... If we approached it this way in the academic field--allowing for maybe one wildcard grant somewhere else--if we approached it this way as a plan, we would be influencing ultimately these other universities and the kind of people coming out of that program ultimately to be in senior positions. Because that's the way it goes. They all get their jobs, through their deans. So we've always had, as far as I know, very good relations with Kyoto University since that time. But that struck me, when you started asking me what I might have been able to contribute, was a negative kind of contribution of going along with Kumagai. It was his idea.

Q: No, I don't think...

NICHOLS: When I heard it I thought it was a damn good idea, but I never told anybody in Tokyo anything about this. I just was so afraid that if--and I've seen this happen before--you mention something like this to somebody, the next thing you know somebody comes up and says, hey, you can't do that.

Q: Somebody is bound to say, gee whiz, we've worked out a really excellent program and...

NICHOLS: Next thing you know ...

Q: ...Nichols down there with Kumagai worked it out, the president of the University did this, that... No, I think you're absolutely right.

NICHOLS: My experience in the security during the war with this communications intelligence experience stood me in good stead. You just don't trust anybody. You know, you weren't allowed to tell anybody where you worked or what you did. Someone would say, "Oh, I checked in over there. What are you in?" Well, I'm in the gunnery or research, or some other obscure area.

Q: Did you establish any other kinds of grants and get any production out of them, say with the media in Kobe?

NICHOLS: Oh, yeah. Sure. We sent press people. We sent governors. We sent people who became governors. The best one we had was--we had very good relations that I helped work out with Governor Kaneko of Kagawa Prefecture, in Takamatsu.

Q: He remained, by the way, a governor for years and years.

NICHOLS: Oh, yes, he's still going strong, but he's been very ill. I think he may be dead now.

Q: No, he's not.

NICHOLS: He isn't? He's still living? Kaneko.

Q: I interviewed Harry Kendall last winter...

NICHOLS: Yeah, well Kendall was down there.

Q: And Kendall says he's no longer governor but...

NICHOLS: Oh, no, he's been out of office, he's been very ill, too.

Q: Harry sees him every once in a while, because Harry made a great name for himself in Takamatsu. And when they opened that bridge across the Inland Sea, a year or so ago, they invited Harry and his wife over there.

NICHOLS: Good, I'm glad.

Q: To participate in the ceremonies.

NICHOLS: That's Kaneko. He was just crazy about Harry. But Cliff Forster was the one who, when he was there as my successor--there was somebody between me and him. There was another guy. Jerry, I can't remember his name.

Q: You mean as the supervisor in that area?

NICHOLS: As the Regional PAO.

Q: Well, Jerry Novick was there.

NICHOLS: Novick, yes.

Q: He's dead now.

NICHOLS: Yes, well, he followed me didn't he?

Q: Yes, he followed you.

NICHOLS: He followed me and then Cliff followed him, I think.

Q: I think so, yes.

NICHOLS: So Cliff was the one who nominated Kaneko for a leader grant.

Q: Yes.

NICHOLS: And he went. So in other words, this was by no means--I didn't mean to give the impression we flooded this program with academics.

Q: No, I didn't mean to imply that you did.

NICHOLS: Oh, sure. We got people in public affairs. I can tell you the funniest story about Hiroshima and an academic in Hiroshima, though, that's--you ever hear this story? You want to turn that off?

Q: Why? Is this something you don't want on tape?

NICHOLS: I don't know.

Q: Why don't you go ahead with it. If you decide later it ought to be cut out of the interview we can cut it.

NICHOLS: You know, we were always being asked for evidence of effectiveness. Well, you know what that's like, it's always a problem. I think this story is one of the best I've ever heard in terms of communications, anyway.

Fazl Fotouhi, when he was down there wanted very much to send a dean of the Hiroshima university--I've forgotten what dean he was, literature or something, I guess--to the States on a grant, so I gave him a grant. Now this fellow didn't speak any English at all, but anyway, he went, and of course his group was escorted with interpreters when they were in the States. So when he came back he came to call on Fazl in the office. So Fazl had his interpreter there and the dean had his interpreter there and everything. When they went in, the dean came in and sat down and started to say something. The interpreter reacted but was hushed. "I talk, I talk," the dean says, in English. So he looks at Fazl and says, "Mr. Fotouhi, I, eh, uh, Mr. Fotouhi. Uh. Umm. Mr. Fotouhi. Oh, shit." That's literally what he said. He learned something over there. It's just a side joke but I've never forgotten it. Fazl, the interpreters and everybody laughed. He just wanted to try to speak a little English, he couldn't get beyond "Mr. Fotouhi."

Q: At least he learned a couple of words.

NICHOLS: Yes, that was the point. Anyway. I don't know. Could I have a break just a second?

Q: While we were off tape, you mentioned another story.

NICHOLS: Yes. You ought to hear this story.

Q: You mentioned that on one occasion you got Ambassador Murphy down there to visit Takamatsu and the governor and he had a meeting. You said there was quite a story connected with that trip. Would you mind going ahead and putting that on tape?

NICHOLS: Well, okay. This was quite a traumatic experience for me because as I said I had had very little experience in the State Department in public affairs, for that matter. When Ambassador Murphy decided to take a trip to Takamatsu and Matsuyama and see Shikoku, I was told by the people in Tokyo to go down there to set up all the arrangements and give them the dates and what not. It was going to be a very grand schedule. I won't go into all those details. But Kumagai and I went down there and talked to the governors, mayors and arranged for the

Ambassador's party to spend a night and a place on the train up to Takamatsu, from Matsuyama to Takamatsu. He was going to fly into Matsuyama...

Q: When the other tape ran out you were just saying that when Ambassador Murphy came down he had flown into Matsuyama and then was taken by train I guess up to Takamatsu, so will you pick it up from there?

NICHOLS: Okay. Well, he flew into Matsuyama, spent the evening, after giving a speech, then he went on to Takamatsu for the next night and gave a speech to the United Nations Association of Kagawa Prefecture that night, and then flew back to Tokyo. So flying into Matsuyama, flying back from Takamatsu with a train ride in between, six hour train ride. Well, this was quite a three days for him, and for me, because we had set everything up and it all ended up going as scheduled. But with many a slip between the cup and the lip.

Kumagai and I went on down with the consul general and stood at the airport and waited and waited. The plane from Tokyo was very much delayed. Finally it flew in. But in the meantime, after he had left Tokyo, but before the party had arrived, the news had broken that Stalin had died. There were a lot of reporters and people, there were radio stations and newspapers. They had picked up on the radio the news that Stalin had died, which was quite an event, of course. So all these reporters were having a fit because here comes the American ambassador who had been up in the air during all of this and they'd be the first people to have a chance to get him.

And so as the Ambassador left the plane they started storming him. We warned him this was what they had in mind. He says, "I don't want to talk to them, I don't want to talk to them." He says, "I have nothing to say, nothing to say, get in the cars and get off." So he got away with no comment. But later when it came to his speech at the dinner, there was no way of avoiding it because there they all were and they had a chance to ask questions so one of them got up and said, Mr. Ambassador--and they had it all translated in English, of course. In effect what he said is, we know of course that surely you must know that Stalin died earlier today and we would like to know if you have anything to say on the subject. And the Ambassador said, "Well, I have not personally been advised of this yet, officially, but you know I've heard lots of rumors about Stalin being dead from time to time and so far I haven't believed them. It could be true this time but I wonder if it is. But in any case, the only thing I have to say is if he is ill, I hope it's nothing trivial."

Well, they all wanted to know, what did it mean, "I hope it's nothing trivial?" The interpreter had a terrible time. So we finally had to just explain that, well, it's just a joke, that he doesn't take it seriously. We flubbed the whole thing, but got over that because they would have had a fit if they thought the American ambassador was saying something like that. Because they came back when they understood, they said they sort of thought that he hadn't said anything. So they said, do you know that Mr. Dulles had wired condolences and the President of the United States and the Prime Minister of England and the Prime Minister of Japan and everybody, everyone has been sending telegrams of condolence, and you have nothing more to say. He said, "I'm sorry, I told you what I had to say. Nobody asked me to send a telegram."

But that was about the way he brushed that off.

Otherwise everything went all right that night, but the next day was the train trip to Takamatsu. Governor Kaneko of Kagawa, where Takamatsu is, the capital of the prefecture, had come down to get on the train and ride the last three hours back with us because he had something very important to say. So we got on the train, and halfway up there the governor got on the train and we had a three-hour session with Ambassador Murphy. It soon became very clear that the governor had a real problem on his hands. And I had to do all the interpreting for this because he didn't want anyone else, he didn't want any other Japanese involved in this at that point, not even Kumagai.

So we sat and discussed this thing and his problem was that they had a little airfield in Takamatsu.

Q: They had what?

NICHOLS: A little airfield, you know, an airport. Of course there were no commercial planes flying in and out of it, in fact no planes flying in and out of it at all, just the strip that had been left by the military. But this strip was built on land that had been confiscated from the farmers of the area during the war to build an airstrip for military planes to land for emergency purposes. And there was great agitation now that the war was over to give the land back to the farmers and let them have it to turn it into farm land again. This had come to a head recently and now that the American ambassador was coming, there was really going to be a problem because he said, "I must confess that we have been holding out and refusing to accept their petitions for return of the land by telling them that we have been told that the American air force will need this for the similar purposes of emergency landings and things like that so that we have no control over the land at all, it's being held at the request of the United States government, which of course is not true." The Ambassador said, "This is the first I've heard of this." The Governor said, "Well, I'm just trying to be very honest with you. I just have to tell you this because they're all going to be demonstrating tomorrow and they are going to be asking you to turn them back the airport and you wouldn't understand what it's all about." So he said, "Can you possibly agree to get me off the hook in other words, by simply listening to their petitions and protests and if you're asked for comment simply saying, 'Well, I really don't know the details of this matter but I will certainly look into it when I get back to Tokyo' and then just go. Because, you see, your plane is going to come and land on that strip tomorrow. So this sounds like a good excuse, you see, for your saying something about this but you don't have to do anything other than say you'll look into it and not promise anything, but at least accept their petition. I wanted to let you know why they're petitioning and I am to blame."

So Murphy laughed and said, "Well, I've never heard anything like this. Okay, all right, all right. We'll see what happens. I'll just say, 'I haven't heard of it before and I'm going to look into it when I get back to Tokyo' and I won't be surprised." So Governor Kaneko said, "Ah, thank goodness."

So sure enough we got off the train and went to the banquet hall after going to the hotel, and he gave a very good speech. This was the United Nations Association of Takamatsu. While he was giving the speech another message came in from Tokyo and believe it or not this one was more

shattering than the one about Stalin. The message was that they just received word that Murphy had been assigned to be Ambassador to the United Nations, so he would be leaving Tokyo very shortly. So at the end of his speech to the UN Association he said, I just got this telegram during this dinner, the coincidence is really fantastic, what a three days.

But anyway, that night he got back to the hotel and there was a mob scene out in front of the hotel, all these farmers and everything with all kinds of signs. What the signs said was, things like this, Dear Mr. Ambassador. Please arrange to give us back our farmland. Please abolish the airport. And things like this. And it turned out that, guess where they'd been? They'd been to our center all afternoon, asking how to write these things in English. So they were all written in very good English, very polite English. Dear Sir.

The center director had told them all what to write. But he said what they wanted the signs to say and very politely. Without knowing anything about this, anything about the airport, but just as a courtesy. So our center was involved.

But anyway, they came and the head man wanted to see the ambassador and somebody came out and said, no, no, he won't see anybody. But, by God, Murphy appeared. He said he had heard something out here, what was this all about? And we told him it was the people about the airport. He said, "Oh, all right, I'll be happy to see them." And so the head man came in with about 10 other people and waited at the front of the hotel. All he wanted to do was hand him this written petition and explain it's about the airport. So Murphy said, "Thank you very much, I'll accept the petition. I haven't read it yet, should I read it now?" And they said, "Oh, no, you can read it later." So he said, "Thank you very much, I will do so." And then he went back into the house and they all left very happy because the important thing was to have left some piece of paper, whether he read it or not, the gesture of having called on him and left this protest. And of course the protest was very mild, whatever it was. Basically they believed that he could be instrumental in getting them back their airport.

So the next morning the plane came in from Tokyo, they were all at the airport, and all the way to the airport were all these former demonstrators lined up with their signs. And at the airport was the chief of the local agricultural group, whatever it was, union or something, all the important guys that were on the protest side standing around there with their signs. The same man in front, you know, who'd given him the pitch the night before. Well, several senior officers and their wives had gotten on the airplane and Murphy was still shaking hands with the governor, when he suddenly said, "Hi, I saw you last night at the hotel." He says to the governor, "Listen, I have an idea. Ask them how they'd like to have an airplane ride." Governor Kaneko was having a fit. He said, "You don't have to do anything like that." But Murphy persisted, "No, no, these people might enjoy seeing Takamatsu from the air and it might give them some idea of how important air connections are." So Governor Kaneko said, "Oh, yes, by all means."

So Murphy ordered everybody off the plane--the staff officers and their wives who had already gotten on--and said to the Japanese dignitaries, "Be my guests. Why don't we take about 10 of you?" So about 10 of the key people in this demonstration group got on the plane and Murphy got on the plane and I got on the plane and he told the pilot to take off. We flew all around, looked at Takamatsu from the air, the castle and the bay and the mountains and everything. And

these people were just bowled over because they'd never been up in a plane. They came down safely and Murphy had made some friends out of these people.

And then, the Ambassador and his party flew off for Tokyo. But this performance really struck me. I had a great deal of admiration for Murphy. He didn't know a thing about Japan but I think he was one of the best ambassadors we have ever had there, simply because of the kind of person he was. This happening was a good illustration of his tolerance and resourcefulness but it's another illustration of the kind of adaptability Murphy displayed. I don't know how anyone could have anticipated this sequence of problem events: like Stalin dying or Murphy being transferred, and then to have this demonstration. I learned pretty fast through things like this all kinds of tricks of the diplomatic trade. But I'll never forget Governor Kaneko for his business of coming down to meet Murphy and having the nerve to ask Murphy to put up with this fraudulent business of saying he would look into it. Which of course he told them he would. The airport now is a very big airport there and it's really brought Takamatsu right into the mainstream.

Q: So they never got...

NICHOLS: But it wouldn't have been given back--it's the same land. And the farmers are very glad of it now I guess.

Q: They never got their land back.

NICHOLS: They never got their land back, but they did get compensation and there were no more petitions, and Kaneko's neck was saved. But I'll tell you, there was a man who made a lifetime friend out of Kaneko for the United States.

Q: I'm sure he did.

NICHOLS: Well, that's been a long story, but it was a baptism of fire for me to have this kind of experience and to sort of learn by leaps and bounds. Suddenly, you know, well, gee, these kinds of things can be involved.

Q: I can't imagine somebody like Allison having done that.

NICHOLS: Oh, no. This man, Murphy, was just fantastic.

Q: He was really upset by his appointment as U.S. Ambassador to the UN He had gone out to Japan with the understanding that he'd be spending a three to five year period there. That news just really knocked him off his feet.

NICHOLS: Oh, he was upset when he got this telegram. And the sheer coincidence of it coming just as he had addressed the UN Society of Takamatsu.

Q: One of the things I meant earlier when I asked you what kind of contact you had with the media was did you have any occasion during the period that you were there, or did the people in the center, operating out of the center, have any occasion to talk to journalists whenever

necessary to try to get any American points of view or policy points of view across to the media? With the hope that U.S. policies could, perhaps, be better explained by the Japanese press, so that the Japanese public would then be informed of exactly what the true situations were?

NICHOLS: Well, naturally it was part of our standing instructions operationally to do that. And I think that all the center directors did to a certain extent, in all those centers in my area. I did to some extent. But the local media for some reason weren't all that interested in national politics. I mean, the kind of people we related with. You know, the people down there in the Kansai don't feel any great interest in this kind of--the international matters are all the concern of Tokyo. The Kansai people felt very much out of it. So there weren't many people you could pick out as outstanding in terms of ability to influence the country through anything they wrote in the press sense. We worked very closely with media in all kinds of public relations operations, knew a lot of them and knew the presidents of the newspapers and everything of course because they were invited to everything like the opening of the new centers, etc. We had good contacts with them, but I must confess that I never ran into a press man with whom I thought it would be worthwhile sitting down and trying to engage in discussion of some kind of international problem, because they hardly ever wrote about it. Most of that sort of material came directly from Tokyo or Osaka--you know, canned stories on international affairs and similar matters.

Q: I thought there might have been in such papers in Osaka.

NICHOLS: Asahi and Mainichi?

Q: Uh-huh.

NICHOLS: Of course their headquarters were both theoretically there, I mean originally. But by that time, everything was happening in Tokyo. You know, to Japan, that's the window of the outside world. I just don't think many stories of that kind were generated locally. They relied always for information from the people at the "source." They were interested in carrying cultural things and things like that and not so much about politics. But frankly, no, I don't think we did very well. I think maybe we did much better when Cliff was there some years later. I don't know about Jerry Novick. When Cliff was there he worked very closely with the press, but to what extent on political things I don't know.

Q: Well, of course later on the regional newspapers became much more sophisticated.

NICHOLS: Sure, oh, yes.

Q: The times we are discussing were those fairly close to the end of the Occupation and they hadn't fully recovered from being heavily under the guidance, under the oversight of the Tokyo papers.

NICHOLS: Right. Censorship, too.

Q: And also of the Occupational Forces.

NICHOLS: Yes, that's right. I don't think I ever felt that there was much mileage to be gotten out of trying to cultivate the press down there because if it got published at all it'd be in some little column in some back page somewhere. Magazines, we had a lot to do with magazines. Now they were somewhat different, but then, of course, the major magazines, the influential magazines, are all in Tokyo.

Q: Even some years later, too.

NICHOLS: Yes.

Q: I think they may have had local editions of national papers back in operation at that time but I'm not sure.

NICHOLS: No, that's for press releases. Now, I hesitate to say this because I want to talk about Pat van Delden, who was a very fine person whom I admired a great deal and to whom I owe a lot, because she was the person who finally picked me to go to Tokyo to take her place, which, by the way, dumbfounded me. She was, as you may recall, very much into the business of working on and with the media. She was very strong on getting to and influencing the press. I used to argue with her a lot about the limitations on what we could accomplish by getting too heavily involved in passing out tracts like, for example, "Bloody Footsteps in Korea." We were getting all kinds of stuff like that out of our Publications Branch in Tokyo.

But most importantly, we were operating under the guise of cultural centers, and, as you may recall, I have always felt very strongly that it was very important to maintain, not a neutral but certainly an apolitical facade for the cultural centers, because it was the fact that they were indeed cultural centers that gave us our in with a significant and influential segment of the Kansai people.

Q: The centers were acceptable to...

NICHOLS: Acceptable to the community, so I was always against anything that would jeopardize that tie by being too political.

This had nothing to do with personal contacts center personnel might have had with local people of influence. But for the centers as U.S. institutions to pass out heavy anti-communist tracts would have been disastrous at that time. The one I can remember in particular was something about "Bloody Footsteps in Korea." Anti-communist stuff. We had a real go-round about that with Pat. But...

Q: Pat had just come out of the European background.

NICHOLS: Yes.

Q: Where the U.S. was completely remaking the German society...

NICHOLS: That's right.

Q: I think that was her introduction to media "propaganda" but she was highly influential in inaugurating a lot of those programs in Germany. You could do things in Germany you couldn't do, given the Japanese culture.

NICHOLS: Yeah. Well, I'm a great admirer of Pat van Delden's, really, believe me, but you asked me a question about this business of the press. That was always a big problem for us and I think all the people in the field, because there's no question in my mind that the place to operate with the press was out of the embassy in Tokyo. There you have backup, you have everything. Out in the prefectures all we could do was go with something that we were given as an instruction sheet, or some text or something to work with, and you're sort of flying blind if you get any real questions in depth.

But Pat was rather insistent because she was so imbued with this sort of secretive aspects of media manipulation. One time she actually told me to call her back from a pay phone, not from the consulate pay phone, even, not from the consulate general phone which is supposed to be secure, but to go to a regular pay phone down in the dock area and call her at a certain time like at 10:00 at night and she had a very important message for me. So I said to myself, wow, what's happening.

Anyway, I went down there and the message was in effect that she had arranged for delivery to all of us in the region some, I don't know, thousand copies of some tract like "Footsteps in Korea," a very anti-communist thing. She herself realized from some of the things we had been saying that we wanted to be very discreet about how we got involved in this sort of activity. So she was being very discreet. But she wanted to let me know that she was sending this screed. She was calling all the RPAOs the same way, and these tracts would soon be arriving in an unmarked, big bale of stuff. "Don't let your staff open it if you feel that way about it, but we want you to figure out some way of getting this stuff into distribution."

Sure enough--I thought it was funny to have to go to a pay phone someplace, as if nobody would ever guess someone was making an important call from a public telephone. But anyway, that was all, that was the message. And so sure enough the packages arrived and sat there with ours and all the centers got them. She was mailing them to all the centers and I began getting frantic calls from all the center directors. I had called all of them in advance and said, "There's a package coming down and I really don't know what to tell you to do with it, but there's just no way you could sensibly dispose of, say, 100 or 200 copies of this kind of thing. I just really don't know what to tell you what to do with it, I haven't seen it myself yet, but I know it's coming in any time so be on the alert. Make sure you tell your staff you're expecting a package and you want it brought to you immediately so that nobody opens it, or something like that. Then you look at it and decide what you want to do locally."

Well, everybody handled it a different way. Some of them just looked at it and said, "Geez, I'm not going to have anything to do with this". Others did other things. The center director in Nagasaki felt he didn't want to have anything to do with it, however, he felt he was under obligation to do something with it. So he took the little station wagon we had, in the dead of night, midnight, put the package in the back of it and drove around town dropping 10 or 15

copies off at each street corner so the next morning he had this treatise distributed all over town, all in Japanese, of course. But he said he didn't think--he called me and said he'd done it. I said, "What?" He said, "I've got them all over town." I said, "My God, how did you do that?" He explained it. I laughed. But he did it.

This gives you some idea of some of the difficulties of executing an ordered action of that kind when you're basically a cultural enterprise on the front end and trying to find other ways of doing hard propaganda things without jeopardizing your reputation and status. I don't think we ever succeeded in finding a good way to balance these competing functions in that area, or anywhere through the centers. The centers just were too vulnerable. They were not for propagandistic lectures. You could if you had a visiting speaker who was a well-known authority in his field and he was well known to be violently anti-communist. In that case, it made no difference, because he was an authority. That's what they were coming to hear, no matter what he said. But to have a center director or we bureaucrats, you might say, running around with any such message was, I think, just counterproductive.

Q: Well, if the ambassador had been willing to say it, that could be something else again. They might have...

NICHOLS: Yes.

Q: ...Perhaps given it some degree of acceptance, even if they didn't agree with what was said. But I agree with you, I think the degree of acceptability--the official position of the individual who is saying it for the American side is the key point in Japan.

NICHOLS: And these articles were absolutely unattributed.

Q: When you moved the Nagano Seminar down to Kyoto and had these people from many different disciplines coming over to lecture, I suppose they were also accepted as authorities.

NICHOLS: Yes. And also, as time went by the local press became more and more influential because with experience they wanted to get into international subjects. Nowadays the local papers compete. So times change. ...

NICHOLS: Yes. Well--what was I going to say? Oh, yes. I was getting very comfortable and looking forward to staying on because I thought I was going to be there for a long time.

But when Pat called me up and said she wanted me to come to Tokyo and take her place, my first thought was, who, me? I don't have a clue what she's doing there. You know, I had been to Tokyo to conferences and things, and I was terribly impressed with what she was doing. I didn't see how I could possibly replace her; it was out of the question that I could do what she was doing. At first I was terribly worried about it. I didn't have enough experience I had only been exposed to her during conferences. I really told her I wanted to think it over. She said, "Well, of course, but it's a great opportunity." I said, "I'm sure it is." It just sort of bowled me over.

So I went to Dave Osborn who by that time was a political officer in the embassy.

Q: Dave, who had come down from Hokkaido?

NICHOLS: Yes, he had been consul and Principal Officer in Hokkaido. Yes, that's right. I went to Dave, who was a good friend of mine by that time and I said, "You're an FSO and you've had experience in USIS." (He had, I think in Taiwan. I don't know where for certain.) But, anyway, I said, "This is the proposition I've been given and my inclination is to turn it down because I have some doubts about my ability to handle it." He said, "I don't know what kind of advice you want, but I can give you some advice based on my own observations and experience, if that's what you want." I said, "That is what I want." He said, "Well, I would take it if for no other reason than the fact that if you don't you're going to find yourself sitting there for some time and not being considered again for a long time for some much better more exciting or interesting position. That's just the way it works."

This hadn't occurred to me. I thought about it and I finally said, "Well, I'll go up to Tokyo and talk to Pat and see what the story is." So I went up and talked to her, and she talked me into it. But what really persuaded me was what Dave said. I always felt I went under protest, but I'm very glad I did.

I was getting to feel real comfortable with the kind of contacts we had set up, like Kyoto University, and Kumagai was a fabulous guy to work with. I tried to--I asked if I could bring him up and she said, "Sure". But he wouldn't come. He said, "No, I don't want to get involved with those people in Tokyo. Kyoto's where I belong."...

Q: I don't think you had yet mentioned the name of--you had said it was the first big exhibit that we put on under the Commerce Department's aegis, so would you go on from there?

NICHOLS: All right. What I mean by that was it was not what you'd call an information exhibit. As I recall, it consisted primarily of machinery or equipment loaned for this purpose by various American companies in hope that it would help promote sale of their products in Japan. It was really a product show. And they hadn't had many of that nature before that. This was one of the very first and it was on a big scale. So it was, totally under the jurisdiction of the Commerce Department, but they expected our exhibits branch, Mrs. Baker, Frances Baker, to arrange the layout and arrange the exhibition itself. Well, she, being a trained propagandist, you might say, having been in PsyWar all during the war, and working for USIS, she thought totally in terms of thematic exhibits. She in the first place didn't want to work on something, just designing booths with no cohesive thematic continuity. She felt that a program could be designed around this material that could be thematic and to which the Japanese would be more receptive. That was the big catch. She felt they'd be more receptive to a thematic approach than just a display of goods--and it could have a wider impact, in the press and everywhere else. I think I recall that she planned to have it involve the incorporation of some Japanese items, too, that related to some of the non-Japanese things being shown.

To make a long story short, this thing developed into a tremendous battle for decision one way or the other between a gentleman whose name I can't recall [Richard "Dick" Ericson], in the Commerce Section and Fran Blakemore and my staff, and all of us in USIS who got involved eventually and went down on her side. We agreed that to be effective, such an exhibit should to the extent possible have a theme, and be presented in a totality which an audience could appreciate, rather than just looking at certain machines that might be of interest to them and not others.

We went around and around and around, but we finally won the argument, a very bitter argument that went on for weeks. The exhibit was finally launched under the title "Partners in Progress". It was a very good title for that period because we were of course the senior partner at that time. It might be a little different today. The Japanese might put one on in the U.S. called "Partners in Progress" reversing the formula.

That exhibit was the forerunner of another, much larger, more spectacular, and more influential once called "Atoms For Peace". I think you mentioned it a few minutes ago when we were off tape.

Q: Yes, I definitely want to go into that at some length.

NICHOLS: This one was completely organized and run by Fran Blakemore on a thematic basis. It developed from an initially rather modest project into a tremendous thing. A year or so earlier, President Eisenhower had given a landmark speech on the concept of the peaceful uses of atomic energy. Following up on the Eisenhower theme, the Agency had staged an enormous exhibit--the first of its kind--on "Atoms For Peace" in Geneva.

Never expecting to be able to replicate the Geneva show, we started out on a far less pretentious scale. Actually, we had absolutely nothing to start with, and I guess as our requests for assistance from Washington grew, the Agency must have decided to support us on a bigger scale with both advisory and materiel help. At what stage they decided to go all out, I don't know. At any rate, our ability to stage the blockbuster event became dependent entirely on whether we were able to get from the U.S. major actual or authentically simulated component parts of a real atomic reactor. To reach its objective, the exhibit had to be sufficient to present a clear, thematic picture of what an atomically operated generating plant was like, and what it would mean, to an audience of Japanese viewers which was conditioned to fear rather than understand the potential of atomic energy from A to Z, at least on a basic level. It became clear that if the exhibit was to be mounted at all, it should make the audience come out of the show feeling that atomic energy was going to be extremely important and could be used for highly productive and peaceful purposes, not just for bombs.

So, from a program priority point of view, it served many purposes. And it became a tremendous undertaking. A startling number of things began turning up not only from Washington, but from various other quarters of the U.S. that we were able to fit into the exhibit plan: valuable full scale models provided by major U.S. corporations, especially Westinghouse, which had built what I think was the first actual working atomic reactor at Shippingport, the pincers that handle radioactive material between shields, and many other important items.

It soon reached large proportions. In fact, it got to the point where we had enough material, and Fran was working on the thematic approach. You could walk in at the beginning and come out at the tail end, having had the whole exposure step by step so you would understand it. But now it was clear that the staging space requirements were going to be horrendous.

So you want me to go on with this, or am I supposed to...?

Q: Yes. Go ahead.

NICHOLS: This is where I got into the picture, because, as I have said, it was all being done by our Exhibits Branch, but when it got to be the problem of how to stage the thing, we had to have a sponsor, preferably a big newspaper to give it adequate publicity. USIS wasn't in a position to purchase either advertising or staging space. The cost would have been prohibitive. So I decided to go to the Yomiuri newspaper, simply because it was an adventurous newspaper, and--it was the third largest newspaper in Japan [In later years it became the largest from the standpoint of circulation.] at the time behind Asahi and Mainichi, maybe 10 million circulation a day in the morning edition. But also I went to them because it was headed by a man named Shoriki who had been the founder of the newspaper and liked to do innovative things. He was a one-man show. He ran that newspaper with an iron fist; he owned it, and everybody said yes, sir when he spoke. He wasn't the typical Japanese president of a newspaper who bows to the wishes of consensus. Or wouldn't think of violating the dictates of a consensus of the staff. He made all the decisions.

So I went down to see him with Ken Bunce in tow to sort of back me up because I thought he could help me to do more than I could do alone. I didn't understand atomic energy myself at all and he, I thought, could help me out. However, it didn't turn out to be necessary.

We were invited and sat through a board meeting that Shoriki had called for the occasion because we were coming to discuss this whole exhibit as a possible thing for his staff to do.

The interesting thing to me was that we were in luck because at that time the whole tone of all Japanese newspaper coverage of atomic energy was very negative in Japan. Discussions of nuclear powered generating plants and things like that were violently opposed by all the newspapers, including the Yomiuri up to that point. Anything to do with atomic energy of course was immediately associated with the atomic bombings and so it was virtually a taboo subject, at least certainly not one in which you'd expect to get any favorable support. But Shoriki had obviously thought about this for a while and, it seems certain he suddenly climbed onto the idea that if he could catch the other two major papers out in left field still promoting this bugaboo view of atomic energy, while he could bring the public around to a dramatic comprehension of both the commercial and peaceful potential for this powerful new genie, he would have scored a real coup and carved out a place in history for himself. Which he did because he ended up riding this thing all the way into being the first Atomic Energy Commissioner in the Japanese Cabinet.

Q: At what point for this support for the "Atoms for Peace" exhibit do you think he realized a potential of riding it into the Cabinet as the first Commissioner of Atomic Energy?

NICHOLS: I don't think he thought of that at first. Well, maybe he did. I don't know, he was a remarkable person. He was also the person who introduced baseball to Japan by bringing the Yankees out here with Lou Gehrig and Babe Ruth. I can remember seeing them when I was a kid in Kobe, play at the stadium. He was the first with television both black and white and color. Imaginative things like that. He had his own television network and radio network, besides the newspaper. He was a real media mogul. But I believe he was thinking in terms of the circulation and the competition with his two big rivals. Besides, it gave him a chance to twist the knife into them or something like that: to upset them.

I believe it was only later on, when the idea really caught on and I think to a large extent due to this exhibit, that there was possibility for safe nuclear power development in Japan, that he began to get the idea that maybe he could ride this even further, and take credit for it. And he got the credit, actually. But of course he had a lot of political clout. I don't know when he really thought of it. I don't think he thought of it at first. Pretty inconceivable to assume there would be an atomic energy commission when you're still battling your own staff to write favorable articles in the paper on atomic energy.

But that was an extraordinary meeting because it was an example of something I had never seen anywhere else in Japan, a one man decision against the whole arrayed opposition of his staff. Then came the question of where it could be held. There were no spaces large enough. And the only thing to do would be to build a building for it somewhere and the question was where could you rent the space. Where could you even find suitable space in Tokyo to construct a building for it. And in the middle of all this, like a bomb, he said, "Well, why don't we build it in Hibiya Park?" That's the park, you know, right across from the Palace grounds and right across from the Imperial Hotel.

Q: Yes, I know.

NICHOLS: As sacrosanct as it can be, and owned by the city. His staff, to a man, didn't laugh. They wouldn't dare laugh in front of him, but I mean, it was pretty clear they thought it was a nutty idea. So they said, "Well, we could never get permission." He said, "Well, I'll see to that." He went right ahead and discussed the location; he kept getting back to "wouldn't that be an ideal place?" Well, sure, there couldn't be a better place, what can they say. So he said, "Well, that settles it, we'll do it in Hibiya Park." Nobody volunteered to undertake to see the city government about this so he said, "I'll do it myself, I'll take care of that." The cost was certainly a factor. His finance man said, "Gee, we can't afford this!" He said, "Give me an estimate." His finance man said, "Oh, I don't know, billions of yen." "We'll do it," Shoriki said. And that was the end of the meeting.

Q: Yomiuri paid for the whole building?

NICHOLS: They paid for the building. They paid all the costs. And later they paid for sending that exhibit to 14 other cities. Fifteen other cities.

Q: I had left Japan by that time and I didn't realize it was continuing to be displayed all around the country.

NICHOLS: Oh, we spent years on that thing. It was still in circulation years later, virtually unchanged. A few things were added later as atomic energy techniques advanced, but millions of people lined up for blocks in every city to see it. It really had an impact, and finally it brought everyone else around to it, even other newspapers. You know, they sent their own reporters around to go through it and I think they came out--well, maybe they weren't for it, but they were convinced that, well, you know it probably will work, and they wouldn't want to knock the peaceful use aspect, they began to knock off on that.

Q: I don't know how lasting the effect was over the years, but I imagine that it really turned Japanese public opinion around to a large extent. Because they were so loudly anti-everything atomic whatsoever.

NICHOLS: It certainly did. It was a very timely thing, Lew, because it had happened right after, I think, just about the time the Lucky Dragon incident was prominent in the public mind, when these fishermen got dusted with the fall out from the U.S. Bikini test.

Q: It came right in the middle of the summer of 1954, less than a year before we began preparing that exhibit and was still a hot issue in 1955 as the exhibit was a building in 1955.

NICHOLS: Yeah. So the timing was just about perfect. As I say, Fran Blakemore deserves credit for organizing that show. But it's an example of one of the things I was going to say about my own embarrassment about what I did there during the exhibit preparation. People say, well, what were you doing? Basically I never really did anything. I was involved in negotiating, which is doing something. I was involved definitely in getting Shoriki to do it. That was my idea, and I arranged it. But aside from that, all the doing was by somebody else.

Q: I realize that.

NICHOLS: I left--I always felt that, I could never say, "Well, gee, what have I really done?" In terms of putting my hands on it, saying, "Look, I made this".

Q: I understand that, but I think the idea of approaching Shoriki and getting him to agree to do it was a coup in itself, and although I'm not sure, I don't think that another paper would have done it. In fact, I don't know for certain, but I think there was a real chance that Shoriki would simply sniff at it and turn it down. Instead he bit it with all dentures.

I also remember that Tom Tuch, who at that time was a very young officer (Hans is his real first name) was sent out from Washington that summer to help with the exhibit and spent two or three weeks with us. Tom had just been one of the principal parties planning the initial Geneva exhibit, and had a significant part in its staging. His past experience and knowledge were vital to us in the final stages of preparation. He worked with Fran Blakemore, or was she still Fran Baker? I don't remember whether she had yet married Tom Blakemore at that time.

NICHOLS: Yes. She had already married Tom Blakemore by that time. But anyway, I remember Tom Tuch very well.

Q: Do you have anything else that you think you'd like to speak about with reference to that period of your career?

NICHOLS: No, except to say that--I felt by the time that I left in '58 and turned it over that we had a fairly good working relationship between the field posts and the headquarters in the embassy which never was disrupted until 1970, after I left.

CHARLES ROBERT BEECHAM
Japan Desk Officer
Washington, DC (1952-1955)

Publications Officer
Tokyo (1955-1961)

Charles Robert Beecham was born in South Dakota in 1923. He served in the Department of State's Government Information program and in USIA. Mr. Beecham served in Japan, Washington, DC, Thailand, and Indonesia. He was interviewed by Jack O'Brien on July 5, 1990.

Q: Bob, how did you happen to get into this profession?

BEECHAM: By accident, partly. But coming out of World War II, I did feel there might be things that could be done to help prevent that sort of event from ever happening again. At the end of 1951, as I was finishing up a year and a half in Corcoran Art School, I began calling various government agencies, including State and CIA, looking for work. I remember calling the Department to talk about a job with the information program and being told more than once that they were not hiring. But as a kid in South Dakota, when I was in the sixth or seventh grade, one of my teachers was a guy named Everin O'Brien, who at that point, in 1951, was working here for South Dakota Senator Karl Mundt. I don't think I went to O'Brien purposely to ask him for help; it came up in a conversation that we had over the phone about what I was doing.

Q: I should explain that he was not related to me.

BEECHAM: When I told O'Brien I was not getting much encouragement, he said, "Well, I know some people down there. Why don't I call them." And, as you may remember, the person he called turned out to be Dick Fitzpatrick. I went to talk to Dick at some point and completed an application. Then, like a lot of others, I waited several months to get word that there was a job opportunity. When it came, it involved a guy by the name Jack O'Brien, who I remember tried to discourage me from accepting what they were prepared to offer me -- a clerk-typist position. Do you remember our discussion?

Q: No.

BEECHAM: Well, as I recall, it was that I would take the job on the understanding that I wouldn't be limited to clerk-typist activities, which you agreed to. I think it was in February of 1952 when I started on the Japan Desk that you had been brought in by Charlie Arnot to set up.

Q: You and who else?

BEECHAM: Dottie Brose and Joe Reilly. I don't think I had any idea what I was getting into at that point. It was a very interesting experience for me. Certainly, I hadn't never been involved in anything like it. My only other exposure to government was working at FBI headquarters for brief periods before and after military service. My attitude toward work, I suppose, was that you took what was available and went on from there.

I remember spending as much time as possible talking to people about the organization, trying to find out what others were doing and where they fitted into the picture. I don't know if that was unique or not, but it was my experience in the Agency as time went on, particularly in domestic parts of it, that too many people rarely had a good idea or much interest in the way their own job and their own office fitted into the larger scheme of things.

Q: I think, Bob, we might explain here that at that time, 1952, the Japanese were still getting acquainted with the rest of the world and demands for information about America were almost unlimited. We had the job of providing much of that, most of it in response to requests from Tokyo. You and I were filing great quantities of copy to the Japanese press at their request.

BEECHAM: Being totally new to what was going on, I don't remember having the same sense of that as you do. Certainly, a lot of what I was involved in initially was very routine and very clerical. I understood better later on, after getting some opportunities to do some feature writing and reporting.

Q: Well, I just came from five years in Japan, and almost everything that we were sending out was picked up in the Japanese press.

BEECHAM: When I went to Tokyo in 1955, I then saw the other end of the operation -- how every day we had scores of Japanese media people coming into that building looking for the kinds of press and publications material that the IPS Japan Desk had been sending out.

Q: Well, you had that first IPS job for how long?

BEECHAM: The place was reorganized shortly after I arrived, and you became Chief of the Far East Branch. Then you went to Indonesia in 1953. Who took your place?

Q: George Sayles?

BEECHAM: Yes. I did various writing, editing and reporting assignments in the Far East Branch after the Japan Desk was eventually phased out. But for a time, I guess, after Dottie Brose and

Joe Reilly had left, I was a one-man Japan Desk. That may have been the point when I became interested in going overseas, particularly to Japan. I used to pester some of the personnel types regularly. Eventually, the chance to go to Japan as Assistant Publications Officer materialized. I think Bill Hutchinson, who had been Publications Officer in Tokyo and was then working in IPS, was probably instrumental in getting personnel to consider my case.

I arrived in Tokyo on May Day of 1955. It was raining, and the Japanese unions were out in force demonstrating. My hotel bed shook slightly the first night from a small earthquake somewhere and added to the excitement. My new boss was the Publications Officer, Carl Bartz. Clem Hurd was the Press Attaché; Charlie Schroth was the Press Officer; Charlie Davis was there going to language school. I knew all three, at least slightly, from their earlier work around IPS.

Q: Who was the Public Affairs Officer?

BEECHAM: Ken Bunce was there briefly. When he left, Lew Schmidt served as both PAO and Executive Officer. Later on, Joe Evans came out as PAO, and Art Hummel came as his Deputy. USIS Tokyo was a large organization with numerous Americans and dozens of Japanese employees. At the outset, it seemed very imposing and somewhat disjointed. I kept busy trying to catch on to how the program worked and how people went about their jobs.

I remember feeling that Lew Schmidt, while he was in charge, ran things with a very firm hand, particularly with respect to money. I don't know why it happened so early after my arrival, but I remember Bartz filling me in on some sort of pamphlet project he wanted to undertake. He needed additional money for it, but because he didn't want to talk to Schmidt about it, he sent me up to Lew's office instead. It seemed to me at the time that Lew sort of kept the money locked in his office, and you went up and made a case for whatever it might be you were planning to do. Later on, of course, I learned that that was Lew's way of keeping the Branch Chiefs from quickly over-spending their allotted budgets.

Carl was a very inventive and articulate boss. He was convinced that one of the things most needed in those days was a magazine that would put Japanese scholars and intellectuals in touch with the thinking of their American counterparts. It took months of constant, often frantic effort on Carl's part to perfect the concept, win Washington support and financing, line up Japanese specialists to serve on the editorial board, recruit a Japanese editor, find a prestigious publisher and settle on the dozens of American scholarly journals from which materials were to be drawn and reprinted in Japanese in a new monthly called *America*. Bartz and a hand-picked board of Japanese scholars reviewed the contents of the American magazines and picked out those considered particularly appropriate for Japanese readership. It was a huge success and I suspect became the model for similar Agency periodicals later produced in Washington, Delhi and other posts.

I found myself trying to manage much of other publications programming over those months but recollect few specifics other than an ambitious, heavily-illustrated pamphlet on the Hungarian revolution.

Q: You had that job for how long, Bob?

BEECHAM: I don't recall exactly, but Carl left for Okinawa in a year or so, and I succeeded him. One thing that I should mention is that when I went to Tokyo, I really didn't have any deep interest or commitment toward the Foreign Service. I went with the idea that I would do this for a time and then probably go back to Washington and settle down into some job in IPS. I was offered a double promotion the first time around in Tokyo, but since the Agency linked the double aspect of it to my transferring to Foreign Service, I turned it down. I took a lot of ribbing about that but was lucky enough to be promoted again the following year. This time, they left me no options; to get the promotion I had to convert. Of course, Jane and I were married by that time, and I had a much better understanding of what I was getting into than I had earlier.

My first tour lasted three years, as did all my other tours abroad, and when I arrived back on home leave in 1958, you had already set the stage for what came next. George Hellyer, then East Area Director, was getting ready to move to Tokyo as PAO, was searching for a Special Assistant and had gotten my name from you. During my consultation in Washington, George called me in to talk and ended-up offering me the job, which I accepted, of course.

George arrived in Tokyo with the very clear notion that he needed to reshape the Japan program. But to be quite truthful about it, he didn't seem to have a really firm idea of what he wanted to do. I may never have understood what exact problems he had with the existing program, but his determination to generate change and improvement was obvious.

I recall George saying to me, and probably to others too, that he wanted a new country plan. In fact, he stressed he wanted a perfect country plan. I suggested to him that a perfect country plan and a perfect country program would be ones in which USIS worked itself out of a job. My thinking on this was probably influenced by my association with Bartz and the *America* magazine project. That was a prime example of American private sector influences being brought to bear on the thinking of leading Japanese. I felt it made a great deal of sense for the Agency to be promoting activities in which the natural forces within American society were brought into play to accomplish what the Agency was trying to achieve.

Q: How did George respond?

BEECHAM: Very enthusiastically, at least until he heard from people in Washington that they didn't view it as a very practical idea for building an entire program around. As you remember, it became a very controversial proposition, and we went through endless back and forth with Washington plus at the Tokyo level, an awful lot of internal upheaval and dissension. George became pretty unpopular with much of the staff. I guess I did too. Certainly, the changes we were pushing weren't very popular in many respects. I think it was Harry Keith, the Mopix officer, who came up with the rather derisive term "thinkers and doers" to describe the proposed staffing pattern. I remember John Reinhardt was very skeptical about the whole thing. John was in Kyoto, I believe, as BPAO, and was only one of many who were very critical of the scheme.

Q: This was the John Reinhardt who later became Ambassador?

BEECHAM: And eventually, he was made head of the Agency under President Carter. He then started his own "thinkers and doers" approach to Agency programming.

Q: George's idea never took root, did it?

BEECHAM: Well, it took root in the sense that the whole place was remodeled, new offices were established. There were half a dozen or so officers who were given assignments as what we called Program Officers. Their basic function was to develop ways to reach influential Japanese, both individuals and groups, more effectively than we had in the past. The emphasis was to be not only on Agency or USIS products, but also on specialized materials coming from independent U.S. sources -- authoritative research and analysis, scholarly articles, government documents, Congressional hearings and reports, etc.

Q: Well, let's summarize this Bob. How long did it go on, and what was the outcome?

BEECHAM: The outcome, I think, was dictated by George's departure more or less under a cloud, not only because of the reorganization, but because of other frictions involving the Ambassador. Months of preparations for the aborted Eisenhower visit put an added strain on relationships all over the Mission during that interval. I don't really know or remember all the story of George's departure, but he was replaced by Bill Copeland who came in quite clearly to reverse the direction in which things had been moving and to keep the Ambassador happier.

Q: The Ambassador at that time was...?

BEECHAM: Douglas MacArthur II, who was replaced after Kennedy's election by Ed Reischauer. I left in 1961 and came back to Washington uncertain about my next assignment. What the Agency proposed for me was the USOM Information Officer job in Bangkok. I was not interested in anything that removed me from USIS main-stream activity.

ROBERT O. BLAKE
Political Officer
Tokyo (1952-1954)

Ambassador Robert O. Blake was born in California in 1921. He served in the U.S. Navy from 1943 to 1946. In addition to Japan, Ambassador Blake served in Russia, Zaire, Tunisia, France, and Mali. He was interviewed James Mason on December 29, 1988.

BLAKE: Maybe we can go back to Japan for just a minute. When I went there my job was to report on Soviet activity in the Far East and on Japanese communist and socialist activity in the domestic area. It was very interesting. A lot of my information was derivative. It came from Intelligence sources, the Army and the CIA. They were wired in very well, but they didn't have much on what was happening on the Soviet side.

My most important task was to help the Japanese Foreign Ministry set up an adequate Soviet Affairs Section. The Foreign Ministry had just begun to expand with the end of the occupation and they were establishing the normal kind of regional setup that they hadn't had before. The man who was in charge was a guy named Niizeki Kinya, who later became Ambassador to the Soviet Union Vice Minister of Foreign Affairs. He was an excellent diplomat. He and I spoke mostly in Russian because he hardly spoke any English and my Japanese, while it got better and better, was never really high quality. We became quite good friends and did a certain amount of traveling around the country together.

I lived in a Japanese house, which was a little bit like camping out in Rock Creek Park in the winter -- paper and glass walls. What heat you had in the winter came from little charcoal braziers, the hibachi, and from the steaming baths that you took early in the morning as soon as you got up. Japan was a very interesting assignment. I did a lot of traveling in the Far East and would have been happy to stay. But, of course, I welcomed the Soviet desk assignment. It was a thrill to get back there for that job.

Q: From there you moved on to Tokyo. Did you go directly there? Did you go home first?

BLAKE: Went home first.

Q: Were you by this time married, or was that later?

BLAKE: No, I wasn't married when I left Moscow.

Q: It's interesting to see when you started having a family.

BLAKE: That was a bit later. In Tokyo - I got there just after the famous May Day riots which took place at the end of the occupation. Bob Murphy had come as the first ambassador to Japan and was one of the people whose views - particularly his operational approach - were enormously important to me. In fact, Bob Murphy was quite right wing in many of his views - right wing of the time. But it never seemed to interfere with his judgement, his ability to size up with intuition. He was a very strong Irish Catholic person who was from the roots of his being anti-Communist. And to some extent that was reflected, but I had a lot to do with him first in Japan, and later when he went back and was first Assistant Secretary for International Organizations, and then Under Secretary for Political Affairs, and then again while he was still having that job when I went to Tunisia. His finesse, his ability to work with other people, his ability to be tough and get away with it was something which had an enormous impact on me.

Q: I take it that he was the man who took over from the military government? So you had quite an organizational job there to do, whatever he did, right from the beginning.

BLAKE: That's right. Not that big. The proto diplomatic mission had been there in the Political Advisor's office, and while the staff was expanded some of it didn't change too much. The center of gravity of relations with Japan changed, from the military headquarters to the ambassador, and he was very determined that that that was the way it should be. He was careful with keeping in touch with the commander. There was no question who was boss, it was Bob. He had a clear

signal from the President - by now it was President Eisenhower whom he'd known very well when he, Bob, had been High Commissioner in Germany - that he was the boss and Ike, not being a great lover of other military guys, that's the way he wanted it. I don't really remember there being any particular spats with the military on the things that we were interested in. In the end, the fact that he was so tough probably was a) the reason why he was sent off to be sort of Political Adviser in Korea, which he was bitter about, though it was a terrific put-down; and then he left that to go back to the States. I think that all that left a very, very bad taste in his mouth. I never heard him speak about this, and I knew him pretty well. He was very careful about such things, but I do know that he felt the State Department hadn't stood up for him enough.

Q: And that was when Allison (phonetic) came in?

BLAKE: Yes. And Allison (phonetic) was the Japanese language officer, the specialist in Japanese affairs, but not a strong man in the sense that Bob Murphy was.

Q: Did you have a lot of BLB (?) personnel that you inherited, that you had to thin down some?

BLAKE: No, we didn't have any by the time I got there.

Q: My experience about that time was in Austria where we took over from the military, and this was one of our problems of very much expanded staff that had to be weeded down and it was a little painful at times.

BLAKE: One of the more interesting aspects that I really didn't know very much about, and in retrospect I wish I'd looked into more, was the beginning of CIA to assert his position in the country, and to try to develop its role as against the role of the military intelligence. One of the really interesting aspects of that was the work that Bob Murphy had me do - when I say Bob Murphy, it wasn't as if I went up and took orders directly from Bob Murphy although I saw a lot of him, it always came through Bill Leonhart, who was very, very active, very smart, and head of the Political Section there.

Q: And he was relatively young for that job at the time too, wasn't he?

BLAKE: I think so, sure. The DCM was a fellow named Bill Turner who is a long time Far Eastern fellow, quite competent, not particularly articulate, but a person on whom Bob Murphy depended to run the Embassy so he could think about the big things. Bob was definitely a politically minded ambassador who wanted to keep full control, but wanted somebody else to run the thing for him.

I started to say about CIA - I think that's worth pursuing just a minute. When I look back at it, I look in wonder at some of the projects they were undertaking. One was, how do we change the Japanese to make the Japanese system even more democratic that General MacArthur had done. The pretentiousness of some of the assumptions about the applicability of US political systems to Japanese experience, the sense that we could really influence a major shift in the way Japanese did business through covert propaganda activities, and through intellectual argument with the Japanese. When you look back as it is just absolutely unbelievable. We collectively took with the

CIA guys the position that this was simply beyond our American capability. But even our guys were inclined, if you will, to have a sort of a Pax Americana of viewpoint on this thing which, if I remember these things accurately, and your mind can always play a little trick on you, seems quite amazing to me.

Q: Well, they were trying to run Japan like we tried to run some parts of Latin America, I guess, in that sense.

BLAKE: That's right. And I think also CIA wanted to run it instead of the way the military had run for so many years.

Q: Do you have anything more to say about Japan? We're about the end of this side of the tape.

BLAKE: No. Most of my work was very interesting - political reporting. I learned to speak relatively good Japanese so that I could understand what was going on. I tried to get to the bottom of the great conundrum that we all did, of how Japanese opinion was formed; what were the real dimensions of the consensus process on which Japan works, and I don't think it had much success. We always overestimated our ability to impact that consensus forming process. We always underestimated the time it would take to bring about changes, and I don't think despite all the information we had, that we had a clear sense of what post-war Japan was about as we thought we did, and as I feel we later did have. It was a dawning on us which was a transition from the period under the military, where we could demand any kind of information, and probably got any kind of answer we wanted to get, to the slower process of really understanding the depths of resistance in the Japanese character to a lot of the basic things that we had tried to accomplish under the occupation.

Q: Who was the principal Japan honcho on the Department at that time? Walter Robertson, or did he have somebody else that was primarily the Japanese man?

BLAKE: A guy named Ken Young. We always thought of Walter as essentially interested in China, and essentially interested in...

Q: Nationalist China.

BLAKE: Yes, and not that interested in Japan. I don't know whether that's correct or not. It wasn't anything that really came into my ken(?) so much, but I simply don't remember.

CHARLOTTE LORIS
Secretary
Kobe (1952-1954)

After graduation from high school, Charlotte Loris worked in California and Hawaii. In addition to serving in Japan, Ms. Loris served in Korea, Congo, and Indonesia. She was interviewed by Max Kraus on June 8, 1989.

LORIS: Then I was assigned to Japan. I went home via Europe, had my home leave, went to Japan, which was also interesting but not the excitement of Saigon. Everyone will always remember their first post. I had a great time in Japan. There I did have the great fortune to have -- I was in the Kobe, the branch post, as secretary, coming up the ladder. And there was a great man in Tokyo who was Executive Officer, by the name of Lew Schmidt, whom I think was one of the first men to recognize that females had ability. And I think it's thanks to Lew Schmidt that I moved on up the ladder to become Executive Officer myself.

Q: Lew was --

LORIS: He was Executive Officer in Tokyo.

Q: Executive Officer of USIS?

LORIS: Yes.

Q: At the branch post.

LORIS: No, in Tokyo. For the total Japan Program. And while I was in Japan USIA became an independent agency, separate from State, in '53. Anyway, I had some interesting field trips, met lots of interesting people, got to know and like the Japanese. Absolutely different type of place than Saigon. I, as in Saigon, taught English and got to know a lot of Japanese there, taught English to the provincial foreign ministry in Kobe Japan. All this is extracurricular activity which one could do in those days to develop their future potential.

LARUE R. LUTKINS
Political Officer
Tokyo (1952-1954)

LaRue R. Lutkins was born in 1919 and raised in New York. His career with the State Department included assignments in Cuba, China, Malaysia, Japan, Hong Kong, Ceylon (Sri Lanka), and South Africa. Mr. Lutkins was interviewed by Charles Stuart Kennedy on October 18, 1990.

Q: Well, you left Penang in '52. I have you in Tokyo for a relatively short tour.

LUTKINS: That's right -- not quite two years. I think I was the first of the Chinese Language Officers assigned to Tokyo. It was considered important that we have somebody to liaise with the Japanese Foreign Ministry regarding their policy toward China and our policy toward China and also to keep aware of what was going on in Japan regarding views about China, both in the business world and in the academic world, press comments and that sort of thing.

Q: Things were pretty Cold Warish, weren't they, at that time? We had been fighting the Chinese

in Korea, and the Japanese were profiting very much -- but very much with us at that time.

LUTKINS: I'm not sure they were really even profiting very much because this was just after the occupation. I got there at the end of '52. The occupation had only been over for about six months, if I remember correctly.

Q: I was there for a very short time in the Air Force as an enlisted man. I occupied the country for about three weeks, and then I was defending the country.

LUTKINS: But even though the occupation was ended, the Japanese were still very much under, I won't say control, but certainly they were strongly inclined to defer to any views that we had in the field of military and foreign policy. And as regards profiting from the Korean War, I'm no economic expert, but the Japanese economy was still very much in the doldrums. They hadn't really started anywhere near the process of takeoff. Now they may have been producing and supplying some material for us in Korea. I just don't know the details on that.

As the job evolved during that year and half or two years that I was there, the focus of it broadened so that I was following Japanese relations with Southeast Asia -- not Korea -- but Southeast Asia. That was it primarily -- what their attitude was toward Vietnam, the Philippines, Indonesia, Malaysia and so forth.

Q: Were the Japanese following things, or were they being rather passive at that point?

LUTKINS: No, they were beginning to emerge. They were certainly primarily passive, but they were beginning to show some initiatives. And they certainly had people on the ground who were following developments and reporting back to Tokyo, so it was interesting to find out what the Japanese view was.

Q: How did you find the Embassy at that point? Did you find it a well-plugged-in Embassy? I think John Allison was the Ambassador.

LUTKINS: Bob Murphy was Ambassador for about six months after I arrived, and then after that, John Allison. What do you mean by plugged-in?

Q: In other words, that you had been in a relatively isolated post, and all of a sudden, here you were with your first really large Embassy. What was your impression of how it operated and the spirit of the Embassy at that time?

LUTKINS: Yes, it was a very chastening experience, going from being in charge of two posts with a lot of latitude. But, no, the adjustment was very easy, and it was a very high-class, high-grade, high-powered bunch of people at most levels.

Certainly in the political section, we had outstanding people. The first section head was John Steeves, succeeded by Sam Burger. And then some of my colleagues were Bill Leonhart and Bob Blake. I'm trying to think of some of the others. Dick Lamb, Bill Sherman, who went on to a fine career in Japanese affairs, Dick Finn, Dick Sneider. So we had a very excellent group in the

political section. And I think the economic section was equally strongly staffed, although I didn't have as much contact with that.

I really wasn't close to Bob Murphy. He was obviously one of our eminent Ambassadors. I don't think he played probably quite as strong a role in Japan as he may have in some of his other posts. John Allison was a Japanese Language Officer and had a fine background.

ROBERT E. BARBOUR
Protocol Officer
Tokyo (1952-1954)

Robert Barbour was born in Ohio in 1927. He graduated from the University of Tennessee in 1948 and attended The George Washington University. Since joining the Foreign Service in 1949, his career has included positions in Iraq, Japan, Vietnam, France, Italy, England, Spain and Surinam. Mr. Barbour was interviewed by Charles Stuart Kennedy in 1992.

Q: *Then you went back to the Far Eastern Bureau for a while...*

BARBOUR: For a while and then I managed to get an attractive job in Tokyo.

Q: *Again as a staff officer?*

BARBOUR: No, as a staff officer to the administrative officer. This was when my FSS-12, which was only one rank above the clerical bottom, came into play. I went there as sort of a special assistant to the administrative officer because we were changing--the peace treaty was signed and would come into effect on April 29, I think--from the diplomatic section of SCAP (Supreme Commander Allied Powers--General MacArthur most of the time, by that time it was General Ridgway) to an Embassy. Japan was going to cease being an occupied country and become an independent country. We were building up the Embassy in anticipation of that changeover and I went out to be administrative assistant to the administrative officer. Which was fun; it was a very good place because we had a big administrative section and a high powered administrative officer and indeed I was his executive assistant. I don't know what we would call that today, probably it doesn't exist, we are not rich enough for it anymore. The new Ambassador announced was Robert Murphy, who was due to arrive on April 29th, the very day of the changeover. We had in that diplomatic section the protocol office which handled the commanding general's relations with all the Embassies which more or less came under him, at least theoretically.

One evening, I think the day the Ambassador arrived, there was a welcoming reception for him, by us, by the staff, and I remember vividly standing up there minding my own business, quietly, unobtrusively, as was appropriate to my station, when the personnel officer came over to me and said, "I suppose you know that you are going to be the new Ambassador's protocol officer?" Again lightning had struck; I was stunned, I was terrified. I didn't think that was a great thing at

all, I knew nothing about it. This was because the protocol officer who had been in the diplomatic section before was leaving; he was a master, he knew everything, everybody, and I was to take his place! And, of course, Robert Murphy was an intimidating individual; he came there with his record of association with Harold Macmillan and Dwight Eisenhower and Mark Clark during the Second World War; he had been Ambassador to Belgium and he was a kind of diplomat of a type that you see very rarely now. I don't want to sound nostalgic, but his concept of the United States was embodied in him as an Ambassador and he represented the President of the United States and the United States in the broadest and strongest sense. I realize now that the reason he was sent there, given his strong personality--I guess his Irish temper--and his military background, was to make the transition. To see that Japan emerged from occupation and that the military role in the day to day life was changed dramatically.

Q: We are talking about the American military which had been ruling very nicely and happily for quite a while; to suddenly become subservient to an Embassy would be a major problem.

BARBOUR: It was difficult. Mark Clark came out as the new commander and at that time, of course, the Korean War was going on and the United Nations Command was located in Tokyo. The Supreme Command remained in Tokyo, the far east air force remained out at Haneda Airport, the navy was in ..?.. So they had a genuine problem of schizophrenia themselves; by and large they tried, but of course under the previous regime Embassy personnel had been military. We were all given ranks. When I arrived I was taken to the Iesu Hotel, a company grade billet, where I shared a hotel room with four other people--two permanent and two temporary beds for people who came over on R&R from Korea. It was a wild existence and it wasn't all surprising to see in our common bathrooms little Japanese girls coming and going and taking their showers too. It was an interesting time. Places were still off limits, there were things that civilian employees of the military could not do. But of course that no longer applied to us and one of the problems was asserting our individual independence vis-a-vis the military--we were no longer under MP's, for example. It was a time of transition, from great things like the role of the Prime Minister to little things about who gives traffic tickets. And Murphy, I am sure, was sent there to effect that transition.

Q: As a protocol officer did you have much contact with Murphy?

BARBOUR: Oh, constant; I moved up into his office. I was today what we would call a staff aide and that meant I had an intimate relationship with him. I was also an ADC, I traveled every place with him. We didn't get all that many visitors to the Embassy and I was sort of the permanent control officer for all Congressional delegations. I did all of his guest lists, his seating charts and things like that. I had all the relations with the Foreign Minister's office, the Prime Minister's office, and the Imperial Household. If he wanted to see the Emperor, for example, which wasn't very often, or if he wanted to take a distinguished visitor like Adlai Stevenson over to see him--which he really didn't want to do all that much but he knew he should--I would call and make the arrangements with my contact, Baron Matsui, I think it was, in the Imperial Household. A lovely man. We would say things like, "The Ambassador is wondering whether His Imperial Majesty might receive Mr. So-and-so." We would get a telegram of instructions requesting that, and I would say, "Of course if it is not convenient we would understand," and it

would never happen. Or we might say, "We hope it might be possible," and he would work it in. Obviously I wasn't making these things up, they were all on Murphy's guidance.

I remember one issue that came up which emphasizes Murphy's role. Some months after the end of the occupation the American Army in effect kidnaped a Japanese national. A very mysterious business, I am not really sure what the ins and outs were; he had a clandestine relationship, was involved in things he shouldn't have been doing; I think he was probably a double agent. Anyhow, they kidnaped him and there was a great stew in the press about what has happened to So-and-so. Nobody knew. Finally it turned out that we had him and had been holding him all this time. Murphy summoned, summoned the chief of staff, a three star general, and explained to him in terms we could hear in the outer office why that was not possible, why it was a stupid thing to do. Of course the general knew it. Murphy's relationship with Clark was a factor but also his own concept of the United States and the way it does things, how you effect a transition from an occupied country to a free country that is going to be extremely important to us. This was an example of the kind of thing that he did.

Q: Murphy had been the American consul general in Algiers.

BARBOUR: He was political advisor in that capacity and then he went with Clark through Italy as his political advisor.

Q: He had also met Clark in Algiers in a clandestine meeting. Clark came by submarine before the landings. So they had a long relationship. As protocol officer did you find yourself trying to hold back, trying to keep the Embassy from leaning too hard on the Japanese so as to get them back in the mainstream, not subservient as before?

BARBOUR: We treated them with complete normality from our standpoint. Murphy knew how to play the game. The Japanese certainly knew how to play the game of diplomacy. We observed all the forms, all the proprieties and carried on a regular day to day business with them at all levels. Murphy played golf with the Foreign Minister, Okasaki, usually once a week. He spent a lot of time with the Prime Minister, Yoshida. The Embassy was developing its own contacts throughout the government, working relations and things like that, in a very normal way. And looking back on it now I realize that this was the way it was done. One of the problems I mentioned was the legitimate difficulty of the military, psychologically, to readjust. They did. I think they did it, certainly at the top, with total good faith and good will. But it was difficult because they were still a very senior command fighting a war next door. There were some problems from the business community, many of whom had lived in China, many of whom had moved to Japan and prospered under the occupation and found it difficult to adjust suddenly to the Japanese way of doing things. Some did, some didn't; those who didn't used to act in ways that showed they wished things had not changed; there was a carpetbagger mentality on their part.

Q: I saw a little of this. I was at one point a member of the occupying forces in Japan as an enlisted man in the air force in 1952 or so, then all of a sudden I found myself part of a defense ally as it reverted to a normal relationship. I could see that it was difficult for some of the military not to keep their preeminence.

BARBOUR: In many, many ways. Landlords, for example, whose houses had been requisitioned suddenly wanted them back and had a right to get them back.

Q: *Were you there when the truce came in Korea?*

BARBOUR: In July of 1953. Yes, but I was back in Washington taking my oral exams.

Q: *So you had applied for the Foreign Service?*

BARBOUR: I took my exams in Tokyo in 1952.

Q: *It was the old three and a half day exam and then you went back to take your orals?*

BARBOUR: I hitched a ride with an Assistant Secretary of State, Walter Robertson, who had been out to see Syngman Rhee.

Q: *Did you have any chance at all to talk to him?*

BARBOUR: Oh, yes.

Q: *He was, I am told, a courteous southern gentleman and at the same time Mr. "don't mess with China" personified.*

BARBOUR: My relationship was more or less limited to that flight, at least my initial relationship. He was a very courteous Richmond gentleman, as you say. We had a lot of fun on the way back; he was very relaxed and I was hitching a free ride since at that time there was no other way to take the examination except to go back to Washington and do it. And I was here when the Armistice was announced.

Q: *What was your oral examination like? You took it in 1953.*

BARBOUR: In July of 1953. It lasted about an hour and a half; there were, I think, five people, one from the Department of Commerce, the others from the Department of State, none of whom I knew. It was initially personal and then we got on to my academic activities, which in high school were terrible and they knew it. They asked me questions about why I had done so poorly in this subject and that subject. I said that except for English literature where I had an acknowledged weakness, I didn't regret it because I had made up for it in college. They smiled and that was very reassuring. Then we talked about the Foreign Service and the implementation of policy. "Did I think the regional high commissioner was a good idea?" That had been discussed in the Ambassador's staff meeting and I had an answer already to go. "What did I think about personnel administration?" That had been discussed in the Ambassador's staff meeting. I had all kinds of information and that helped a lot. Someone had told me in the Embassy, "Make them smile, make them laugh." It turned out very well.

Q: *How did your career progress here? You went back to Japan?*

BARBOUR: I went back to Japan, back to my job with, by then, Ambassador Allison and stayed another year with him in the same role I had had with Murphy.

Q: Did you find a difference between Murphy and Allison as far as dealing with the Japanese?

BARBOUR: Allison was perforce much closer to them; he had been in Japan before the war, he spoke Japanese and he had been interned by them. So he had a much more personal interest in developing relations with Japan and used to get very upset with people who made his life complicated. I never saw that very much with Murphy.

CLIFF FORSTER
Assistant Public Affairs Officer, USIS
Kobe (1953)

Regional Public Affairs Officer, USIS
Fukuoka (1953-1956)

Cliff Forster was born in 1924. His career with USIS included assignments in Japan, Burma, Israel, and Washington, DC. He was interviewed by G. Lewis Schmidt on May 29, 1990.

Q: You must have come in sometime fairly near the middle of '52.

FORSTER: No, I arrived in Yokohama in July of 1953, and I recall it well since it was the Centennial of Commodore Perry's entrance into the bay with his "black ships" to open up Japan in 1853.

Q: So you got there to help celebrate the Centennial?

FORSTER: Right. And that was something else again, too. John Allison was our Ambassador as you know.

Q: Back to CIE, I do want to say that I have a great admiration for what they did, as a matter of fact. I think that the old-style Army officer would not have done what MacArthur arranged to have done. Of the twenty-four centers which we took over from the Army, two were in Tokyo: one out at Shinjuku and one downtown. We soon closed the Shinjuku center, but we still had twenty-three for another year and a half or two years. But the Army did a really stupendous job, and despite Sax Bradford's antipathy to the military, I have nothing but admiration for what the CIE centers accomplished.

FORSTER: They did a great job.

Q: They got the Japanese involved in those centers and displayed a completely new concept of

how to operate a library and what the U.S. could do for them. So I don't have any adverse feeling about the CIE.

FORSTER: That concept is carried on today, you know. Those centers, of course, many of them are now run by the prefectures and the cities, and they still have the old name. "Cultural," as you know so well, is *bunka* in Japanese. They are still *Bunka* Centers. So the name has even caught on. It's a little-known story, isn't it? I think it's one of the exciting chapters of cultural relations that the institution has survived.

Most of the directors we took over from were women librarians, and they were fantastic. I was in shock at first -- I guess we were a little more chauvinistic then -- that I was taking over from a woman librarian as a Foreign Service Officer. But years later, when I was questioned about the advisability of sending in our first American officer -- a woman officer -- to Kyoto, and there was a lot of opposition to it in the Agency, I said, "No, no. Long ago these centers were run by absolutely outstanding women who were very well-received and who have not been forgotten to this day."

Q: I would say that probably two-thirds to three-quarters of those centers were run by women during the occupation.

FORSTER: Oh, yes. Yes.

Q: There were a few men under CIE, but very, very few.

FORSTER: Very few.

Q: Probably not more than six or eight. The rest were all run by women, who did a very good job.

FORSTER: I think our major problem going into Japan, particularly those of us who had the information officer background and where our previous assignments were in insurgency areas, was the problem of adjusting to this new role in an occupied country. We had specific policy objectives and country plans to work with. So we couldn't quite see the advantages of just the goodwill thing working out of a library in a broader cultural scene. But I'll tell you in retrospect that this was terribly important at the time. I mean, both should go together. There should be some kind of mix of the political and cultural because we have a mission to do. I used to feel in later years that our program should be more balanced. It was much more than going in to pound the table on policy points of view without having that other kind of goodwill approach -- the give and take of these libraries and the students in there using our books. I think that's one of the tragedies. But then I'm very out of date. I do feel that we've lost a lot in our centers in a way, not having them more open to the public than they are today.

Q: I think so, too.

FORSTER: There would be a lot of disagreement among some of my very good USIA colleagues on that one.

Q: We'll get back to that period.

FORSTER: That's a later period.

Q: You were preceded by Alan Carter as PAO in Tokyo some years later.

FORSTER: Oh yes. That's a long story.

Q: What did you see as your particular duties during your first assignments in Japan? What were your primary types of programming when you were in Matsuyama, for example?

FORSTER: Matsuyama was the first post. You may not recall, but you called me up one summer afternoon after I had been there a few months to say, "Cliff, pack up your bags with Nancy. You're being assigned to Fukuoka." I was really quite distressed because we loved that little castle town of Matsuyama.

Q: A lovely town.

FORSTER: Marvelous. We had that Center which had been built for us by Governor Hisamatsu, who used to come over in the afternoons to join us for tea. It was a very unusual experience.

So the transfer to Fukuoka came as something of a blow, but I must say that was another great experience in Fukuoka because you had the RPAO or Regional Public Affairs Officer concept then. I was RPAO for all Kyushu, which made it possible for me to work the entire area. We had four USIS centers when I arrived: Fukuoka, Nagasaki, Kumamoto and Kokura. In Matsuyama, I had served under a fine officer, Walter Nichols -- you know him well from way back -- who was RPAO in Kobe. Walt really knew the country, and his Senior Advisor, who I also learned so much from, was Naotada Kumagai. And you had David Osborn as Political Officer in Kobe, who went on to be DCM in Tokyo and later served as our Ambassador in Burma. Dick Ericson was in Osaka then, another top Japan specialist. It was a very professional crew and I had the great privilege, as a complete neophyte, coming in to work with them. And, of course, you were in Tokyo as Executive Officer. You were our main contact then, Lew, more than anyone else at headquarters, because you provided us with all that we needed to get the job done. We had great respect for you and the way you managed those posts.

It was also a time of great stress and strain. I'd only been in Matsuyama about two months when Walter called from Kobe and said, "Lew wants us all to get together to determine which posts are going to have to go in our regions." There was a marvelous field supervisor in Tokyo at the time, Pat van Delden, and I recall that she always wore dark glasses at work. I guess she had a problem with her eyes, but at first, I found myself wondering if I had come into the wrong agency. You also had Bryan Battey still waiting for his center to open in Tokyo and a great guy whom I'd known in the Philippines as a kid before the war. His name was Bill Graves, and he was then running the center in Kanazawa. Bill, I notice, has just taken over as editor of *National Geographic*. Then there was Russ Lynch, whom I'd known with USIS in the Philippines. He was RPAO in Nagoya when I arrived in Japan.

So there were these familiar faces and many new faces as well. It was a very large operation in Tokyo, and I found it rather frightening, having always been out in the field at small posts. But it was an exciting time, indeed, to go out to Japan with the occupation coming to an end following the signing of the Peace Treaty.

I think I strayed from your question.

Q: I asked what the thrust of your program was.

FORSTER: Fukuoka was a far more complex and difficult area to work in than Matsuyama, which was a rather laid-back agricultural town. Fukuoka had the large industrial area of Yawata, with its steel mills and chemical plants. There were the strong leftist labor unions carrying out massive strikes in the depressed coal mining areas. There was also our large Itazuke Air Base, with our jets flying over the university all the time, resulting in more demonstrations. So you had one issue after another and a great deal of anti-American feeling.

We were all working together in the Consulate in those days under the same roof. Owen Zurhellen had been the Consul. He is here now, by the way, teaching at the University of Hawaii. Jim Martin took over from Owen. We had a very close working relationship, and at that time, we were still all State Officers. I had information and the cultural exchange side of it. At first, we spent much of our time continually putting out fires. I was working with our Air Force officers at Itazuke trying to explain their position to the Japanese as an important operation to protect Japan during the Korean conflict. So we did a lot of work on base relations, inviting fighter jet pilots and others at the base to meet with the students often teaching English to them. Our plan was to try and establish these personal relationships between base personnel and the university teachers and students to get more community support for our largest air force facility in southwestern Japan -- just across from Korea.

Overall, our USIS mission then was to try and achieve a better understanding of our policy positions, and Japan's security was one of the major ones. Of course, at that time, the "Rhee Line" was also a major problem in our area and elsewhere in Japan because they felt it affected their fishing rights. We also had the "Bikini ashes" incident, which you remember well, following our nuclear test in the Bikini region when atomic fall out resulted in the death of a fisherman. The anti-U.S. feeling at the time was very strong, and once again we had to defend our position.

Q: The Lucky Dragon was the name of the boat?

FORSTER: Right. The Lucky Dragon. Then you had the case of the U.S. soldier firing on a Japanese entering one of our target ranges in northern Japan. It was known as the "Gerard Case", as I recall, and once again there was a lot of hard feeling since the Japanese felt our military court had let him off too lightly.

Q: I think he (the Japanese) was picking up shell casings.

FORSTER: That was it. There was one public opinion issue after another in those early days, and it was our job to deal with them to keep U.S.-Japan relations on course.

Nagasaki was also in my region of responsibility, where the atom bomb hostility was still running quite high at the time, although it was not as strong there as it was in Hiroshima. I've often thought about Nagasaki bombing as contrasted to Hiroshima, and I think the long association with the West and the strong Christian community there -- mostly Catholic -- made the big difference. Feeling was not as intense there as up in Hiroshima, where my colleague, Fazl Fotouhi, was running into more severe psychological problems.

LAURENT E. MORIN
Economic Officer
Kobe (1954-1956)

Laurent E. Morin was born in Augusta, Maine in 1920. His career with the State Department included assignments in Algeria, France, Japan, and Iraq. Mr. Morin was interviewed by Charles Stuart Kennedy on March 24, 1992.

MORIN: In Japan it was different. We had an affordable school and nice houses.

Q: You were there from 1954-1956.

MORIN: Right. I was an Economic Officer. We had offices in two cities. The main office in those days was in Kobe, which is not the case anymore. We had an economic/commercial office in Osaka. I spent a day in each, back and forth. I lived on the railroad line between the two cities, so it was very convenient. It was a place where we really got into the guts of the economy. It was really something. Osaka, among other things, was a textile center. That was the time when the Japanese were starting to penetrate the American market on finished goods, textiles, etc. The American textile manufacturers were really unhappy. It was just beginning, but they could feel the pressure. They were trying to push protectionist measures while the Japanese were expanding their activities all the time, particularly in artificial fibers -- spun rayons, etc. My boss was tremendously competent.

Q: Who was that?

MORIN: Lou Gleeck. He had learned so much about the textile business that some of these textile people would come to him for advice. I traveled with him and by myself around various factories. We had very good rapport with the industrial community.

Another thing that Osaka had...it is the sundries capital of the world. I made a whole series of reports on this. This is enamel ware, artificial funeral wreaths, toy cap guns, strings of beads, Christmas ornaments, fountain pens, cigarette lighters, beaded pocketbooks, toys, buttons and much more.

Q: Sort of the Woolworth-type stuff.

MORIN: Each of these items would have its own quarter. You would go along the narrow streets and see people working away in stalls and ramshackle structures making all these things. They were depending on the American market for most of their sales. They were also great in copying things for the black market in Europe; I remember buying exact duplicates of Parker pens and Ronson lighters for fifty cents. So I made a whole series of reports. It was fascinating.

We also had another interesting experience. In those days, borax was considered a sensitive material that we were keeping away from China. It was used in some form of munitions. A lot of it was being sold to Japan for authentic purposes, but more was going into Japan than should have been. We had the job of tracking it down. I would go around to these enamelware makers. That is where they used a lot of it. I would ask to see their books, and they would show me how much they bought and how much they used. They would get annoyed, and looking back on it, I don't blame them.

The other thing that is very interesting to me is the contrast of the Japan in those days with the Japan of today. It is so different. I am amazed with stories of Japanese efficiency. It was so contrary to my day. For instance, the Bell helicopter plant -- Bell was putting up a plant in Kobe, and I used to know the people there pretty well. The manager said, "You know, we have to put three Japanese on these assembly lines where we usually would have one American."

I had a Hillman Minx -- a little English car I had bought in France. In Japan at that time, they were assembling Minxes in Tokyo, and it was a very popular car. The Hillman agent in Kobe told me, "I have so much trouble with these assembled Minxes because my people have to rebuild them here in Kobe. They leave out things like the sealer behind the windshield and things like that. It is just terrible. People much prefer to buy an English-made Minx." And sure enough, when it became time for me to leave, he was after me to sell it to him. Here is a guy who had a whole warehouse full of new Minxes, and he bought my five-year old Minx, even though the steering wheel was on the wrong side for Japan. He said that he would fix it up and get a good price for it. The whole idea of the Japanese being so efficient now is just mind-boggling to me. I could cite dozens of examples of inefficiency.

I left Japan and went on to Yale and got an M.A. I spent a year at Yale.

GEORGE ALLEN MORGAN
Political Counselor
Tokyo (1954-1958)

Ambassador George Allen Morgan was born in Tennessee in 1905. He received graduate degrees from Emory University and Harvard University, where he received a Ph.D in philosophy in 1930. Ambassador Morgan served in Germany, Japan, and the Ivory Coast. He was interviewed by Arthur L. Lowrie on December 23, 1989.

Q: Then your next post seems rather curious after all of this Russian and European experience, to go to Japan. How did that come about?

MORGAN: I don't know why I was posted to Japan. All I knew was after I had spent a year as Deputy Executive Officer of OCB, I felt I had done my duty there with PSB and OCB and it was time for a change. So I went to Bedell Smith, who was then Under Secretary of State, and asked him for his advice, and he then poked up the personnel people and they assigned me as Political Counselor in Tokyo. I don't know why, but there I was and I was glad to go. It was a fascinating new experience, a different part of the world, different culture.

Q: Who was the Ambassador in Tokyo then?

MORGAN: John Allison and then Douglas MacArthur. Doug MacArthur II -- not the General.

Q: What was the thrust of American policy toward Japan at that time?

MORGAN: Japan was just gradually creeping out from the vast losses of World War II and the main thing we were trying to do was help Japan get back economically, and to secure their alignment politically as an ally against the Soviet Union. So one of the main accomplishments, as I recall, during my day was a security treaty with Japan which secured that. But I must say considering how Japan's economy has flourished, amazingly flourished since then, we had no inkling that they were going to do as much as they have.

Q: What did the Japanese government want from us in those early years? What was the main thing they wanted from the United States, just more economic help to rebuild?

MORGAN: I don't remember.

Q: They were still very much in rebuilding stage?

MORGAN: Yes.

Q: What did you think of Ambassador Allison?

MORGAN: He was reasonably competent, had very good background.

Q: Was he a political appointee?

MORGAN: No, no. He was a Foreign Service Officer. So was Doug MacArthur.

Q: What did you think of MacArthur?

MORGAN: A little too self-assertive, too aggressive. But, of course, in many ways very able, very highly intelligent with an excellent background.

Q: *Did you try Japanese? ````*

MORGAN: Yes, I took some lessons in Japanese and learned elementary spoken Japanese.

Q: *All these years, were you continuing your real vocation or your early vocation or your interest in philosophy.*

MORGAN: No, no I had no time for that.

Q: *You'd set that aside?*

MORGAN: No time for it.

Q: *Now did you complete your tour at this time in Tokyo and go back to Washington or did somebody grab you again?*

MORGAN: I more than completed it. I had planned to take the usual three years, then home leave, then go on to another post. So I had postponed home leave for this purpose when I might have taken it after two years. But when Doug MacArthur came, he insisted on keeping me for a fourth year, to my great regret because I had hoped, in fact I had been promised, a good DCM assignment somewhere. This not only delayed it, it in the end prevented it, it because toward the end of my fourth year I was again yanked back, this time to State Department Policy Planning.

GUNTHER K. ROSINUS
Cultural Center Director, USIS
Niigata (1954-1957)

Cultural Center Director, USIS
Kyushu (1957-1959)

Gunther K. Rosinus was born in Germany in 1928 and emigrated to the United States. He attended Harvard University, where he studied political science; he later studied international affairs in graduate school. In addition to serving in Japan, Mr. Rosinus served in Germany and the Philippines. He was interviewed by G. Lewis Schmidt on March 21, 1989.

Q: *Why don't you -- now, I think you went to Niigata first.*

ROSINUS: I did, correct.

Q: *So, why don't you tell me not only what you did in Niigata, but what you felt your particular efforts and objectives were directed towards accomplishing; give me some ideas as to how you went about this or some of your experiences, any anecdotes you may have and whether or not you think you were successful, moderately, quite a bit, or otherwise.*

ROSINUS: Okay, perhaps we can put it even in a framework of Japan as a whole, since as you recall, subsequently we went down to Kyushu to take over the regional public affairs job in Fukuoka. In Niigata, I served under your embassy leadership as Cultural Center Director.

Perhaps, I should really say at the beginning of this interview that my actions in USIA have always been based upon a keen interest in what I have defined as the overall mission and purpose of public diplomacy, or public affairs, which I can go into perhaps a little more at length as we proceed with this interview.

Basically, I have always felt that the mission of public affairs was an integral mission, involving all the elements that have now come together. Long ago, I was preaching very hard and working with people like Lionel Mosley and others and then writing periodically on the subject of public affairs as a direct dimension of American diplomacy, of public affairs as requiring the integration of all elements, both cultural and informational, and of the public affairs officer as a substantive officer, not just as a manager or an impresario.

The mission of such an integrated effort was to be, as I saw it, the projection of our open society and of the policies that flow from it. Simple enough. That is it. Therefore, I have always put a strong political aura or context on whatever we were doing and using the cultural side of the house in support of a given defined political objective in whatever country I served. Targeting Labor and Intellectual Circles in Niigata. So, in Japan, for example, and in Niigata, what we were facing in 1954, as you will recall, was the growth of a lot of left-wing agitation, particularly in the labor movement and within intellectual circles.

So, we set up programs directed toward labor and toward intellectual circles, university circles. In Niigata, for example, it took the form, among many other activities, of a regular seminar that I led in international relations with a group of labor leaders from various unions in the Niigata prefectural area.

Q: Had you had any Japanese language training before you went to Japan? If not, were you dealing through interpreters when you were chairing these seminars and how did you operate?

ROSINUS: I had not had language training prior to going to Japan. I took some Japanese within Japan and was able eventually, within half a year or so, to use written texts for speech purposes, which I did, but in seminar settings, I would always use interpretation.

The purpose was to try to clarify through seminar techniques and discussion groups of this nature, U.S. policies and intentions and their origins in American society.

We were, of course, also concerned, as you will recall, with expanding knowledge of the United States as a whole among the Japanese who were emerging from the relatively isolated and poverty period of the post-war years.

That effort, I think, was at least on a national scale pretty successful and I recall a specific incident in Niigata that showed the kind of goodwill that had been built through these efforts. In

1955, I believe, a typhoon fire burned down our Cultural Center and, you will recall, immediately the prefectural government offered us room in its own limited space, because of unlimited offices, which had also been partly destroyed by this fire, and we continued to operate out of there. Of course, we had many expressions of sympathy and all that sort of thing coming out practically every segment of the populace at that time.

I think the widespread use of cultural centers providing access to libraries, lectures, films, exhibits and cultural events, serving as the "window to America," as we called them at that time, was an extremely effective method for projecting our open society at that moment in Japanese history. The Saturday Evening Post praised our efforts, with specific examples from Niigata, Tokyo and Yokohama, in a major article in the September 1955 issue.

Q: You mentioned that you were doing this largely targeting the labor --

ROSINUS: The labor and university audiences.

Q: University. I know, of course, because in Tokyo, we were also having a clear demonstration of a very leftward driven labor movement. I wonder if you felt that you had any substantial impact in diverting them away from this more or less left-leaning attitude or could you measure that at all?

ROSINUS: It is tough to measure. There was one funny incident that might have been -- that, again, shows some of these dichotomies in politics. On May Day, as you recall, the Japanese left was in the habit of snaking down the road in large demonstrations with white headbands and flags denouncing various things including certain U.S. policies.

Well, they were doing the same thing in Niigata on this particular day and they happened to come snaking by our Niigata Cultural Center; and as these labor leaders came running by, a number of them broke ranks, came over to where I was standing watching them and exchanged bows and greetings, turned around and jumped back into the demonstration line and kept on going.

I do not know if that is evidence of anything, but I have sort of a fundamental faith that the injection of rationality into any hot, emotional issue does help somewhat when the crunch comes, yes.

Q: Did you have any evidence in Niigata of the Soviet Union trying to place its cultural emissaries or its agents into any part of the programs that the labor union was involved in or in which anybody else was involved in your area?

ROSINUS: I do not recall any specific incidents. Niigata, of course, faced the Sea of Japan and across the sea was Vladivostok, so they somehow had a keen sense of Soviet presence, but as you know, the Soviets have had a pretty tough row to hoe in Japan also, given the fact of the Kuril Island occupation and the prisoners that they held at that time still and were returning gradually to Japan.

There were, as I recall, a couple of warnings about Soviet ships coming in and leaving books and materials and that sort of thing, but heavens, I do not think that they were of any major concern to us.

Q: The reason I asked that question was because at that time, I believe it was at that time, Paul Bethel was our person in Nagoya and at that point, in late '54 or early '55, there was a cultural festival of some sorts in Kanazawa.

According to Paul, the Soviets had decided to make a point of this and they had people, whether they were agents or whether they were using Japanese for this purpose, up there in force and were presenting cases which were pretty -- not too subtly -- a denigration of the U.S. position.

He called on Glenn Shaw, the Cultural Attaché who, of course, had lived almost a lifetime in Japan, to come up and according to Paul, and I was not present, Glenn got up and gave about a two-hour speech in which he virtually demolished the arguments that had been presented by --

ROSINUS: Whoever they were.

Q: Whoever they were, and he thought that was a great successful enterprise in the use of the cultural officer in political terms. So, I wondered if you had had any such experience, but evidently, you had not.

ROSINUS: No, not directly, but you mentioned one thing, of course, and that was the great advantage during this particular period when there really was an ideological Cold War going on in the Stalinist years, the advantage of the Soviets in having indigenous agents.

Much of this took place within the labor movement through infiltration by the communist party of Japan at that time, so obviously, yes, they did have their spokesmen around and that was what I was trying to combat with my seminars in international relations with the labor leaders and university people up there. But how does one measure it -- except that over the long run, of course, look at Japan today!

I guess you might say we all succeeded maybe too well.

1957: Transfer to Kyushu, Where the USIS Target Was the Marxist-Influenced Economic and Political Science Faculties at Kyushu University. Which brings me to the point in Kyushu, because in Kyushu there is Kyudai University, one of the great imperial universities of Japan, and my concern there was that Marxism, theoretical Marxism, had such a hold on the economics faculty particularly and in part on the political faculty, in large measure because they were simply out of touch with what was going on around them and Marxist theory was a very appealing construct and concept. It provided the intellectual with what he needs, a "weltanschauung" that hangs together.

So we thought that in Kyushu, it might be a good idea if we could cooperate with another

element of our government, namely the productivity program of AID, which was at that time seeking to develop Japan's economic productivity and which resulted in the creation of regional productivity councils, as you recall, composed primarily of businessmen, some union leaders and local entrepreneurs.

Our aim was to encourage that council, the Kyushu Productivity Council, to pay much closer attention to the integration in its programs of both labor and university elements, so that they in turn would become exposed to the realities of Japan's economic future and economic problems and in that process wean them away a bit more from their theoretical and unrealistic Marxist predispositions.

Q: Now, this productivity program was one of the principle thrusts as I recall of the AID or whatever it was then called.

ROSINUS: Right.

Q: Of the AID program under Chief Meyer --

ROSINUS: That is right, and I think we did have some success in that. I remember still the name of the chairman of the productivity council, Mr. Chikami, and we worked very closely with him and I think the council did try to reach out into university and labor circles, and, therefore, to try to set up a kind of labor-business-university cooperation that was at that time so typical of the United States and which was one of the reasons, of course, for our economic success up to that period.

Beyond that, we ran the usual program in Kyushu, again with a heavy policy thrust in terms of the explication of American policies and with a broad cultural credibility-building base, if you will, including many cultural performances that were particularly popular in Japan at that time, as examples of the American culture in which they had such an intense interest still in those early years. It was the place of our first meeting with Eugene Istoman and with Rise Stevens and with Jan Pierce, for example, the beginning of a long line of contact with such luminaries as Leonard Bernstein, Andre Watts, Zubin Mehta and the like.

Q: Of course we also had going in Tokyo our radio program which was placing a lot of programs in the radio stations around Japan and Leon Picon was in the midst of producing his book translation program. To what extent did you have contact with them, in assistance to them and --

ROSINUS: Very direct, of course. I traveled a lot throughout Kyushu and every time that we took off, we would visit the radio stations, the editors, you know, the usual USIS route, and the universities and labor centers and so forth and leave materials and pay attention to the book translation and presentation program in particular.

Presentation was a large measure of our activity at that time, including presentations within the university and, of course, there was a regular placement of the radio programs as well.

On this Marxist aspect, I do recall one particular contact with a delightful gentlemen who himself was a professor of economics at Kyushu University, a highly recognized and respected one, by the name of Masao Takahashi. Naturally Mr. Takahashi had very close contacts with Sohyo, the Japanese labor federation, as an advisor as well as with the Japanese Socialist Party. I paid particular attention to working with him on a very personal level, having many interesting discussions about the nature of Marxist economics and politics as against our own perceptions and he, I was under the impression also, modified his views over time on some of these issues. We also sent him on a very successful leader grant visit to the U.S.

So, again, my faith in rational discourse was somewhat sustained by this experience.

Q: *And by personal contact.*

ROSINUS: And by personal contact. This was illustrated very vigorously much later in my career when I went to the Philippines, but we will get to that soon.

Q: *So do you have any further comments that you want to make with reference to your tour either in Niigata or in Fukuoka?*

ROSINUS: Only that they were wonderful years to be in Japan.

Q: *Precisely, what were the years that you were in Fukuoka?*

ROSINUS: Fifty-seven to fifty-nine; fifty-four to fifty-seven in Niigata. These were years when Japan was still Japan, as you well remember; when such things as Japanese inns were still available to us all as we traveled throughout the country and they simply invoked an intense interest in Japanese history and culture, which is in itself so extremely colorful and marvelous. It was a great experience.

Q: *It was a wonderful period, all right, before Japan became so superficially, at least, western --*

ROSINUS: Correct.

Q: *But a lot of that has gone by the board.*

ROSINUS: Correct. I went back again a couple of times since then, and I was struck, of course, with this in 1980 when I did a series of talks for CINCPAC in seven Japanese cities.

Q: *When you were there, were you able to get up to the North Coast of Japan along the Japan Sea?*

ROSINUS: Yes, Niigata, of course, was on the Japan Sea. I went off across to Sado Island, also, which is a famous old cultural island with its old dance forms and so forth.

Q: *It has the Sado drums.*

ROSINUS: And the Sado okesa, that famous dance. Also up to Akita. I did not get to Hokkaido on that tour, but I did then in 1980 when I spoke in Sapporo on U.S. security policies, but that is another chapter.

Q: What prompted my question was that I think if anywhere, the old Japan is probably still partially represented on the North Coast and on up through the northern part of Kyushu where much of Japan today still looks a bit like I remember it fifty years ago when I first went there; and I have one more comment --

ROSINUS: The northern part of Kyushu, you mean, Kyushu or Honshu?

Q: I mean Honshu.

ROSINUS: Because Kyushu is a wonderful island with all of the hot springs and, you know, Nagasaki, fantastic.

Q: Just one comment about your talk regarding the orientation of the faculties of many of the universities toward Marxism. That was interestingly enough a great feature in prewar Japan, when I was there in '38 just for the summer with the Japan-American Student Conference.

I found that there were many students of Marxist persuasion and they were of Marxist persuasion because there was a very strong element in the faculties of the universities at that time --

ROSINUS: Exactly.

Q: Having been isolated even then from the --

ROSINUS: West, right.

Q: Marxism simply fermented within the universities and I think it took practically a decade or more after the war --

ROSINUS: To wear down.

Q: It gradually wore out.

ROSINUS: Yes, that is right, and, of course, I spoke of the productivity council, but obviously, we did much more broad scale work within the universities as a whole, you know, through the American participant's programs, getting in speakers, economists, and discussion leaders, through book presentation, through the use of the Cultural Center libraries doing whatever we could to expose these faculties, particularly the younger faculties, to non-Marxist economic thought and political thought, but it was again a political focus that I brought with me through my own inclinations and my own deliberations on what the role of public diplomacy should be as an essential element of American diplomacy as a whole.

MAURICE E. LEE
Cultural Affairs Officer, USIS
Yokohama (1954-1956)

Regional Public Affairs Officer, USIS
Yokohama (1956-1959)

Maurice E. Lee was born in Erie, Pennsylvania in 1925. His career with USIS included assignments in Germany, Japan, Vietnam, the Philippines, Korea, and Israel. Mr. Lee served as USIS's chief inspector. He was interviewed by G. Lewis Schmidt in 1989.

LEE: Well, Yokohama was not unlike Germany in the sense that here I was in a country that was just rallying after a very destructive war. And again, there was great keen interest in Americans and things American.

Q: This was 1954.

LEE: 1954 -- and I stayed there for five years. I had three prefectures I was responsible for. They were Yamanouchi, Shizuoka and Canoga -- three very different prefectures. Yamanouchi was very primitive in many ways. Shizuoka was a beautiful place, noted for its fruit, fish and cottage industries. Yokohama and part of Canoga was very industrial. And right in the middle of the Consular district rose Mount Fuji.

I made a real effort to get out and meet people and talk to them. I had very close connections with the three governors of the three provinces, so it was very easy to get things done.

One of our principal tasks again was bringing in American speakers and American cultural events. And it was amazing how the Japanese responded. I think the USIS programs in Japan at that time had a great deal to do with the spreading interest in Western culture that took place at that time. The Japanese started building concert halls, forming symphony orchestras. And today, as you know, there are many gifted Japanese performers and artists known throughout the world.

One little side thing, for what it's worth. Our center in Yokohama was rather small, and we were unhappy with it. So we were looking around for another building. We heard that the British Club, which had been there for God knows how long and which had allowed no entry to Japanese -- not even as guests, was going to close down. So we gave them an offer and ended-up getting their impressive building. The day we opened it as the American Cultural Center. It was a mob scene. All the Japanese dignitaries that were invited had never been allowed in that building, and so they all came. In a sense, we ended the colonial period for the Brits in Yokohama.

Q: Did the British run out of money for their club? Why did they decide to discontinue it? Do you know?

LEE: I think that a lot of the British had left at the beginning of the war, and many did not return. So there probably weren't enough British around to keep it going.

Q: And the Center stayed in there as long as you were in Japan?

LEE: Right. It closed down many years later when the Agency had major budget cuts. I found my time in Japan an interesting one. I think that we really made some inroads there. It was a great time to be there because the Japanese economy, its cultural institutions, its media, etc. were rebuilding and entering into a new era under a democratic system. We had a lot of influence upon the process.

Perhaps a small example was that there was great, great interest in the study of English. I had hundreds of students come to me about learning English. Or if they had a certain amount of English, how could they get into an American university? It was overwhelming. My small staff and I just couldn't handle it. One day, the Commander of the Seventh Fleet walked into my office. He said, "You know, I've got a bunch of officers' wives down at Yokosuka (where the fleet was based) who don't have anything to do. Could you find something for them to do?"

And I said, "Yes, I've got the ideal thing." He sent one of the ladies to see me. I gave her some office space, and in turn, she organized a center where the wives advised students and gave English lessons.

Q: You mean, you advised the Japanese students what to do if they wanted to get into an American university?

LEE: Well, the ladies ordered college catalogues from all over the United States. They advised students on visa procedures, helped them write letters to the colleges and taught English to the ones who needed it so they could pass the necessary tests to get into an American university. That was the beginning of the great tide of post-war Japanese students who went to the United States to study.

Q: Did you find a big market for your lectures and visiting dignitaries who came?

LEE: Well, again, like Germany, the Japanese were just starving for information about the outside world, and in the process of rebuilding their country, they needed a lot of advice and help. I remember, just to give you an idea, that in my area, Sony, Suzuki and Yamaha, which today are huge Japanese corporations, were just starting out. One day, somebody took me to see Mr. Suzuki. He was building motorcycles by hand in his garage. That was the beginning of the Suzuki Motor Company. I visited Yamaha one day. It was a store that had been converted into a small piano factory. They were making pianos one at a time. Sony was also a very small place. I remember when I left they gave me one of their first small portable radios. The official said, "You wait and see; there will be a lot these in years to come."

Q: One thing that I'm interested in...you had quite a substantial library down there which was, I gather, about ninety or ninety-five percent in English. We often underwent criticism in our own

agency back in the Washington headquarters because it was felt that all these books in English were really not subject to much use by the recipient countries, and what was the use of having a big library under these circumstances. How did you find that?

LEE: Well, that was a running gun battle, as you know, for many years -- until we got a good translation program underway. But as the Japanese got to learn English, a lot of them could read it, and some taught themselves to read it. It wasn't perfect in the beginning, needless to say. But as the translation program grew and the Japanese learned English, our clientele grew and grew.

Q: You, I'm sure, remember very well our old friend Leon Picon who established the translation program in Japan?

LEE: Right. A very, very good officer.

Q: And I think he made quite a substantial contribution, both in his magazine, the Beisho Daiori, and also in the translations that he accomplished. I imagine you took his translations into the library once he got them going.

LEE: Right. And, of course, people in the field were putting pressure on the front office and on Washington to speed up the translation program. But like anything else, it took time.

ELIZABETH J. HARPER
Passport Officer
Tokyo (1954-1957)

Japanese Language Training
Tokyo (1958)

Visa Officer
Naha (1958-1961)

Chief, Consular Section
Kobe-Osaka (1961-1965)

Elizabeth J. Harper was born in Oklahoma in 1920. She entered the Foreign Service in 1951. Her career in the State Department included assignments in Indonesia, Japan, and Canada. Ms. Harper was interviewed by William D. Morgan on June 18, 1992.

Q: 1954, when you got to Tokyo, and then eleven years later?

HARPER: Well, I came home the first of July, 1965. It was ten years, really -- ten years plus -- because I didn't actually get to Tokyo until about January or February of '55.

Q: And then after four years, you went to Okinawa, then back to Tokyo?

HARPER: I went to Kobe-Osaka. It was Kobe-Osaka in those days. It's Osaka-Kobe today. My assignment was as Chief of the Consular Section.

Q: How big of a post was it? It was a Consulate General, I presume.

HARPER: It was a Consulate General. We had, in addition to the Consul General, we had one economic officer, about four consular officers, admin officer -- except the admin officer, God love him, really diverted my activities. First of all, he persuaded the Department to let him buy a house -- an old house at an excessive price -- for a principal residence (that is, for the Consul General), assuring the Department that it needed no initial repairs, thus justifying spending all this money for it. Actually, it needed about \$25,000 worth of repairs. Then, two days after all of the papers were signed, he transferred to Tokyo and I became Acting Administrative Officer and responsible for all those repairs in order to make the place habitable! Anyway, that's a different story and unrelated to immigration, but it did take a lot of time away from my Consular duties.

Q: But as Chief of the Consular Section, you had not only visas, but you had the whole schmear.

HARPER: I had the whole schmear. Yes, in addition to visas, you know, we had Americans in jail, we had people who were losing citizenship or who were regaining it, and lots of seamen. You will recall, Bill, in the early '60s, which is when I was in Kobe, during the whole period of the late '50s and early '60s, the Supreme Court was frequently invalidating one loss of nationality provision or another. So people who had been technically expatriated all of a sudden had not been expatriated because the related provision of law was found not to be constitutional.

Q: We were being challenged. This very, very strict, biased -- if I may use the word -- citizenship approach, including on women, was repeatedly challenged, and it kept falling. So today, I think we might say, B. J., it's pretty hard if not impossible to lose your American nationality.

HARPER: I think, actually, it is. And in many ways, I regret it. However, that's beside the point.

Q: In any event, you had the product of these changes when you were there.

HARPER: Yeah. Don't misunderstand me, I don't mind making it more difficult to lose American nationality. I do mind, speaking personally, making it unduly too easy to gain American nationality.

Q: Green card and five years' wait.

HARPER: Well, it isn't so much the green card and five years' wait. I think immigrants should have a reasonable chance to naturalize if they want to; our original ancestors here -- mine came before the Revolution -- were not native-born U.S. citizens. What bothers me is the law regarding, for instance, the transmission of citizenship. John Doe, American citizen, or Mary Doe, American citizen, goes overseas, marries some alien, makes his or her home in that foreign country forever, has a child. We have watered down the length of time the American citizen

parent must have been resident in the United States in order to transmit citizenship. We have watered down the length of time, if any -- I think we may in fact have eliminated the length of time -- the child, who becomes a citizen at birth, has to come and spend in the United States in order to retain citizenship. I think that's unfortunate because we end up with a number of American citizens, in name only, who then become the responsibility of American Consuls to protect.

Q: That's a different question. But the first question is, of course, what makes an American? Attitude, loyalty -- all these words that you and I would say make an American. Some people argue, however, that those issues aren't necessarily what makes an American.

HARPER: Well, I continue to believe no matter what nationality it is, I don't care whether it's American, British, Indian or whatever, it should have an element of allegiance involved. And I really feel that these people do not, in many instances, have anything other than the sense of, "gee, it's handy to be an American citizen because that way, I can go there if I really want to sometime," and no sense of emotional attachment to this country.

Q: But, of course, you and I as Consular Officers, or former ones, never would let that enter into our judgement.

HARPER: Well, it doesn't enter into my judgment if the person meets the requirements of the law. What I'm arguing about, against, actually, are the current requirements of the law. And I really do think that they demean the importance of one's citizenship, whatever the citizenship may be.

Q: Versus whether they appear in front of you and the Consular establishment as an American citizen, burning the American flag and swearing how much they hate America...even that?

HARPER: Even that. I usually made people wait twenty-four hours and come back before I would take an oath of renunciation, incidentally.

Q: Oh, I think that's, as I remember, part of the law, or part of the procedure?

HARPER: Well, no it wasn't part of the law. But we did, I think, finally make it part of the procedure.

Q: Yeah, it was indeed.

HARPER: Before it was a procedure, a standard procedure, I did it. It was one of the things I learned from the more experienced officers in Tokyo.

Q: Well, you're probably the source of some of our subsequent standard procedures or laws!

HARPER: I'm the source of a number of standard procedures because of my duties in connection with the '65 Act.

Q: What about the visa function in your many years in Japan? And obviously, when you were in Kobe-Osaka, it was not what it is today, especially in terms of visa restrictions, inability to travel and the like. But what were the visa issues there at the time?

HARPER: Primarily the *bona fides* for nonimmigrants because, of course, with the quota on Japan of a hundred...

Q: Which was a hundred for all Asian countries.

HARPER: There was always a question as to whether or not somebody was a *bona fide* nonimmigrant. And a great many were. The problems, however, were essentially not exclusively with the Japanese who would come in and try to con us into believing that they were just making a short trip and would obviously come back after seeing the Grand Canyon, or whatever.

Q: The famous Niagara Falls or Grand Canyon...or a funeral.

HARPER: Yeah, and surely, or a funeral. Another real problem was with Americans, who were dishonest enough to try to help them fraudulently.

Q: Why would they help them? What was their connection. Friends?

HARPER: I don't know. I mean, I remember a couple of missionaries, one a Roman Catholic and one a Protestant, both of whom submitted fraudulent documents on behalf of and otherwise advised Japanese applicants -- suggestions on what kinds of arguments would persuade the consul to give him, in both cases it was a him, a visa

Q: God's law being more important and overriding than any national law.

HARPER: I guess so. They was also a problem when it came to children, I might add. Missionaries, more than once, would come in with a child who quite clearly was not their child, and try to register the baby as an American citizen, as their own offspring. But, in any event, I don't want to pick on the missionaries because most of them were absolutely wonderful, but there were some, who, as you say, I guess they believed that God's law was more important. Although, none of them ever expressed it that way to me. Whatever their motives, there were occasionally problems.

I also had the interesting experience, one time, of ruling off limits our Consular office, and more accurately, the Consular section, to any member of the Japan Travel Bureau, which is a Government agency. The reason was that one of their personnel was forging documents for people who were using the JTB as a travel agent and applying for visas. Well, as far as I was concerned, that made not only that individual ineligible under 212(a)31, as it was in those days, but it also made the JTB a hazard. So I informed the Embassy, and I informed the Japan Travel Bureau that I was sorry, but no representative of their organization was going to be admitted to the Consulate General in Kobe-Osaka for a minimum of ninety days. At that time, they could perhaps persuade me that they had sufficiently trained their people so that this wouldn't happen again.

Q: I don't think Consular officers could quite do that these days.

HARPER: Well, I don't know if they could either, but I certainly did it, and I expected howls from the Embassy because of the Japanese government connection, but I didn't get any. They said, "More power to you!" And meanwhile, this young man was transferred to something like baggage handler in Shikoku.

Q: Rather than to jail?

HARPER: Rather than to jail.

Q: You have introduced fraud as obviously a key emotional issue for all of us associated with visas. But I never thought of fraud with the Japanese and certainly not in those times. You've opened up the subject of purposeful misrepresentation. Were the applicants largely people who were leaving for economic reasons? What was the basis, if there was one particular one for fraud, or misrepresentation?

HARPER: Oh, they were, for instance, a kid who said he wanted to go to school in the U.S., or a businessman, who really wanted simply to get lost in the U.S. and work. Sometimes it was sad because the applicants would have been found eligible for a visa if they had not engaged in misrepresentation. But they figured they had to do something special to get a visa -- instead of playing it straight. We issued more than 5,000 nonimmigrant visas the year I arrived -- which was so unusual that the Consul General made a ceremony of personally handing the applicant his visaed passport in his office -- so obviously some people were *bona fide*.

Q: Also, the Japanese were very loyal?

HARPER: Basically, the Japanese are very honest.

Q: But also very close to Japan. They are like the Chinese in not rejecting their culture.

HARPER: No, they don't reject their culture, and they shouldn't. But they do, you know, harbor a desire to go the United States.

Q: Probably it was the quota, the limited quota?

HARPER: And the quota got in the way. They had relatives in the U.S. There was no prayer of ever getting a visa, however, an immigrant visa.

Q: Post World War II problems?

HARPER: It was mostly a matter of there not being visa numbers available, even for people who would be fine immigrants. In the JTB case, our office suddenly found itself getting roughly identical letters, business invitations, purportedly from the United States for, say, Hiroshi Watanabe, or whatever the name would be. They would have misspellings, they would be

written in what was usually known as Japlish, you know, Japanese-English, and the fraud was perfectly apparent.

HENRY GOSHO
Radio and Program Officer, USIS
Tokyo (1954-1960)

Information Officer, USIS
Tokyo (1964-1968)

Public Affairs Officer, USIS
Osaka/Kobe (1969-1971)

Chief, East Asia/Pacific Division Broadcasting Service, USIS
Washington, DC (1971-1973)

Henry Gosho was born in Seattle, Washington in 1921. Much of his career with USIS was spent in Japan. He was interviewed by G. Lewis Schmidt on January 4, 1989.

Q: Do you remember exactly what date it was that you arrived in Tokyo? I had come out a short time before you arrived, and I can't remember just when it was you came to be actually assigned to USIS or its predecessor.

GOSHO: I first came to Tokyo to recruit the announcers and then stayed on for six months. That was in the summer of 1950. But I think what you're talking about is when Jeanne finally got her citizenship. That would be June of 1954.

Q: I'd forgotten it was that late in the game. I remember Sax Bradford talking about you and saying, "As soon as we can get Hank cleared, we'll get him out here." But I didn't remember when it was that you actually showed up. I came in January of '52 and handled the nuts and bolts of the takeover from the Army when the program converted to USIS. We had twenty-four field centers, about 840 Japanese and 135 American positions authorized. We never filled them all, but we did get about 100 on duty before Washington ordered us to start cutting back.

GOSHO: I remember when I was first assigned there on TDY in 1950, USIS was in the Mitsui Bank building. Then we moved to the Mitsubishi Shoji building. Then from there to the Mantetsu building. I guess that was over a span of some fifteen years.

Q: When I came out in January of 1952, we were in the Mitsubishi Shoji building near the Tokyo Station.

GOSHO: There was one more before that. We were in the Mitsui Bank building.

Q: Then we moved to the Mantetsu. I've forgotten now whether it was late fall of 1952 or the early part of 1953, but it was right in that two or three-month period. We moved up either around November of '52 or sometime the first month or two of '53. By the time you came out on assignment, we were already in the Mantetsu building.

GOSHO: That's right. As I mentioned, Victor Hauge was the chief of the radio branch. Vic had already embarked on an ambitious radio program project. The plan was to furnish the commercial stations with USIS radio programs that they could use in the early days because there was nobody that would sponsor any of the time slots, mainly because Japanese businesses were not familiar with the business of sponsorship.

Q: And they didn't have much money.

GOSHO: They didn't have much money. But Vic Hauge saw this as an excellent opportunity to get our message across through the radio programs that we would furnish free. We started out, as I recall, with two or three programs. One I remember was called "Family Album," which was a program that talked about household hints, how things were done in the U.S., how it might work in Japan. It was an excellent way, I thought, to get our American message to the Japanese. A lot of the letters that we received showed that there were listeners.

It was an ideal situation, as you might guess, because there was a lack of sponsors in Japan. We were able to get USIS radio programs on the air in prime time, which was, in those days, between 6:00 and 9:30.

Q: As I recall, at that time, there were no networks in Japan at all. You were dealing with a group of independent stations and therefore had to deliver your taped programs to stations all over the country, each one of which played individually. They were all pretty low-power stations.

GOSHO: Yes, that's right. Radio Tokyo was the first commercial station in Japan, followed by Osaka, then by Nagoya, and then eventually into Fukuoka, and up to Hokkaido. We were fortunate in that in each of those major cities, we had a cultural center. So the cultural center director was able to make contact with the radio station and establish a relationship, which helped in carrying out the cultural center activities in his own area.

Eventually, the radio stations formed networks. Primarily they were owned by the *Asahi* newspaper organization, which had one network. The *Mainichi* newspaper had another network, and the *Yomiuri*, the third. Those are the three main media newspapers in Japan. These later on branched out into TV.

Our programs were made up of a mix of music and "Family Album," which was more of a home aid type of program, but we would weave USIS country objectives into the program. We also had what we would call talk shows. I think there were two or three of what we called commentary talk shows.

One on which we put a lot of emphasis was a military program for which we were able to utilize a prominent military commentator who would talk about the security pact -- what it intended to

do and what it hoped to do, but mainly to keep the peace. We would receive letters from audiences. Not all were in favor of what was being said, but nonetheless, we thought that it was worthwhile in that at least it got the people thinking about the security pact and what it meant to Japan.

On another commentary program, we invited former Washington correspondents or New York correspondents, who were the *Asahi* or *Mainichi* or *Yomiuri* correspondents, and they would talk about international politics, relating mainly to U.S. and Japan affairs.

Another commentary program was a U.S.-Japan economic talk show. We were able to place these programs initially on prime-time programs.

Q: You talked about the feedback on the military programs. Did you get any feedback on the correspondents' program and the economic program that you were putting on?

GOSHO: We received many comments on the current topic programs, mostly that they appreciated the program and they enjoyed it. But I think that that was mostly because they were able to read in their own local newspapers on current topics or current events. But on the economic programs, we would receive comments that there were some aspects in it that they hadn't realized, and they thanked us for the educational info that was being provided.

Of course, the most popular shows were the music shows. We had country and western, which was very popular at the time. I wasn't much of a country and western fan, but there were quite a few in Japan, strangely enough, because at that time, square dancing was very popular. That went across great, and we got quite a few requests for that type of music. Although we did have classical music, such as the Boston Symphony. Those were very popular, so popular, in fact, that we got a request from Suntory Whiskey Company that they wanted to sponsor one of the shows. We thought, "Gee, that would be terrific." So we sent a message to Washington, but the legal beagle said no, an alcoholic beverage program would not be appropriate, besides which they advised that a U.S. Government-operated program could not be commercially sponsored. So that one went by the wayside.

There was, as I recall, a JTB (Japan Travel Bureau) or similar organization that did sponsor one of our shows without our knowing it. The program had to do with a tour of the United States. They would do a show about the Grand Canyon or about national parks or about various cities and how they were related to Japan, so on and so forth.

Q: I think you mentioned at one point in our conversation before we were recording that you would occasionally put on shows that would review or report on certain articles that appeared in major U.S. periodicals, and some of them in the medical field, which got a great response.

GOSHO: Yes, in the program called "Family Album," we would from time to time insert either new findings or interesting findings by the American medical field, either an article out of the AMA journal or the Harvard medical journal -- I've forgotten which it was. But quite often we would receive inquiries from a medical college in Japan, saying that they heard the program and could we furnish them with more detailed data on it. In many cases, we were able to furnish them

with additional data, and if we couldn't, we would write them and tell them that we were looking further into their request. This was one of those things you call "evidence of effectiveness."

At the height of the radio branch operation, we had between thirty and forty programs, the majority of which were on prime time. But as the years went by, commercial sponsorship caught on. I would guess around seven or eight years later, we began to get pushed out of prime time programming. But interestingly enough, the stations would make another effort to ask us if they could only sponsor "Family Album," for instance, saying they could still carry it on in prime time. But since that was impossible, it would be shoved back to, say, around 1:00 at night, and eventually midnight. Pretty soon, the only time we were on the air was 1:00 in the morning and 4:00 in the morning.

Q: When you were in your heyday and furnishing all these programs to individual stations, did you have "traveling salesmen" who would go out and make contact with the various radio stations first to get them acclimated to taking your product and later perhaps to get a feedback from them as to what they wanted?

GOSHO: We had a system where if I didn't go out, then our top FSL or local employee would go out with, let's say, three or four sample programs. Maybe two tapes would be music tapes. That was a good come-on because good music programs in those early days were hard to come by in Japan. The prime program that you really wanted to sell was either a commentary or "Family Album". In most cases, they knew that if they picked one or both music programs, they were, more or less, obliged to take the talk show or the commentary program.

Q: At the height of utilization of your programs around Japan, approximately how many stations were you servicing? What is your evaluation overall of that earlier period -- say the first five or six years that you were on the air through so many Japanese stations -- as to the influence the programs had?

GOSHO: When we first started out, there were only three or four stations, but at the peak, we serviced in the neighborhood of sixth to seventy stations. In fact, I would have to say that it was probably higher because when you got into the hinterlands of Japan -- as you know, it's a mountainous island -- they had there what they called slave stations. So if Nagoya carried a program, it was generally also carried by the slave station, which would be maybe as many as three or four additional. So we probably serviced, at the peak moments, about 100 stations.

When television came in, I would guess about 1958-59, we started out with three or four programs and ended-up with three or four programs. Of those three, two were English conversation-type programs.

Q: Teaching?

GOSHO: Yes, teaching. One was just pure elementary English, but the other one, we used VOA's Special English material, which enjoyed some success. The other two were documentaries, which were furnished by the Agency's TV and MOPIX Service. But, you know, television caught on very fast in Japan. By that time, commercial sponsorship was making rapid

headway, so there was not much need by the Japanese to depend on us for furnishing material.

Q: Other than the correspondence you received as a result of your programs, did you have any kind of an indication that you were making some headway with messages in the programming that you were preparing?

GOSHO: In a negative sense, and yet the fact that we got some negative responses to it, it was an indication that they were listening. We had a military program, not in the sense of warfare or defense -- well, it had to do with Japanese defense -- but we had a military commentator who, interestingly enough, we were able to get from the *Asahi* newspaper, whose policy at the time was generally anti-American. By anti-American, I would say they were more pro-Japanese than they were anti-American. But we were able to get a military editor, who would talk about the nuclear protective aspects of visiting submarines or nuclear aircraft carriers. The Japanese were Hiroshima conscious, and so anything that had to do with nukes, they were against. But this military commentator tried to inform them of just what it was that the U.S.-Japan defense was doing. As I say, not all the letters we got in that connection were favorable; a lot of them protested trying to justify nuclear weapons. But at least, as I say, it showed they were listening to the program.

Q: It seems to me that at one time, USIS was arranging to broadcast World Series games. Tell me how that came about and what role you played in that.

GOSHO: That was before I was assigned at Tokyo. It occurred to me that even before the war, baseball was extremely popular in Japan. Probably, next to *sumo*, it was considered the national pastime. But because of that, I suggested to the Agency -- well, at the time, it was in State -- I put in a proposal, which was approved, that we broadcast the World Series in Japanese to Japan. As it happened, I had gone to Japan earlier to recruit three NHK announcers, two of which happened to be sports announcers, so we were well prepared. I did the color commentary on it. Broadcasting a World Series was a great thrill to me because I played baseball in high school in Japan, and it had always been my dream to see a World Series. Here I got the opportunity to do so.

One of the highlights of the World Series was when I conducted an interview with Casey Stengel, manager of the New York Yankees. I had asked him whether he foresaw a day when they would have a *real* World Series, with the champion of America playing the champion of Japan. His response was, "You know, I went to Japan in 1934 with Babe Ruth, and now there was a great player." He talked about Babe Ruth, and he said that Babe Ruth had gone to England. "Now, England, that's a different situation. Baseball is not all that popular in Europe, but eventually, there will be a day when baseball will become popular." He switched from one topic to another so rapidly, in the blink of an eyelash, that I had a great deal of trouble interpreting what he said. Nonetheless, it went out over the air.

About two weeks later, we got several letters from Japan saying, "We couldn't understand a word of what that interpreter was saying." Well, what the heck. I couldn't understand a word of what Casey was trying to say either.

The significance, though, of that World Series was that we got reports from USIS Tokyo that there was an estimated audience of between 5 to 7 million who heard all seven games. That was one of the highlights of radio broadcasting, even in Japan, as the first broadcast in Japanese. Of course, today the Japanese are here not only broadcasting the World Series, but the Super Bowl as well.

Another sidebar on the radio branch operation in Tokyo was that we had several local radio producers who were just starting out. In other words, they graduated from university, and they'd apply for a job at USIS, and we would take them on as assistants to the main producer. Later, as Agency budget cuts came, they would move on to Japanese radio stations. Eventually, we had quite a large alumni group of former USIS radio branch employees who were working for various radio stations throughout Japan. We were invited to attend what the Japanese called the NARB, the National Association of Radio Broadcasters, patterned after the NARB here in the States. It was like old home week. I would go and be greeted by these various former workers of USIS

Eventually, the radio and TV programs sort of faded out, and more emphasis was put on the information side. USIS was divided into the Information Division and the Cultural Division. I was assigned to head up the Information Division, made up of Radio/TV, MOPIX, Publications, and Exhibits Branches. My last assignment in Tokyo was Expo 1970 in Osaka. Although talking about expositions, I was called out of retirement in 1984 and 1985 to be the deputy commissioner of the U.S. Pavilion at Tsukuba.

There are many memories of the long years spent in Tokyo. I guess one of the most memorable was in 1959, toward the end of the year, I'd say around November, Harry Keith, chief of the Mopix operation, and I were assigned full-time to the upcoming visit by President Eisenhower in Japan. It had been announced in October of 1959 that in 1960, President Eisenhower would schedule a visit to Japan, and it would be the first time that a U.S. President would visit Japan. So it was to be a big event. Harry Keith and I were on it seven days a week, twenty-four hours a day practically, as were two from the Foreign Office. We worked as a team in submitting various suggested schedules to Washington.

The main difficulty was that we had to time everything down to the nth inch of what was to happen. For example, on the program, there was a luncheon to be given at the Imperial Hotel. First of all, we had to submit the menu to Washington. The menu was approved. Then Harry Keith and I and the two from the Foreign Office, and two from the White House came, and we sat down in the banquet room at the Imperial Hotel and actually ate what was to be served to the President. Somehow or other, when dessert time came, the waiter brought out vanilla ice cream. We were just about to dig into it when the White House medical officer says, "No, no! We can't have that. There's too much cholesterol in it." So the ice cream had to be scrubbed.

As I say, everything had to be timed to the minute. The visit to the Meiji Shrine, the oldest shrine in Tokyo, was on the schedule. One of the problems there was that there were no telephones readily available. As you know, the President has to have at each station the ability to make direct contact with the Washington switchboard. After a great deal of negotiations and whatnot, they were finally able to install one telephone just outside the shrine admin office, much to the

chagrin of the high priest who objected to it. That was my first experience with picking up a phone and having the White House switchboard come right on.

Q: As you remember, in our early days out there, we were reduced to radio telephone, and very often it was almost impossible to hold a conversation between Tokyo and Washington. On this occasion, what had they done to improve communications so that you had a much better connection?

GOSHO: The telephone at the shrine, for example, went directly to the switchboard at the Embassy, and then the switchboard at the Embassy went to the USAFJ (the U.S. Army Forces in Japan) headquarters in Fuchu, I think it was, and their switchboard was able to patch right into the White House.

Everything wasn't work in preparing for the President's visit. As a "take-off" on the requirement of communicating at all times with Washington, we came up with a little skit where the President is in audience with the Emperor, and there's a familiar red pay phone installed right next to the throne. As the President is bowing, the phone rings. The Emperor picks up the phone and he says, "Hai." Then he hands the phone over to the President and says, "Its for you."

The upshot of the whole thing after all the months of preparation, papers after papers -- plan A, fair-weather schedule, plan B, wet-weather schedules -- and all these things where you had to measure things by the minute, by the second. The upshot was Mr. Haggerty, the President's press secretary, flew into Haneda airport two weeks before the President was scheduled to arrive. We had already had indications there was going to be trouble. There were quite a few demonstrations already going strong. I think it was for that reason that Mr. Haggerty flew into Tokyo to get a final reading. I believe the President was already in Okinawa when Mr. Haggerty came in. You couldn't get into the airport because of the demonstrators. I was there well in advance of Mr. Haggerty's arrival. The Japanese security officer in charge of Haneda airport came to me and said, "A U.S. helicopter is on standby. He's flying in now. We would strongly recommend that Mr. Haggerty avoid the demonstrators and take the chopper, and use that to get to the Embassy."

So when Mr. Haggerty's plane arrived, I went up the ramp and I gave him the message. He just looked at me and said, "No American official is going to go in by the back door. I will use the Embassy car and proceed that way."

Well, he got no more than a few blocks at the far end of the runway there, and the cars couldn't move because of the demonstrators. They were pounding the car with their placards. This was in June of 1960. It was hotter than hell.

Q: That was about the time we were due to renegotiate the Security Treaty, as I recall.

GOSHO: That's right.

Q: Was that the basis for the rioting?

GOSHO: That was the basis. Well, at that stage, it wasn't rioting yet, but there were protest

demonstrations and just general havoc. As a matter of fact, I believe that in one of the demonstrations at the Diet, a high school girl was crushed to death. That caused further problems. That was also one of the reasons why Haggerty came in.

It was hot in those cars. The engines overheated, and we had all the windows closed, and they were pounding the car with these placards. I was in the car directly behind Ambassador (Douglas) MacArthur II and Mr. Haggerty. There was a knock on the window. I looked out, and there was the chief of the security forces. I lowered the window, and he said, "I want you to go tell Ambassador MacArthur that your U.S. Army chopper is going to hover over the cars. When I give the signal, they're going to lower a rope ladder. When I give the signal, I would like to have the Ambassador and Mr. Haggerty get out of the car and climb up the rope ladder and take off."

I said, "You're out of your cotton-picking mind! You don't want me to go out in that crowd, do you?"

He said, "Well, I can't do it. I don't speak English!"

I finally said, "Okay."

As I got out of the car, I got hit in the head with one of the demonstrator's placards, and I turned around -- more in pain rather than anger -- and this Japanese fellow that hit me on the head with the placard bowed low and said, "Excuse me. Sorry about that." Out of that emotional bit, there's that little bit of to-do that remained in my mind.

I went up to the car and told the Ambassador what was going to happen. When the signal was given, they came out of the car. But as you know, when you're standing directly under a chopper, it raises a dust storm the likes you've never seen before, especially when it's so low. They got out and climbed up the rope ladder into the chopper, and it took off. As soon as the chopper took off and the main object of the demonstrators had gone, why, the crowd just disappeared, and we were able to proceed back to the Embassy.

In the meantime, the chopper had landed at a place called Hardy Barracks, which is less than a mile away from the Embassy. Mr. Haggerty and the Ambassador drove directly through the back roads to the residence. When I arrived, Mr. Haggerty was chewing Ambassador MacArthur out for not providing the proper intelligence. I don't know what he could have done about it.

Q: Was it at that point that Haggerty decided that he was going to recommend the cancellation?

GOSHO: Yes. The President was in Taiwan, and they had the President go to Seoul. Prime Minister Kishi appeared tearfully on TV and announced that the President's visit had been canceled. I believe within the next day or so, Prime Minister Kishi resigned.

Q: We were discussing earlier the value of use of Japanese language by American diplomats and, to some extent, that it was counterproductive in certain instances.

GOSHO: First of all, I'd like to mention that the majority of my service was in Japan -- I can

only speak for Japan. Over the past several years, I have found the Foreign Service Officers' linguistic abilities to be top grade. Especially I found that those in USIS were of high caliber.

However, I have one observation to make, and I think it still applies. I remember an incident back in the days when USIS would invite the Japanese media for a get together, and almost the entire USIS staff and Japanese correspondents, foreign news editors and so forth were invited. Mr. Watanabe of the Osaka *Mainichi*, chief of the foreign news desk who was educated in the States and spoke excellent English, appeared at the cocktail party, as he always did. He was a great fan of USIS. As a matter of fact, come to think of it, Mr. Watanabe was one of those who appeared on our commentary programs in the early days. Anyway, he came to me toward the end of the party a little bit upset and said, "You know, one of your officers kept insisting on talking Japanese to me." He pointed him out.

I said, "Well, he's a recent graduate of the Yokohama Language School."

Mr. Watanabe said, "Well, since you and I are old friends, I can be frank with you. Every time I responded in English, he came back at me in his Japanese, which was not bad but not all that good. I think he should realize that when someone answers back in English that they should then drop the second language and respond in English because it tells the person that his English isn't understandable, and it's a breach of etiquette." Also a breach of diplomacy, as far as that goes. So despite the fact that there are excellent linguists, there's always a time and place when they should respond in English if the guest talks to you or answers your questions or carries on a conversation in English.

Q: But on the whole, you feel that the diplomatic students speak a pretty good version of Japanese?

GOSHO: Yes.

Q: However, as we all know, the Japanese language is full of many nuances. To what extent do you think that a student in a couple years of study can pick up those nuances? Or do we miss an awful lot of them? Is that one of the great faults or inabilities in our language learning?

GOSHO: Yes. I can only speak for the Japanese language, but it is a language full of nuances, which is probably some of the reasons for many misunderstandings that arise between the U.S. and Japan -- the nuances of the language.

I recall in the early days, when Washington sent the post a message asking that such and such be transmitted to the Foreign Office, I accompanied the Ambassador to the Foreign Office. The message was transmitted. The Foreign Office official said, in Japanese, "I generally understand." "I got the gist," would be the more accurate translation. Except that the Ambassador took it as an acceptance of the message.

We returned to the Embassy, and a draft telegram was written that they had accepted. As the accompanying officer, I was required to initial the message. I said, "No, I don't think this is correct. What they actually said was they'll study it. It was not an acceptance." From that day

forward, the Ambassador agreed that henceforth anything official would be handled in the English language.

Q: I know that Sen Nishiyama, who, for general purposes, I'll identify as the top local employee in the U.S. Information Service operation. He was born in the United States, got a degree in the U.S. and then went to Japan and lived there ever after. He is probably the best example of a bilingual person that we have. But he and Reischauer used to get into some rather unpleasant arguments over the utilization of certain phrases in Japanese, and the Ambassador would insist that the way he was saying it was the way it ought to be. Sen, in his very polite way, was trying to tell Reischauer that it really wasn't the way it should be said. I suppose that is due to the fact that the language had progressed since Reischauer learned it. Sen, of course, had been there all the time and knew all the current nuances.

GOSHO: I think that may have been true, but initially, it got quite a response from the audience. I recall that at one of the speeches he made, the Ambassador had made a longer-than-normal talk in English before the translation. Normally, he got to a convenient place so Sen could translate. But on that particular occasion, he had talked a little longer -- either that or he forgot that Sen had to translate it. Anyway, it was quite long. Sen translated it as best he could, and when Sen finished, the Ambassador said, "Well, that wasn't exactly what I said. What I said was ..." and the Ambassador started talking in Japanese. It brought much laughter, and a humorous air was interjected. So it became kind of an act, and it was a good one because it showed the humorous side of the Ambassador, and Sen realized it, too. They continued this "act" many more times.

But I agree. Sen, without a doubt, is the best interpreter of English into Japanese and vice versa that I've ever heard. He compares well with Mr. Shimanouchi, who was Prime Minister Kishi's personal secretary and interpreter. Mr. Shimanouchi spent his early years in Los Angeles and was educated at UCLA, so his English was perfect, too. When Prime Minister Kishi came to Washington as the first post-war high Japanese official to address the Congress, Mr. Shimanouchi did the interpreting. When Prime Minister Kishi finished his speech, and Mr. Shimanouchi ended with "Thank you very much" (I forgot to mention that Mr. Shimanouchi was a debater at UCLA, so his English language is flawless), the Congressmen and Senators came over and all shook Mr. Shimanouchi's hand and sort of left the Prime Minister standing out in the cold.

JOHN M. STEEVES
Consul General and Political Advisor
Naha (1955-1956)

Ambassador John M. Steeves served in the China/Burma/India theater during World War II in the Office of War Information. His Foreign Service career included positions in New Delhi, Tokyo, Djakarta, Naha, Kabul, and Washington, DC. This interview was conducted by Charles Stuart Kennedy and Thomas Stern on March 27, 1991

Q: Then you went from Djakarta to Naha in Okinawa as the consul general and also the political adviser. You were there from 1953 to 1955. Could you explain the situation and what your job entailed?

STEEVES: From the standpoint of personal relationships and comforts that was a delightful assignment because it was with the military command. I got along with all of them extremely well. General Moore and all of his staff. I got the Command people to give up a perfectly delightful site that they had begun to fix up--in fact, put a million dollars into it actually--and use as a club. I told them that it would look very, very bad for them to be occupying a place like that as a military club--high on a cliff overlooking the China Sea and obviously beyond their needs. I said, "You know what you ought to do with that? You ought to turn it in to the consulate general." I got Washington's permission to go along with that and they did.

Q: That's diplomacy.

STEEVES: It was the old Japanese naval inspection site. It had a lighthouse on it. It still had the rings on the wall where they tied up the pirates that they caught at sea. It was a marvelous place. One of the Okinawa contractors built new counters for us out of that lovely travertine that they have naturally in Okinawa and put it all in for nothing. It was one of the most delightful offices I have ever had in my life.

Q: What were the issues?

STEEVES: The issues were occupation problems. Getting the Command to do the types of things for the Okinawa people that would bring about the right relationships between the two, which is not very easy.

Q: Was that the period when you had either a communist or socialist mayor of Naha?

STEEVES: No, neither the Mayor of Naha nor Okinawa Governor were Communist. You must be referring to Senaga, a member of the native Council--or some such office.

Q: How did that work?

STEEVES: Senaga caused us a lot of trouble for he was an out and out communist. He was popular with the people on some issues but he had to be controlled very carefully. Under Military Rule, of course, he could have been dealt with very quickly. But that would not have been a wise course to follow.

Q: This was the fifties. How did you deal with him?

STEEVES: Well, he could be isolated pretty well because he didn't have a lot of influence, but he had potential influence. He was beginning to gain popularity with the teachers union. Then, we had done so many things for the Okinawans that were obvious benefits that they could kind of see where their bread was buttered. I, for instance, sent back to India and got the Coiembatore Experimental Station to send me great crate loads of experimental cuttings to revolutionize their

sugar industry. One of the things that I really prize in the Foreign Service was when they sent me a silver cask with the first sugar that they got from the new cane some years later.

Q: At this period I take it that Okinawa Reversion to Japan was not a major issue.

STEEVES: It became a major issue somewhat later. It was just beginning when I left. It was growing all the time because the Japanese wanted the islands back and the overtures and propaganda was strong and constant.

Q: How about the Okinawans?

STEEVES: Yes, for cultural reasons, language especially, they would be just more at home with their own Japanese people despite the fact that they were always looked on as country second cousins. They suffered a lot by being looked down upon by the Japanese. I am afraid that is happening again--and we told them it would.

ARTHUR W. HUMMEL, JR.
Deputy Public Affairs Officer, USIS
Tokyo (1955-1957)

Ambassador Arthur W. Hummel, Jr. was born to American parents in China in 1920. His career with USIS included assignments in Hong Kong, Japan, Burma, and Taiwan. He served as the ambassador to Burma, Ethiopia, and Pakistan. Ambassador Hummel was interviewed by Dorothy Robins-Mowry on July 13, 1989.

HUMMEL: As the PAO -- because from Hong Kong...let's see, we arrived in Hong Kong in '52, left in '55 -- from '55 to '57, I was Deputy PAO in Tokyo, managing a much larger program under Joe Evans -- two years, from '55 to '57. That I enjoyed very much and traveled to all of the cultural centers -- twelve to thirteen of them at the time -- and learned quite a bit of the Japanese language.

From there, I went to Burma as PAO, replacing Lionel Landry, from '57 to '60.

Q: So, you were overseas constantly during this period?

HUMMEL: '52 to '60.

Q: What did you make of all those branch posts in Tokyo, or in Japan, obviously during one of the final cut-backs? They've cut back since then, but it was such an agonizing kind of thing. It was so emotional for the Japanese.

HUMMEL: Yes. Well, as the country grows up and reconstitutes or constitutes its own media and cultural activities, the foreign input becomes a smaller percentage of the total pie. So, the

cultural centers that were almost the only thing around that had had intellectual stimulation in the early days of the occupation were increasingly supplemented and superceded by Japan's own lively efforts.

Still, I don't mean to denigrate it because throughout this whole period, there was an intense curiosity on the part of the Japanese about everything Western. They wanted to learn about everything. They are terribly single-minded, as everybody knows.

By the time it became necessary to chop, when that time came, I think that was probably a rational decision because the need was no longer quite so great. In the same sense, the Fulbright Program that had been absolutely essential in bringing people out of environments such as Japan, China, wherever, and vice-versa, later became a small part of the huge tide of exchange of persons that eventually went on through other auspices.

So, I think it had been highly valuable in the immediate post-war years, as USIS' program throughout the world was more valuable everywhere then than it is now because it is quite often submerged under other media efforts.

Q: This was the rationale when I was there for further cutting.

HUMMEL: I'm afraid that's probably a good rationale.

Q: I know the situation in Germany, when they started to cut there, it seemed to be more difficult to cut in Germany than in Japan, but it made the same kind of rationale: You could spend your money on other things.

HARRY HAVEN KENDALL
Public Affairs Officer, USIS
Takamatsu (1955-1957)

Harry Haven Kendall was born in 1919 in Louisiana. He entered USIS in 1950, serving in Venezuela, Japan, Spain, Panama, Chile, Vietnam, and Thailand. Mr. Kendall was interviewed by G. Lewis Schmidt on December 27, 1988.

Q: Let's get back to Japan now. What were you doing in Takamatsu, and let's hear a little bit about that program. You were there quite a while, as I recall.

KENDALL: Lew, you had a hand in it, so you would know as well as I. When my time came up for transfer from Caracas, I wrote to Kitty Jones, our personnel officer in Washington, and told her Japan would be my first preference for my next overseas assignment. Then lo and behold, she found a Japan position for me. You remember Kitty Jones. She was a charming lady who took good care of all of the USIS Foreign Service types at that time. She wrote me that there was an opening as director of a binational center in Takamatsu. It was the capital of Kagawa prefecture and the principal city on the island of Shikoku. I had never heard of the place, but I

was ready and willing to go.

We, Margaret and I and our then two-and-a-half year old daughter Betsy, left Caracas in May, 1955, for home leave and transfer to Japan. We traveled surface all the way, by ship from the port of La Guaira to Mobile, Alabama, thence by rail and car to New Orleans, where we bought a Pontiac station wagon to take with us. It turned out to be too long for Shikoku's one lane roads, but we managed anyway. We drove that car to see my mother in Lake Charles, thence to Chapel Hill, North Carolina, to visit Margaret's mother, then to Washington, D.C. for consultation, and eighteen days across country to San Francisco, where we took it with us aboard the President Cleveland bound for Yokohama. From Tokyo, we traveled by train to Kobe and thence to Takamatsu by the old *Kansai Kisen* ferry. I didn't realize it at the time, but never again during my whole time in the Foreign Service was I to have such a leisurely home leave and transfer.

As I learned in Tokyo, Governor Masanori Kaneko of Kagawa prefecture had gone to Tokyo to request an American director for the center. When the U.S. Army turned over their CEI-SCAP (Civil Information and Education-Supreme Command Allied Powers) libraries to USIS at the end of the occupation, USIS had converted the Takamatsu library into a binational center and given operational responsibility to the Kagawa prefectural government. In effect, they gave the prefecture a good-sized library but no librarian to run it, as the Army had provided. The Governor had found the library very useful in helping his constituents learn about the United States and had been very cooperative in its operation. He wanted another American director and wanted one badly.

I am sure you are familiar with the problem because you were the executive officer for USIS Tokyo at the time. Kaneko had approached you and the PAO on the matter, and as a result, Kitty Jones was asked to send a young American officer. I guess that's the essence of it. My application for a post in Japan hit Kitty's desk in Washington about the time your request came in, so I was tapped for the job. That's how these things come about I suppose.

I regret I wasn't given any special training for Japan. I went there without knowing the first word of Japanese. So the first thing I did was to get myself a tutor and started learning Japanese. I took daily lessons while I was there. I would not say that I became proficient, but when I left, I did an interview in Japanese with the local radio station.

My job was to run a cultural center. There was some connection with what I had been doing in Caracas, but not much. In Caracas, I had been an Information Officer. Here I was to be a Cultural Affairs Officer. It was a general purpose post, and, as I understood it, my job was to help bring American culture to the Japanese hinterland. They were an eager group wanting to learn more.

Takamatsu had been about ninety-five percent destroyed during one massive U.S. Air Force raid on July 4, 1945, and the whole city had burned down. The place was poverty stricken. The inhabitants were in the process of rebuilding the city, and they worked very hard at it.

But they still wanted American culture. They wanted to know what Americans were thinking, what they were doing, and how they could get to know Americans and the United States better. Much has been written about the psychological aspects of post-war Japanese attitudes toward the

United States, but for me there at that time, it meant being confronted by people who saw their future as being aligned with the nation which had resoundingly beaten them in war, and they urgently wanted more information about that nation and its people. My job was to provide it for them as best I could with the resources available. I had a staff of Japanese employees who were on the payroll of the Kagawa Prefectural Government. USIS gave me a vehicle and a driver, but other than that, I worked entirely with the Japanese staff.

Q: I'm interested. When did you get to Japan?

KENDALL: I arrived there in September, 1955.

Q: That's why. Originally when we started, we paid the whole Japanese staff. We simply took them over from the Army and put them on our payroll. I think the man who had been in Takamatsu was an Army employee and actually stayed on for a while; I'm not certain now, but I think he stayed a year or two. Initially, we took over twenty-four of those cultural centers. It was about 1953 and '54 that Washington began to retrench in the program in Japan, and they said you've got to convert anywhere from six to ten of those centers to a binational status. I guess that had happened just prior to your arrival, and that's why at that time, we were not paying the staff of the center. It had passed over to prefectural payroll, and they probably got less money than they did under us.

KENDALL: They got considerably less. As a matter of fact, it was a real hand-to-mouth existence for them. But they were loyal, they worked hard, they accepted my direction, and at the same time, they took me in hand and led me through the intricacies of Japanese culture and government. I was a willing student. I'm not sure I was a very good student, but I was willing.

We had a staff of about ten persons to operate our library, cultural and film programs. The prefecture inherited the old CIE/USIS film library and all of the projectors. These materials, equipment, and the library itself became part of the Japan-America Cultural Center. Governor Kaneko looked upon me, a U.S. Government official, as a means for getting more U.S. oriented material into that library -- more books, more USIS programs, more speakers, more visiting artists.

My title was Provincial Public Affairs Officer. I worked under the supervision of the Regional Public Affairs Officer at the American Consulate General in Kobe -- first Jerry Novick, then Clifton B. Forster. The RPAO had supervisory responsibility for the seven Kansai region centers -- Osaka, Kyoto, Matsuyama, Hiroshima, Takamatsu and Nagashima. Cliff had a lovely secretary, Melita Schmidt, whom he called "Snow White," and he used to refer to us as the Seven Dwarfs. It wasn't very flattering, but Melita made up for the difference by taking care of the needs of the more isolated "dwarfs," such as myself, by keeping us supplied with basic necessities from the Kobe Army PX and commissary.

Q: I think Kyoto was still under the Kansai. I don't remember whether the Okayama center had ceased to exist?

KENDALL: The Okayama CIE library was converted to a BNC under the city government, but

it was never very active. They lacked a Governor Kaneko. Jerry Novick and then Cliff Forster had supervisory responsibility for regional operations, and it was my job to work up my own programs, with the RPAO channeling what support he could to me and the other provincial posts. My programs were very scant at first. Later on, we got a system working whereby Cliff sent us some first-rate Japanese lecturers he was scheduling around the region and occasionally an American lecturer. That was before our AMPART (American Participant) program got into full swing. We made good use of those who came our way.

We also had some visiting artists. One of the more interesting ones was an American Indian, or Native American as we now say, named Tom Two Arrows, who did Indian folk dances. He was a big hit. Then there was a musician, a harmonica player, named John Sebastian. He was another big hit for a very special reason. The Japanese in the immediate post-war era were trying to reestablish music education in the schools, but they had very little to work with. Governor Kaneko had persuaded the school board to equip the schools with harmonicas, which were very inexpensive, and so each school had its own children's harmonica orchestra. When John Sebastian came to town with his harmonica, playing both classical and popular music, he was met with an outpouring of enthusiasm by teachers and children alike. The schools brought out all their children to hear him. It was a touching thing, particularly when the children honored the visiting artist with a return concert. These were some of the few types of performing artists we were able to get out there in the boonies.

These few programs were not enough to satisfy the demand for information about the U.S., so I made a point of getting around to the various towns and villages in Shikoku. There were two Centers on the island, mine and the American Cultural Center in Matsuyama, down in Ehime Prefecture, one of the fourteen you mentioned. My Takamatsu territory included Kagawa and Tokushima prefectures; Matsuyama's included Ehime and Kochi prefecture. For an interim period between directors at the Matsuyama Center, I commuted there once a week to supervise that program. The trip was four hours by train, pulled by an old coal burning locomotive, and I would always need a bath to wash off the coal dust when I reached my destination. In Matsuyama, the American Cultural Center had a studio apartment above the library, but there was no bath in it, and so I would go to the public bath at Dogo Hot Springs for a good soak in their mineral waters, always a pleasant experience. Whenever I had to escort an American visitor for some program or other, I would stay in a Japanese *ryokan* in the Dogo area. In those days, when the exchange was 360 yen to the dollar, you could do this without it costing an arm and a leg. In the evening, the maids would come around and ask you what you would have for breakfast the next morning. No matter what you ordered, it was always ham and eggs. I recall going by the kitchen one night with some visitors after an evening on the town and seeing our breakfast ham and eggs all cooked and ready to be served the next morning. Very efficient, these Japanese.

My assistant at the Takamatsu Japan-America Center, the *Nichi-Bei Bunka Kaikan*, as it was called, was Kaoru Nishimura, a minuscule person about five feet tall. He was a waif of a man with a good Japanese education, an excellent command of English, and a bountiful supply of common sense. He enjoyed the confidence of the Governor and had a good rapport with members of the prefectural government bureaucracy. Even though he had served with the Japanese army in Manchuria during the war, he was a very unmilitary man. He was head of the

Japanese staff and served as my interpreter and teacher. We became very good friends and remain so to this day.

One day, driving from Tokushima to Takamatsu, Nishimura-san and I stopped at a noodle shop for lunch, and a conversation with the owner gave us an idea for a program we could conduct without the necessity of outside resources, which were not very abundant anyway. The shop owner, who seemed to be an educated man, complained to us that the people of his town -- the mayor, the school teachers, and many others -- were eager for contact with Americans, people they could talk to and learn more about the United States, which was exercising such an important influence on their lives. The kind of questions he asked matched those I had encountered in earlier discussions with my Japanese contacts, and I felt I could handle them just as well as any lecturer who might be riding the USIS circuit. So out of that conversation, we developed the concept for a Japan-America Forum, using myself, and my wife as principals and Mr. Nishimura as interpreter. During the course of the next year and a half, we met with community leaders in cities and towns all over Shikoku.

Nishimura-san organized them and arranged advance promotion. He would sketch out an itinerary for us, and working through the prefectural government, he would get in touch with the mayors or some other local leader in each town and ask them to organize the local intelligentsia - usually high school teachers, principals or professionals -- for a morning or afternoon session of about two hours. On the given day, we would meet with the group in the town hall, sip Japanese tea as we are doing here today, warm our hands over a *hibachi*, and talk about things American and things Japanese.

They wanted to know a lot about American customs. Margaret was with me, and the women invariably asked her questions about American family life. One even asked how she could get away from her family to go on that trip with me. Answer: a reliable Japanese amah. The questions concerned American education -- mostly primary and secondary, but also about American universities -- about local government, social customs, enormous numbers of questions. None of them were particularly difficult, but they showed a keen interest as well as wide curiosity about the nation that had conquered them. I remember one delicate situation in Tokushima prefecture where racism in the United States had become an issue. We were going through our usual routine, answering questions about education and schooling, and after each exchange, one or more of a group of young men would say, "Well, what about the people in Alabama? What about Selma? What about the discrimination against the Negro?"

This was the period when the struggle for civil rights was going on in the South. Martin Luther King was leading demonstrators and organizing sit-ins against racial discrimination. We could not ignore them and tried to respond as factually as possible. After some time, I said, "Well, you know, we are not alone. Racism is not confined to any one country. You have problems with it right here in this country with the people who work with leather and with dead animals. They do not enjoy the rights of other Japanese citizens."

Later, Nishimura-san said to me, "You know, I didn't translate that bit. It wouldn't have done any good. They've got an Eta village right in this town." Nevertheless, despite this rare, negative reaction, we found our Japan-American forums to be one of our most valuable experiences while

we were in Shikoku.

Q: Do I understand that you were conducting these forums in each of several locations throughout the island of Shikoku? Was there any time in which you brought a much larger forum group and had a program centrally in the cultural center there, or was this just a series you did by going around to different parts of the island?

KENDALL: Primarily, it was programming myself and my wife because we didn't have other resources. We had similar programs with larger groups in the center with visiting lecturers when we were able to get them. The major thrust of this particular program was taking ourselves south to the towns and villages to meet with local leaders. This wasn't a mass program. It was a selective program for local leaders -- mayors, school principals, school board members, high school teachers and prominent local citizens.

Q: Did you have materials about America that you could distribute after you left?

KENDALL: We had some, not very much.

Q: I suppose most of it was in English, so it was not really useful to them anyway.

KENDALL: That is correct. However, we were able to use English materials with the English Teachers' Association on Shikoku. They maintained very close contact with us because we were a source of assistance to them in their own programs. They very often came to our center to get such materials as we had. We brought in Fulbright teachers of English or conducted English-teaching seminars and then spend several days giving teaching demonstrations at our center itself and in their individual schools.

One person who came on various occasions was Glen Shaw, the USIS cultural attaché in Tokyo. He was a real cultural treasure. As a matter of fact, the Japanese named him a cultural treasure of Japan. He had first gone to Japan in the 1930s and had become thoroughly immersed in Japanese literature and culture and spoke fluent Japanese. At one time, he was a columnist for the *Asahi* Newspapers. You must certainly remember him. He was a tall, gangly man. He must have been six feet six. I recall that his first visit while we were there was to help inaugurate a statue of the writer Kikuchikan in the center of Takamatsu. Kikuchikan was a native son of Takamatsu, and Glen Shaw had translated several of his plays and poems into English.

After the ceremony at the statue, Governor Kaneko took Shaw and me on a trip around Kagawa prefecture, stopping at sites of particular interest -- a fish farm, a pearl growing industry, temples and spots of scenic beauty. The Japanese like to have their guests sign visitors' registers, and Shaw would compose a haiku for each occasion. His signature in Japanese was a brush profile of himself. He was a man full of good humor who charmed everyone he met. I also recall that when he boarded the overnight ferry for Kobe, Governor Kaneko asked him how he was going to fit his lanky self into one of the five-foot bunks in the sleeping compartment. Shaw replied, "Well, I'm just going to curl up like a snake and sleep all the way to Kobe." Wonderful guy. He returned later for a series of lectures on American literature and culture.

These were some of the events that highlighted our stay in Takamatsu. There was another of which I feel very proud. It has to do with the "leader grant" program, now called the International Visitors Program, in which local leaders are invited to the United States to see how we live and to get a better understanding of how the U.S. functions. I persuaded Walt Nichols, who was then our field supervisor in Tokyo, to arrange a leader grant for Governor Kaneko. Until that time, it had been against USIS policy to award leader grants to Japanese government officials, but Kaneko was such an unusual person, a decision was made to make an exception and invite him.

Governor Kaneko came to the U.S. for three months and then went to Brazil for another couple of weeks to visit some of the many Kagawa prefecture people who had migrated there in the immediate post-war years. He came back to Takamatsu, brimming over with new ideas for improving the quality of life in his prefecture. He told me then and has repeated it many times since that his vision as a boy was to have a bridge over the Seto Inland Sea, the *Seto Naikai*. But, he said, he had never imagined that Japan would be able to build such a bridge until he had seen the Golden Gate Bridge and the Oakland Bay Bridge and the one over the Verrazano Narrows. He returned to Japan with the vision of using American technology to build a bridge across the Inland Sea. He said, "As I stood there looking at that Golden Gate Bridge and at the Oakland Bay Bridge, I said to myself, if the Americans can do it, we can, too."

Shortly after returning from his visit to the U.S., Kaneko began a campaign to get his dream bridge built, and it eventually developed into three bridges. The most important one insofar as Kaneko was concerned, of course, was the bridge from Okayama to Sakaide City near Takamatsu. Margaret and I were pleased to attend the inauguration of the *Seto Ohashi* (Great Seto Bridge) on April 8, 1988. Unfortunately, Kaneko was in the hospital at the time and could not attend the ceremonies, but he still reveled in the glory of the occasion. Unfortunately, the bridge will probably change the rural nature of Shikoku forever. Nevertheless, Kaneko felt his dream had finally been accomplished, and he gave me full credit for helping him to realize it.

Kaneko's visit to the United States also inspired him to other achievements in which I take some pleasure. He visited various museums designed by Frank Lloyd Wright and had one built in Kagawa using Wright's concept of designing the architecture to meld in with the landscape. In New York, he met Isamu Noguchi, the Japanese-American sculptor who died recently. On seeing some of Noguchi's stone sculpture, Kaneko said, "Well, you know, we have some very fine stonecutters in Kagawa, but all they are doing now is making gravestones. Maybe you could teach them some of your kind of art." He invited Noguchi out to Takamatsu, and today there is a very fine studio a few miles from that city producing some of Noguchi's best artistic stone sculpture. So these are some of the intercultural exchanges we developed about which I feel a certain sense of satisfaction.

In 1957, the word came that USIS was undergoing another budget reduction and would have to close one of its centers. My center in Takamatsu got the axe. This incidentally, came about at the hands of Lyndon B. Johnson, then Senate Majority Leader, as a reaction to some rather indiscreet remarks about the Democrats made by the director of USIA.

Q: That was Arthur Larson, who gave a speech before the Young Republicans Club in Honolulu shortly before he was appointed Director of USIA. He made the remark that during the

Democratic years, for twenty years, the United States government had been under an "alien influence." Now that the Eisenhower administration had come into power, that was going to be corrected. Lyndon Johnson was not only Majority Leader but also the Nominal Chairman of the Appropriations Committee, which ran Foreign Service appropriations. So Lyndon Johnson took Larson to great task the first time he appeared before the Appropriations Committee, and USIA got its budget cut something like twenty-five or thirty percent. It took us about six years to get back from that debacle.

KENDALL: One of the results was the closure of my center. That hurt to the quick, but I was compensated by my new assignment. I had done a pretty decent job in Takamatsu, and my reward was Madrid. Joe McEvoy, my former PAO in Caracas, was now PAO in Madrid. He told our personnel office in Washington that he would like to have me join him. So the Agency cut out one good post and gave me another. In effect, they made me an offer I could not refuse.

Q: Harry, earlier we were discussing some of the additional things that came your way as a result of your assignment to Takamatsu. I think they are very significant because this was Japan at a time when it was just recovering from the war. Even ten years after the war it hadn't really recovered its own vision of where it belonged and what it wanted to do. What you have been discussing, I think, was a great contribution to the American help that was given Japan. I would now like to ask you to review a few of the things that we talked about.

KENDALL: I was the only American official on Shikoku. There were two young enlisted men from the Army's Criminal Investigation Division, the CID, who stuck pretty much to their headquarters. But since I was the only public official, Japanese private citizens and public functionaries who needed help from the United States government would come to me as their first point of contact. For example, the prefectural Chief of Agriculture for Kagawa, a man named Irimajiri, was trying to expand local sugar beet production. He said they didn't have any dollar exchange, and they didn't have access to American sugar beet producers or their technology. Would I, he asked, be so good as to help them out. Mind you, there was no U.S. agricultural official there -- no one else for him to turn to -- so he naturally came to me. Basically, what he wanted was various types of seed he could use for his own agricultural experiments. So, with the assistance of the Embassy's agricultural attaché in Tokyo, I obtained a list of American seed houses, wrote directly to them, sent them my personal check and got him his beet seeds. Of course, he reimbursed me in yen. But he used the seed very diligently and was able to improve the prefectural beet production. He took me out to his agricultural experiment station on various occasions to show me what was happening. Naturally, I was pleased and felt rewarded for my efforts. We have heard from Mr. and Mrs. Irimajiri at Christmas every year since then -- more than thirty years.

On another occasion, the Governor of Tokushima sent two of his forestry specialists to seek my assistance in expanding that prefecture's lumber production through the introduction of new varieties of pine. Now, I knew nothing about the lumber business, but their problem was lack of access to information on who to contact in the U.S. They needed seed catalogs. They didn't really know who to talk with or to write to in the United States. Would I please help? Again with the help of the Embassy agricultural attaché, I wrote to the seed companies and got them the seed catalogs. They selected the varieties they wanted, and since they didn't have any foreign

exchange either -- imagine Japan not having foreign exchange! -- I again sent off my personal check and got them their seeds. When I was preparing to leave Takamatsu in 1957, the governor of Tokushima sent his representatives over to Takamatsu with a beautiful bamboo carving of the typical Tokushima dance figures -- the *Awa Odori* -- which I have to this day. It is a beautiful piece that my wife and I treasure very much.

On another occasion, the Embassy informed me that they were sending a commercial trade mission to Shikoku to work with Japanese businessmen and government officials and asked me to organize groups in Ehime and Kagawa prefectures to meet with them. I went to the governor of each prefecture and enlisted their assistance in organizing these officials and businessmen. The purpose was -- and I laugh about it to this day -- to teach the Japanese how to export to the United States. I would say that perhaps we were talking when we should have been listening. But the mission was simply fulfilling the U.S. policy of helping the Japanese get back on their economic feet. They learned their lesson well, perhaps too well.

Those were some of the things that came my way. Another thing I did, and this has nothing to do with being an official American -- just that I was an American there, was to serve as judge for English-speaking contests conducted by the Japanese schools. I am sure you have done that many, many times. These were public performances which we did as part of our official presence there. It was fun; we enjoyed it.

To this day, when my wife and I go back to Takamatsu, we find that our friends -- the people we met and worked with thirty years ago, are still there, and they still remember us. We feel very good about that. During those thirty years, Shikoku has changed from being a collection of poverty-stricken, backwater prefectures to a very prosperous island. It's really beautiful what the people have done with their hard work. They learned their lessons well, and their work has paid off. We have returned for two and three day visits a number of times, and I feel good about going back because I think we were able to contribute something when they needed it most.

Q: I know that Japan has changed tremendously since your and my day there. But in the trips which you have made back, although there is a lot of anti-Americanism in various parts of Japan, do you have the sense that perhaps it's less virulent or less demonstrative in the Shikoku area than it is elsewhere? Or do you find a good deal of it there? Or haven't you really been able to judge?

KENDALL: My trips back have been just for a few days at a time. In 1975, twenty years after we left Takamatsu, we returned to Japan for a second tour of duty, this time in Tokyo, and made several visits to Shikoku to see old friends. We have been back three or four times since I retired from the Foreign Service at the end of 1979. Generally, these visits have been managed by our friends in the way Japanese manage visits -- with every minute scheduled, and my contacts have been invariably friendly. If there is any anti-Americanism present on Shikoku, I have not personally encountered it, though I do recall that on our last visit, we saw a poster in Matsuyama protesting the importation of American beef and citrus fruits, a product of Japan-American trade competition.

HARVEY FELDMAN
Visa Officer
Tokyo (1955-1957)

Consular Officer
Nagoya (1957-1960)

Ambassador Feldman was born and raised in Chicago, Illinois. Educated at the University of Chicago, he joined the Foreign Service in 1954. His early assignments took him to Hong Kong and Japan, which marked the beginning of a career dealing primarily with Chinese Affairs. Mr. Feldman also served in Bulgaria as well as in Washington, where he held senior position dealing with Chinese and United Nations matters. From 1979 to 1981 he served as United States Ambassador to Papua New Guinea. Ambassador Feldman was interviewed by Edward Dillery in 1999.

Q: What things led to your next assignment?

FELDMAN: I knew some Chinese, although I must say that which I learned at the University of Chicago was classical Chinese, which is of little practical use today. I decided that I had enough Chinese for a while and thought that it would be very useful to study Japanese. So I applied for Japanese language training and the Department agreed with the stipulation that I first serve a tour in Japan - to see whether I really wanted to specialize in Japan.

So I was assigned as economic officer and vice consul in Yokohama. We sailed from Hong Kong - I think it was on the "President Wilson" - up to Yokohama on the way to the U.S. for our home leave. When we got to Yokohama, the Consul General - Lionel M. Summers - got on board because he too was returning to the U.S. for home leave. Naturally, I introduced myself as his new economic officer. During the course of the voyage, Summers asked whether my wife and I played "Scrabble." In fact, Carol and I were sort of "Scrabble" demons. So I said that indeed we did play the game. That began a series of "Scrabble" games between the Summers and the Feldmans.

We made the mistake of beating them very badly several nights in a row. That ended the "Scrabble" games. When I got to Washington, I was informed that my assignment had been changed. I was no longer going to Yokohama, but rather to Tokyo as a visa officer. I protested, but I was told that it was an "appropriate" assignment. There is a marvelous line in American literature from a short story by Ring Lardner called "Alibi Ike." It goes: "Shut up, he explained." That is what Personnel said to me.

After home leave in Chicago, we sailed to Japan - I think it was the "President Hoover" - and reported for duty at our embassy in Tokyo as a vice consul and visa officer. I went to work for a Virginia Ellis, who was in charge of the visa section. We became rather friendly; in fact, one afternoon during a cocktail hour, Virginia remarked that if she had full powers, she would never issue a visa to a Chinese, or a Japanese, or a Jew or an Italian - and maybe a Greek as well. I

pointed out that I was Jewish. Her response was: "Present company excepted." But these comments represented her attitude toward visa work.

One of the matters which took up much of my time in Tokyo was the pre-clearance of Japanese brides of GIs. In those days, if a member of the U.S. military wanted to marry a foreigner, he had to get military permission to marry. Before that permission was granted, the fiancée had to fill out an application which was sent to a visa officer to review whether there were any grounds for ineligibility. There often were because many of these hopeful brides were found in brothels by a GI. There was a prohibition - in law - at the time against issuing visas to women who had been prostitutes. Later on, a waiver of ineligibility was adopted, but in 1957 no such waiver existed and those women were ineligible.

There were an awful lot of women who were ineligible. After the waiver came into effect, we could deem the applicant to have participated in prostitution, but that fact could be waived, allowing the GI to marry the foreigner.

The most interesting visa case I had in my tour did not deal with a Japanese bride, but something that grew out of Chinese history. You may have heard of the "May 4th" movement. In 1919, on that day, there were huge student demonstrations in Peking occasioned by the Minister - Tsao Rulin - responsible for mining. He had been accused of having received bribes from the Japanese who were interested in a "sweetheart" deal on some important coal mines in northern China - the Kailan mines. This set off a series of student demonstrations protesting the deal with the Japanese, the Versailles Treaty, which confirmed foreign "concessions" in China, China's weakness, and foreign pressure. The "May Fourth Movement" remains a watershed in Chinese history. One day, a visa application was given to me; it was from a father of an American citizen - Tsao Rulin. Tsao had lived in Japan after he left China in the 1920s. During the war, he lived as a house guest of Shigeru Yoshida who was later to become a Prime Minister. Tsao had several children; one, a daughter, after the war married an American soldier, moved to the U.S. and became an American citizen. She later petitioned for her father to come to the U.S.

When the visa application came to me, I saw no reason to turn it down. He hadn't committed any crime under American law. He was one of the most notorious figures in contemporary Chinese history, but I didn't see any part of the law that might lead me to reject the application.

I had had a similar case in Hong Kong - that is, one involving a famous historical figure. One of the visa cases I had there was from a Chinese citizen who was using the name De Vee Sing. I didn't recognize the name in the Shanghai dialect, but when I saw the Chinese characters, I knew that the applicant was Tu Yueh-sheng, who had been the head of the "Green Gang" in Shanghai in the 1920s. That gang was notorious for prostitution, drugs, protection rackets, etc. In this case, I was delighted to refuse this application.

Q: There were no repercussions?

FELDMAN: No repercussions.

Q: What were the arrangements when you arrived in Tokyo? Had there been any improvement

from what you experienced when you arrived in Hong Kong?

FELDMAN: By this time, I was an “old” hand in the Foreign Service. I had served one tour. I knew consular work. I didn’t need a whole lot of schooling. I moved into the Nonomiya apartments. You arrived sometime after I did and we had adjacent offices. That was the beginning of a friendship that has lasted some 42 years. You and we lived in the same apartment buildings; our children grew up together. I think you were the first to describe those apartments as “shabby genteel.”

Q: Did you see any improvement in the care and feeding of FS personnel from that which experienced in Hong Kong?

FELDMAN: None that I remember. You must remember that when I joined the Foreign Service, I didn’t have the foggiest notion of what it would be like and therefore had no expectations. I was just coming out of graduate school and I would be paid \$4,200 - that was an incredible sum of money - especially how far it went in Hong Kong.

I don’t remember what my salary was while in Tokyo - probably \$1,000 more. I had been promoted to FSO-6 on the new pay scale. I was one of the FSO-6s who had to go back to FSO-7 and then I was promoted back to FSO-6.

Q: When you first came into the FS, I think there was a budgetary freeze. No one was allowed to travel. So when I got to Tokyo in May 1955, I was very envious of your situation because you had been assigned overseas as a Junior Officer.

FELDMAN: You have to remember that I went overseas as part of the Refugee Relief Program. I don’t know what would have happened if I had been treated as any other junior officer. In any case, I was very lucky.

Q: What did you think of the Embassy?

FELDMAN: It was very, very different from the Hong Kong CG. I had thought that the Consulate General was very formal, but I found it nothing compared to the Tokyo Embassy. This was a real proper embassy. I guess when I got there, John Allison was our Ambassador, but he left shortly thereafter and was replaced by Douglas MacArthur II who was married to Laura Barkley MacArthur, the daughter of Alben Barkley, the former Vice President and Senate Majority Leader. They were a very formal couple.

I remember that very early in my tour, I was assigned to “door” duty at the Residence. I had to stand at the entrance to welcome the guests to the evening festivities. I had to say “Good evening, I am Mr. Feldman of the Embassy. May I escort you in?” You asked their names and then took them to the receiving line and introduced them to the first person there. On my first “door” duty, I was there together with another consular officer, Bill Boswell, who I think was the head of the Passport Section at the time. As I stood there, a very tall red-haired gentleman and his wife walked up to the door; I met them and said, “Good evening; I am Mr. Feldman of the Embassy. May I show in?” The gentleman said, “I know my way” and walked right by me.

Boswell turned to me and asked whether I was a joker. I asked him whether that was not what I was supposed to do. Bill then pointed out to me that that was the DCM - Outerbridge Horsey and his wife. I had never met the DCM.

You asked what arrangements had been made for my arrival. Later I learned that according to Embassy procedures, all new officers were supposed to be shown around and introduced and allowed to call on the Ambassador and the DCM. Nothing like that happened to me. We were met at the airport, taken to the apartment and left then to our own devices.

Q: You were then transferred to Nagoya.

FELDMAN: Nagoya was established as a consulate when the U.S. Fifth Air Force had its headquarters there. That created a major consular workload. By the time I got there in 1958, the Fifth Air Force had departed and the base was Japan Air Force Self-Defense Force base. So the consular work had diminished considerably. Economic work was increasing because Nagoya was the home of Toyota, Brothers Sewing Machines and Noritake, China. But I was a consular officer; so I had a fair amount of spare time on my hands. I used it mostly to study Japanese and to tour around the approximate 13 prefectures in our consular district. I would hit the road with one of my Japanese local employees; we stayed in ryokans. I could go for a week at a time without speaking English. So my Japanese got very, very good even though I had not gone to Japanese language school.

My second son, Peter, was born in Nagoya, shortly after a typhoon. The other notable event was the arrival of an American aircraft carrier to help in providing humanitarian assistance after a very destructive typhoon and storm surge which flooded lower Nagoya. I was asked to go to the carrier to coordinate; I was picked up by plane from Nagoya airport and brought to the carrier where we made an arrested landing - my first and only experience with that kind of landing. I still remember vibrating like a rubber band for quite a while after that landing.

Q: I envy you for that. I would have loved to do that at least once.

FELDMAN: My boss in Nagoya was Joe Donelan. That was his first overseas post. He had served in the Department in various administrative jobs. For promotional reasons, it was decided that he needed a field assignment; so he was sent as Principal Officer to Nagoya. A very delightful guy.

But nothing very much happened in Nagoya. In 1960, I was transferred back to the Department to serve on the Japan desk. I guess the principal thing that happened in Nagoya was the birth of my second son, Peter.

Q: Did you ever have language training? What are your views on the efficacies of such training?

FELDMAN: Other than the hour-a-day course, I never had Japanese language training, but as I said I learned on the job. Later I had Chinese language training. I always thought that the Japanese language course material, which was prepared by Eleanor Jordan, was much superior to any of the Chinese material I used. Although Japanese is intrinsically a much more difficult

language than Chinese because Japanese grammar is so complicated, nevertheless I think I learned Japanese more readily than Chinese despite the fact that I studied Chinese full-time. Maybe that just showed that I had an affinity for Japanese, but I did learn it better. When I was tested upon my return to Washington for my Japanese language fluency, I was given a 3 on the speaking test. Up to that point, I was the only officer who had reached that level of proficiency without having studied the language formally. I was very proud of that.

Q: I recognize how well you did because I had the same experience in Kobe, but I never reached a 3 level.

FELDMAN: I may have had more time to study than you did. What really helped me were the field trips that I would take when I would go off with a local employee to the various prefectures. Then we did not speak much English for a week at a time.

Q: Before we leave your Japan tour, what are your feelings about the differences between Japanese and Chinese people?

FELDMAN: They are completely different. For example, although the Japanese language uses Chinese characters as one of their three writing systems, the fact is that the languages are entirely different. Japanese is a polysyllabic agglutinative of language with a highly complex grammar - e.g. adjectives have tenses. Chinese is monosyllabic, not agglutinative, and had practically no grammar at all. As you might expect, people who grow up with these different languages think completely differently; their social systems are very different. There is no similarity between the two.

Japanese and Chinese may physically resemble each other, but so do Americans and Turks. But in both cases, the people are completely different. What motivates one will not motivate the other and vice versa. There is just no similarity between the Japanese and the Chinese.

Q: Might that lead you to believe that close relationships between the countries is not likely to ever happen?

FELDMAN: I wouldn't necessarily reach that conclusion because just as I was able to learn enough about Japanese and Chinese culture to be able to act in either culture, establishing rapport with both and able to negotiate with both as I did later in my career, so a Chinese or Japanese can also. That is what diplomats do. I guess one of the things diplomats have to do is to take themselves outside the boundaries of their own culture and learn how to operate across cross-cultural divides. American diplomats do that; Russian diplomats do that and so do Chinese and Japanese diplomats.

I left Japan on the day - June 16 - that Prime Minister Kishi had to resign after the security treaty fiasco. You remember, the Japanese left-wing staged massive demonstrations against Kishi, against the U.S.-Japan Security Treaty, and the anticipated visit of President Eisenhower. So Kishi felt he had to resign. But I used to joke and tell people that when Kishi heard that I was leaving, he was heart broken and resigned.

LEON PICON
Cultural Affairs Officer, USIS
Tokyo (1955-1957)

Assistant Cultural Affairs Officer, USIS
Tokyo (1957-1960)

Program Officer, USIS
Tokyo (1961)

Branch Public Affairs Officer, USIS
Tokyo (1963-1965)

Leon Picon was born in Pennsylvania in 1917. He received a Ph.D. from Dropsie college in 1952. His Foreign Service career included posts in Japan and Turkey. Mr. Picon was interviewed by G. Lewis Schmidt on October 30, 1989.

PICON: I guess I should make the statement here, though it should be fairly obvious, I did not go to USIA -- I was not attracted to USIA by its mission in the first instance. I came into USIA just by default, so to speak. In other words, I was not setting out to be working in the field of public diplomacy. I became interested in that much later. But my first job abroad with the Agency was Book Translations Officer in Tokyo.

Q: When you got to Tokyo, did you have a specific idea of what you were going to do in the Book Translations Program? And did you have particular goals that you were shooting for, or did these develop as you went along in the program?

PICON: The answer to that is definitely that I went to Tokyo with a rather specific instruction from Lew Fanget. It seems that the Book Development Program wanted to compete with the books that were coming out of the Soviet Union and other parts of Eastern Europe, being translated into Japanese and being sold in the Japanese bookstores. There was one book that was quite sensational -- surprisingly a best seller on the Japanese best seller list -- called Keizaigaku Kyokasho, which means Economics Textbook, which came out of the Soviet Union on Communist theories of economics. It was one of the best sellers in Japan. There was a lot of other stuff being distributed in Japan, some having been translated into Japanese in the Soviet Union. There was a good campaign going on.

My job was to get the widest possible distribution for books that would combat this sort of leftist output in some way. And working together with Lew Fanget, I developed a low-cost book program through the business of subsidizing Japanese publishers to put into translation and to distribute books that were of specific interest to the United States government. Our books were quite varied in subject matter -- not all hard-hitting texts -- but there were plenty of hard-hitting texts among them. And Tokyo, at that point, developed the largest scale USIS Book Translations Program in the world.

Q: I wanted to ask you at this point, Leon, when I first came to the Embassy in Tokyo right at the end of the Occupation, although the Japanese were by that time already producing a lot of books, were they still pretty short of Western-originated books by the time you arrived? Particularly American and British? Or were they pretty well along the line of getting an adequate number of books from Europe, the United States and Great Britain? What was the situation then?

PICON: The Japanese were getting foreign language books, which were being sold successfully. But, of course, the selection of those books would have not been the kind of selection that the Agency would have been very happy with. Now, we have to divide the book program into two specific categories here. One relates to the books that were put into translation. Working with a Japanese publisher -- one of the major publishers -- we developed a program whereby the books we wanted to get translated and put into the market would be sold at prices lower than the standard Japanese books: a low-cost book program. And this was becoming a major drive of the Agency when we were working together -- the Agency and we in Tokyo, developing the concepts and methods for low-priced books.

There's another aspect of this which is quite interesting. At one time, one of the major publishing distributors, who was working with the Agency in the Book Development Program, came to visit us in Tokyo. He had some specific things in mind, but among other things, he mentioned in passing that some of the American publishers were not very happy with what was going on in the "Far East" as it was then called. Many American books were being pirated: photocopied and offset printed, bound and sold in East Asia with no profit at all to the American publisher. This pirating was becoming an awful nuisance. And I guess it was just as a joke that I said to Mr. Feffer, "Paul, why don't you tell them to pirate their own books." The idea took. And out of that developed an entire part of the book publishing industry in Japan wherein American books, such as Samuelson's Economics...and when I left Japan, there were then about 150 titles -- no, it was before I left. When I left the book operations, there were 150 titles -- American books printed in Japan by the American publishers under bilateral contract arrangements. And pretty soon those book development programs expanded like mad, as these books were being reprinted, legally this time, and at low price, and demand for American books increased greatly.

Q: Were those books that were being reproduced -- this 150 titles about which you were speaking -- books that had been translated into Japanese, or were they still in the original English?

PICON: Original English. These were in the original English. They were mostly college textbooks. But many of them the Agency would not have subsidized, and the Agency did not subsidize any part of this program at all. Many of them were technical books, medical books and things of that sort. But there was a remarkable expansion of American books in Japan at that time because of this program, developed mainly with the Tuttle Company in Tokyo and also with one of the major printers because the job was mainly printing. In effect, what was being done here -- and you can see how the economics of it works out -- instead of an American publisher sending 1,000 copies of Samuelson's Economics across the ocean and selling them at the American book price plus transportation costs, converted into Japanese yen, the Japanese could now buy the

book, same book, same contents -- though generally it was in soft paperback rather than hardback -- the same book was now available at generally one quarter of the price that they were paying before. And yet the printers and the publishing company were making good money out of the whole thing.

Q: And were they paying royalty to the American authors?

PICON: Yes, yes.

Q: You also started a rather extensive translation of books -- as you were talking about I think earlier -- of American books through this publisher with whom you had this special arrangement. How did that work out? What was being done there? And what kind of books were you throwing into this translation program?

PICON: It was a very varied program. I believe that by the time I ceased to be the Book Translations Officer, we had about 250 titles going through this method, and they were being sold, regardless of size, at 100 yen. Let's see what that would be the equivalent of in those days...

Q: At that time, since the yen was 360 to the dollar, the equivalent in dollars would probably have been somewhere around twenty-seven cents.

PICON: Yes, that's right.

Q: We spoke before we started this actual recording about the publication "Beisho Daiyori," and I had thought that you were the originator of that magazine. As a matter of fact, in my own interview, when I spoke of some of the programs that we were doing, I attributed the origin of the magazine to you. You told me that, although you did a lot in developing it, the original idea was elsewhere. You might go into that, but I would also like to ask you what does "Beisho Daiyori" mean, and what was it doing? What was the subject matter of it, and how did it help in promoting the kind of books that you were translating?

PICON: "Beisho" means American book; "Bei" being the symbol for America, and "sho" means book. "Daiyori" is almost like the English word diary. A diary of American books, or more accurately: a Journal of American Books, a Journal (about) American books.

In format, it was a magazine in which my staff, working with some specialists in American literature and specialists on American society, did reviews of books that were current on the American scene. We would review about twenty-five different books in each of these issues. Now, for this purpose here, I will state that most of the reviews we did were reviews of books that the Agency was pushing. Some of the reviews that we did were based upon other reviews that appeared in American journals, book reviews in other places. The *Beisho Daiyori* was sent out to anybody who was interested in the journal. They were sent to virtually every large book publisher in Japan, and book publishers did, we know, translate into Japanese some of these titles. The magazine was very well received by the Japanese. They did not consider it any kind of propaganda as such. It was a very highly-respected magazine.

I was not the originator of it. It had been thought of and created -- the concept conceived of by Carl Bartz. But I cannot remember specifically whether any of the issues had yet been published. I believe that they had started to work on it when it was time for Bartz to go on home leave, and then he was going to be transferred to another part of USIS Tokyo. I think that -- I'm not positive of this, but I think -- we put out either the first, second, or third issue and then all of them from then on. I say "we" meaning the people who were working with me rather than with Carl. But this was a tool for us to get American books that we wanted published put into Japanese.

Q: Did you write reviews of the books that you had sponsored in translation -- American books that you had sponsored in translation through this publisher with whom you were working?

PICON: Generally speaking, no. We would have reviewed those in *Beisho Daiyori* before we worked out the translation of them. It was frequently through *Beisho Daiyori* that the publisher became convinced that a certain book was one that he would like to do, and many of the books that we reviewed were taken from the Agency's lists.

Q: Do you have any idea of the number of copies of those books reviewed in "Beisho Daiyori" that were sold in the bookstores? Do you have any ballpark estimate?

PICON: Well, it varied with the book. But the Japanese custom at that time was generally to publish 3,000 copies to 5,000 copies of a book, have it get into the market and then do further printing according to how the book sold. In our low price book program, we became convinced that it would be much more economical to print 10 or 20,000 copies of the book and get them out -- sort of flood the market with them, have them around everywhere. At first, the publishers were a little bit reluctant to undertake this, but with a bit of financial help, we worked it out. And in the low-priced book program, our general run of a first edition was 10,000 copies as compared with the normal 3,000 for Japanese books.

Now, let me go back on that.

Q: Just let me ask you one thing before you do. Are you convinced that the majority of those 10,000 were sold in each case?

PICON: Absolutely, absolutely. Absolutely because we saw them everywhere. We saw these books everywhere. As a matter of fact, the publisher designed a specific type of book rack, a cylindrical thing.

Q: I remember that.

PICON: And we could find these -- well, I'm only talking about Tokyo, of course -- but we saw these in many, many bookstores in Tokyo. And when I traveled in other parts of the country, I would see some of these here, there and elsewhere.

I wanted to go back for a moment to explain that 3,000 copies of a book seems pretty, pretty small. But that's about the size of the edition for the kind of books we would be interested in. Of course, the kind of book that would become a best seller -- a novel or whatever -- that sort of

thing was published in greater quantity actually. But thoughtful books were likely to start out with an edition of 3,000 to 5,000. Our objective was to double that at the beginning. The program turned out to be very, very successful. And my successor, Cliff Southard, carried this program to even greater heights.

Q: Did you have any indication as to whether some or a substantial number of these books were being used in university study, or were they mostly books that were bought by, I imagine, students and read on their own but not necessarily in the collegiate curriculum?

PICON: Most of these were not in the collegiate curriculum. In fact, very few were. Our stuff was a bit more hard-hitting than the kind of thing that would get in the ordinary college curriculum. But nevertheless, they were being read. I mean, after all, this was Japan -- Japan with a literacy of something like 99.4%. I think it's actually higher than the preservation of matter in chemical and physical experiments.

But the titles were very varied. Now one thing that we did develop that was definitely used in the universities was a continuum of the works of specific American writers: Faulkner, Hemingway, etc. The reason that these were so popular and were used in the colleges is that they fit into the pattern of Japanese publishing. You can go into a Japanese bookstore and see volume after volume of the complete works of a Japanese author. When a Japanese author established himself, at some point inevitably his complete works would be published. And these fit right into that pattern, and these books became natural ones to be used in the universities when students were studying American literature.

Q: Would you want to say a few words about the so-called summer seminar in Nagano? Because that was at its height at the time you came over. I think it later sort of fizzled out and was transferred to a different kind of program down in Kyoto, which has been covered, by the way, by Walt Nichols in his interview. But would you say a little bit of the purpose and the nature of the summer seminar.

PICON: I had nothing to do, believe me, with the origin of that, though I became very closely connected with it by default. I believe it was Don Ranard who had come up with the idea. I believe that this is so.

Q: It was Pat van Delden, essentially.

PICON: Oh, all right. I didn't know Pat van Delden or very much about her at all, but I did know Ranard, and he was the one who headed the Exchange of Persons Program when I got to Tokyo. Whoever had the idea for the origin of this thing had had a very, very good idea -- the idea being to promote and widen interest in American literature and American writers. I don't know who it was that came up with the idea of getting the individual, but all of that had been decided before I ever got to Tokyo. Someone got the idea of bringing out to the Nagano Seminar -- I'll go into that in just a moment -- an American author by the name of William Faulkner.

The Nagano Seminar, by its name, meant a gathering together of leaders in the field of American literature and American studies to meet at a resort-type place -- at least away from the city, away

from the noise, a quiet place -- and contemplate the navel in good Oriental fashion, along with some specialist in American studies. It was a great idea. It was like going off to Aspen or some of the other places like that which we have here in the U.S.

I had come to Tokyo in March and had been in Tokyo March, April, May, June, July -- five months -- when I inherited the visiting guest by default. Don Ranard had gone on home leave; many others had gone on home leave. The PAO had either gone on home leave or was being replaced, and you yourself, Lew, were the person who was handling everything that USIS was doing in Japan at that time.

Q: Just let me interpose here. Willard Hannah had been the PAO, and he got into a terrible argument with the Ambassador because of the "Lucky Dragon" incident, in which a Japanese fishing vessel was showered with ash from the American atomic energy explosion in the Pacific. When the ship arrived back at its port in Southwestern Japan, all the men were deathly ill, and the Ambassador refused to allow any statement to be made about them. Of course, Willard told him that he couldn't let this kind of thing go because the whole press was after the story. They got into such a shouting match that they actually shouted obscenities at one another, and finally, Willard just came back and resigned both from the job of PAO and from USIA completely, and he had not been replaced.

PICON: Well, in any case, word was out that the great William Faulkner was going to be coming to Tokyo. I wanted a piece of that action. I didn't want the whole thing, I just wanted a piece of it. I wrote a memorandum at that time asking simply for a chance to host a reception in Mr. Faulkner's honor and to invite leading publishers, writers, critics, American studies people, etc., to the reception to meet Mr. Faulkner.

I'm reminded here of a little story about a man who worked with me in London, a British employee, who went to the United States on one of our orientation programs. He came back, and I had lunch with him along with some other people. I was anxious to find out what he thought about the United States. When I asked him what he thought about the United States, he said, "Well, I can summarize that best by telling about getting a newspaper. I arrived on a Saturday night, and Sunday morning I got the *Times*." It was not the *Times* he was used to; it was the *New York Times*.

And I, smilingly, said to him, "Well, how did you like that?"

He said, "Well, frankly, Mr. Picon, I felt as if I had ordered a ham sandwich, and they gave me the whole pig."

Now I had asked simply to be able to host a reception for Mr. Faulkner, and instead I got the whole pig.

You want me to be more specific about this?

Q: Yes, you go ahead and be specific.

PICON: Okay. Well, we realized very, very slowly but shockingly -- and then suddenly -- that we had bitten off quite a bit in bringing Mr. Faulkner to Japan. In the first place, when he arrived, he had apparently been doing quite a bit of drinking on the plane, and his eyes were almost moving independently, but nevertheless, he got to Japan and was taken to the International House, where he was to meet with some Japanese critics. I did not participate in that thing at all; I had nothing to do with it at all. It was handled entirely by somebody else, so I can't speak to that. However, a schedule had been worked out for him, and one of the things that he was to do was to address the Foreign Correspondents Press Club in Tokyo at noon the next day. And the Ambassador was going to give a reception for Mr. Faulkner that next evening. This would be the second evening that he would have been in Japan.

I don't remember what day of the week it was, but let's assume for a moment that it was Tuesday that he arrived, and this would have been Wednesday -- Wednesday morning because there was a shortage of people, and I had the assignment of picking up Mr. Faulkner, bringing him over to meet the Ambassador and then taking him to the Press Club, where he would deliver his remarks. Mr. Faulkner was staying at International House in Azabu, Tokyo, and I went there at about 9:00 in the morning. I knocked at his door, and there was no answer. I knocked again and again. I went down to see if perhaps he had gone to have breakfast. No, nobody had seen him. I went back up again, tried the door and it was not locked. There was Mr. Faulkner on the floor, and his room reeked of alcohol.

The first thing I thought of doing was to call you, in fact, because you were going to go at the same time and present him to the Ambassador along with me. I did manage to get him dressed, the car came to pick him up, and we met at the Embassy. You holding one arm and I holding the other arm, we escorted him up the steps into the Ambassador's office. The Ambassador greeted us, invited us in. We went and sat on the couch; the Ambassador sat in a chair near his desk, fortunately some distance away, and tried to make conversation. But Mr. Faulkner's mind was elsewhere, and I remember very clearly, and I admired you for having the sense to say, "Well, we can't take too much of the Ambassador's time, Mr. Faulkner, we'd better go." And you took one arm, and I took the other, and we escorted him toward the door.

I remember the Ambassador saying to you, "He isn't very talkative, is he?"

In any case, our next step was to take Mr. Faulkner over to your office. And in that office, we were helped greatly by Peggy Schmidt, who had been a nurse.

Actually, we went to your office first and then over to Don Ranard's office. And your wife, Peggy Schmidt, was there to help. We tried to bring him to his senses. The clock was moving fast at this time, and it became difficult to see how he was going to make any speech at the Foreign Correspondents Press Club. But we tried to revive him completely. You know, Lew, I don't really know -- it's not clear in my mind at all how much of this was act and how much of this was really intoxication.

Q: I think it was real. He may have been -- he didn't like to talk, and he may have been putting on, but believe me, he was so sick that it wasn't a total...

PICON: No, no. I agree with you. Both of these things were playing together, perhaps if he hadn't been so shy -- so afraid of meeting an audience -- he might have done something psychologically that would help him get into a kind of shape whereby he might have been able to carry on. But actually, at one point, he opened his eyes, and he said, "I'm not going to go there." Just wasn't going to go there.

So, since Mr. Faulkner was not going to go there, and since all these people from the press were waiting, there seemed to be no alternative except to go there and talk about Mr. Faulkner. And there being no one else to do the job, I went and spoke in his stead. I spoke about him, and I read the message that he had written for his Nobel Prize acceptance speech. I apologized and explained that it had been very hot, and he had had a long trip, and he was overcome by the heat. And someone in the audience yelled out, "Was this canned or bottled heat?" No question about it...the press coverage -- whatever there was of it -- on this luncheon address by Mr. Faulkner simply talked about the honored guest who failed to arrive to make his speech.

That evening was the Ambassador's reception, and Mr. Faulkner went. I had given instructions to the help at the residence to keep his drinks light -- in fact, to put practically nothing in them except the soda, or ginger ale, or whatever the drink was to have been. But Mr. Faulkner had his own ideas about that, and he stepped out of the receiving line a couple of times and came back with a drink that he had managed to get somehow himself. I have a photograph of Mr. Faulkner holding a drink, probably a gin and tonic, tilted at a forty-five degree, or worse, a thirty degree angle, and the drink itself coming out of the glass and going all over Mrs. Allison's skirt. The face of Ambassador Allison at that time, as you yourself put it when you saw that picture, "You could see him writing that memo." And I'm sure you won't forget that memo.

Q: Sure won't.

PICON: This was a memo sent to you from the Ambassador instructing you to see to it that Mr. Faulkner was on the next plane back to the United States or to give the Ambassador cause why not. I saw that memorandum when you handed it to me to read along with your reply to the Ambassador, in which you stated quite firmly that Mr. Faulkner would not be on the next plane back; he had come here to do a job; he had come here to do the Nagano seminar, and he was going to do that. And if there were any further recurrence of this, the Ambassador could very well have the resignations of the undersigned. And your name was there, and Don Ranard's name was there, and my name was there? Do you remember that?

Q: I remember it. Except I got that memorandum about 10:30 in the morning. The poor little girl who brought it over was practically shaking, and she didn't want to see me; she wouldn't give it to me, she gave it to my secretary out front. I looked at that paper, and I must have spent two or three hours figuring out how I was going to answer it before I finally put the answer down. But as you say, that was basically the response we made.

And that evening the Ambassador was giving one of his periodic parties for the staff of the Embassy -- to get to know his staff. I had to go to the party, of course, and when I got there -- I waited late, and the party was fairly well underway, you could tell by the noise. I went up, and there was the Ambassador standing over to one side with a drink in his hand and his aloha shirt

on. Finally, I went over to him, and he said, "Lew, I lost my cool. You're right, we've got to let the guy stay, but I'm making you and USIS responsible for his conduct from here on in, and you're going to answer for it if he doesn't work out." Of course, you kept him under control pretty well after that.

PICON: Yeah, you passed those instructions on to me. I hadn't been in Japan very long at this point, and I certainly had never had experience with this sort of thing before. But I must say that you came to the rescue. I traveled by train with Mr. Faulkner up to Nagano. But you sent a car up to Nagano. It went separately, and you had a supply of "medicines" there in case they were needed -- "medicines" meaning things like gin and scotch. And they were very, very, very helpful.

I did not know how to handle a situation like this because I had never encountered anything like it before. But there was a program all arranged. Mr. Faulkner was not very communicative. But gradually, gradually he warmed up. We would go walking together, and talking, and he really was a great man, absolutely a great man. Yet, when 4:00 was approaching and he was to have one of these meetings, he would say to me, "Well, got to go on there pretty soon. You know, Leon, I don't think I feel like going today. I don't think I can face those people without a drink. Couldn't we just have a couple of drinks before we went?" Well, I don't know where I got the idea, but thanks to the stuff that you sent up there I got the idea of keeping glasses soaked in gin ready for such emergencies so that I put in just a little, tiny bit of gin and lots of tonic, and let him have that drink because he would not go without it. Apparently, it gave him enough of a kick -- enough of a high -- to enable him to go to the seminar meeting and to be magnificent.

Of course, there were some other things that entered in to help. One got the idea pretty soon that he had his eye on a very lovely Japanese teacher, an assistant professor or something of the sort. There was nothing wrong with what went on between them. Faulkner simply found her fascinating to look at and to talk to with her demure Japanese nature. Discovering this affinity, I saw to it that she sat up close front, which was breaking the tradition of the Japanese and causing a bit of a problem, but we got that straightened out because he would talk to her, and then he would be magnificent. If she wasn't there, he was far less so.

But I had the task at that time of seeing to it that he remained sober, or nearly so, throughout the course of the seminar. I was with him for twenty-four days, actually. I think it's taken twenty-four years off my life. But we had great times in the evenings when the seminar was over, with dinner. He would drink *sake* at dinnertime, and then after dinner, the Japanese scholars all wanted to cluster around him, but he always begged off saying he was tired. Then he would say to me, "Let's go up and have a nightcap." So it was not a matter of depriving him entirely by any means of that which he needed so much but rather timing it so that he could do his performances. And that worked out.

Q: The seminar was a tremendous success then, wasn't it?

PICON: Yes, it was absolutely a rip-roaring success.

Q: Did you have much press coverage at the seminar, or did you keep the press away until he got

back down to the major cities?

PICON: There was press coverage of the event. There were Japanese reporters who had been assigned up there to cover this. They never sought an interview with Faulkner himself but covered the activities -- what was going on in the seminar.

The Japanese, because of their own nature, didn't see anything wrong with the amount of drink that he had, and they understood when he went off completely and was not communicable again. This didn't bother them a bit. There was no loss of face or anything of the sort. But I must say that he was fully cooperative. It was blood, sweat and tears, but in the long run, he came through. He was not going "to let USIS down!" Those are the words that he used himself.

Q: I think from all that I remember and from the press coverage that I remember, he made a tremendous impression. Of course, the Japanese were already prepared to accept him as a great man, and he did enough so that he didn't disappoint them.

PICON: There is another thing. You do call to mind another thing which I think is very, very important. All the time that he was there, because of the nature of the Japanese themselves, he was being asked the question, "What are your impressions of Japan?" And he used to say to me when he was asked this question, or after he had been asked, "I don't know what they expect from me, I've just come. I won't have impressions of this place for another three or four weeks. Then if I have any impressions, I'll let them know." But yet when we sat and drank together or when we went and walked together, and he made observations, after he had made them and I could discreetly do it, I would write down into a notebook some of the things that had impressed him. At that time we had a motion picture officer, Harry Keith, who was going to do a film about Faulkner, and I think at the beginning he didn't have any firm idea of what the nature of the film would be. But he came up there and we talked about this and he got the idea of doing a film which would be called "Impressions of Japan." I gave him those notes and others that I had gotten later and he framed the movie that he made around things that Faulkner had said. Then as he developed this idea, he got Faulkner to the places, to the sites, doing the things that had impressed him, and Harry made a wonderful film, "Impressions of Japan" out of this. But the text of it is all based on Faulkner's "Impressions of Japan."

I gave those notes back to Mr. Faulkner afterward, saying that the Japanese had all wanted him to write something, and one night he penned off a thing which he called "Impressions of Japan" -
- A marvelous piece of writing. It is the basic text of that film which Harry made.

There was one other thing in this connection. Faulkner met with reporters at the Tokyo Cultural Center -- a special thing that hadn't been on the program at all. But he wanted to meet with them and to say a few things about the importance of maintaining a democracy in Japan, and he spoke about democracy and freedom. I remember particularly that he told his audience that he was not a profound scholar or a well-versed specialist in the field of political theory, but of this he was certain: "Democracy, as we know it in the West, may very well have its faults and ingrained problems, but it remains unquestionably the best form of government yet conceived by Man." Hardhitting? No. He meant it.

Then, about the last couple of days, he said to me, "Have we met all the requirements, done all the things we're supposed to do?"

I said, "Yes, all except one. You yourself talked, Mr. Faulkner, about the importance that you placed on youth and how you saw this thing as something you were giving to youth. How about writing something for the youth of Japan?" And he did that, too. He wrote a message called, simply, "To the Youth of Japan." And again in this piece he hit hard toward the need of maintaining the democracy that we know. Marvelous piece of writing, "To the Youth of Japan." Both of these things, "Impressions of Japan" and the message "To the Youth of Japan" are things that everybody ought to read.

Q: I think that was the highlight of all the Nagano seminars that we put on. We put on three or four of them. And certainly that was the absolute zenith, or not zenith, absolute acme?

PICON: Apex.

Q: The peak of the effectiveness of that whole seminar. I'm sure it helped tremendously in the Japanese educational system.

PICON: Definitely.

Q: I think now, Leon, we've covered pretty well your work in the Book Translation Program and the Book Program generally in Japan, concluding with an extended discussion of the success of William Faulkner's visit for the purpose of participating in the Nagano seminar and the effect it had in Japan. Shortly after that, I think you -- or after at least a couple of years -- you left the Book Translation Program, and you went on to other things in the USIA program -- some that were not directly in the Translation Program but in one way related to it. So I'd like you to pick up from there now and go on in sequence with what you did with the rest of your years in the country.

PICON: All right. I guess this is the nature of bureaucracy. I guess it's the sort of thing that's certainly par for the course in any bureaucracy, but having been the Books Translations Officer, as time went on, I had to become something else. So I became the Book Programs Officer, which had to do with not only the book translations but the entire book programs field of the Agency, which meant that under my wing came the librarians and the libraries, which was fine. I've never been a librarian; I don't know that much about librarianship, but I did know the program and was very deeply involved in what we were doing with books in any of its phases.

But then, with reorganizations, I found the Exhibits Section under my wing as well, so I was Books and Exhibits Officer. USIS was then housed in the two uppermost stories of what was still called the *Mantetsu Biru* or Mantetsu Building. And as I developed from Book Translations Officer to Book Programs Officer to Books and Exhibits Officer, our friend Harry, of the "Impressions of Japan" fame, put a sign outside my office which read "TODAY THE MANTETSU, TOMORROW THE WORLD."

Q: We might just say Mantetsu was short for the Japanese of the Manchurian -- the South

Manchurian Railway -- which the Japanese had developed and operated when they controlled the puppet state of Manchukuo. They had, of course, a functioning office up in Manchukuo -- over on the Continent -- but their headquarters for the South Manchurian Railway was in Tokyo, and the Mantetsu building was their building. Of course, when the Occupation came in, our Army took it over, and later we used it as the annex of the Embassy. That's where USIS headquarters were.

PICON: Yes. Anyway, after my experience as Books Officer, Book Programs Officer and Books and Exhibits Officer, we had a reorganization in Tokyo. George Hellyer, who was then the new PAO -- this was some time later -- had a concept which antedates the concepts that -- what I think I'm trying to say here is that George Hellyer had an idea of functioning that predates the Allan Carter thesis on operations, and he used a very untraditional approach to the operation of USIS. He divided us up into what some people teasingly called the Doers and the Thinkers. There was a Program Division, which was supposed to come up with all the ideas for the activities that the organization was going to conduct, and then there was the Production Division, which would do the actual work of producing all of the bits and pieces that went into any of the programs.

And I was in the Programming Office. For a while, I headed the programming office, and Harry Keith -- and then later on Hank Goshko -- headed the Production Office. I don't know really what the reorganization ever accomplished -- whether it made us more productive or less productive or what. But that's what happened to me.

Later on, when I returned from home leave, there had been some further change, and I was no longer the head of the Program Division but was put into a separate corner where I was to deal with "Cultural Programming," as it was called. But my job was mainly one of being in touch with, having contact with and just conducting a dialogue with leading Japanese writers and intellectuals. I think much of this stemmed from an article that was written by later Ambassador Edwin Reischauer, in which he spoke about a broken dialogue between the United States and Japan. He was talking about the breakdown of dialogue between intellectuals in both countries, and this made our PAO and the Ambassador feel that we ought to do something about intellectuals. The problem was that nobody seemed to know any of the intellectuals. So my task became one of developing -- doing nothing but developing relationships with Japanese intellectuals.

Then, as history has its curious ways of behaving, the man who had attacked what the Embassy had been doing in Japan, Reischauer, was appointed by John F. Kennedy as the Ambassador to Japan, and my relationships with the Japanese intellectuals served well at that point.

Q: I know that you had earlier developed considerable proficiency in written Japanese. Had you, at this stage in the game, developed enough proficiency in the conversational Japanese so that you could approach them without utilizing an interpreter -- these intellectuals that you were working toward?

PICON: Well, actually, Lew, no. As you can see from this, it's not only my age that causes me to stammer, stutter and hesitate as I speak. It's always been the nature of my talking. I've always

been very hesitant, and then, in a foreign language, it's almost impossible. I do not have any gift for speaking foreign languages. I do have a gift for reading and writing foreign languages; I just can't speak the languages. I used an interpreter all the time. But most of the time, actually, the important intellectuals were those who could speak English, and our conversations were in English all the time.

I was of use to the new Ambassador because of these connections. By the way, I had known him for a long time. In fact, when I was in the Army studying Japanese, he was one of my teachers. He taught us Japanese, and his Japanese is superb. But he practically never speaks Japanese, at least I haven't heard him speak Japanese ever, except for a few phrases here and there. He always used an interpreter. But, of course, that would be expected -- what an Ambassador has to say is so important that he would want an interpreter's accurate interpretation. But most of the important intellectuals were quite fluent in English.

Q: We spoke a little bit off the record earlier about some of the things that you were doing on behalf of Reischauer in connection with these intellectual contacts, and if you don't mind, I'd like to get some of that on tape.

PICON: All right. Well, Reischauer felt that one of the most important parts of his assignment was repairing the dialogue that he had seen broken. Yet, he was a bit handicapped in his current position as Ambassador, and he was advised, I understand, that he could not run the risk of too much association with the gentlemen on the near and far left as Ambassador. After all, the ruling party was quite conservative and would take exception to his, let me call it "pussyfooting" around with the gentlemen of the near left, certainly with the far left.

Well, Reischauer was not particularly interested in the far left at all, but he was interested in the people on the near left. Let me go off on a little bit of a tangent here, and you don't have to do anything with the tape. There was a funny story in this regard. When I first went to Japan -- I say first went to Japan because I was there for a total of ten years consecutively -- as Book Translations Officer, I was invited to attend a staff meeting of the Ambassador, John Allison at that time, because he was interested in the book translations program, wanted to know how it ran and wanted me to do a presentation on what we were doing in the book translations field. I went to that meeting. It's, by the way, the only Ambassadorial meeting I attended in Japan, ever. But anyway -- when I went to that meeting, I don't think that I became very beloved by the Political Section because of my actions at that meeting.

During the course of that meeting, the Ambassador asked the head of the Political Section whether the Japanese Socialist Party was going to split, as had been rumored. And the reply that the Ambassador got was that there certainly was no evidence that there was going to be a split in the Japanese Socialist Party at that time. And I, sitting there, said, "Uh, but there is. There is very definite evidence." I'm sorry that I said that.

But the Ambassador looked at me and said, "You have some evidence of this, really?"

And I said, "Yes, I do."

Let me give you the background on it. Where we were living during that early period in Tokyo -- in a place called Seta, in Tokyo -- we lived in an apartment house near a shrine and next door to a wonderful Japanese family, a father and mother and three girls who were about the ages of our children. And these children played together. The shrine comes into this story simply because very shortly after we had moved to Seta, the neighborhood was having a festive *bon odori* (folk dancing) at the shrine, and my family and I went down to see this. At that dance, I was approached by a Japanese gentleman wearing his *yukata*, and he told me that he was my neighbor and that he would like to come and visit me and pay his respects. He spoke English very hesitatingly. I told him that anytime that he saw that we were at home, he was welcome to come over.

He was a professor at Tokyo Metropolitan University. His field was the history of political ideas. Besides that, he later became the advisor, on theory, to the Democratic Socialist Party of Japan. He was a Democratic Socialist -- what they called in those days the Right Wing of the Socialist Party. But there was only one Socialist Party then. Well, as we became more and more friendly and talked about different things, he wondered if I would help him with something. He had written the constitution for a new party in Japan, which was to be called the Democratic Socialist Party of Japan. He had it in Japanese, and he was translating it into German, and he wanted me to work with him on translating it into English.

When the constitution was translated, and on the date that the Right Wing of the Party was going to announce its separation, they would have the constitution of the new Party published in three languages: Japanese, English and German -- with the help of Fabian Societies and Social Democratic Parties in other countries. Would I help him with the English? I said "Sure." He came over from time to time. This was to be the official document of separation of the new Party.

That's for the background. But at this meeting, I said: "I do have evidence; I have a copy of the proposed constitution for a new Right Wing of the Socialist Party."

Q: You said this at the -- ?

PICON: At the meeting, yes. "I have a copy of the constitution."

Everybody looked at me quizzically: "What do you mean?"

I said, "Well, as a matter of fact, I have it in my desk over at the Mantetsu Building."

Then one of the officers said, "Can I see it?"

I said, "I guess you can, if I can get permission."

But this is the kind of thing that develops when you have this sort of relationship with individuals in Japan. I was trusted not to release this to the press or anybody. It's the kind of thing that you develop person to person. These interpersonal relationships, I believe, are one of the most valuable things that develop in an organization like USIS abroad.

Q: There's no doubt about it. May I ask what was the upshot of that final request? Did you ask the gentleman if you could release it?

PICON: Yes, I did.

Q: And what did he say?

PICON: Yes. But not to the press.

Q: So you gave it to the Political Section in confidence.

PICON: Yes. That's exactly right. But it's an example of the sort of thing that we don't have time for in large doses, of course not. It's too expensive; it's too impractical. But to the degree that this sort of relationship -- and I'm not trying to throw bouquets backwards, but I'm sure you know what I'm talking about -- when this kind of relationship can be developed between an officer of USIS and important intellectuals in a country, it carries our goals farther than a thousand pamphlets, I believe.

Q: I do, too.

JACK SHELLENBERGER
Public Affairs Trainee, USIS
Tokyo (1955-1956)

Provincial Public Affairs Officer, USIS
Nagoya (1956-1957)

Assistant Motion Picture Officer, USIS
Tokyo (1957-1958)

Jack Shellenberger was born in New York in 1927. His career included foreign assignments in Japan, Belgium, Nigeria, Iran and Canada. He was interviewed by G. Lewis Schmidt in 1990.

SHELLENBERGER: Our first stop en route to Tokyo was Honolulu. We enjoyed it. The Pan Am Clipper, which permitted us to have the benefits of first class travel, with champagne and the linen on the dining tray, stopping at Wake at dawn. Very exciting.

Q: And a berth?

SHELLENBERGER: And berths if we wanted, but I was too anxious. Tokyo's Haneda Airport was crowded; it still is. I heard my name being called over the public address system, but I was unable to get through Customs to answer the call. So I was a bit agitated. But as we emerged

from Customs, a driver -- a Japanese driver -- was there holding a card with my name. He took us through the congested streets toward the Tokyo Grand Hotel. The traffic was mostly tiny taxis and what they called *bata-bata*, which were three-wheeled motorcycle trucks, and then, of course, bicycles. It was definitely not the Tokyo of today.

Tokyo Grand Hotel wasn't very grand, but it was only a block or so away from the Mantetsu Building, where USIS was located. Our first American greeter was none other than Lew Schmidt, who came over to the hotel and proposed that we go to lunch at the Union Club. At that time, Lew was carrying responsibility as PAO, as Executive Officer, as Deputy PAO, and we were astonished at his and Peg's graciousness and generosity, given all the responsibilities that they had to carry.

I enjoyed the training period in Tokyo. It was a natural for me to go into the radio side of the operation, producing half-hour programs on developments in America because the media at that time, the Japanese media didn't have the wherewithal to maintain bureaus in the United States to any great extent.

Q: Since you were broadcasting or sending your tapes for broadcast over Japanese stations, you must have been broadcasting in Japanese. Who was doing your voicing for you when you weren't playing music?

SHELLENBERGER: We had two on the team who voiced: Lucy Nakai and Paul Fujimaki. Paul is still a Foreign Service National at USIS Tokyo. I was more or less the editor. And indeed the tapes were sent all over Japan.

What I remember about that year, 1955 -- 35 years ago -- was the visit by the famed Nobel Prize-winning novelist William Faulkner, who came tired but agreeable, ready to do what he could for his country. He was very patriotic about going out as a cultural ambassador -- took it very seriously. But also, he was not a vigorous man, and a couple of drinks could do him in, as it did on the occasion of an ambassadorial reception. The Ambassador sent for Lew Schmidt and a couple of others in USIS and said, "I want that Faulkner out of here in twenty-four hours." Well, Faulkner's visit had been touted as the event of the year, and to have him leave would have been disaster.

So Lew and the others said, "If he has to go, we'll go with him," stating that they would monitor him and make sure that there would be no repeat of this incident. I was one of his monitors, and I absolutely admired Faulkner's gentleness, and his intellect, and his patience and his endurance in receiving intellectual after intellectual and giving them all of his attention and not reverting to cant or repetitions. He took every questioner -- every question -- with the utmost seriousness.

When he went up to Nagano, where the summer seminar which was built about him occurred, he was in all respects a gentleman and an agreeable presence. He wrote an essay called "Impressions of Japan." It was beautifully written, vivid and cried out for a motion picture that would put it into everybody's view. I wrote a script, drawing from Faulkner's essay, and we shot that film in Nagano, in the places that he describes in his essay, and found him to be an utterly cooperative collaborator, even though heretofore he had never let himself be photographed or

filmed. I believe it's the only film other than the Talking Heads video in which he appears as himself. We completed the film after he left, but when he did leave, I remember we took him to the airport early and had him get on the plane and then come off the plane with a number of USIS people and employees to simulate his arrival. That became the opening of the film.

Q: I hadn't realized he had never been filmed before.

SHELLENBERGER: He had been filmed in interviews, but he had never appeared in one like this. So it's a first and now a last.

I was transferred to Nagoya to take on my first non-training assignment in the middle of 1956.

Q: Before you go on with Nagoya, I would like to ask you to make a brief statement about your impression of the success of the Faulkner visit because there were some snide remarks passed by some members of the Embassy as to whether the man was really effective or not. I felt it was one of the great coups that USIA was able to bring off in Japan, and I'd like to get your impression.

SHELLENBERGER: Well, there are no less than two definitive books in Japanese and English about the Faulkner visit. Faulkner scholars, prior to his visit, were a few -- you could count them on one hand. Today there's a Faulkner scholar on every literature faculty in every university in Japan. And I think it was probably culturally our greatest contribution to U.S.-Japanese understanding at an intellectual level.

My transfer to Nagoya was providential in the sense that it permitted our first child to be born at a U.S. Air Force facility. We would not have had that benefit had we gone to where we were originally assigned, which was Matsuyama. I believe Lew made the decision to put me into Nagoya -- a bigger job, a bigger city than would normally come the way of a junior officer. And so, yes, Katie was born on July 13, 1956, and we enjoyed that central Japan environment and the program totally -- absorbed by it. Our library was one of the most active places in the city because so much had been destroyed, and so little had been rebuilt that we were one of the prime outlets for information. And about 30% of our book collection was translations into Japanese.

I had a call from Harry Keith about a year after I got to Nagoya inviting me to come to Tokyo to be his chief of motion picture and television production. And since I had enjoyed so much the work I had done in television in Philadelphia and doing the Faulkner film, I, without too much thought, said, yes, I would. Art Hummel later told me he thought I had made a terrible career mistake. Art was the deputy PAO at the time. He said, "What you're doing is slipping into the specialist category, and that denies you the opportunity to get into the more responsible and higher positions of a USIS Foreign Service Officer."

All that aside, I did enjoy what I did in Tokyo, making a number of motion pictures. The ones I can recall most vividly were a cartoon we made to try to satisfy or calm Japanese fears about their economic future as a trading partner of the United States because at that time, their deficit with us was enormous -- much higher relatively than our deficit with the Japanese is today. So this cartoon was meant to reassure them that they wouldn't always be in deficit with the United States.

The other two, "*Nihon no Takara*," or "Treasures of Japan," we produced with the cooperation of the Japanese Foreign Ministry. It depicted the living national treasures in the arts category -- dubbed by the Emperor as Living National Treasures -- doing what they do, whether it's pottery or *Kabuki* or the *Noh* theater or painting. And being depicted with American students or apprentices who had come to Japan to be at the master's side, what it did, of course, was to demonstrate not only the cultural tradition of these living national treasures but the reverence and the respect shown them by a diverse group of Americans who were in Japan to learn the *Koto*, to learn painting, to learn pottery. It was a great success and had a glittering premier.

The other film I'll mention is one that was produced after the unveiling of a major exhibition entitled "Atoms for Peace." Now, atom was a word that was a no-no in some parts of the Embassy because we had not only Nagasaki and Hiroshima, but we'd had a case of a fisherman who had been dusted with radioactive ash from the American Bikini demonstration. And so anything nuclear was sensitive. But the head of the *Yomiuri* newspaper, a man named Shoriki, urged that Japanese be educated on the peaceful uses of atomic energy. And with the help and guidance of a nuclear physicist from Oak Ridge, a major exhibit was mounted, which showed the use of radioisotopes, various types of nuclear reactors that produce energy, even a model of a nuclear-powered ship. And we made the film, and the film and the exhibit were used for years all over Japan. In fact, that exhibit is still maintained at Tokai Mura, the home of Japanese peaceful atomic research.

Q: I think you told me that at one point, the Ambassador, who, I gather, was still John Allison, had some objection to taking that thing on tour around the country.

SHELLENBERGER: I was out of Japan in late '59 and so was John Allison, but it took place. He objected to something else, now that you remind me of it. "The Family of Man," which again was a very ambitious photo exhibit put together by the great photographer, Edward Steichen, who came to Japan. These were photographs depicting the human face, the human being, from all over the globe and carrying the message that we're all one great family. The Ambassador came over just prior to the press preview. He went through it, and he looked in this one room, and there on the back wall was this huge depiction of the photograph of Hiroshima after the atomic blast. He said, "Well, that won't do, that's got to go. I can't imagine that we could use that photo in this exhibit. It would be enormously insulting." Well, all of us who had been working on the exhibit, and I, who had been making film of the photo and portraits, disagreed. We again had this sort of conference at which we agreed that taking that photo out of the exhibit would become known very quickly and would be considered an insult to Japanese maturity. The Hiroshima photo remained, and the U.S. was praised for its inclusion.

JOHN SYLVESTER, JR.
Consular Officer
Yokohama (1955-1958)

Japanese Language Training

Tokyo (1958-1960)

**Economic Officer
Tokyo (1960-1963)**

John Sylvester, Jr. was born in Rhode Island in 1930 and raised abroad in a Navy family. He spent much of his career in the State Department dealing with Japan and Vietnam. Mr. Sylvester was interviewed by Jeff Broadwater on April 6, 1993.

Q: How was it that you came to be assigned to Japan?

SYLVESTER: It was a slightly disillusioning process. When I came in the Foreign Service, our class was asked where they would like to go. And I actually wanted to go to Europe; I'd never been to Europe. But the person who spoke to us said that we all had to understand that Europe was the most popular, and your chances of not getting it were fairly strong. So I thought carefully and decided to put down on my so-called wish list my second choice, which was to go back to the Far East. And then everyone who asked for Europe went there. And me, being Sylvester, I was almost at the end of those as they announced the assignment posts.

Q: They were made alphabetically?

SYLVESTER: Yes, they read them out alphabetically to our group of twenty. They got down to me and said I was assigned to Pusan, Korea. I'd just come back from Pusan a year before, which was a real dump then. It's actually a very interesting place, and I was there months ago.

But I was not happy about that, so I went in, rather crestfallen, to Personnel the next day, just to report in that I would be ready to go off to Pusan when the course ended. And they said, "Oops. Sylvester, Sylvester...Your assignment has been changed, and you're going to Hong Kong."

I was happy, and I went over and started basic Chinese language and took that for about a month and a half. I went back one day to Personnel to report in, and they said, "Oops. Sylvester...Your assignment has been changed. You're going to Okinawa." Well, in the end, I went to Yokohama. So I was slightly disillusioned at how government worked by then. But it was probably a good lesson.

Q: Did you ever figure out what was going on with those assignment changes?

SYLVESTER: It was just the normal Mixmaster effect of Personnel's assignment needs.

Q: Now your first post was in Yokohama, at the Consulate there. What were your duties there?

SYLVESTER: It was a typical Consulate. I did the full range of Consular and administrative work. I started as a citizenship and passport officer, which was dealing then with the remaining cases of *Nisei* who'd been sent back to Japan either during the war or after the war and were trying to regain their American citizenship. It was kind of a sad aftermath of the wartime hysteria. Then I did shipping services, which involved some rather interesting cases of seamen

who'd gotten into trouble. Then later, a little bit of visa work. And then, for a while, the normal administrative chores of the Consulate General.

It was a handsome building -- modeled on the White House -- that was on the Yokohama waterfront, and later, like a lot of our buildings in Japan, was sold off. For a while, it was made into a beer hall. I went back then and had a beer at exactly the place my desk had been as a Vice Consul. Finally, it was destroyed and a Japanese hotel erected on the site.

Q: Now, you said these Japanese-Americans were former citizens, and you were trying to help them return to the United States.

SYLVESTER: During the war, as you know, many Japanese-Americans were put in concentration camps. And some of them, who were pro-Japanese during the war, mainly just out of resentment at how they'd been treated by their own government, asked to be shipped back to Japan. When the war was over, in the post-war misery, with their roots in many cases being actually in the United States more than in Japan, they applied to regain American citizenship. They formally petitioned for this through the Consular procedures, and we would forward their petitions to Washington, with information on their cases, and they would be acted on. It took many years before these all were finished off.

Q: How many of these kinds of cases did you handle?

SYLVESTER: By my time, they'd grown to be a lesser trickle rather than a flood. But even then, in '55-56, I think I handled at least one or two a week, probably.

Q: You were then assigned to the Economic Section of the American Embassy in Tokyo. How did your duties change when you moved to the U.S. Embassy?

SYLVESTER: I'd taken two years of Japanese language training at the Embassy Language School, which was an excellent course, and then went in as a rather raw officer into the Economic Section and worked on East-West trade issues. We were trying to persuade the Japanese not to sell too much to the Soviets or to the Chinese Communists. There were the COCOM regulations, which limited the types of strategic articles that they could sell.

Occasionally, we'd have a real issue. The one I remember was wide-diameter pipe for the Soviets to build an oil pipeline from the Urals all the way into Western Europe. We were trying to persuade Japan not to sell the pipe.

I also reported on things as the Japanese companies did get involved with China and the Soviet Union. They had a fair amount of trade, and we were just trying to follow it and see what they did.

Q: What kind of influence, or maybe pressure, did you bring to bear on the Japanese to discourage them from engaging in that kind of trade? What kind of leverage did you have in that position?

SYLVESTER: My superiors, occasionally, when it was a significant issue, would go in. The Minister for Economic Affairs when I was there was an excellent man, Philip Trezise, a fine economist, a very savvy man on Japan. And occasionally, when there was an issue that Washington took seriously, he would go into the Japanese Ministry of Foreign Affairs, occasionally, with me in tow, and make an issue out of it.

Q: What was the attitude of the Japanese in those kinds of meetings? How did they respond to these overtures?

SYLVESTER: They would cooperate, but they would be skeptical, I think. They thought we were too ideological -- too fixated on these issues. But the ties with the United States were so important to Japan that they weren't going to jeopardize them over relatively minor amounts involving trade with the Communist countries. So they were usually responsive when we wanted to make an issue out of it.

Q: Did it make a difference whether you were talking about trade with the People's Republic of China as opposed to the Soviet Union?

SYLVESTER: Well, at that time, not too much difference. The Japanese did, and still, find the Soviets -- the Russians -- very difficult to deal with. China, they thought, was a difficult market but a market with more prospects in the long run. When I started, it was a period when the Chinese were being very hard-nosed to Japan.

I came, I think, shortly after there was a rather strange incident called the Nagasaki flag incident -- when a young Japanese right-winger ripped down a paper Chinese Communist flag at a postage-stamp exhibit at a department store in Nagasaki. It got in the newspaper, and in Beijing, the Chinese Communist leadership decided to make it an issue with Japan. They blew it up and then put a total embargo on trade with Japan to try to pressure them on some of the political issues at that time.

The Japanese were quite disconcerted, although it didn't achieve the results the Chinese expected. The Japanese trading companies, like Mitsubishi Shoji or Mitsui Bussan, founded what were called dummy companies. For instance, there was one, Meiwa Sangyo, which was a known dummy for, I believe, Mitsui Bussan. And they just let them carry out the trade with Communist China. These companies would act in a friendly fashion; that is, the president of the company would echo the Chinese political line at the time so that the Chinese would approve of them politically. It was all subterfuge -- a Kabuki phenomenon that the Japanese companies found useful in continuing their trade with China.

China wanted the Japanese imports and wanted to sell to Japan, so they themselves kind of went along with this subterfuge. And then, finally, the whole thing evaporated with the passage of time.

Q: By the time you arrived in Japan, the Japanese economy was really starting to take off. Were you surprised by the speed with which Japan recovered from the war? What was your thinking about that as an economics officer there?

SYLVESTER: Looking back on it, my own thoughts, I think, were thin. I think, generally, Americans were surprised at the speed of the recovery. But it was not an easy, very fast process. When I got to Japan as a Foreign Service officer in '55, there were still large sections of Yokohama that were burnt-out fields, just ashes. I remember going down by Yokohama Harbor and hearing an ungodly noise coming out of kind of a warehouse building. It turned out to be a truck fender factory. And the way that they were making truck fenders then was not through a gigantic press, like they would now, but it was an individual workman with a hammer and a flat piece of metal, which he would pound on top of a wooden form until it became the shape of a fender. It wasn't a rich country by any means then.

But my timing, in one sense, was very good because '55 was just about the end of the post-war miseries and the real beginning of Japanese prosperity, I think. And as the years went along, you could see it; people were well clothed, they began to eat well, the stores got fancier and fancier, you began to see more private cars on the road, traffic increased steadily. All the elements of prosperity, year by year, were becoming much more evident during the ten years of my duty there.

Q: Was that something that you tried to explain to your superiors in Washington? How do you explain it...I guess that's what I'm asking.

SYLVESTER: My superiors -- Ambassador MacArthur, Minister Trezise -- would make a real point of it with visitors, that Japan had a very vigorous industrial economy. This had to be pointed out to the American visitors at that time because the image was still of a broken-down Japan, one that was just pulling itself together from the destruction of war.

I remember Ambassador MacArthur had a standard briefing that he gave to one group of visitors after another. And like anybody who gives the same talk, the same briefing, time after time, you begin to can it, and you have the same expressions. He had one which I think was something like "Japan is the Ruhr of Asia." His experience was in Germany and France, and the similes he would bring up -- that this was like the great belt of industry along the Rhine, that Japan had the same sort of massive industrial capacity that north France, West Germany, and the United States had.

It was a lesson that American business had to be told at that time because it was not self-evident.

Q: There was one event that came up in 1960 in Japan that I wanted to ask you about, and that was the debate over the adoption of a new security treaty with the United States. I don't know if you would have been directly involved in that or not, but I was just wondering what you remember about that. Do you remember? There was a lot of opposition to it. I think President Eisenhower was going to visit the country and decided to cancel his visit. Do you remember that?

SYLVESTER: My duties were not officially with the negotiation of the security treaty, but I arrived in the Embassy -- in the Chancery -- at exactly the time that the major demonstrations and riots began over the revision of the security treaty. And it was an awesome sight because I

think there were up to a half-million Japanese, on some days, who made a circuit that went by the National Police Agency, the Diet, the Prime Minister's official residence, and then came by the front of the American Embassy. There was this sea of Japanese who were chanting "*Ampo hantai!*" (Against the security treaty!) "*Ampo hantai! Ampo hantai!*" It was an almost hypnotic, roaring chant. And it was a popular thing; the *Asahi* and the other newspapers generally supported the demonstrations. It was a mass phenomenon.

My future wife was a member of a theater group which, like most Japanese cultural groups, had left-wing inclinations, and a lot of them would participate in this, and then later in the evening would drop off at my house for a drink. The whole atmosphere was one of enormous tension.

I remember being in the lobby of the Embassy when Mr. Haggerty, Eisenhower's press secretary, arrived from the airport. He'd been in a car that had gotten caught in a student demonstration then. The students had rocked the car and stomped on it. He'd finally been rescued and brought to the Embassy by American helicopter. And they were very shaken, with good reason.

Q: Why was the treaty so controversial?

SYLVESTER: I think there were a variety of reasons. In one sense, the context of it was the very beginning of the youth revolution that was to hit us in the 1960s. The radical youth leaders of Tokyo University and so forth were very prominent in the disturbances.

In part, it was the strength of the left generally in Japan at that time. The left, particularly the Communists, had stood against the Japanese militarists, and they emerged from the war with prestige; the right wing having been disgraced by having led Japan into that disastrous war. The left saw communism, socialism as the wave of the future. They saw the Americans as capitalists, as imperialists. They saw the security treaty as tying Japan to American militarism.

The public was deeply pacifist after the tragedy of the war and was not really sympathetic to being tied to a military agreement with the United States, even though the leaders thought it essential in this dangerous post-war world.

There were many reasons, but it all came together in part because the prime minister at that time, Nobusuke Kishi, was a somewhat Nixon-like figure -- a man who had been a minister in prewar governments, in Prime Minister Tojo's cabinet, and was once again the leader of Japan, and he was the one who was pushing the security treaty through the National Diet. In the end, they had to force it over against a rowdy filibuster by the opposition parties within the Diet. And that action, plus Kishi's personality, became the final crux of the security treaty riots. When it all finished -- when Kishi was forced out of office -- the whole thing deflated like a balloon that's lost its air.

Q: I had read that. Did any of the hostility toward the treaty, or toward American policy generally, manifest itself in any hostility on the part of the Japanese toward American Foreign Service people working in Japan? And were you the target of hostility as a representative of the American government?

SYLVESTER: No, there was very little real anti-Americanism in the whole phenomenon. It was a protest about American policy, about Japanese government policy, about the personality of Kishi, but the Japanese as a whole tended to be rather friendly to Americans. And I found this true, even of many among the political left. I later got to know a number of Socialist Diet members and opposition politicians, and they'd be as friendly as everybody to Americans. The Communists were usually professionally hostile to us and would stay away from us and so forth, but there was very little overt anti-Americanism.

Q: I want to ask you at least one more question about Japan. Edwin Reischauer would have been ambassador at the time you left, or at least you would have served through his tenure as ambassador. Could you tell me a little bit about him, what kind of ambassador he was, how well you knew him?

SYLVESTER: I thought he was a very fine man and an excellent ambassador. He was a man of good sense, of friendliness, of enormous understanding of Japan. His manner of working with the Japanese was what was necessary in the post-security-treaty period. He was an excellent choice, and I think he was an example of how a non-career ambassador, if well chosen, can be among certainly the best choices.

I think the only fault was that he was not experienced in the ways of Washington, like Ambassador Douglas MacArthur II was, and I think he had more trouble getting Washington to do things than a more experienced bureaucrat might have had. But he was very proper for the times. I was a junior officer; I knew him and I called on him several times after he retired and went back to Harvard, and then after he ultimately retired from there. I thought the world of him.

I think his hardest problem when I was there was the negotiations for the reversion of Okinawa. Okinawa had been essentially run as an American military colony after our bloody victory there during the war, and the American military authorities were very reluctant to see it returned to Japan or even to share in its governance with Japanese authorities. But the essential problem was that Okinawa was still desperately poor at a time when the main islands of Japan were increasingly prosperous. The Japanese government regarded Okinawa as part of Japan. They wanted its return, they wanted to bring the living standard of the people of Okinawa up to mainland standards and they wanted to offer money to help this process. And we were in this ridiculous posture of refusing Japanese financial help to the island because the military authorities felt that that was baloney tactics -- that the Japanese would use that as the entrée and then steadily erode the ability of our senior military authorities to govern Okinawa as we thought was necessary. Ambassador Reischauer had to argue that in the long run, this was absolutely necessary for American interests -- that Okinawa was very important to our military but that good relations with Japan and a healthy relationship with the security treaty was far more important to the United States than an ability to run Okinawa just as we wanted. But General Caraway, who was the general in charge in Okinawa when Reischauer first went, was a hard-line person, and he deeply resented Reischauer's policy recommendations. And there were some sour relations between the Army headquarters in Okinawa and the Embassy. But after General Caraway left, his successors were quite broad-gauged generals, and the mood in the Pentagon in Washington also changed. And by the time Ambassador Reischauer finished his Embassy appointment, very substantial progress had been made on the Okinawan issues.

Q: I was going to ask you about that. While it was eventually returned to Japan, it was after Reischauer had left.

SYLVESTER: Yes, it was 1972 when it finally took place. But the whole process had been put well under way by Reischauer. Another officer who was very instrumental in the process was Richard Sneider, who later became ambassador to Korea. And his officer, Howard McElroy, who later worked for me, was a very able junior officer on that issue.

RICHARD W. BOEHM
Consular Officer
Okinawa (1956-1958)

Richard W. Boehm was born in New York in 1926. He attended both Adelphi College and the George Washington University. He served in the United States Army, and entered the Foreign Service in 1955. In addition to serving in Japan, Mr. Boehm served in Germany, Luxembourg, and Turkey. He was interviewed in 1994 by Charles Stuart Kennedy.

BOEHM: I went to Okinawa, again with misgivings, because it wasn't at all what I had in mind. I seemed to be going in the wrong direction. The Consular Unit, as it was called, in Naha was a four-man post. Organizationally speaking, it was an interesting one. It was headed by a senior officer, at that time John Steeves, who later became Director General of the Foreign Service and Ambassador to Afghanistan. He had the title of Consul General, but his main hat was as Political Adviser to the Commanding General of what was called USARYUS/IX Corps, or United States Army, Ryukyu Islands - IX Corps. The commander was a three-star general. John Steeves was his Political Adviser. That was the main function he had. There wasn't much Consular activity. There was one upper, middle-grade officer who was his deputy -- who more or less ran the Consulate. There were two junior Vice Consuls, of whom I was the more junior. We did everything else -- the administration and the Consular work. The number two guy, Steeves' deputy, was an economic type. It was great training.

The senior Vice Consul had entered the Foreign Service through the back door. He had been a ship's radio operator earlier in his career. Then he had become sort of a Consular clerk or communicator somewhere -- I think in Australia. Then he made it and was commissioned a Vice Consul. He was a very salty old guy. However, he knew his business. He took it very seriously and taught me not only the Consular business but administrative affairs as well. All of this, plus my experience (in the Department) as a Press Officer stood me in very good stead throughout my career. Even though at the time I was frustrated at being in Okinawa, I came to appreciate it and realized that it was a very useful experience.

Living in Okinawa was nothing much. You lived in a fenced-in area -- a U.S. military compound where a few houses were set aside for the people from the Consular Unit, as it was called. It was called the Consular Unit, because the United States was the administrative power in Okinawa,

and you couldn't have a Consulate as such. Technically, it was treated as a branch of the Consular Section of the Embassy in Tokyo, for Consular purposes. There were several military compounds -- some of them in one area, some in another. Life was kind of like Levittown with a fence around it. So that was a disappointment. We did our best and struggled along.

I got a chance to do something -- I'm not sure what role it played in my career, maybe none, except in my own mind. We had an inspection during my tour there. There were two inspectors. One of them was Ed Gullion, a well-known Foreign Service Officer and later an Ambassador. He eventually became the head of the Fletcher School of Law and Diplomacy at Tufts University. Ed Gullion sat down with John Steeves, the Consul General, at the end of his inspection. He said, "We have a list here of political subjects on which there has been no reporting. You have this young Vice Consul. We think that it would be a good idea if you and he, between you, would pick one of these subjects, turn him loose for a couple of weeks from his other responsibilities and let him do it."

John Steeves was a very fine guy and a very good developer of his staff, and he said, "Okay." The inspectors went their way, and John called me in and said, "Let's look at this list."

The subject that attracted me was "Reversionist sentiment among the Okinawans." At the time, Okinawa was being run by a military governor -- not the commanding general to whom Steeves was an adviser, but a civil administrator who was an Army officer. All of the civilian Americans living there worked for the military government. They had a notion that the Okinawans loved us so much that what they really wanted was to become the fifty-first State. However, there were a few people who believed that Okinawa should revert to Taiwan because it had historic ties with China at one time or another. It had been an independent kingdom, and there were some who wanted it to be an independent kingdom again. However, those with any sense realized that the Okinawans considered themselves Japanese. If they went anywhere, it would be to become a province of Japan.

I was asked to do a report on this. I did. I took two weeks off. I didn't have very many sources. I must admit also -- and I might want to take this out of the transcript later -- that I had a preconceived notion of what the answer should be, even before I began my research. The preconceived answer was that the Okinawans really wanted reversion to Japan. This probably also served U.S. interests best, and I thought that we probably should start preparing for it. At that time, we kept Japan very much at arms length in Okinawa. There was no official Japanese representation in Okinawa. When a Japanese ship came into the harbor, it couldn't fly the Japanese flag. We kept the Japanese away, which might have been a mistake. We should have begun to involve them and gotten them to pay some of the bills (for the Occupation). I had these ideas before I began my research. So I can't say that it was entirely objective, although I think that the conclusions I reached were correct. I came up with this report, which concluded that reversion to Japan was the way to go.

Q: Method and process are always very interesting things. Here you were -- obviously, you didn't speak Japanese, or certainly not the Okinawan dialect in Japanese. How did you go about this?

BOEHM: I went about it as best I could. I would say now, with the perspective of four decades later, that it was a very inadequate kind of research. But you talk to anybody you can lay your hands on. There was a structure -- a Ryukyuan government structure -- with a governor, a mayor of Naha, various officials and an Okinawan staff. I'm afraid that all too often we drew on our local staff for this kind of report. I tried to find Okinawans who would talk to me, and I talked to Americans who had contacts to see what they thought, looking to those who were as objective as you could find. So I put together what I could. I would say now that what I did was inadequate in terms of research, although I think that the conclusions of the report were correct.

Anyhow, I prepared the report. It was a bombshell. By the time the report was completed, John Steeves had moved on. He'd gone to become Political Adviser to CINCPAC (Commander in Chief, Pacific) in Hawaii. But the American military command in Okinawa was outraged at this report. They wouldn't speak to me. I was shunned.

Q: Could you explain what the American military attitude was at that time?

BOEHM: They were convinced that we had to keep Okinawa. It was ours. They thought the Okinawans liked it that way, and the idea of more or less inviting Japan to start coming in and preparing eventually to take over was anathema to them. My report, by implication, rebutted their notion that the Okinawans loved us and wanted us to stay. A few of the military would come to me privately and say that it was a great report. They said that they couldn't say this publicly, but "You are absolutely right about what you said." The official American military reaction was very bad.

It happened that just after the report came out, I went to a Consular conference in Tokyo. At that time, the Ambassador was Douglas MacArthur II.

Q: General Douglas MacArthur's nephew.

BOEHM: Yes. The DCM in Tokyo at that time was Outerbridge Horsey.

Q: Two very much establishment-types.

BOEHM: Very establishment. Horsey gave a luncheon for the visiting Consular Officers, to which Ambassador MacArthur, of course, was invited. Since Horsey had a protocol problem of whom to put next to Ambassador MacArthur, he solved it by choosing the two most junior persons present to sit next to the Ambassador. I was one of them. Ambassador MacArthur turned to me and said, "That was a first rate report on the reversion of Okinawa. Congratulations." I was stunned and thrilled. I doubt if he had actually read it. His staff probably drew it to his attention. It gave me a tremendous lift.

Q: Oh, I'm sure.

BOEHM: And I got a letter from John Steeves, congratulating me on the report, which he said was being read with interest in Hawaii. Even though the local reaction in Okinawa among our military was very negative, the report got some attention and attracted interest elsewhere.

Q: I think that it was the first time we really started to look at this issue.

BOEHM: It did that. I would like to think that I made a decisive contribution to something. As we go along in this interview, I'll come to other points in my career where I felt that I did something that was crucial at the time that I did it. But I'm not at all sure that this was the case (with regard to Okinawan reversion). It was something which was going to happen, either then or a little bit later, in any case.

Q: Anyway, it was a timely report.

BOEHM: It was. It took a little time before we started to negotiate with Japan and to hand Okinawa back to them, although we kept our bases there. It worked out all right. Okinawa is still chafing a little bit. I read in the press the other day that the Japanese governor has been in Washington, asking us to give back a lot of land which we now use on our bases. Okinawa is land-poor, so that kind of issue -- the base presence -- goes on. But that is something that we will negotiate with the government of Japan.

Q: I had a call from Japanese Public TV earlier this year -- not too long ago. They wanted to do something or talk to people about the reversion issue and all of that. I said, "You know, you don't have to talk to the Japanese authorities. If you want to get different views, talk to the Pentagon and the Department of State people at that time because that's really where the conflict was."

BOEHM: They ought to talk to Dick Sneider, who was head of the Political Section (in the Embassy in Tokyo) a little later. It was he who, while in Japan, or perhaps back in Washington in some capacity, gave impetus to the negotiations which ended up in the reversion of Okinawa. Anyway, I'd like to think that I made some kind of a contribution. But the point was that, as a very junior officer, I was given the opportunity to prepare this report. It made a splash. It was a great lift for me.

Q: Oh, absolutely. Was there anything else in Okinawa? Who was Consul General after Steeves?

BOEHM: It was another very fine career Foreign Service Officer named Olcott Deming. He went from there to be Ambassador to Uganda or Malawi and then retired. His son is now, I think, a senior officer in the Foreign Service. I was lucky in my assignment to the Consulate in Okinawa. Both Steeves and Deming were very good guys. I was in Naha for two years (1956-1958).

Q: You left Naha in 1958.

CLIFF FORSTER
Regional Public Affairs Officer, USIS
Kobe (1956-1958)

Cliff Forster was born in 1924. His career with USIS included assignments in Japan, Burma, Israel, and Washington, DC. He was interviewed by G. Lew Schmidt on May 29, 1990.

FORSTER: I was assigned in '56, after three years in Fukuoka, to the Kobe-Osaka district as Regional Public Affairs Officer for that region. Walter Nichols was our field supervisor by that time. I spent two years there. During that time, I should like to highlight two things which come to mind. There were many more, but these two in particular: working on the development of the Kyoto-American Studies Program and the highly successful Faulkner visit to Japan remain memorable and had great impact on the Japanese educators.

Q: I understand that the Kyoto Studies Program was a direct descendant of the Nagano seminar with Faulkner and was more or less a broader, more political program.

FORSTER: Oh, it was definitely spurred by it. Again, you have to recall -- as I'm sure you do -- the situation there in the '50s, when many of the younger Japanese literature professors were really not given an opportunity at their universities to get into American studies and were told to avoid the young "upstarts," as their mentors would call them -- authors like Hemingway and Faulkner. This was not really English literature! I remember in particular the Dean of Literature at the University of Kyushu, who had studied in England before the war. His whole program was built around Chaucer. It was pretty deadly for many of his younger professors, who were far more interested in contemporary American authors.

So we used to have these meetings at the American Center with the younger Japanese professors, bringing in our own specialists on many of our great authors, and these Japanese became the nucleus of a whole new generation in Kyushu of American literature specialists. This happened throughout Japan at the time -- a real ground-swell -- and, like the labor program, USIS played a very important role in introducing American studies and thereby American culture and our values so that the Japanese would know more about us.

As you say, the visit of Faulkner brought that all together because those professors who were coming to our center to escape this Chaucerian type all went to that Nagano seminar, and many of their students also went to the seminar. I was in Kyushu at the time of the Faulkner seminar. That just reinforced the determination of the younger Japanese scholars to get a strong American studies program under way at Kyushu University, which is kind of an old line traditional university. That happened, as you know only too well, all around Japan at the time. And, once again, I believe, USIS was the catalyst, and we all had a lot to do with it.

The other thing I might mention is during the Kansai period (late 50s), the Japanese really discovered modern American drama and modern dance for the first time. Up until the time of the New York City Ballet -- when we started bringing in our big performing artists -- it was generally the Europeans and the Russians who were receiving top billing in Japan. The only ballet that had any impact in Japan was the Bolshoi. So when the New York City Ballet came out for the first time to the first Osaka Cultural Festival, it really was overwhelming for the Japanese. They were so impressed. Of course, after that, the NYC Ballet and other groups started coming over regularly.

Q: This was the festival in '58?

FORSTER: In '58, right. The USSR-sponsored Bolshoi was there along with the US-sponsored New York City Ballet, and it was our ballet which received the rave reviews. The same thing happened later with the first musicals we were able to bring out like "Hello, Dolly" with Mary Martin. This started a whole new wave and a new interest in American drama and music. You may recall that we also started programming the first symphonies -- the L.A. Symphony, the Symphony of the Air and other musical attractions at this time which were widely acclaimed.

Q: The first one to come was the Symphony of the Air.

FORSTER: I believe so.

Q: Their contract with, I think, NBC had just been terminated, and they didn't know what they were going to do. They were still intact, so they were sent out by the State Department as a big cultural presentation and were a tremendous success.

FORSTER: Oh, yes. The USIS centers arranged for that complete tour all around Japan. So again, I would like to cite that as an example of our ability to put the American performing arts on the center stage in Japan. Now, of course, we don't need to do that any longer. The Japanese bring them over continually.

1956 to '58 was a very interesting time, indeed, and this is when we started working with younger professors of international relations and studies at Kyoto University and Doshisha, who were concerned about the Marxist domination of the curriculum, particularly at Kyoto University. We were able, as with the labor leaders, to arrange for them to go to the States not only to meet their counterparts but also to gather materials to bring back. When they returned, they were able to attract more students because they were not as ideological as the Marxist types. They really wanted to have a more objective presentation of world history for their students, and the American experience provided by USIS was a great help to them.

One of the leaders of that movement was Professor Masamichi Inoki, who you may remember. His disciples, or *deshi* as they call them in Japan, were also able to visit our universities to develop the same kind of network of contacts, and this resulted in a whole new approach to the study of world politics in Japan. That, I think, was very significant, and it not only happened in the area I was in but also in Tokyo and the other USIS center areas in Japan.

Q: It's too bad that too often our program has been judged on what has been an immediate reaction to the political situation. We tear ourselves apart -- or did -- in getting a lot of material out -- motion pictures and pamphlets, that sort of thing -- trying to get immediate impact. I don't say that these haven't been successful on occasion because many of them have been, but the long-range impact is so hard to identify as an accomplishment at the time it's going on that you have to wait three, four, six, seven years before you realize it's full impact.

FORSTER: Exactly.

Q: We have often been unable to sell our case in Congress simply because you can't measure this thing in terms of one or two years.

FORSTER: Precisely. And there is continuity to it. I think that was very important -- like working with Professor Inoki and his graduate students and with other professors like that, who wanted to have greater objectivity in their treatment of current affairs in the books they wrote and the classes they taught. Some became commentators, many of them, and they wrote articles for influential magazines. We also concentrated on journalists, sending them over a period of years, and many returned with a positive impression as a result of their trip and came back with broader international perspectives. On my last tour in Japan (1977-81) under Ambassador Mansfield, I found I was working with senior editors and professors, whom we had known in Japan way back when they were at the bottom of the rung -- young profs, associate professors, or, indeed, assistant city editors or assistant political reporters. Now they were in top positions in Japan. All of those people -- so many of them -- had their first contact with the United States through the USIS State Department International Visitor Programs or Fulbright or through the USIS Centers. That, to me, is what USIA was all about, and I hope that these longer-range efforts are continuing.

MARSHALL GREEN
Bureau of Far East Affairs
Washington, DC (1956-1960)

Ambassador Marshall Green was born in 1916 in Holyoke, Massachusetts. He received an undergraduate degree from Yale University in 1939. In addition to his service in the Bureau of Far East Affairs, Ambassador Green served in Australia, China, Indonesia, Hong Kong, and South Korea. He was interviewed on March 2, 1995 by Charles Stuart Kennedy.

Q: You were talking about your service in the Bureau of Far Eastern Affairs, 1956-1960, during which time you worked closely with Assistant Secretary Walter H. Robertson. Did Robertson agree with the way Senator McCarthy of Wisconsin thought about the Far East?

GREEN: No, his views were not as antique as that. However, he was a "dyed in the wool" Republican. He was a man who believed very strongly in the "right wing cause" as far as Asia is concerned, but his views were different from, and opposed to, those of Senator McCarthy of Wisconsin. Moreover, he was a very strong upholder of the Foreign Service. It is interesting to note that all 14 of our Chiefs of Mission in East Asia and the Pacific at that time were Foreign Service Officers -- a record that probably has never been matched anywhere and at any time in history.

Now, I got along very well with Assistant Secretary Robertson. For one thing, one of my first jobs was running the United Fund Campaign for the Bureau of Far Eastern Affairs, which came out far ahead of its quota. To Assistant Secretary Robertson that was very pleasing and cast me

in a favorable light. I also wrote a lot of his speeches. He liked the way that I wrote, and his speeches got good reactions on Capitol Hill [Congress]. In the speeches, of course, I always gave proper play to his known prejudices regarding...

Q: Was it a problem to write speeches for him? You were a professional Foreign Service Officer, close to your political masters, but at the same time...

GREEN: I knew what his strong views and prejudices were. I had to play them up in his speeches, because they were his speeches, after all. I would present the material as I knew that he would present it. It was more in discussions of particular issues, where I was present, that I would sometimes mildly take exception to what he was saying. It was always mild because, if it went too far, that would be the end of my close association with him.

The one time I can recall when he "blew up" was when I took issue with him over something which Syngman Rhee [President of the Republic of Korea] had done regarding the seizure of Japanese fishing vessels. We had tremendous responsibilities in both Korea and Japan. We were doing everything possible to try to bring them together. With Syngman Rhee around, there was no chance of doing that. I felt that this was a primary issue, to which Robertson was giving insufficient attention.

When Robertson left in 1959, Jeff Parsons succeeded him. He was an old like-minded friend and career colleague.

Q: Robertson was focused on Korea and China. We are talking about Japan at that time [1956-1960]. What were his interests and concerns with Japan?

GREEN: I had no difficulties in writing for him or talking with him about Japan. He recognized the primacy of Japan. Our overall relationships with any country in that part of the world had to be based on a healthy US-Japan relationship. That was something of a concession for a man like Robertson, who put so much emphasis on China.

The Japanese Broadcasting Company recently wanted to interview me about the Security Treaty of 1960 between Japan and the United States. I said that I did not have very clear recollections about that. They replied, "On the contrary. We see you as being a principal architect of that treaty." I said, "What?" They said, "Yes, let us show you the documents." Then they showed me documents which they had arranged to have declassified [under the Freedom of Information Act] from our archives. These showed that while working for Robertson I was the one who originated the proposal for the Security Treaty of 1960 between the United States and Japan. It took the form of a 17 page memorandum dated December 28, 1956 [to which the Japan Broadcasting Company referred] addressed to Douglas MacArthur [nephew of Gen. MacArthur], who at that time was Counselor of State Department, and to Bill Sebald, who was then Robertson's deputy in the Bureau of Far Eastern Affairs. What I wrote was something of a reflection of what I had gone through before with George Kennan [in 1948 when he was Director of Policy Planning and with whom I visited Japan]. I pointed out that the Japanese considered our sizable military presence in Japan as a carryover from the occupation period and as a form of foreign control. Furthermore, this presence had the danger of involving Japan in war because we had extensive military bases

in Japan which were seen by many Japanese as a kind of a magnet which might draw even nuclear war to Japan. Therefore, our political position in Japan was quite perilous, unless we moved very rapidly to put these bases on a mutually beneficial basis. In other words, we couldn't be "dictating" to Japan. We had to be "consulting" with Japan. I urged that we replace the Security Treaty of 1951 between the US and Japan with a truly mutual security treaty, which eventually became the Security Treaty of 1960 between the US and Japan which is still in force today. Judging from what's happened to NATO [North Atlantic Treaty Organization], I'd say that it's even more durable than NATO.

This long paper made specific recommendations as to how we should go about negotiating a mutual security treaty with the Japanese and what in general might be the terms of such a treaty. All I can say is that it received the strong endorsement of the Bureau of Far Eastern Affairs. Later on, actual machinery was established in Japan to negotiate the treaty between our Ambassador in Japan and CINCPAC [Commander in Chief, Pacific, with his headquarters in Honolulu], on the American side, and the Foreign Minister of Japan and the head of their Self-Defense Forces, on the Japanese side. They had all sorts of people down the line, working on this negotiation and finally came up with a very good security treaty.

This was the principal issue regarding Japan during my years from 1956 to 1960 [as Regional Planning Adviser in the Bureau of Far Eastern Affairs].

Q: Let me focus on what is probably the most difficult, adversarial issue. It was not between Japan and the United States but between the Department of State and the Pentagon -- over Okinawa, over bases [in Japan], and all that.

GREEN: Well, I would say, Stu, that ever since the days of General Eisenhower, when he organized the National War College, there have been good working relations between State and Defense. The State Department and the military were prone to sneer at each other -- with references made to "the military mind," and "to cookie pushers" and that kind of thing. After a while, you didn't hear that so much. We had improving personal relationships and mutual interests and we expressed ourselves accordingly.

I think that this was very well reflected when I got back from Sweden where I had been for nearly five years [1950-1955]. It was rather refreshing to find that the military and the State Department were working in more constructive terms, particularly in the case of Japan. The same thing might have been true in terms of Europe as well.

We had an interesting time negotiating the Security Treaty of 1960. Douglas MacArthur had meanwhile ceased to be Counselor of the State Department and had become Ambassador to Japan. He came back to Washington in 1959 to try to get the Joint Chiefs of Staff completely "aboard" on the new Security Treaty. He knew that they were generally supportive but we still had the final steps of the negotiations to complete. Ambassador MacArthur called a meeting in the Secretary of State's conference room, with the Joint Chiefs of Staff on one side of the table. On the State Department's side of the table were Jeff Parsons, who had meanwhile taken over as Assistant Secretary of State for Far Eastern Affairs from Walter Robertson; Ambassador MacArthur; myself; and one or two others. MacArthur chaired the meeting.

I'll never forget the meeting, because a rather amusing situation arose. Doug MacArthur, in his didactic way, was telling the Joint Chiefs of Staff about the essence of diplomacy and how to negotiate a treaty. He said, "Gentlemen, it's absolutely essential, when we sit down with the Japanese, that we know exactly what we want to get out of the Japanese. We want to have our whole position worked out and ready. Then we can do a real "snow job" on them." Admiral Arleigh Burke, then chairman of the Joint Chiefs of Staff, said, "You mean, Doug, the way you're doing on us right now?" [Laughter] Well, I was the only one on the State Department side of the table who laughed, though I quickly suppressed it. That was one of the things that I found so delightful about Admiral Arleigh Burke.

Anyway, that treaty was negotiated. I don't want to go into all of the details.

Q: Before we leave that, the United States had major bases in Yokosuka and Atsugi, and Okinawa was off to one side. But these bases must have led to a lot of discussion about what we were going to do with them. Or were our military fairly well...

GREEN: Oh, no, I'm not finished talking about the bases, because they raised critical issues. All of the points you have made are valid. We had various problems with our bases in Japan and the Ryukyus -- and we of course had to distinguish between the two, because the Ryukyus didn't revert to Japan until 1972. At this point we are talking about 1960. The bases in Japan and especially the Ryukyus were also very important to carry out our treaty commitments in other parts of East Asia. To some extent it might appear to our other allies in East Asia that the Japanese had some kind of controlling hand over the use of our facilities in support of missions for the defense of those other countries. That could wreak havoc with the fabric of our relationships with those countries.

The skill was how to come up with a treaty which, on the one hand, comported with Japan's feelings that it did not want to become a "lightning rod," and that it did want to be able to control all that went on in their country. At the same time there were the views of the countries which were protected by our bases. I think that diplomacy really triumphed in this situation. The negotiations were handled with great skill by the powers that be. I take no credit for this. They were handled by our ambassador, CINCPAC, the Secretary of State, as well as by Japanese Prime Minister Kishi and his officials.

We came up with a formula under which the treaty left it unclear as to the precise extent to which we would be responsive to Japanese requests not to use our bases for particular missions. In essence the formula involved an exchange of letters in Washington at the end of 1960 which stated that in carrying out our missions each of the parties would take into account the concerns of the other party. Whatever we did would comport with Japanese concerns about not having any nuclear weapons in Japan, not drawing Japan into a position of being a "lightning rod," and so forth.

That was a very sensitive and difficult maneuver and an example of diplomacy at its very best, involving some very good men at the helm in the Foreign Office and the Prime Minister's Office. We had, too, especially Ambassador U. Alexis Johnson, a superb diplomat.

Now, you mentioned something else just now, Stu, which is very close and parallel to this. That is, we had bases throughout East Asia, especially in Japan, Korea and the Philippines, but increasingly elsewhere in Southeast Asia, including Thailand and, eventually, Vietnam. With all these bases, we inevitably had numerous problems between our forces and the local communities.

The Assistant Secretary of Defense for International Security Affairs, Frank Nash, was assigned the task in 1957 of going around the world with specialists in the field of politico-military affairs to see what steps we should take to forestall the dangers of "blowups" as well as to improve, in constructive terms, troop-community relations. I went on a long trip with Frank Nash in May 1957. Also on that trip were Henry L.T. ("Barney") Koren, Jim Wilson, Len Unger, and Tim Hoopes. I was the specialist for East Asia and the Pacific. The others were more or less European or Defense specialists.

The first country we visited was Japan, where we had a real "blowup" over the so-called Girard case. This involved an enlisted man who had shot a Japanese woman who was collecting brass casings [from shells] on an artillery firing range. The matter blew up overnight into a national scandal. So we had that problem right off the bat. We had a similar case that I have already mentioned in my oral history on China. This had to do with a G.I. shooting a "peeping Tom" in Taiwan. I won't go into that. We had some similar cases in the Philippines. Overall, the results of this trip, not just to East Asia but other trips to Europe and the Middle East, did a great deal to improve troop-community relations.

However, my real job was that of Regional Planning Adviser. The task of a Regional Planning Adviser was quite clear in Europe where we had the Marshall Plan, NATO, and all other regional organizations. In East Asia we had no regional organizations at all. Therefore, the region contained four divided countries [Korea, China, Vietnam and Laos] and less important countries -- Communist China, Japan, and the Republic of Korea -- were not represented in the United Nations.

Here let me point out that the only real unifying factor in the East Asian region at that time was the United States which had close ties with most of the countries of the region while those countries had generally poor or non-existent relations with each other. Moreover, the more responsible we were for the problems of our friends in the region, the less inclined they were to resolve issues with neighboring countries.

Meanwhile between 1952 and 1960, the US had established military alliances with Japan, the Republic of Korea, the Republic of China and the Philippines. These were all bilateral alliances and efforts to establish any multilateral alliance in the region never really succeeded. SEATO collapsed, though it did have a legacy of enduring US military ties with Thailand into the Rush-Thanat Agreement.

Q: Getting back to Japan, how did we view the internal situation in Japan from 1956 to 1960? Were there concerns, or...

GREEN: I don't think that there were any major concerns. My recollection of the internal situation in Japan is that we faced some problems regarding the status of the Koreans in Japan. We also had some problems, which I mentioned before, about our base-community relations. However, as far as the Japanese political figures were concerned, the Liberal-Democratic Party was clearly in the saddle. The democratic process in Japan, if you want to call it that -- was under the thumb of the well-heeled Liberal-Democratic Party, which was oriented toward the United States. So we didn't have much to worry about. However, the left wing in Japan was vociferous and could whip the people up, as indeed it did, on the military base issue. So the situation was nothing to take for granted. We worried about it a good deal. It was an incentive for us to move forward on the recommendations I mentioned earlier about the need to enter into a more truly bilateral mutual security relationship with Japan.

Q: Was this the time when the Zengakuren, a radical student movement, emerged? At that time were we concerned about some of the groups in Japan really going "off?"

GREEN: Undoubtedly, we were, although I can't remember which they were. I know that there were some troublesome groups.

Q: Was part of your job -- and this was clearly its politico-military dimension -- involved in developing the position of Political Advisers?

GREEN: That's a good point. I think that the idea originated with Bill Sebald. Bill Sebald was a close friend of Admiral Arleigh Burke, the Chief of Naval Operations, who, in turn, was a close friend of Admiral Felix Stump, who was CINCPAC. Admiral Stump was a touchy salt-crusted sailor, who had the same kind of suspicious attitude toward the State Department that military officers of his vintage -- he was well on in years -- commonly had. The idea of having anybody from the State Department "snooping" on him or keeping an eye on him was disturbing to him.

We got around this problem through the diplomacy of Admiral Arleigh Burke. Arleigh sent a personal message to Admiral Stump, saying, more or less, "Felix, we think that you have one of the most important jobs in the world. In addition to having the best in the way of staff, you ought to have somebody on your staff who knows how to get things done for you in the State Department. We have such a fellow in mind. His name is John Steeves." Sebald and I had recommended that John Steeves [later Ambassador to Afghanistan and Director General of the Foreign Service] be Admiral Stump's first Political Adviser. Well, to make a long story short, Felix Stump got along beautifully with John Steeves, and vice versa. That was the beginning of a string of Political Advisers, all of whom did very well.

Admiral Felix Stump was also very useful in this period in connection with something else. In September, 1957, the Russians put up "Sputnik," [the world's first man-made satellite]. Secretary of State Dulles was extremely concerned over this development and the implication that we were falling behind the Soviet Union in the "race for space," as well as the "race for science and technology." Dulles put out a circular asking each of the bureaus of the Department for suggestions as to how we might counteract this development.

Psychologically, there was need for counteraction, because in the world at large the Russians

appeared to be moving ahead of us. People might begin to knuckle under to the Russians, thinking that they were the "wave of the future." I don't know whether the idea was John Steeves' or Arleigh Burke's or Felix Stump's. However, let's give Admiral Felix Stump credit for it because he was the one who carried it out.

The idea was that, once a year, Admiral Arleigh Burke would conduct an air-sea-ground demonstration in East Asia. The demonstration would be carried on by the Seventh Fleet, with Admiral Stump as the host. He then invited the Defense Ministers and the Chiefs of Staff of all of the countries in East Asia to attend. Most of them came. The demonstration started at Clark Field [in the Philippines], went from there to Subic Bay and Cubi Point [also in the Philippines], and ended up in fleet exercises en route to Okinawa, where there were Marine Corps "vertical envelopment" exercises [helicopter insertion of troops on a given point], for the edification of these leaders. On top of it all the Navy was able to demonstrate how quickly it could bring reinforcements and supplies into the Far East from the West Coast of the United States, as well as from Hawaii. It was very impressive, and I think that it left a very deep mark on all of his guests, that the US was a powerful friend who could deliver.

Q: Looking at some of the things that you were involved with, was there a Japanese connection with the Taiwan Straits crisis of 1958?

GREEN: Yes, I think that there was. The Japanese were very nervous about Taiwan, bearing in mind that Taiwan used to be part of the Japanese Empire, and the Japanese are very conscious of being on a long chain of Islands running South from the Kuril Islands right down to Taiwan.

Q: During this time, 1956-1960, did you feel that the Japanese, in some sense, were "coming of age?" They had been through this traumatic war [World War II], we had occupied their country, and...

GREEN: Yes, they were coming of age, but still very slowly. We're talking now about the period 1956-1960. The Japanese were still "reeling" from the effects of the American occupation. The 1960 US-Japan Mutual Security Treaty was yet to be finalized. They were beginning to make real strides forward economically, but as you know, this process moved rather slowly in the beginning. It wasn't until 1961 or 1962 that the Japanese economy began to boom. It was a bit later that they began to score very rapid increases in their GNP [Gross National Product].

Q: How effective was their Foreign Service, their representation abroad and especially in Washington? I'm trying to keep it to the 1956-1960 period. We'll talk about later periods at another time.

GREEN: They had very good people. Incidentally, during that period, when Prime Minister Kishi came to Washington in 1957, there was no official Japanese-American organization here, as there had been in Japan for many years. So Kishi had no suitable organization in Washington to serve as host for an occasion where he could deliver a major speech on US-Japan relations (as Grew had done in Japan under the auspices of the American-Japan Society in Tokyo).

So, three of us Foreign Service Officers in the Far East Bureau (all specialists on Japanese

issues) undertook to establish the Japan-American Society of Washington, DC which then hosted a dinner party for Kishi. (The Society was to flourish over time, later headed by Alexis Johnson whom I succeeded as President in 1985.)

Q: Did the Japanese Embassy [in Washington] and visiting Japanese cabinet ministers who came over -- did they know how to "play" Congress?

GREEN: Well, I'm not sure that they knew how to "play" Congress. They included able and experienced diplomats who were true professionals, albeit somewhat reticent about promoting their points of view directly with our Congress. They rather looked to the State Department to front for them.

Q: During this period and still concerning Japan, how well do you think our policy was supported by the CIA, as far as intelligence went?

GREEN: The CIA? I think that our policy was pretty well supported. However, there is one weakness about the Agency which was disturbing to me. That is, they tended to get involved in doing things which, if they ever became publicly known, would have been deeply embarrassing to the United States. In other words, they interfered in the Japanese electoral process. They did this in Japan and they did it in the Philippines. When I became Assistant Secretary for East Asian and Pacific Affairs, I saw to it that there would be no more of that. I think that it is a very poor idea for the Agency ever to get involved in the internal politics of foreign countries.

Q: It is counterproductive.

GREEN: Especially in democracies.

Q: Perhaps it is a matter of "don't just stand there -- do something."

GREEN: Yes. The CIA was involved in Japan in this sense. As it turned out, there was an article in the press a few months ago about this involvement. I was surprised and shocked to read about it. I didn't know that there had been such involvement.

Q: Then why don't we move on to the next subject? Is there anything else that you wanted to cover?

GREEN: Yes. The Soviet Union and the relationship of the communists in Japan to the Soviet Union. The Soviet Union played its cards vis-a-vis Japan just about as badly as it could. That was a real blessing to us. Consider that when the US-Japan Security Treaty was being negotiated the communists, the socialists, and a lot of the intellectuals were urging a foreign policy of neutrality for Japan. But the Russians came through with threats which really made such a policy impossible, quite apart from the record of Korea itself. You would have thought that once the Russians saw how much success our mutual security treaty had achieved in US-Japanese relations, they would have seen the wisdom of turning back at least some of these islands in the northern territories of Japan. This is something they have never done -- even to this day. They have never understood that by simply turning over these woebegone islands they could have

gained an opportunity for getting loans, investments, and a peace treaty with Japan. They still don't have a peace treaty. The Russians acted in ways that made our job easier in Japan.

Q: *Obviously, the Kuril Islands...*

GREEN: Well, the southern Kuril Islands.

Q: *What was our reading of why the Soviets wouldn't turn these islands over to Japan?*

GREEN: That was hard to understand, because we're talking about four islands. Two of them are fairly large, but all are without resources except their proximity to fishing grounds, valuable to the Japanese. The Russians had more territory than they could ever use. By turning back these islands to Japan they would gain all kinds of opportunities...

Q: *Was it submarine passage or something like that?*

GREEN: There were several available passages for Soviet vessels going through the Japanese chain of islands. Evidently the Russians were (and still are) opposed to any territorial concessions lest this constitutes a bad precedent elsewhere along the borders of Russia -- and it was probably an issue of special sensitivity to the Soviet (now Russian) armed forces.

KENNETH MACCORMAC
Cultural Affairs Officer, USIS
Tokyo (1956-1960)

Kenneth MacCormac was born in Cordova, Alaska in 1911. He graduated from the University of San Francisco in 1933 and served overseas in the US Army during World War II. After entering the State Department, MacCormac served in Seoul, Japan, and Thailand. In 1978 during his retirement Mr. MacCormac directed the Thai Fulbright Foundation. He was interviewed in 1989 by G. Lewis Schmidt.

MACCORMAC Then on to Japan, which was a one-year tour. The purpose of it was to develop a follow-up program for the many hundreds of Japanese who had been to the United States.

Q: *What year was it that you went to Japan? What month, do you remember? It must have been June or after, because I had been in Japan for four and a half years, and I left at the end of May of '56.*

MACCORMAC: I remember meeting you in Korea one time when you came over on military.

Q: *That's right, I remember that.*

MACCORMAC: It must have been the summer of 1956.

Q: By that time, Johnny McKnight was PAO in Korea, I think.

MACCORMAC: That's right. He was PAO in Korea. We formed, among other things, a number of American University Alumni Associations in Japan, and I found this was fairly easy to do because the Japanese like to work in groups. For instance, we had a big alumni group from the University of California, from Stanford, with regular meetings, and then we had regular follow-up meetings of returned Fulbright alumni at Fulbright headquarters. I had published at that time a newsletter which went out monthly to 3,000 Japanese returnees, and I think it's still going. As a matter of fact, I have some of the early editions bound and published, and I have them all wrapped up. I'm going to send them back to the Fulbright Foundation in Japan, because they're an interesting history of the Foundation in those days.

Q: When you had our meetings, were they primarily social, or were they study groups? How did they function?

MACCORMAC: The meetings were primarily meetings with visiting American scholars, professors, political leaders, and that sort of thing. We would select and invite Japanese returnees who we thought would be interested in meeting these individuals.

Q: Did you have fairly sizable meetings?

MACCORMAC: Oh yes. There was a good deal of interest in it, yes.

DOUGLAS MACARTHUR, II
Ambassador
Japan (1956-1961)

Ambassador Douglas MacArthur, II was born in Pennsylvania in 1909. He was a Foreign Service Officer in Canada, Italy, France and Belgium from 1937 until the post-war period. His experience led him to be named Counselor of the State Department under Eisenhower. In this capacity, he organized the Berlin Conference of 1954, which brought together all four of the powers occupying Germany. In the late 50's, MacArthur was named Ambassador to Japan. He was interviewed in 1987 by Charles Stuart Kennedy.

Q: Mr. Ambassador, we have now reached the point where I've been calling you Mr. Ambassador, but for the first time you actually were appointed to an ambassador and to a very major post, Japan. You were as Europeanist as anyone could be. Your entire career overseas was in Western Europe, and although you had worldwide responsibilities as Counselor of the State Department, yet Japan seemed to be out of your field. How did that appointment come about?

MACARTHUR: It came about because during the period that I was Counselor, I spent a great

deal of time traveling with the Secretary of State, usually, but not always, in the Middle East, in Southeast Asia, in Japan. And indeed, I was named and designated the negotiator for the SEATO Treaty, which was an abortive operation, although the treaty was signed, which tried to bring together the free nations of Southeast Asia into a relationship where they could work together to prevent an expansion of Communist power, which was taking place on the mainland through the Viet Minh operations after the Chinese Communist Party had seized the mainland.

The Viet Minh, the insurgent Communist-supported rebels in then French Indochina were expanding rapidly. Laos and Cambodia were threatened, as indeed was Thailand. So I spent a considerable amount of time in Southeast Asia. And since, in the whole Asian rim of the Pacific Basin, Japan obviously was on its way back to being a very important power and perhaps by far the most important industrial power, because in those days, there were no NICs. The NICs hadn't emerged -- the newly industrialized countries like Taiwan and South Korea and Singapore and the like.

Q: The date when you went to Japan was when?

MACARTHUR: I was sworn in as Ambassador to Japan in December of 1956, around Christmastime, and I went to Japan in 1957. I'd been back in the Department working as Counselor, in the Counselor's seat after President Eisenhower took office in January of '53. I was coordinator of all Mr. Dulles' trips to South Asia, Southeast Asia, Middle East, and the like.

So although my practical experience as a diplomat, until I became Counselor, had been Western Europe, with an initial post in Canada, the next few years as Counselor, almost four years, I had to wrestle and coordinate plans and policies with the Geographic Assistant Secretary of State and the Under Secretary of State for Political Affairs in many parts of the world. Of course, not the least bit was the fact that I was Coordinator of Plans and Policy for all our meetings with the Russians during that period when I was Counselor, including the Geneva Summit in '55 and the various foreign ministers' conferences.

So I did have an exposure to Japan and the Far East. That exposure, before I became Counselor, was enhanced by the two years I spent as General Eisenhower's political advisor at SHAPE, because General Eisenhower realized better than most people that in a period of decolonization, which was creating great problems for our NATO Allies, that what happened in every part of the world was of critical importance to them that could affect the resources they had available or could use in support of NATO and its objectives, while at the same time trying to protect their interests in widespread areas of the world in which they had colonies. In fact, I recall -- and I think I mentioned it in an earlier interview -- that in one of my daily morning briefings alone with General Eisenhower at SHAPE, he asked me when the last time an American Secretary of State had visited the Middle East, and I said no Secretary of State had ever visited the Middle East or South Asia. And he so organized life with Mr. Dulles, his Secretary of State when he became President, and I was present when he gave the instructions that Mr. Dulles was first to visit the NATO countries, and then he was to visit Southeast Asia.

Now, the final part of the decision was that in terms of American strategy -- I'm using the word "strategy" in its broadest terms -- it had become evident by 1956-57 that Japan was not only re-

emerging as an important nation, but that with Communist expansion rife everywhere and with the developments on mainline China with the Communists taking power there, that American basic defensive strategy must be based on a tripod concept. The tripod, North America -- that's Canada and the U.S., NATO, Europe, and Japan, where we had bases, and where we had a relationship, a special relationship as a result of the period of our occupation and then the 1951 treaty negotiated by Mr. Dulles, that was the so-called peace treaty. I'll come to that a bit later.

So after four years as Counselor, I think -- and I've always felt -- that four years is enough for any person in a senior advisory position to hold such a position in the Department of State, or for that matter in other agencies and departments. Why? Because after four years, you become so much of a part of every past decision of the past four years that you're sort of in your subconscious wedded to those positions. And we live in a changing world where you have to look at things slightly differently. I think it's much harder for somebody that has been a part of a series of successive decisions over a period of years to take a new look at the nature of the problems that we face, an entirely new look with a different perspective, than it is for somebody who has participated and been active in making those decisions. It's just more difficult.

So in late '56, I saw the President and the Secretary, and said that I felt it was time for me to get out of the Department, back into the field in an operational capacity, and have a new person in the Counselor's job with perhaps a slightly different perspective. The suggestion was then made about three weeks later by the President and Mr. Dulles that I go to Japan, which obviously was coming along very rapidly.

Q: Had you expressed any preference at the time?

MACARTHUR: No, I just said I wanted to go out. Japan came as a sort of surprise to me. I thought they might send me someplace in Europe in view of my NATO background. But the President and the Secretary felt that Japan was moving very, very rapidly toward an increasingly important position, and as it became increasingly important as a nation, it would become increasingly assertive, and with the experience I'd had in various parts of the world and some understanding of the importance of Japan and our broad strategic thinking, as well as the nature of the feelings of the other countries on the Asian rim about Japan because of the Japanese militarist expansionist policies, which were called the Greater Asian Co-Prosperty Sphere before Pearl Harbor, that although I'd never served in Japan, I could fill that role. So I went there. But that is how it happened.

Q: What were your marching orders when you went there? I'd like to now two things. One, what were your marching orders? Secondly, what were your internal ideas of what you wanted to do? First let's go to your official instructions.

MACARTHUR: I knew a little bit about Japan -- very little. I didn't speak the language, although I took three hours a day for about three months before I went there, which helped only modestly. And indeed, I took lessons after I got there. But I first visited Japan in 1921 with my father, who was in the Navy. He was in the Navy, a captain in the Navy, and when the Secretary of the United States Navy and the Annapolis class of 1881 were invited to Japan as official guests of the Japanese Imperial Navy, which sounds very strange in light of Pearl Harbor, my father was

selected to command the warship that took the Secretary of the Navy abroad. The Secretary had a son of about my age, and so being a good politician, he didn't want to be accused of taking his boy along all by himself for the ride, so he said, "Captain MacArthur, you have two boys that are friends of my son. Let's take all three boys along together, and nobody will say anything." So we went.

My first contact with Japan was the night that it was so arranged that we would arrive on July Fourth in Yokohama, our national Independence Day, for a very warm welcome from the Japanese. In July, when you're doing the Great Circle Route into Japan, it gets light very early, and I woke up at about 4:00 o'clock in the morning. Dawn was breaking, and I asked permission to go to the bridge, and I went to the bridge after permission was given. The Marine at the foot of the bridge got permission. My father said I could take a seat on the wing, that slot that runs along that the officer of the watch or the skipper sits on, and there I saw, as I looked from one side to the other, on each side there were two small, low, twin-funneled destroyers ghosting along beside us as an escort, flying the Imperial Japanese Navy flag. That's the one with the stripes coming out from the rising sun.

I looked at these destroyers, and after a few minutes, when my father was not engaged, I said to him, "Isn't it too bad that the Japanese are so behind the times that they have these destroyers with only two funnels, whereas we have those marvelous ones with all four funnels?"

And my father looked at me and said, "Sonny, never underestimate the Japanese." He said, "They're about eight years ahead of us." He said, "We're still trying to get four boilers to go off on two funnels properly and with a low silhouette such as they have, so just never underestimate these people." And I never forgot that, because it was so true, how many people underestimated Japan before and during the war.

Q: *And even after the war.*

MACARTHUR: And after the war. I'd like to say, if I may, just a word about Japan before we get into the details of what I did while I was there.

Q: *Certainly.*

MACARTHUR: Japan is a unique country in one sense. There is no other country like it. It is the only nation that has never been subjected to the leavening and melding influence of other societies, civilizations, and points of view, which have come about either through massive waves of migration or by conquest. The Japanese have sat in their islands from the beginning of time, never having been conquered or invaded. Indeed, according to legend, they have been there since the Sun Goddess came down and gave birth to the first Japanese. The word "kamikaze" that was used for suicide airplanes in the last war goes back to the 13th Century, when the Chinese, under Kublai Khan, tried twice to invade China in 1274 and 1281. And each time the Chinese were successful in landing their armies on the beach, but then Japan was saved by the kamikazes, "the divine breeze," which was a typhoon, which came along and broke up the Chinese ships, and the samurai's polished off the men left on the beach with their two swords and that indomitable spirit that the Japanese fighting man has always shown. So their civilization grew up in very much a

unique way. They're an inward-looking people. There is a togetherness and a Japaneseness about them that they feel toward each other and their people, with other people being foreigners. And this is a direct result of the history of the nation, as I say, unlike any other country in the world, any other nation in the world, never exposed to other cultures, civilizations, ways of looking at things, and so forth. They've developed their own unique and in many respects, very, very, very high-grade and beautiful civilization.

I would say, among other things, that in all the countries I've known and visited and served in, I've never known a people with a greater appreciation of duty. This is one of the characteristics that the Japanese have, and you notice it in everything from the way the food is served, the presentation of the food when you're in a Japanese restaurant is as important, the beauty of that presentation, as the cook who prepared it and the preparation of the food.

It's produced, as I say, a remarkable people that have their own very special way of looking at the rest of the world, at themselves. I think this is changing. It is changing, as Japan has become more exposed through the fact that it has come from a defeated, wrecked, destroyed country to become an economic and financial superpower, with its young people going through one of the finest educational systems -- I wish ours was half as good -- that is imaginable, and many, many, many of the young people being sent abroad to learn and study in foreign universities, so that they understand the outside world, and also that they acquire almost a bilingual ability to express themselves in other languages. They are an extraordinary people. I mention all this because it has a background on the years I spent in Japan.

When I went there in February, I arrived on February 3, 1957, I arranged to fly from Washington to Honolulu by American carrier, and then I thought that because of all that had happened during the war and so forth, that it would be a useful thing to arrive in a Japanese carrier, showing confidence in Japan and what it had accomplished. So I took a JAL, Japanese Airline flight from Tokyo to Haneda. In those days, that was long before they had the volume of air travel that is there now and which obliged them to build that huge new airport at Narita, almost an hour outside Tokyo. Haneda was right on the edge of Yokohama in those days. This gesture was very much appreciated, and in my opening statement, as my arrival statement, which was a very short statement, I said that I had come to listen and learn more about Japan, which I'd visited only once as a boy, and not to preach to them or tell them what to do. In effect, that was the thrust of the statement I made.

So I got off to a fairly good start with the Japanese, but I was immediately apprized, after I'd been there a few weeks, that the United States had over 8,000 basic research contracts being conducted by young Japanese, Japanese who had doctorates or master's degrees in the sciences, and that roughly half of these were basic research contracts financed by the Pentagon. This came as quite a blow to me -- a shock. I would say not a blow, but a shock. So I inquired why, and the answer was a very simple one. The majority of bright young Americans seemed to think the quick way to the top and the money, the dough, was by going down the law school route or by going to a business school, like a Harvard Business School, or going into medicine, and we had very, very few coming out with higher degrees in the sciences, mathematics and the sciences. And we had so few that we had to put them basically on development of improvement of existing things, whereas the big and flashing experience is when you make a breakthrough in

basic research. That's where the big glue comes. So I started visiting some of these Japanese plants, and I went to the Sony plant, founded by my friends Mr. Morita and Mr. Ibuka in about 1947 or '48. They then employed something over 700 people. I was amazed to find out that 20% of their human resources and 20% of their financial resources were going into basic research, and the motto of Sony was, "Research makes the difference."

Then I flew down to Nagoya to visit the Toyota passenger car line, and when I went there in '57, Toyota was the only Japanese automobile company turning out passenger cars. In the immediate post-war period when Nissan and Toyota were building motor vehicles, they were building four-wheelers, usually, but they were van-type things which in the period of reconstruction were all-purpose vehicles for families or whoever had them. You could do anything with them. You could use them for any purpose, and that was the purpose they needed, for reconstruction and rebuilding. And Toyota was turning out 20,000 cars a year. I visited the line, and they were, indeed, very kind, and they were most appreciative. They said that Mr. Ford had invited them to come to America before they built the line, that Mr. Ford had not only permitted them to take pictures, but to make diagrams of the Ford assembly line in Dearborn, I guess it is, and that they had come back. But then they said, with some pride, "We have eliminated two full stations on the line, and we're eliminating the third."

And I said, "Well, how did you do that?"

And they said, "Well, we discovered that Mr. Ford, in putting together automobiles, they sometimes have three or four parts, you have to put two together and then the third you screw on and you put the fourth. We found that we could design a part which encompassed all four parts, and you just eliminated the labor of putting these pieces together, and you had a stronger part which functioned better and had less chance of problems later."

Q: Mr. Ambassador, before you get more into the economics of Japan, could we talk a little about when you were sent out? Did you have any instructions?

MACARTHUR: I had no instructions at all, other than that Japan was on the comeback trail, it would again resume a place as an important nation in the world, and particularly in what we referred to as the Far East -- one of my successors or predecessors referred to as the "Near West" -- and that my job was to strengthen the ties of understanding and friendship between our two countries. And that is why I took a Japanese plane in as a practical example of what I might do and to let the Japanese people know from the beginning that I had confidence in them and in what they were doing, and that is why, also, I designed my arrival statement to say that I had come to listen and learn, and not to tell them what to do.

Q: On this economic side that you were mentioning, at the time you came out there . . .

MACARTHUR: The only problem we had at the time I came out there was the beginning of the problem of textiles. This was before the NICs -- Korea, Singapore, and so forth had reached the capacity that Japan did. One of the things that I did while I was there was to negotiate a so-called voluntary quota for Japanese textiles. It was about as voluntary as your doing something if you've got a pistol pointed at your head, economically, because Japan depended even then, not to

the extent that it did now, but it depended on access to the American market.

Japan's balance of payments on trade and commerce were just under a billion dollars in deficit. That billion dollars in deficit was made up for by American military spending on the troops and forces and supplies and things that we procured in Japan for our forces in Japan, our naval base and the air base and so forth. We still had a few thousand troops there. So their balance of payments, overall, was in equilibrium, but the export market was very important to them, and they were obviously targeting it.

Now, I want to make just one point about that. The Japanese honored that agreement, and what happened, Hong Kong immediately stepped up its textile industries and started shipping more than they had been than the total Japanese shipment, and we accepted that from Hong Kong but not from Japan. And why was that? That was simply because we didn't want to offend the British, who said they would be very, very offended if we put voluntary quotas on Hong Kong. So we accommodated the British, we didn't help our textile people with the voluntary protective quotas one damn bit, because it was immediately filled by Hong Kong, and then as Korea came along, by Korea. So the Japanese said, with some reason, "We reduced our shipments and accepted a quota, but you immediately let it be filled by other people. What good does that do you, and why should we be penalized?" It was one of the injustices that Americans sometimes don't understand unless they've been a part of one of these so-called voluntary quota negotiations.

Q: Did this happen while you were in Japan?

MACARTHUR: This happened while I was in Japan.

Q: Did the embassy -- you, as ambassador -- try to protest?

MACARTHUR: Well, you don't protest, but you report their protests and say it obviously is not an equitable thing to do, but that had no effect on Washington, which felt that its special relationships with Britain, born during the war or drawn ever closer by World War II and in NATO and one thing and another, we were not going to offend the British. I mean, back here -- I've been ambassador in many places, and they said, "Well, that's fine. We understand the point you're making, but we've got other considerations that we consider important." And very frequently they're right, because if you're an ambassador stationed abroad, you can't also understand always some of the domestic political implications of things that are not necessarily the best foreign policy in the world, but you have to face up to political realities of who controls the Congress and what they can do, and the extent to which you must cooperate with the Congress if our system of government, the Executive Branch, that is, is to function successfully.

Q: Looking at it from today's point of view, but at the time was the idea of opening up Japan to American goods very high on our agenda, or was it not really considered a very important item?

MACARTHUR: I'm delighted that you asked that question, because it brings out the reason for the tremendous adverse imbalance in our trade. When the war ended, our two great potential industrial competitors, Western Europe and Japan, had had their industries bombed out, burned

out, used up by the war, and exhausted. We had no competition roughly for 15 years. We had no competition. You could sell any American product almost that we turned out if the money was available. We could sell anything if the people had the money to buy it. And when you have no competition, the first thing that suffers is quality of product. When you have no competition, there's no incentive for quality; there's no incentive for better industrial designing which will make your product cheaper and better.

Let me emphasize this by a personal story. After I left Japan in '61 and was appointed to Belgium as ambassador, I decided that I wanted to take a medium-size American car, a personal automobile, to Belgium that I could use weekends or for personal use when the official car should not be used. So I called up a friend, who was the vice president international, one of the two greatest American manufacturers, got him on the telephone, and explained what I wanted, and asked what they had. He said, "I'll call you back in about half an hour."

He called me back in 40 minutes. I'd worked with him before and helped his company a bit here and there. He said, "Doug, we've got just exactly the car that you want. Of course, you'll get the usual 10% Foreign Service discount, and we'll ship it whenever you want." And he said, "Best of all, it's a Wednesday car."

I said, "Joe, what the heck is a Wednesday car?"

"Well," he said, "you know, a lot of our people don't show up on Friday on the production lines. They want a longer weekend, and sometimes a lot don't show up on Mondays because they want to extend their weekend or they've celebrated too much. So we have to put people on the production lines on Friday and Monday that don't do the job every day." So he said, "All our people in the company get Tuesday, Wednesday, or Thursday cars, but the top executives get Wednesday cars, because that's the time when you will get a car with the maximum chance of it being put together properly in every respect." So much for quality. And it was quality which, as much as anything else, started us down the slippery slope.

In textiles, we had already become or were rapidly becoming not very competitive with quality textiles because of the higher wages in this country as contrasted with Japan and Hong Kong and, subsequently, Korea and Taiwan. But I make the point that the period when we had no competition was to a very, very considerable extent responsible for the falling-off quality in American products and the emergence of foreign products which people bought, not because they were foreign, but because they were of better quality and they lasted better.

Now, I do not want in any sense to excuse the Japanese for their protectionist policies of that period, because they had protectionist policies, too. We could sell stuff for a period of time in Japan, but take automobiles, which they targeted for eventual export. And when I was in Japan, as I say, there were only 20,000 passenger cars a year being turned out. Honda turned out only motorcycles. Nissan turned out a small open sports car with a collapsible top, two-passenger car. Those are the only passenger cars that were being turned out when I arrived in Japan -- 20,000 Toyotas and that was it. But they targeted; they had automobile markets targeted.

I had a very serious argument with Mr. Ikeda when he succeeded Mr. Kishi as prime minister on

the very subject of automotive imports, because I suddenly discovered that members of the American Chamber of Commerce in Japan, of which I was a member, could not import an American car unless they had owned that car for 30 months before they imported it, and these were businessmen who lived in Japan. How could they have owned abroad a car for 30 months before they imported it? So I went to him and said, "Mr. Ikeda, it's as simple as this. Either you remove that provision of the 30 months and so forth, or I will recommend in the strongest fashion possible that we put quotas and take retaliatory steps on some of your products that are important to your exports to the United States." And that particular provision was removed. This was several months before I left Japan.

Q: But this was, of course, for the personal car of Americans there.

MACARTHUR: It was any Japanese; it was the same thing. A Japanese had to own it; it wasn't just American. It was a rule: foreign cars cannot be imported unless they've been owned for 30 months.

Q: Were we getting any other pressure from American businessmen and from the Treasury and Department of Commerce and elsewhere?

MACARTHUR: Not in the early period that I was there, because the Japanese competition, there were some things. Sony was doing extremely well at that time. I remember the General Electric senior vice president came out there, and when I told him that Sony was devoting 20% of their resources, human and financial, to research and development, and they were coming out with some very, very interesting new things, he was astonished. He said, "My God, of course, we have a much larger budget, but it's less than 1% that we devote to research and the kind that you're talking about with Sony." But the big push had not come. The big push in automobiles and textiles, we'd solved it by the voluntary quotas, which the Japanese observed, but as I recall now -- it was a good many years ago -- but that was the only one where there were strong pressures from America. There was no question about other Japanese products that were coming in -- just textiles.

Q: I'm skipping around a bit, but moving from the economics to internal workings, how did you find our embassy at the time? You had been in the Foreign Service a long time, but this was your first time being charged with an embassy. How did you find it as an operation, an effective or non-effective operation?

MACARTHUR: I found that we had some extremely capable and good people. I found it an excellent embassy. I had been chargé d'affaires for a while in Belgium, in '49, during Admiral Kirk's incumbency as ambassador when he was away, even though I was ill, and I had served in another big embassy in Paris as head of the political section, so I was somewhat familiar with embassy operations. But I found that we had excellent people, first-class people. I found the younger officers who had gone through language training extremely able and contributive to general thinking. Then I had the very good luck, as attrition took place, as it does when an assignment is up and they go, to be able to get very good people to replace the people that had left.

When I came there, Ben Thibodeaux was Minister for Economic Affairs, and when he left for another assignment, I got Phil Trezise, who is still down here with Brookings Institute, an absolutely first-class economic minister and person, with political as well as economic sense and judgment. I got Bill Leonhart from the policy planning staff as my DCM.

Q: For the record, how did this work? Did you say, "I want so and so?" Did you give names of people?

MACARTHUR: I recommended them. Bill had served in Japan, he helped work with me and talked with me when he was on the policy planning staff on my initial statement there, which I mentioned earlier. He is a man of remarkable judgment, and he is still a member of one of the senior government intelligence boards here in Washington. He's a man of admirable intelligence and judgment, which is what you want as much as anything else, in addition to his knowledge and other skills. I would recommend them, and when somebody's time was coming up, you don't wait until the replacement is done. If it's somebody's time coming up and you've got what you think is an important mission, you let the Department know, unofficially, if you will. You let the assistant secretary of the geographic division know the guy that you think is most qualified. That's the way it should work. It shouldn't work with some cabal of people who are 1,000 miles away in personnel doing it; it ought to come from people that know something about the man's qualifications in the post that he goes. I'm all against the idea of having a personnel section that looks at a computer or numbers and picks people out for key positions. Further down the line, as you move along, that's one thing.

The world has become too complex, and international problems are too complicated now to think that one man, an ambassador, can mastermind everything. Every ambassador, like every President, needs the best and most capable advisors that he can get, because an ambassador, some of his time, like a President's time, is taken up in time-consuming protocol things that cannot be avoided. There are many things that he must do, and no single person has the wisdom or ability to know everything about everything. You've got the economic side, you've got the strategic side, you've got the domestic political side, you have the domestic political side on our side of the water as well as theirs. You have all these factors that have to fit in and be fitted in together when you make a recommendation to the Department on a given subject, on a serious subject, and you need the best you can get for that.

Q: Did you find that we were developing a solid and large enough corps of Japanese experts as officers?

MACARTHUR: I can't really answer that question. Certainly you can't take an officer and chain him to Japan for his whole life. I mean, that isn't what the Foreign Service is all about; you won't get the experience. We went through the business of old China hands, and we went through the business of old Middle Eastern hands, who couldn't see anything. We went through the business of old European hands, who didn't understand a thing about the inevitability of decolonization and the like. So we were certainly turning out capable young officers, they were extremely good, and they made a very valuable contribution.

We also had several Japanese nationals who were extraordinary. One of them was Kishiyama,

who was my interpreter. He had grown up in this country, gone to school in this country, although he was of Japanese origin and Japanese nationality. He spoke flawless American. He had a memory like a tape recorder in translating, but also he translated the spirit of what you were saying, even sometimes the facial gestures and things. He was an extraordinary man. After he retired, guess who snapped him up very swiftly? Mr. Morita of Sony.

Q: Looking at the other side, who did you deal with in Japan, and how would you describe the Japanese Government and its structure and personalities at that time?

MACARTHUR: I would like to, if I may, get into the negotiation of the Japanese treaty, which brings out those very points of your question.

Q: Excellent.

MACARTHUR: And I think it brings them out more tellingly than just a descriptive business.

Q: Yes.

MACARTHUR: After I'd been in Japan six or eight months, I was able to develop a rather warm and friendly relationship with the Prime Minister, Mr. Kishi, and also with some of the senior people in the foreign ministry. The foreign ministry was staffed by some very able people. They were entirely Japanese, but they were also understanding to an extent that was not true with the other ministries, particular MITI, Ministry of International Trade and Industry, which often tried to block the recommendations of the Japanese foreign ministry to be more liberal and open in the acceptance of foreign products.

I don't exactly remember when, but late in '57, Mr. Kishi asked to see me privately, and I think there were only two other people present on his side, and I went with -- I can't remember. I had a couple of people on my side. I think one was the interpreter. Mr. Kishi said that he thought the time -- it came as quite a surprise to me -- had come to renegotiate the U.S.-Japan treaty of 1951. The U.S.-Japan treaty of 1951 was negotiated by John Foster Dulles, and Mr. Yoshida, Prime Minister Yoshida, an extraordinary gentleman who was five times Prime Minister of Japan, a man who spoke flawless English, he'd been ambassador to Rome and The Count of St. James, a man of courage, a man of great ability. That treaty was negotiated in '50-'51, when Japan was still under occupation. That treaty was the price for the restoration of sovereignty. Until that peace treaty was signed, Japan's sovereignty could not be restored and the occupation ended.

The treaty was, in a sense, one-sided in favor of the United States, because it had to be, for this reason. At the time that treaty was negotiated, Japan did not have one single man under arms, and we took on the heavy obligation of assuring the defense of Japan. When you take on an obligation with a country that doesn't have a single soldier, sailor, or airman, you've got to be able to deploy your troops and forces to meet possible threats if a contingency arises for which the commitment is made. So we were, in a sense, able to do whatever we wanted in terms of moving forces here, there, or anyplace, without consultation. We had a status-of-forces agreement regarding the status of our forces that enabled us to do whatever we wanted, insofar as they were concerned; the Japanese had no voice in it. Generally speaking, the treaty was not in

keeping with our other treaties, because it had been negotiated under entirely different circumstances, our other treaties of alliance.

Mr. Kishi pointed out that since that treaty had been negotiated, with the Korean War, Japan had developed its own self-defense forces -- Army, Navy, Air Force. They were small, but they would be increased and assume greater responsibilities, and that at the same time, we had treaties, we had negotiated the SEATO Treaty, the NATO Treaty, had a treaty with Korea, that were based on equality, whereas Japan, which now had its armed forces, still needed and absolutely had to have the protective umbrella of American military power, but Japan was being treated as a very second-rate citizen. This did not worry Mr. Kishi at that particular time, because our relationships were good and we had a close personal relationship, but he said, "You have only to listen to the broadcasts in Japanese from Peking and Moscow now that there is a great effort being made by the Communist world and by the Japanese Left to upset this treaty." And he said, "If the treaty ever becomes an issue of Japanese sovereignty, and the question of whether Japan is being treated on a basis of equality, it will be much easier for these people to get demonstrations going in the streets, and it will be much easier for them, if a majority of the Japanese so decide, to make your bases useless simply by cutting the communications that you have to get in and out of your bases -- rail, road, all the rest that they can divide. So now, when relationships are extremely good, is the time to renegotiate this treaty and put it on the same basis of equality as your other treaties, so that it is not attackable by the left, that above all wants to see Japan first neutralized and then dominated by the Communist world, our two great Communist neighbors," because they're neighbors of both China and Russia. "And the great potential of Japanese industry used to their advantage."

Q: I just want to make one thing clear. The initiative came completely from the Japanese?

MACARTHUR: It came from the Japanese side.

Q: Had this subject even been raised when you left Washington, about renegotiating the treaty at some point?

MACARTHUR: Never. They'd never raised it with (inaudible).

Q: And in Washington?

MACARTHUR: No, it had not been raised before. Our relationships with Japan were on a stable, even keel, and there it was. Kishi was looking ahead.

So I said I would reflect on this and we would meet again in a week or so. I thought back to a comment that President Eisenhower had once made to me when I was his political advisor at SHAPE and briefing him one morning, and we were discussing a treaty. He said to me, "I don't care how important a treaty is or how important the occasion on which it's signed is, or how important the personality of who signs it is. Once one party to a treaty feels that that treaty is not only not serving its own self-interest, but is against its own self-interest, then that treaty is unenforceable if we're a party to it, unless we're willing to land the Marines."

And I thought about this, and I thought about the future, and I thought about Japan's rapidly emerging status as a very important nation, so I went back and had a further talk with Mr. Kishi, and I said one thing, and I'll tell it to you now. He had said to me, "Of course, any treaty we have with you will have to recognize Article IX of the Japanese Constitution." This is the no-war article in the Japanese Constitution that was put in largely by American insistence in the aftermath of the war, only to be regretted in the Korean War, when Japan was encouraged to raise its own self-defense forces on the basis of the U.N. Charter, which gives every country the inalienable right of individual and collective self-defense.

So I said that I would recommend this to the President, but that in other respects, I would have to see him. I didn't know what his view on this would be, and I would have to consult in Washington. I sent an eyes-only telegram to the President and Secretary, laying out the whole thing and the reasoning, and why I felt that this was the time, when relations were so stable and good, to go ahead with the renegotiation on the basis that we'd have to recognize Article IX, but that it should be consistent, and that with our other engagements, we couldn't make it a special thing with a whole bunch of special things for Japan only, when we had allies in Asia, as well as in Europe.

Then I got word to return to Washington, so I returned and talked to the Secretary and the President.

Q: I assume this was kept very much under wraps between you and Kishi.

MACARTHUR: As I said, eyes-only for the President.

Q: Nothing was coming out of the Japanese side about this thinking either?

MACARTHUR: No, not at that time, because I told them that I couldn't in any way, shape, or form say whether Washington would go along with it. I'd be willing to recommend it; that was as far as I could go.

Q: The Japanese wasn't mounting any campaign.

MACARTHUR: Oh, sure, there was the constant campaign of the left, but it was under control. It was propaganda; it was not an issue. There was nothing that was an issue. The issue only came up after the treaty was negotiated.

Q: I'm sorry to have interrupted. You went back to Washington.

MACARTHUR: We're talking about two years before the demonstrations. So I got back to Washington and got word that the Secretary wanted to see me, and then we'd go over together to the White House to talk about it. I tell this as an amusing episode of the treaty. I knew the Secretary extremely well. I'd traveled many hundreds of thousands of miles with him all over the world, I'd organized trips for him, I'd been Coordinator of Plans and Policies for him, I'd done a lot of things. When I walked into his office that morning, when we were to see the President the day after I got back, he looked at me, and he said to me, his first words were, "Doug, what's

wrong with that treaty I negotiated?"

And I said, "Well, Mr. Secretary, you're a great lawyer from Sullivan & Cromwell, and you got 90% for your client, and it won't stand up over a bit of time, I fear."

Then we went over to see the President, and the President saw the point immediately and virtually repeated this business, "Well, if once ever a country feels that a treaty is working to its disadvantage, it's inoperable unless you are willing to land the Marines. You can't enforce it. It's unenforceable unless you're willing to land the Marines. That we're certainly never going to do." So he said to me, "Doug, this is all right with me, but first you must go and clear it with the Senate Foreign Relations Committee. I want you to see these top three people on each side of the aisle, Republicans and Democrats. I want you to see the Majority Leader of the Senate, and I want you to see the Speaker of the House, those people."

Q: This shows his thinking on how to deal with the Congress.

MACARTHUR: He said, "If they say no, there's no point in going ahead. We're not going to get into a battle which we can't win with this. If they give the green light for a negotiation, okay. Now it's up to you."

So I spent about four days and saw all these people, and I had brought back with me a draft treaty which differed from the old treaty, because I wanted to get away from the idea that this was just a military treaty. That's why the name we chose, Treaty of Mutual Cooperation and Security, would start the economic cooperation, cooperation non-military, in the earlier stages of the articles of the treaty. They didn't want to look at any text, but in effect, all of them said, "Well, the point you make is a very good point, that if it is one-sided, if it's been overtaken by events, we will recognize Article IX, although that will put the Japanese in a more privileged position than any of our other treaty partners, who, engaged in attack, is on us. This engages us to come to their defense only on an attack against Japanese territory or Japanese-controlled territory under the authority of Japan." Our other treaties are more general; an attack anywhere can do it.

So I went back to Japan, saw Mr. Kishi. I got back in the evening and saw him the next morning, thinking he would be very happy. I told him that I'd seen the President, and that the parameters within which I could negotiate with the following, which I thought were eminently satisfactory to the Japanese, first we would recognize Article IX of the Japanese Constitution. We would not try to void that by treaty language, that would stand and be left alone, untouched or unmentioned by the treaty, and it would stand.

Secondly, in every other respect, this treaty had to be fully consistent with our other security engagements in other parts of the world, including NATO, SEATO, the U.S.-Philippine Treaty, and the other ones. And he smiled and said that that was fine, but then he said to me, put his head to one side, sort of shook his head and he said, "I have a problem with Mr. Yoshida."

And I said, "What's your problem?"

He said, "He's not enthusiastic." Yoshida, two of his boys controlled two of the largest factions -- I'm coming to the Japanese Government structure later -- that made up the Liberal Democratic Party, Ikeda and Sato, that successively succeeded Kishi.

So I said, "Well, all right."

So I called up Mr. Yoshida and said I was back from America, and I wanted to come down and talk to him about the treaty. He had a little house at Oiso, behind the dunes down on Segami Bay. So I got an Army chopper. He said, "Come on down for lunch." So I choppered down for lunch, and we landed on a little pad there.

Q: I might say for the record that "chopper" means a helicopter.

MACARTHUR: A helicopter. He was waiting to greet me at the little gate and fence around his property, and after greeting me and asking me how I was, his first words -- I give you my word of honor -- were identical to the words of Mr. Dulles, with whom he had negotiated the treaty, "What's wrong with that treaty I negotiated?" [Laughter] I mention it only to show that pride of authorship sometimes . . .

Q: Did you tell him that Mr. Dulles . . .

MACARTHUR: I told him that Mr. Dulles had said exactly the same thing, and he laughed. We had lunched and talked about it, and I explained the reasons why, to make less vulnerable our relationship to the left, which he was concerned about, too, because part of the problem with Japan at that time, and part of his problem with the students that later emerged, was the fact that during the time when the militarists took over in Japan and did Pearl Harbor and did all the expansion, many of the Japanese professors in the universities didn't raise a single voice. They were quiet as mice; they never raised a voice of protest or suggested it might not be a good thing. And after the war, those professors, or some of them, a number of them felt -- and this comes to me from two very distinguished Japanese university presidents, among other people -- they felt that they had to be more liberal and more to the left than anybody else to re-establish their credibility, and so they were, to a considerable extent, behind the students and pushing the students on later, which I will come to.

In any event, the negotiations started, and the negotiators were basically myself, Bill Leonhart, who was my DCM, who made a remarkable contribution, Dick Sneider, in the political section, who was later ambassador to Korea, a wonderful fellow, and he was in the political section. He was the fellow I drafted or tapped to do a lot of the basic work and be responsible in the political section for the treaty part of the negotiation. And on the Japanese side, it was Mr. Kishi, who headed the thing; Foreign Minister Fujiyama, who was a politico and had no international background, he was simply a voice; Kisimara Yamada, the vice minister, who died only six months ago, I only heard about it two days ago; Mr. Togo, who was later ambassador to the United States, who was chief of the American section of the foreign ministry at that time, and who, I think, on the Japanese side bore the brunt of most of the drafting.

Q: He and Sneider were sort of counterparts?

MACARTHUR: Yes, they were sort of counterparts in it, in a sense. And the chief of the Japanese legal division of the foreign ministry. We negotiated along.

This brings me to the structure of the Japanese Government, the political party that's run the country since the war, and how it functions. Why did it take two-years-plus to negotiate a treaty that Japan wanted and we were acceptable to? First, I would have to mention a fundamental and most basic difference in the decision-making process of Japan and most other countries. In our country and many other countries, except dictatorships, the decision-making process is by majority vote in democratic countries, and Japan is a democracy. But in Japan, the decision-making process is a process of consensus. That means that in a cabinet of, say, 24, headed by the prime minister, if one or two people say no, they won't move until those gentlemen withdraw their objection or agree. So we would go along with the easier articles, and then there would be a pause, maybe five or six weeks, where we wouldn't meet. And why was that? That was simply because within the inner workings of the cabinet, one or two or three people would say no. They couldn't move until those people removed their objection. Why couldn't they move?

This leads me to the structure of Japanese Government. The political party that has run Japan since its sovereignty was restored, the Liberal Democratic Party, is not a political party in any sense that we understand it in the West. It is uniquely Japanese, and it has certain feudal aspects. The Liberal Democratic Party is a grouping of coalitions who generally believe in the same philosophy, but each coalition is headed by a very ambitious leader whose ambition is to become prime minister of Japan. The coalition leaders are the ones that shake down big business for the contribution, and then dish out the money they get from the big companies for the campaign expenses, for members of the Diet who support them. So in a sense, it's like feudal Japan, when you had the shogun who had to have the support of a majority of important daimyos, feudal lords. And the feudal lords were, in turn, supported by their samurai swordsmen whose loyalty they kept by giving them so many kokus of rice every year. Today, in the Liberal Democratic Party, you have the factional leader, who is the political daimyo, you have the prime minister, who is the shogun, you have the factional leader, who is the political overlord, you have his samurai Diet swordsmen, who are the members who support him in the Diet, and you have the political overlord giving to his political samurais in the Diet not kokus of rice, but so much money because running a political campaign in Japan is very expensive, of the money that he's collected from big industry.

So the prime minister's position as prime minister depends on keeping the support of a majority of these people, but under the consensus decision-making process which is fundamental to Japan. A majority isn't enough; you've got to have the consensus.

Now, let me give you an example. After we'd been negotiating for about 11 months, ten or 11 months, maybe it was a little longer, and we negotiated to keep it out of the public press, because the press, Asahi Shimbun, I was told by a senior member, had 154 card-carrying members of the Communist Party in its editorial and reportorial staff. We used to meet privately, without any announcement. I went into a meeting one day with Bill Leonhart, I guess, and Dick Sneider, probably. We had been going along and agreed on three or four of the simpler articles. And the prime minister, Fujiyama, looked at me, and he said, ~"We've been thinking a lot about the treaty

lately, and we think we have a better formulation than the one we've been working on, better for you and better for us, better for both sides."

And he handed me a piece of paper, two sheets, to read. I started reading, and as I read it, the adrenalin of anger started making my heart pound so loud, I thought that they would probably hear it. But I remained quite impassive until I had read it through. Why did my heart pound? Because this had nothing to do with what we'd been talking about. It was a treaty that gave every single advantage to Japan with not a single responsibility. It was quite contrary to anything that was dreamable. So I looked very coldly at the foreign minister and said, "I suppose this is your Japanese way of breaking off the negotiations. I accept it as such. I think we've got nothing more to talk about. Good day," and got up to leave.

He grabbed me, and he said, "Why do you say that?"

And I said, "Because you know, your prime minister knows, your government knows, the vice minister who's sitting here next to you knows exactly the limits within which the President and the United States Senate will ratify the treaty, and this has absolutely no bearing. There is not one measure or reciprocity in any sense. It has nothing to do with what we've been talking about. So obviously, there it is."

Then he said to me, "Please give me back that piece of paper." I gave it to him. He tore it up into small pieces, put it in his briefcase, pulled out the treaty we'd been working on, and said, "Let's go back to the other treaty then."

And I said, "No, Mr. Minister. You've raised a very important question in my mind, the question of Japan's sincerity." Sincerity in Japan is a word that translates itself. It is much stronger than in English. It's a combination of "bushido," honor, and sincerity.

Q: It's a certain amount of face.

MACARTHUR: Well, it's more than face. It's a question of honor and one thing and another.

I said, "I must think very seriously about whether this proposal that you made originally was a serious proposal or not, and whether we're dealing with sincere people."

And he said, "Next week."

I said, "I'm not prepared to set a date. I may want to communicate with the President and find out what his views are." So I left. I got back. I knew Mr. Yamato, the vice minister, he was a close friend. He called me Mac-san, and I called him Yamato-san. And I sent word to him.

Q: He was the vice foreign minister?

MACARTHUR: Yes. I'd done a lot of work with him and Togo-san, the ambassador, later Ambassador Togo, also a remarkable man. And I sent word that I felt that he owed me an explanation about what had taken place. As soon as I got back to the embassy, I got one of my

Japanese-speaking Americans to call up his secretary and say that I felt he owed me an explanation about what had happened that afternoon.

I got word back immediately to come and see him the next morning about 9:30 at his little house, the house that was maintained by the Japanese Foreign Ministry for entertainment and geisha parties and things of that kind. I went there the next morning, and Yamada-san greeted me with a drink in his hand, and said, "Mac-san, come have a drink with me."

I said, "No, Yamada-san, I didn't come to have a drink with you. I came to find out what happened yesterday."

He said, "Please have a drink with me."

I said, "No."

He said, "I'm embarrassed. I can't explain unless you have a drink of friendship with me."

So he poured me a drink, and I touched it to my lips. Then I said, "What the hell happened yesterday?"

He said, "You know, in the cabinet there are 24 people, including the prime minister." He said, "Twenty-one people agree completely with what we are doing, but three gentlemen in the cabinet have different ideas. They don't agree. They say what they think we ought to be asking of America, which was in our paper." He said, "The prime minister explained about your talks with the President and the Foreign Relations Committee. The prime minister explains, I explain that it won't work, that there's no way that such a treaty could ever be ratified." But he said, "Then these three gentlemen look at the prime minister and say, 'Well, why are you afraid at least to try?'" So he said, "We tried." And then he giggled that nervous giggle they give when they're very, very embarrassed.

Now, I mention this because it brings together both the decision-making process and the fact that the three people were important factional leaders or representatives of important different factions, and if the prime minister had overridden those three gentlemen, he would have alienated and had the permanent enmity of the factional leader and the faction they represented. Either they were the factional leader in the cabinet, or they were the factional leaders represented in the cabinet, and there would have been problems further down the road.

So we continued on and eventually completed the treaty. We had a difficult time -- not a difficult time, but for the Japanese, the nuclear problem was a very acute problem.

Q: Could you explain what the nuclear problem was?

MACARTHUR: Well, the nuclear bomb having been used only twice in the world, in Hiroshima and Nagasaki, and never anywhere else, and several hundred thousand people having perished as a result of either the bomb or the great widespread fires that resulted from it, the Japanese were extremely sensitive to this issue. This was an issue that in the daily broadcasts from Moscow and

Peking, was always hit upon during the period of the negotiation of the treaty, you know, the nuclear business and so forth and so on, and Japan would be a nuclear base, one thing and another. So the problem of devising a treaty that met our requirements and our procedures, with respect to our armed forces was one which was not insoluble for us, but was very emotional for the Japanese.

We settled it by a formula which I would give Bill Leonhart the basic credit for devising, which is that we undertook not to introduce nuclear weapons into Japan. Of course, the problem of vessels with nuclear weapons is one which we had always taken a consistent position on. That position is that a vessel and its armaments are inseparable entity, and that we do not, for national security reasons, advertise the particular types of weapons that we carry on any vessel, nor will we ever make them public. But we undertook not to introduce nuclear weapons into Japan.

Q: So you are really talking about a twofold thing. One was that we would not put ground-based nuclear weapons in Japan. On the other, we just left it open.

MACARTHUR: In effect, we said just what the language says: we would not introduce nuclear weapons into Japan. There are two aspects, one of basing land-based weapons there; the other is the question of whether a ship that happens to have a nuclear armament of some kind on a casual visit or passing through Japanese territorial waters, we do not respond to that and never have and will not.

The treaty was signed in the White House with general acclaim, except for the left in Japan, and a number of university professors and the Asahi Shimbun, which, as I mentioned, one of its senior people told me they had 154 card-carrying members of the Communist Party. And then the treaty was signed in the White House in January 1960.

Before it was signed, the President wanted and I wanted a commitment from Mr. Kishi that they would go ahead and get on with the ratification, which they wanted to do. The reason this point came to a head was that Mr. Kishi extended an invitation to the President, when he came over to sign the treaty, to visit Japan. I advised the President that the acceptance should be conditioned on the fact that sufficient time had been guaranteed for the treaty to get over and the demonstrations which we knew the left would mount against it, and that there should be a commitment from the Japanese Government, which had a majority in the Parliament, on a date by which time they would have the treaty ratified. We would then set a date roughly three months after that for things to quiet down.

So the Japanese Prime Minister Kishi gave an assurance that the treaty would be ratified probably in late March, but no later than early or mid-April, and the visit could take place about the middle of June.

When we got back to Japan, the Japanese Government introduced the treaty into the Diet, but the opposition kept, through various delaying procedures and tactics, delaying and delaying and delaying it. In the meantime, the propaganda from Moscow and Peking about the remilitarization of Japan by the Americans and so forth was growing, but no demonstrations started. There was simply propaganda in Asahi Shimbun and speeches by left-wing university professors, and the

like.

Finally, March came and went, and in April, Mr. Kishi felt that he had no choice but to go ahead and vote the treaty through the Parliament with the majority that he had.

Q: *We've come to April.*

MACARTHUR: By April, Mr. Kishi realized that he had no choice but to go ahead and ratify it, even though it was contrary to Japanese practice, because the opposition socialist party, led by Mr. Asanuma, had threatened to walk out or block a vote on the treaty, and it was contrary to the general sort of consensus decision-making process that was sort of ingrained in Japan, although it does not operate in a modern Diet in domestic or matters of budgetary or other concern.

So finally, Mr. Kishi talked to me twice in April, I guess it was, and I said, "If the treaty isn't ratified, I don't see how it's possible for the President to come out here."

Q: *Had the President's visit been announced?*

MACARTHUR: Oh, yes. It was announced in January that he would visit, that at the White House he had accepted an invitation to visit Japan sometime in June. It was to be in the middle of June, but I don't think the exact date in June had been fixed. Mr. Kishi realized this, and I didn't even know it was happening. He then decided to go ahead and force a vote in the Japanese Diet, gave the orders to the Liberal Democratic Party, and his cabinet backed him, forced the vote through the Diet.

Well, the minute the socialists heard he had given the order, they grabbed the speaker of the Parliament, the presiding officer, the speaker, because a vote cannot take place unless the speaker is in the chamber. And they locked him up in a broom closet in the bottom of the Diet to prevent a vote from being legally possible. And when the Liberal Democratic Party members heard about this, they went down to the basement, and there was a pitched scuffle, and then they started dragging the poor old speaker up the stairs into the room to vote. Finally, in a tug of war, in which the poor old gentleman's knee was dislocated, if I recall correctly, he was pulled into the chamber, and at that point, the socialists all simply marched out and refused to vote. And the vote was held, and it was a unanimous vote of those present, which was a substantial majority of the Liberal Democratic Party.

But the socialists immediately went out, and with the collaboration of the Asahi Shimbun, published stories and got on the radio that the Japanese Government had brought police and military in, had dispelled the socialist members of the Diet, reverted to militarism, and passed this treaty, which was a total false lie. They had walked out when they saw that they would lose the vote in the chamber. But the story was broadcast by at least one or two of the radios, and Asahi Shimbun headlined it. This immediately was picked up in the universities, and demonstrations started. As one young man explained to me later, which is a different story, which was among the students and later became an executive at NHK, their national television company, broadcasting, the students were all told by their professors and by the newspapers that it wasn't a question of the treaty, that democracy had been violated in the most flagrant way by

the Japanese Government, that had used military and police force to physically eject democratically elected members of the Parliament from the building, and that this was all part of a plot to remilitarize Japan and so forth, and that the treaty was involved in it, and so forth.

Q: Had we had any observers around to see any of this? Were we getting a straight account of what happened?

MACARTHUR: Well, nothing had happened yet. You mean in the Diet building?

Q: Yes.

MACARTHUR: No. We didn't even know they were going to call the vote in the Diet building. We didn't even know they were going to call the vote. But once the word got out the next day, the demonstrations started.

Then James Haggerty, who came over, he was the press secretary, with Tommy Stevens, who was special assistant to the President, they came over in early May, if I recall correctly, when the demonstrations had started, street demonstrations with students dancing and things, in a city which was then a city of 6 million, and with Greater Yokohama, which is all one great accumulation of 11 million, there were probably 15,000 to 25,000 people demonstrating, basically around the Diet. It was business as usual at this period.

When Haggerty, who was coming over to make, as always before a presidential visit, the preliminary arrangements and to survey the schedule and all that, when he sent me word he was coming, I suggested he come in at a military airfield. I said, "There are going to be demonstrations, and the Communist left is capable of mounting a demonstrations of 10,000 or 15,000 people if you come in at the airport. So I think the thing to do, you're coming in a government military plane anyway, is to land at a military airport and then we'll bring you in in a car with no American ambassador flag flying on it. There won't be an occasion or opportunity for them to make something out of your arrival."

Haggerty sent back word saying that he didn't want to do that, that he didn't want to be sneaking in the back door. We had an open relationship with Japan, the treaty had been negotiated and signed in the White House. He felt that he must come in through Haneda. So I got word -- we had observers out there -- that the press here had announced that he was coming in at such and such a time, and I drove out to the airport to meet him, and driving out, I passed a number of groups that were converging on the airport, of perhaps a few hundred here, a few hundred there, a thousand here, a thousand there. And we got to the airport, went in, and nothing happened. The airport was a rather large airport, and there were police to keep people away from any demonstrations, away from the airport itself, but the airport is a very large area. In one place you have to go down underneath a runway or a roadway across the top. We came out on the other side of that, and we ran right into about 5,000 demonstrators, who immediately surrounded the car and started pounding on the thing, jumping on the top, were very careful not to break windows or do things of that kind, but they rocked the car. Tommy Stevens got extremely agitated, Haggerty kept his cool completely and started to pull out his little pocket camera and started snapping pictures of the demonstrators. It was well organized, and they had obviously

been told not to resort to violence, because we had several American newspapermen that were out there also covering the business right there next to the car, and they were snapping pictures and writing their stories.

Q: Selective violence.

MACARTHUR: But one of them put his hand on top of the car, and one of the demonstrators who was dancing on top of the car jumped on his hand, and the man said, "Ah!" And the man on top of the car immediately bowed and apologized for stepping on his hand. [Laughter] But finally, when they started rocking the car, the police finally arrived, and they decided that we were never going to get out of there without a helicopter. So the police arrived, and they cleared a little area around the car, then made a thing, and a chopper came down in another area where the police cordoned off. Tommy Stevens wanted to run, and I said, "No, no, don't run. When you run in a mob, I've seen it happen too often, it just excites them. It's like a cat running after a mouse or a dog running after a cat. If the cat stands there. But if it starts running, they go after. So we'll walk at a deliberate pace." We had police on both sides of us.

We walked toward the thing. In the meantime, some of these people had brought along clubs and things, started throwing them into the blades of the helicopter, the chopper. To make a long story short, we got off, took off back to Tokyo, landed at a helo-pad not far from the embassy, and just as we got out and the blades were slowing down, two of the blades fell off that had been hit by these clubs that they had thrown into the blades. So we were very lucky. They could have just as well fallen off up in the air, and we would have been 800 feet up in the air, down to the ground in nothing flat.

So Haggerty went back. Haggerty gave a very excellent press conference, and there was a lot of condemnation that this was not the way that Japan did business, except, again, with Asahi Shimbun. They went back.

Q: What was Haggerty's impression at the time? He was giving the press conference in Tokyo?

MACARTHUR: He gave a press conference in the embassy residence, where he was staying. He called it afterwards and said that this was, in effect, a childish, barbaric act, that Japan had asked for a treaty, we had negotiated, it was more favorable and so forth to Japan than to other countries, we fully recognized Article IX, and that a free and independent Japan we thought was important to us, and we assumed that the Japanese people thought it was important to them. Then he answered a lot of questions and so forth. He handled himself extremely well.

He went back, and I had a long talk with him and then with Tommy Stevens about it. I said, "If this goes on, we're going to have to perhaps rethink this thing."

Well, the demonstrations went on, and they'd moved up to around the embassy and the Diet building, which is not far away. They were confined to those areas. In the rest of Tokyo, you wouldn't have known there was anything going on, but that's what they focused on. Probably the maximum was around 50,000 people. A girl got killed in one of these demonstrations; she got trampled to death in one of these demonstrations. Then the demonstrations started getting ugly.

This was in May, after the Haggerty visit.

I went to Mr. Kishi and said that I thought that if the demonstrations persisted, the worst thing for Japanese-American relations would be to have the President come there and have a scandal or incidents or have that kind of a reception, and that if they could not find a way of bringing them under control -- and I didn't mean by military means -- then I thought the President's visit should be postponed and that I was willing to recommend a postponement of the visit on the basis that the President hoped to be able to work in -- he was going to go to the Philippines first, and then I think to Korea or Taiwan or someplace -- another one or two more countries on this visit, because he got to the Far East so seldom. Kishi said, "Is this your idea or Washington's idea?"

I said, "It's my idea, but I wanted you to know that I proposed to send a message in."

So he said, "Well, I understand. It's a very serious matter, and I understand." Kishi, of course, was fighting for his life, because if the visit was postponed, he would be held responsible as prime minister and would be finished.

So I sent a personal eyes-only telegram to the President and the Secretary, saying that I felt that the visit should be postponed. It had gotten to the point, particularly after the death of this girl, where it was getting violent and ugly, and there was no assurance -- I reported my talk to Kishi and what he had said -- that I could possibly get from them or give them myself that the demonstrations would not take place when the President arrived, and that would be the last thing in the world to strengthen the ties of Japanese-American friendship, for which the visit was planned. So I sent this telegram off and got word back very swiftly that evening -- it was personal, from the President -- saying that he agreed, and that it would be phrased as a postponement and not a cancellation of the visit and so forth. I went to bed much relieved.

By the time I got up the next morning, I had asked for an appointment with Kishi, a follow-up telegram came. Obviously the President had been talking further with some of his advisors. It said, "While I still believe the visit should be postponed, please tell Mr. Kishi that if in his best judgment the postponement of my visit will lead to the total failure of the treaty to be able to be implemented and create a problem for him, possibly calling for his resignation (I don't remember the exact words), then I will come no matter what the risks involved are. I will come anyway." So I went to Kishi. Instead of going into the thing saying, "The President felt that a postponement was wise under the circumstances," I went with this caveat and put it to Mr. Kishi, and Mr. Kishi thought for a while, said he wanted to think about it. Then he eventually said that he felt that the failure to come on the visit would endanger the treaty. I think that was the word the President used -- endanger the ratification, because it still had to go through the upper house of the Diet. It had gone through the lower house only.

So Kishi, who knew that if the President didn't come -- and this is not a criticism of him -- said that after reflection -- I think he asked me to come back later that day, I just don't remember, for his decision, but he said, in effect, that he felt it would endanger the ratification, because it still had to go through the upper house.

The violence, in the meantime, increased, and the attacks on Kishi from the left increased, and I took the position that we should not cancel the visit unilaterally, that the postponement of the visit should come from the Japanese Government, that if we did it, it would show a lack of confidence in Japan and would be construed in various ways, and that their neck was in it. I felt that it was up to them to do it. This decision, I've often wondered about whether it was the right one, or whether I shouldn't have gone back to the President when I got the second telegram, saying he was bound to do it. But in any event, I accepted the President's decision and Kishi's word, except as violence got [worse] later, I sent word to him that it was no longer feasible for me to see him with a crowd, the demonstrations. I felt sure we were coming up against a very serious situation.

Then just before the visit, the President was to leave Washington. The Japanese Government . . .

Q: We had not postponed it up to that time?

MACARTHUR: No, we didn't postpone it at all. The Japanese Government announced that it had requested the President to postpone the visit. When that happened, the reason that Kishi had no wanted to resign earlier was an admirable one. He did not expect, in the face of all this violence, that the upper house would act on the treaty in the 30-day period, but if a bill under the Japanese thing, as I remember the intricacies of it, if it went before the upper house and no unfavorable action was taken, it automatically became law. They had to act opposed.

Kishi's problem was that he had to remain in office for 30 days after the lower house had acted without the opposition being present, because they walked out. I went and saw a number of the factional leaders, who were going to succeed him, because I knew immediately who they were -- Yoshida's boy, Ikeda first, and then Sato. They had an agreement that Ikeda would take it for two or four years, and then Sato would succeed him, and they had the other factions all lined up.

So Kishi stayed in power, deserted by all the factional leaders as somebody that's a has-been. With courage and fortitude, he faced that situation and remained in power until the 30-day period elapsed. The treaty was then ratified. The minute it was ratified and there was no longer any hope, these demonstrations, which I said at the highest, I think, the estimate was 50-some thousand, although from the newspapers, just seeing them concentrated on the crowd, it looked as if the whole city was in an uproar all around the Diet and around the embassy. Kishi stayed in, and then he resigned. Ikeda was immediately elected to replace him.

But the interesting thing was, the minute it was fact that the treaty had been ratified, those 30 days were up and the ratification procedure on the Japanese side was complete, then the demonstrations disappeared.

Q: When Eisenhower was planning to come, when it was still on, you had recommended that it might be a good idea not to come, but Eisenhower had decided . . .

MACARTHUR: No. Let's get it right now. I recommended that the visit be postponed. Eisenhower agreed to that recommendation and sent me a telegram, agreeing. Then he followed it with a second one, saying that if his failure to come would result in endangering the ratification

of the treaty, then he would come, no matter what the risks involved were.

Q: But Kishi's role in this?

MACARTHUR: This is explained to Kishi. But if Kishi announces at that time that the Japanese Government is asking the President not to come, the danger, until the groundwork has been laid for him to remain on with the other factional leaders for 30 days to ratify the treaty, and they wanted it ratified, too, they didn't want chaos, with the left having a great victory. This took time, and the time it took was that period of time when the demonstrations were going on after I had told Kishi of the President's message, and Kishi had said, "Well, I think the President should come." And it was between that time and the time when the arrangements had been agreed within the government that the visit had to be canceled, and it was just about three days before, if I remember.

Q: So the final decision was made by the Japanese.

MACARTHUR: Absolutely.

Q: And at that point, you had not backed away, but you were no longer part of the decision process, because it was their decision. They knew all the factors.

MACARTHUR: It was their decision to make.

Q: This is before the upper house had approved the treaty.

MACARTHUR: Yes. The treaty -- I can't remember, but the lower house acted something around March 20 or something like that, and the upper house had 30 days, which brought it to June 20, and the President was supposed to come over around the 12th or 13th or something of that kind. The decision was always the Japanese. That had been my recommendation from the beginning, because I felt we could ask for a postponement if there were logical grounds, like the President was going to postpone his whole trip to the Far East for a brief period to try to work in a couple of more countries. That sort of a postponement would wash. But for him to just say, "I'm postponing my visit, period," or because of the demonstrations, this would simply strengthen the hand and encourage the left and discourage our friends there. I felt that it would be generally construed as a lack of confidence in Japan and its people. That was the reason I made that recommendation. Some people take it as a mistake. As it turned out, the treaty has become the cornerstone of our relationship with Japan.

If I could cite just a little epilogue, a few years ago I was out in Japan, and I think it was on the occasion of the 20th anniversary of the NATO treaty. A treaty is of indefinite duration for anybody to denounce it after ten years. I was asked to be interviewed on television about the treaty, and a very nice team came to the Okura Hotel, where I was staying, and they got a television studio downstairs. I went down. They had several commentators and people, but a very nice young man from NHK was handling all the arrangements and everything, and the interview went well. Everybody, the Japanese that had participated in it, said it had become the foundation and cornerstone of U.S.-Japan relations.

Then at the end, this young man, he was in his late thirties, it seemed to me, something like that, who had arranged everything so thoughtfully and been very nice, came up to me rather shamefacedly and said, "Ambassador, I was one of those students snake-dancing around your embassy." [Laughter]

I said, "Well, what do you think of it now?"

And he said, "Well, we were totally misled. When our professors told us that the Kishi Government had brought in military force, police force, to expel the thing, what we were worried about was democracy in Japan, and this was a return to militarism and the end of democracy. This is what our professors told us and encouraged us and led us in those snake dances." He said, "That's what set us off. It wasn't the treaty by itself. It was this business of the destruction of democracy," which I thought was a very interesting commentary coming from one of the boys who had been there.

Q: One last question before we end this interview, Mr. Ambassador. During the time you were there involved in the treaty negotiations, did Okinawa and the Bonins come up as an issue?

MACARTHUR: Okinawa was always there, and the Bonins. But the Japanese, after getting the treaty revision, were not in a mood to push immediately. But I wrote a telegram to the Secretary saying that the next thing on the board was that. Then when I came back in March of '61, after President Kennedy had been elected, and I'd known President Kennedy since he was a Harvard schoolboy, he spent a lot of time in my apartment when he used to come over in the summer, when he was at Harvard, to visit his father, Ambassador to England, and he used to come over to Paris, I saw a lot of him and knew him well, so before I left, he asked me if I had any thoughts about what we would face next in Japan. I left him a one-page memo which said at the top of the list, "It is Okinawa and the Bonins, and eventually they'll have to go back. But that will be the most important single problem that my successor will face, because inevitably, basically Okinawa, the Bonins are just an extension, if you will, of Japan, but until Okinawa is there, until it goes back to them, it's going to be a continuing problem that will be agitated and be exploited by the left, and it's one that we're going to have to face." It was not my successor, Reischauer, but I think it was Alexis Johnson who finally worked out the Okinawa thing.

But someplace in my files is a copy of that memo, the one-page memo for President Kennedy, because, as I say, I knew him extremely well, and he was interested in knowing what I thought would happen and what the problems would be during his presidency insofar as Japan was concerned. Okinawa was high on the list.

The Japanese, after they got the treaty, the Japanese Government, you know, you can take things sort of one bite at a time. That was quite an exercise. There would be no such demonstrations against the return of the Bonins and Okinawa, of course, but they knew that we'd have to move gradually.

There was one point that I omitted, that I should have mentioned. From the very beginning, our military and the Defense Department were extremely opposed to the idea of a new treaty. Why

were they opposed to it? Because under the original treaty, they could do whatever they wanted. They could move their troops around. Under the status-of-forces agreement, under that old treaty, if an American committed the most hideous crimes against Japanese civilians when he was off-duty or any other time, the Japanese did not have any custody of him.

I arrived at a most inauspicious time when I arrived as Ambassador to Japan in 1957. It was about ten days after the Gerard case broke. The Gerard case was a G.I. who was out guarding a rifle range where these poor, miserable, wretched women, ragpickers, they called them, would come out to pick up casings and pieces of metal and the metal from bullets and things and sell them. And he had strict orders to keep his gun unloaded and never to use it during the rest period. He got up there and squeezed off, targeted an old woman who was about 200 yards away, squeezed off a shot and killed her. He obviously had violated his instructions, was just practicing, and had forgotten to unload his gun during his lunch hour period, which were in his written instructions. The military were totally averse to turning him over to Japan for trial. Although under the terms of the agreement we had, in a case such as that, they had a right to try him. The military immediately whipped up the Congress that they should never let the Japanese try somebody, they wouldn't get fair people, justice, and all the rest of it.

So I came home and went over to the Hill and talked to a lot of senior people in both the House and the Senate about this, who all agreed with me that given the circumstances -- and I brought back the whole history of the case -- that we should turn him over to the Japanese, which we did.

This shows the mentality of the military. But then the idea that they couldn't, without -- under the old treaty, we could have put Japan into thermonuclear war without even consulting her, and the idea that you had to give up the right to do whatever you wanted in Japan and Japanese territory was too much for them. Finally, during the course of the negotiations, the Deputy Secretary of Defense, whose name escapes me now, he went out to Korea and wanted to stop by Japan, and I sent a message to the President and Secretary of State, saying that I felt that it would be a great mistake for this gentleman to come to visit Japan, which was on his itinerary, unless he agreed not to have a press conference, because they were bound to ask him, "Have you stopped beating your wife?" questions about the treaty, which he would not be able to answer satisfactorily, and it would be exploited by the left. This recommendation was approved, so he'd come to Japan and hold no press conference, but he was miffed, and so he just bypassed Japan and didn't come there.

But again, this is a business where I think we've erred a great deal. We have some Secretaries of Defense who go abroad and make statements, and Mr. Weinberger is one of them, that are strictly foreign policy statements. Casper Weinberger talked foreign policy the whole time, perhaps because he always wanted first to be Secretary of State, rather than Secretary of Defense. But you should have one senior cabinet voice speaking for the United States Government on foreign policy. You have either the President or the Secretary of State.

Q: But you had very much the feeling, during the negotiations, that your bosses were the Secretary of State and the President, and they were running the show.

MACARTHUR: Anybody in the Defense Department. General Eisenhower knew the Defense

Department better than the people who were the incumbents. He'd grown up in that department. He knew its weaknesses. He was the one that later, as you remember, talked about the world of the military-industrial complex. He knew it damn well, and he knew so much more about it than any of the others, that if they challenged him, they would be on very poor ground, and they probably wouldn't be around very long. I say that because we have so many Secretaries of State that know nothing about the five-sided building and how it operates and how it works and how the JCS works. I worked with the Joint Staff. I helped work on the first NATO Force Goals and everything else in the bowels of the five-sided building. But there was nobody in the Defense Department that knew as much about the Defense Department as President Eisenhower. We hadn't had a President before him that knew as much about foreign affairs as he did, so we were very, very fortunate.

Q: So you felt the President and Secretary of State were running the ship, as far as you were concerned.

MACARTHUR: There was no question about it. Who else?

Q: We are talking about a different era, where the Secretary of Defense often has his own policy.

MACARTHUR: That's been the fault of the President. That's uniquely the fault of a President, to permit a Secretary of Defense to go out and make all kinds of pronouncements when he's on foreign trips, on basic foreign policy. I don't mean that he can't say that we fully support a foreign policy, but to go out and deliberately seek foreign policy, basic statements of foreign policy and things of that kind, that isn't the way to do it. Sure, you support the foreign policy of the United States, but the spokesman should not be because you get conflicting interpretations.

Q: Interview date: March 29, 1988. Mr. Ambassador, there was one question I noticed when I reviewed our last interview concerning Japan. Was the fact that you were the nephew and had the name of Douglas MacArthur a positive factor? Did you find this helped you, or was it almost an inhibitor when you were dealing in Japan?

MACARTHUR: On balance, I found that it helped me. It helped me with the senior people with whom I dealt in Japan at that time. As today, to a lesser extent, it was the older politicians, the older men that were the people that were in power. It's curious, when I called on the prime minister, my opening call, he referred to my uncle as MacArthur Shogun, and I was MacArthur Taishi, Ambassador MacArthur. But General MacArthur was referred to by those senior people as MacArthur Shogun.

On the whole, I think they felt it had been a very benevolent administration during the occupation that had Japan's interest at heart. The Japanese traditionally, going back to feudal days, and let's remember they were only 100 years out of feudalism, the Meiji Restoration had taken place less than 100 years from the time I assumed the ambassadorship there. When the feudal daimyos, the warlords, were fighting each other and the one that lost, he committed suicide so that there wouldn't be any what the French call revanchists, revengeful people, left, the Japanese would slaughter the losing daimyos' people so that there wouldn't be any gathering there that could create problems for them.

I don't know what, frankly, they expected when they lost a war that they had started with the attack on Pearl Harbor, but the end result was a feeling, except for the left, which accused me constantly of trying to remilitarize Japan when I was negotiating the treaty, this spurred on by broadcasts in Japanese from both Moscow and Peking at that time.

Q: Did they throw your uncle's name in your face at that time?

MACARTHUR: No, but in some of their broadcasts, they would say I came from a long militarist family, which was quite true, because one grandfather was an admiral, and the other was a general, my father was in the Navy, and General MacArthur was my uncle. My brother had been and died in the Navy. So I was the sign of a military family trying to remilitarize Japan and destroy democracy and reinstate the militarists who had brought Japan to the great disaster that befell it as a result of their action at Pearl Harbor in World War II.

So on balance, I found it a positive mark in my favor. As an example, Mr. Yoshida, who had some very spirited discussions, who was five times prime minister of Japan during the period of my uncle's shogunate there, if I may put it that way . . .

Q: It's still being referred to. In this week's article in the Washington Post, they referred to it.

MACARTHUR: Somebody called my attention to that, yes. But when General MacArthur died, Mr. Yoshida, the grand old man of Japanese politics, who was 86 or 88, flew, and rather infirm -- he died just a year or so later -- he flew all the way to New York for the funeral ceremonies there, then he flew down to Washington, and then he flew down to Norfolk for the burial ceremony where General MacArthur is buried in the old capitol building in Norfolk. So I think there was a great respect for General MacArthur, and, of course, he had learned a lot, because when the Russo-Japanese War took place, my grandfather, General Arthur MacArthur, the Civil War hero who won the Medal of Honor at Missionary Ridge, was named U.S. observer with the Japanese forces during the Russo-Japanese War, and he took as his aide his son, young First Lieutenant Douglas MacArthur, and they were mixed up with the Japanese military. I think my uncle, as a result of that experience as a very young man, and in the close intimacy of life with the Japanese in a military observer's capacity during a war against a great European power, he picked up the fundamental essence of how the Japanese mind worked and how, if you had to deal with them in the position that he was in, the best way to deal with them.

Of course, they were very grateful that he kept the Emperor, because there was a strong move, as you may remember, to depose the Emperor and liquidate it. They were also grateful that when the Soviets proposed dividing Japan into zones of occupation, as they did in Germany, and we agreed to in Germany, he opposed that successfully with every ounce of his vigor, which was very considerable. Had we divided Japan into zones of occupation, Japan today would be divided between a Soviet zone and an American zone, or a Japanese Democratic Republic and the Japan that we know. So in the reconstruction effort, his recommendations; in the handling of the Japanese, he handled them in a way that they were accustomed to. They were accustomed to a senior person, like a shogun or a strong man doing it, he dealt with them, with very few of them -- the Emperor, Mr. Yoshida, and a few others. But he kept an aloofness from the mass and from

mixed social events and things of that kind. This was very much in keeping with Japanese tradition. Of course, with the Emperor, who was surrounded by the silk and veil, and where before the war, when the Emperor passed, you had to bow your head and put your eyes on the ground so that you would not desecrate him by staring at him, I think his mode of operation, call it what you will, and the way he conducted himself was by and large in keeping with something that is similar to what they were used to.

GASTON J. SIGUR, JR.
The Asia Foundation and Sophia University
Tokyo (1956-1961)

Gaston J. Sigur, Jr. was born in 1924 in Louisiana. He attended Louisiana State University from 1941 to 1943. In 1943 he entered the Army and served until 1946. He received his B.A., his M.A. and his Ph.D. from the University of Michigan. He worked for the Asia Foundation and dealt with the National Security Council from 1982 to 1986. He was interviewed by Charles Stuart Kennedy in 1990.

SIGUR: ...Later, I was in Japan from 1956 to '61 with the Asia Foundation and then at Sophia University.

Q: *I wonder if you could talk a little about that. You were at the Asia Foundation, and then you were in Sophia University in Tokyo from '59 to '61. Could you tell me your impressions of Japan at that time, sort of a formative period.*

SIGUR: Japan was moving out from under the occupation (the occupation ended in '52). And Japan was beginning to feel her way into the post-war world as an independent country-- closely allied with the United States, of course.

I think that's one of the significant factors here, that since that period of time, when the occupation ended, the governments of Japan and the people of Japan, in their election process, have all strongly reinforced the tie with the United States. This has been absolutely key in terms of their foreign policy and the way in which their foreign policy is made and implemented. It is, first and foremost, the United States-Japanese relationship that affects the minds of the policy makers. So I think that's very important.

But also, of course, by 1956 one could begin to see the Japanese economy rising quite rapidly. There had been great devastation caused by the war. Immediately following the war, one saw devastation all over the country. But by '56 this had clearly begun to disappear. Rebuilding had taken place, new businesses were going up. You got a sense of vitality. This is not surprising, given the fact that the Japanese educational system was one of the best in the world. The literacy rate was almost a hundred percent, even in the pre-war days in Japan. Training was very good. The United States contributed mightily to the Japanese economic development and one got a sense of things moving forward. You could see again the rising of Japan.

Q: What was your impression when you were in Sophia University (this was one of the top universities in Japan) of the student body as far as its attitude towards outside Japan and particularly the United States?

SIGUR: It's hard for me to say too much about that, because I didn't see that many of the students. I was engaged in a research project there with a group of Japanese professors.

LESTER E. EDMOND
Economic Officer
Tokyo (1956-1961)

Lester E. Edmond attended the City College of New York and Harvard University. Edmond was in the US Army during WWII and worked in the State Department before entering the Foreign Service as a Rotation Officer and International Economist. His posts in the Foreign Service include Japan, Finland, Washington, DC, National War College, France, and the Philippines. Edmond was interviewed by Raymond Ewing in 2001.

Q: So you're out to Tokyo in 1956, I think.

EDMOND: That's right August 1956. Travel was more leisurely then. Shom, the three children and I flew to San Francisco where we boarded the American President Line's President Wilson for a thirteen day voyage to Yokohama.

Q: What was your job there, and how did you find things?

EDMOND: Obviously I was assigned to the Economic Section of Embassy Tokyo. Again I have to say that I have been, I think, blessed with the quality of the officers for whom I have worked during most of my career. The Ambassador at that time was Douglas MacArthur II, the nephew of General MacArthur. The Economic Minister was Frank Waring who was followed by Ben Thibodeaux. In addition to serving as Economic Minister, both also served as heads of the US Aid Mission to Japan which was still in existence, although winding down. When we think of Japan today it is difficult to appreciate that when I arrived it was still an aid recipient. In fact one of the assignments given to me during my first years there was to negotiate a PL 480 agreement to furnish rice to Okinawa.

In 1956, Tokyo was immeasurably different than it is today or even when we returned for our second tour in 1970. The city itself had been largely reconstructed after the fire bombings of 1945 which had largely destroyed it. The buildings, however, had been hastily built and were architecturally unimpressive. As an aside it also not widely appreciated that the loss of life in Tokyo, as a result of the bombings, exceeded the loss of life caused by the atomic bombs dropped on Hiroshima and Nagasaki. In the pressure to rebuild and rehouse the displaced Tokyo residents the authorities did not alter the narrow winding streets which served Tokyo adequately in the seventeenth to nineteenth centuries but which even by 1956 had become clogged with

small three wheel trucks.

The only western style hotel available to foreign visitors was the Imperial Hotel designed by Frank Lloyd Wright and which was one of the few survivors of the massive 1923 earthquake. The high rise office buildings which dominate today's Tokyo skyline were in the future. In 1957, about a year after my arrival Phil Trezise arrived to serve as Deputy to Ben Thibodeaux and then to replace him as Minister for Economic Affairs. In my opinion which is shared by many of his colleagues, Phil was the finest Economic Officer that the Department has produced, certainly during the thirty or so years of my experience.

The assignments given to me were rather general in nature. One area that I was told to follow and report on concerned Japan's economic relations with other Asian countries I also did a bit of bilateral negotiating of minor agreements. One that sticks in my mind, because of an embarrassing incident dealt with disposal of the yen proceeds of an aid agreement. I was in the Embassy on a Saturday, when a cable arrived from Washington which reversed the negotiating position that we in Tokyo had developed and which I personally had promoted to the Japanese. In my view it appeared to put the entire agreement in jeopardy. I went charging up to the Ambassador's office. Under normal circumstances I would have expressed my concerns to my immediate superior so my seeing the Ambassador directly was a bit unusual. But on this occasion, since Phil Trezise was not present, I barged in and remember saying something like, "Mr. Ambassador, we're in great trouble, we have a real problem." He said, "What is it?" and I explained it to him. He said, "Well, what do we do about it." I said, "I really don't know. The message has just arrived." Ambassador MacArthur leaned back in his chair and rather briskly said "Les don't ever come into my office again just to tell me we have a problem. I have problems all day long. All I deal with are problems. When you come into this office with a problem, you tell me what you think the suggested solution should be." That was another lesson that I learned early in my career.

Shortly after Phil Trezise became Minister, I unofficially took on many of the tasks of a special assistant, primarily in the sense that I was his note taker for most of the meetings which required records to be kept and follow up messages prepared. Phil Trezise had regular weekly sessions with the chief of the Economics Bureau of the Japanese Foreign Office (the Gaimusho), and often with the Director General of the Gaimusho's American Affairs Bureau, as well as intermittent meetings with senior officials of other agencies, such as the Ministry of International Trade and Industry (MITI). It was a somewhat onerous assignment but it provided me with the invaluable experience of observing the interplay between highly professional diplomats as well as providing me with insight into the wide range of politico-economic issues facing our two countries.

Q: This was your first overseas assignment, first Foreign Service assignment abroad. At that time the Economic Commercial Section, Economic Section, was pretty good sized. There were people from other agencies.

EDMOND: It was one of the more sizeable Embassy economic sections. Treasury furnished the Embassy with a Financial and Assistant Financial Attaché. Agriculture also had at least two representatives The Science Attaché's office had representatives furnished by the Atomic Energy Commission. Commerce had not yet established the Commercial Service. Therefore the

Commercial Section was staffed by Foreign Service officers from State.

The differing relationship between the United States and Japan during the two periods of my assignment there is worth noting. During the 1956 to 1961 period, particularly in the early years, the United States acted as an elder brother attempting to assist a younger sibling. In the trade area, we actually spent time and effort to encourage Japanese firms to export to the United States and to Europe. I recall making speeches to Japanese industrial associations, lecturing them as to the importance of quality control if they were to sell to the wealthier industrialized countries. Little did we realize that in a very few years some of our bitterest trade disputes would be about what we would then regard as excessive Japanese exports to the United States and reputed unfair Japanese trade practices.

Another area of responsibility that was assigned to me was to encourage Japan to expand the level of its foreign assistance, particularly to the countries of Southeast Asia. This was an issue that did not arise too frequently but it had a significant political component as it was often interconnected with the delicate issue of reparations.

Q: The other thing that I [remember], of course - having served with you at least part of the period in Tokyo; I came in 1959 - was the planned Presidential visit by President Eisenhower, which was supposed to take place in June of 1960, and the demonstrations going on connected with the security treaty signature and so on. Do you have much recollection of all of that?

EDMOND: One could never forget that incident which was certainly the most dramatic development in my entire first tour in Japan. As you noted, the President was scheduled to visit Japan in June 1960. The visit was, I understand, strongly recommended by Ambassador MacArthur and was to be a political triumph for Prime Minister Nobusuke Kishi who was a great favorite of the Embassy. The immediate occasion for the visit was the revision of the United States-Japan security treaty. One of the conditions of the peace treaty which had been signed, I think, in 1951 had been the acceptance by the Japanese government of a mutual security treaty that provided for extraterritorial status to the American forces stationed in Japan. Some months earlier a Japanese woman collecting spent shells at a US firing range had been shot and killed by an American soldier. The incident quickly became a public relations nightmare and a political issue between our two countries because the United States military insisted on trying the soldier in a US military tribunal as was provided for in the treaty. Eventually the soldier was sent home with a dishonorable discharge but it left a residue of Japanese resentment at the "unequal" treaty that the postwar politicians were obliged to accept.

After this episode the White House was persuaded that the security treaty should be renegotiated to meet the principal objections raised by the Japanese Government. It was believed that the outcome would strengthen the Prime Minister. The treaty was revised in 1960 to satisfy Japan's principal concerns. Unfortunately the treaty's revisions occurred at about the same time that Prime Minister Kishi managed to outrage public opinion and alienate many members of the Liberal Democratic Party by proposing a return to a much detested prewar police system.

President Eisenhower had agreed to pay a state visit to Japan to dramatize the new stage in United States-Japan relations. Unfortunately it was not the hoped for success. Kishi, with a huge

majority in the Diet, insisted on pushing the new treaty to a vote without allowing the debate that the opposition considered its right and Japanese custom expected. At about the same time, May 1, 1960 to be exact, the Russians shot down the U-2 spy plane that was piloted by Gary Powers. Leftists world wide, encouraged undoubtedly by the Russians, railed at what they regarded as untoward US aggressiveness during the Cold War. All these developments set off mass demonstrations in Tokyo, particularly near the Embassy and the Diet area.

With the demonstrations in full swing, Jim Hagerty, President Eisenhower's Press Secretary and the President's advance man for the Tokyo portion of the visit arrived at Haneda Airport outside of Tokyo. His arrival had been well publicized and a large mob managed to halt the cavalcade of cars near the airport and Hagerty's car was jumped on and treated violently before the police were able to rescue him. The news and photos made the front pages of the US and Japanese press and compounded the already negative public relations aspect of the visit. In addition at one of the demonstrations in front of the Diet a girl student was trampled to death in a confrontation with the police. As a result of these developments Kishi lost his nerve and asked the Ambassador to request that the visit be canceled. I suspect it might well have been by mutual consent for I find it hard to believe that Hagerty would have continued to support a visit after the reception that he received. The violent aspects of the demonstrations were extensively publicized and US television made it appear as if all of Tokyo was up in arms.

I saw a somewhat different version of the protests. I was in the embassy working after hours, and I guess it must have been about seven in the evening or so. I ordinarily walked to work because we lived in apartment called Perry House, which was within easy walking distance. When I reached the embassy gates, a sizeable but organized and well disciplined demonstration was taking place just outside the Embassy, effectively blocking entrance or exit. The demonstration's leader was using a bullhorn and leading chants about American perfidy. I didn't quite know what to do and I had no idea how long the demonstration was going to last. I don't think I would do this today but while standing at the front gate I attracted the attention of the leader of the demonstrators and then pointed at the gate, letting him know that I wanted to leave. He looked at me and nodded, and I persuaded the Marine guards to open the gate just enough to permit me to squeeze through. The leader of the demonstration then turned, raised his hands and stopped the crowd from chanting and let me pass. I turned and bowed to him in thanks. He turned and bowed to me in turn and then continued with the vocal demonstration. I don't know what conclusion one draws from that, and I don't mean to imply that the demonstrations, the riots, were not serious, but my one experience differed considerably from what was viewed as the norm.

Q: I've heard of other stories like that, and certainly my own experience was similar. I can't quite remember an incident as clearly as that, but I think one point is that they were demonstrating against a cause for ideology, for ideas, while having, I think, real honest respect and affection for individual Americans, whether they were official Americans at the embassy or somebody else.

EDMOND: I agree, and there's another factor which is perhaps somewhat applicable as an aside. It's that the television images emphasize the violence, and the impression is given that the violence is rampant throughout a city when actually the violence is not as wide spread as it appears. Now, I worry a bit about saying this, because we now live in different times with far

more violent terrorism and I don't wish my comments to lead some to think that I am minimizing the dangers that exist in many parts of the world to our Foreign Service personnel. This was just one limited experience in one unique country at one particular time.

Q: I certainly agree with that. On the other hand, I think, again having been there at the same time, I certainly did not - I may have been naive - did not have a fear of violence that it would be directed at me, partly because I knew university students and I kind of knew what they were thinking about, also because the demonstrations were very well organized and disciplined, if you will. We may have been all perhaps not aware of dangers that could be in other settings, but certainly at the time I didn't have that trepidation at all. Well, when did you actually leave Tokyo, Les? That was in 1960 or '61?

EDMOND: I left Tokyo in 1961.

ALBERT L. SELIGMANN
Political Officer
Kobe-Osaka (1956-1959)

Political Officer
Tokyo (1959-1962)

Albert Seligmann was born and raised in New York City where he also attended Columbia University's School of International Affairs. He entered the Foreign Service in 1955 after serving in the US Army during World War II. His career included posts in Japan, Thailand, and Germany. He was interviewed by Charles Stuart Kennedy in 2000.

Q: Well, you were in Kobe-Osaka from 1956 to when?

SELIGMANN: Until January 1959.

Q: What was when you went there, you say your job was political officer.

SELIGMANN: Yes. We still had the luxury of such a position. We had offices in both cities; that is why the name of the post was hyphenated. When I arrived, we were on the verge of moving into a newly built building in Kobe and had just moved in o a new office building in Osaka, then perhaps the finest, but now one of the oldest - we moved out of it since. I spent more time in my office in Osaka than in Kobe, where I had a small office in the Consul General's suite. As an amusing aside, CIA decided to open a small suite of offices in the new Kobe building, down the corridor from me and put up a sign, "Political Section." It caused me no real problems, even though ostensibly it looked like I was the spook and they were the "real" political section - I don't think anyone was really confused.

Both Osaka and Kobe were fascinating cities whose relative importance to Japan as a whole was

far greater than, say, ten years later. The headquarters of many of Japan's largest companies - all the major trading companies, major textile companies, pharmaceutical firms, etc., were in Osaka, and Kobe was still the nation's major port. It was a tremendous opportunity for a junior officer for two reasons. First, in part as a carryover from the occupation, and in part because the Japan-U.S. relationship was only beginning to change from "big brother, little brother" to a more normal partnership, a process that took some years, I had access to just about everybody, a heady experience. Secondly, I could do things that were more difficult to do in Tokyo, where you were forced to deal more with day-to-day requirements, answering the telegrams, etc., and had to clear one's work with at least two vertical layers as well as with other sections. The Embassy would levy requirements from time to time, for example when it prepared a report on elections or attitudes on a particular issue where it incorporated the findings of the consulates, but most of the time I could set my own agenda. So what I was able to do as never before or since was to get out and report in microcosm, often at the grassroots level on developments in the Kansai area, that is Western Japan, that reflected on national trends or foreshadowed national trends to come. I knew from my Washington experience how welcome this sort of reporting was. I had no trouble making appointments with governors and mayors, newspaper editors, leading professors, presidents of major companies and banks, some of whom exercised considerable political influence, etc. By and large my contacts were eager to express their views to an American government representative, and many of them became good friends. I was still pretty junior, but found no difficulty, for example, in having prominent people to our house for dinner - more often than not offering them the novel experience of bringing their wives along.

Apart from a sizable consular workload, the major focus of the consulate's work was economic - I was essentially a one-man political sideshow. Lew Gleeck, the more senior, somewhat crusty head of the economic section, belonged to the old school that placed high value on guidance to junior officers, and even though he had no responsibilities for my work, was of inestimable help in sharing ideas, introducing me to key business leaders, etc.

Q. Well in the first place, just to get a little feel, who was the consul general at this time - or were there consul generals?

SELIGMANN: George Emory. He was newly appointed to the job and - now we are going to get irreverent - made my job easier in a way. George had been in the private sector before he served under George McGhee in the AID mission to Turkey. As I understood it, McGhee had wangled the Kobe-Osaka position for him, and somewhere along the line, somebody told him this was the second most important position in Japan. Now I don't think that would have sat well with the DCM. I know it didn't sit well with the Supervising Consul General, as he was still called in those days, because he was supposed to supervise the consulates and consulates general. But George Emory took it very seriously. He would not move out of his temporary quarters in the new apartment building they built for staff in Kobe until he could find suitable housing. Well, he set his heart on a house owned by Anderson Clayton, one of the big American cotton firms, that were important in the area at that time, a lovely house that ironically much later became the residence of the consul general. It was supposed to become his residence when the incumbent, who expected to be transferred back to Texas, went on leave. He came back, however, so Emory did not get the house. Instead, he combined two of the tiny apartments into one and then complained that he couldn't entertain because he didn't have appropriate quarters. That left Lew

Gleeck and myself to do most of the entertaining. Emory didn't move around much. He would make a grand tour and pay calls on the governors of the 13 prefectures in the consular district, but steered away from substance.

Q: Just to give a person a feel about this, take a day. You start out in the morning; what are you up to? What did you do?

SELIGMANN: I started off by reading a number of newspapers at home or, if I was headed for Osaka, on the train. One thing I learned early in the game, however, was that while the papers were useful to develop leads, there was generally a story behind the story. For one thing, they tended to treat developments the same way, partly because of the press-club complex, whereby reporters assigned to cover a particular political party, major organization, government office, or the like generally consulted with each other on how they would play a story. Another approach was periodically to check in with contacts who had proved valuable to myself or my predecessors in the past. Often I set out not knowing just what it was I was after, but landed up stumbling on worthwhile information or part of what I could turn into a larger report, e.g., attitudes of the business community toward the coming elections. A major reporting vehicle, well-received in the Embassy and Washington was a monthly composite despatch, in which I devoted a page or two to about a dozen different topics. Occasionally, but not as often as I had supposed, I would be asked to send reports to the Embassy for incorporation into larger reporting pieces - to which the consulate contributions might be attached. In much of this, a good model was my predecessor, once or twice removed, Dave Osborn.

I had the help of a senior local employee, Mr. Oishi, who had been in the job for some years and had especially good contacts with the local Japanese security agencies - so good that I wondered sometimes whether I might be at risk of unwittingly serving two sets of consumers. Partly with that thought in mind, I broke with the custom of some of my predecessors and preferred to conduct interviews on my own in the absence of a situation that called for taking him along, e.g., if my interlocutor had been his long-standing contact. My philosophy was that my language ability was far from perfect, but even if I missed one-quarter of what I was being told - not necessarily the norm - when I talked to a Japanese contact tête-à-tête in Japanese, he was likely to speak far more frankly and tell me twice as much than he would have otherwise. When I went on extended field trips in the consular district, which I tried to do perhaps three times a year, I would go on my own, which probably hurt the feelings of Mr. Oishi and put more strain on myself, but in the end paid off both in terms of information gathering and representation of the U. S. On the other hand, he was extremely helpful in setting up appointments, and based on previous experience, suggesting people to see.

Q: What were you looking at particularly at this point?

SELIGMANN: Just about all political trends. This was the height of the Cold War and there was great interest in left-wing movements, and, in the light of Japan's history, the right wing as well. I was amazed at how open a discussion you could have with even the more extreme members of other left-wing groups, including some of the trade unions and the principal political opposition, especially strong in the large cities, the Socialist Party. Much of our coverage of right-wing movements, which were noisy but not all that influential, was through Japanese sources,

especially the PSIA (Public Safety Investigation Agency). Coverage of the Liberal Democratic Party, which has dominated Japanese politics from about that time on, was no problem and helped provide insights on attitudes toward the performance of the administration in Tokyo, factional maneuvering, and the like. It was also a good chance to get to know some of the up-and-coming politicians, a number of whom became prominent in later years. To give one example, Masa Nakayama, a Lower House member from Osaka who became Japan's first woman cabinet minister, invited us over to meet her son, a pediatrician and Osaka prefectural assemblyman. We became good friends and our families went on weekend excursions together. Subsequently he took over his mother's seat in the Diet and he rose to be Foreign Minister.

The business community at that time was far more active in politics than it is today, and certain of its leaders were regarded as the pointmen, so to speak, in exerting political leverage; they were delighted to discuss politics and some of my best reporting derived from conversations with persons such as the presidents of some of the trading companies and textile companies, ranking officials of the three major economic organizations, etc. Elections were always a focus of interest. I would generally prepare a district-by-district analysis, to the extent possible based on field trips, replete with predictions, that fed into the Embassy's composite reporting. This was a luxury that other constituent posts lacking a political officer could not often afford, whereas Embassy officers in turn could not always get away from their desks as much as they would have liked.

I was also able to report in depth on sociopolitical issues such as the status of the burakumin (the current euphemism is dowa but still outcaste) community, especially significant in the Kansai area - hard to imagine today, but tens of thousands of this minority group of Japanese, subject to economic and social discrimination, lived in segregated areas of Kobe, Osaka and Kyoto, without paved streets or sewers, but nonetheless wielded some political clout. Another phenomenon we reported on well before it came to national, let alone international attention, was the rapid growth of Sokagakkai, a Buddhist sect with great appeal to the growing rootless urban migrants from the countryside. Sokagakkai proselytized with methods bordering on illegal coercion, e.g., boycotts of small shopkeepers who did not join, heavy-handed door-to-door visits, ostracizing of non-member schoolchildren and so forth. Out of nowhere it started to hold rallies in Osaka drawing tens of thousands of well-disciplined members with arm-banded marshals, marching youth groups and the like - all reminiscent in the minds of observers of the early Nazi Party. Then in 1956 it ran three candidates in the national Upper House elections, including a popular baseball pitcher, and to everyone's surprise, all three were elected. This show of well-organized mobilization and discipline worried political observers.

Q: Yes, I was wondering whether we were, I think normally American professionals feel begin to feel disquieted when you have people on sort of religious grounds because it tends towards fanaticism and so forth.

SELIGMANN: That's right, so we were very much interested. We covered that in considerable detail but I held my fire in judging Sokagakkai's political intentions: its pronouncements were too amorphous and probing with other political observers did not add much. Some time later, Jerry Schecter, a friend who was a stringer for Time magazine - subsequently, Time Bureau Chief in Moscow - said, "Hey what about Sokagakkai?" I gave him some leads for covering it,

and we traded some of our information. If I remember correctly the article he produced helped bring the group to public attention in the United States Much has changed over the years, but at the time it was a little scary, because in the next election in 1959 they ran six candidates and elected all six. They had built their strength up to where it is today with about 50 members in the lower house [in 2001 down to 32], and it has become an essential coalition partner of the LDP. For some years, the political party has operated as a separate entity, the Komeito or Clean Government Party, albeit with the same religious Sokagakkai base. They no longer have their big rallies; they have dropped their coercion tactics; their policies remain amorphous with no indication of extremism. That was the kind of thing we could report on that was not so easy to do working out of the Embassy.

Q: This, of course, is the great advantage to consulates which is often lost e in an embassy because people tended to get stuck with visitors, reports, the whole thing, and they don't get out.

SELIGMANN: I remember that when Winston Lord was assigned as a junior consular officer, I believe to Kuala Lumpur, he had just resigned from the Department on the grounds that his talents would be wasted. I got to know him when we were working in the same office in the Defense Department shortly after that and told him, "You know, you made a mistake: that is the kind of place where if you want to do something, you just do it and you can make a mark for yourself - you will never have that sort of chance again." Of course, he didn't make a mistake. He did very well.

Q: Did you have problems dealing with this religious group? Often they don't take kindly to foreigners. Was there xenophobic...

SELIGMANN: I didn't meet with them directly. I relied mostly on government officials, newspaper reporters, and politicians who were observing them Later on I dealt with them. Jumping ahead, but before we forget, their leader at the time was Daisaku Ikeda, a charismatic figure who is still the head of their international bureau (deposed as leader of the Sokagakkai proper after he became involved in a number of scandals, both monetary and sex. He established a reputation later on moving around the world, sponsoring major conferences, et al. He published a book on his dialogues with Arnold Toynbee. When I was back with the Embassy and we were fighting to get the revised Security Treaty ratified...

Q: This is 1960?

SELIGMANN: 1960-61. The question was the LDP being put in the position of having to ram this through the Diet unilaterally, with all of the opposition parties refusing to participate in the proceedings. That wasn't a good picture to present to the world for the U.S. or Japan. It turned out to be a pretty futile mission, but I made an appointment with Ikeda and tried to persuade him to have Sokagakkai at least abstain. In the end they didn't, but we made the effort.

Q: What about the communists? Could you talk to the communists?

SELIGMANN: I imagine it would have been easy to do so, that is they would have been willing to talk to me. But for the same reasons prevailing in many other parts of the world, our policy at

the time to have no contacts with the Communist Party or its more blatant front organizations, e.g., the Sino-Japanese Friendship Association, the Soviet-Japanese Friendship Association, Gensuikyo (the anti-Atomic Bomb Association), etc. I thought this was well advised: we did not want to be manipulated by Communist propaganda and wished to avoid giving the wrong impression to others, especially the more moderate left. This was the height of the Cold War with large-scale financing of leftist front groups coming from the USSR and China, and while it runs counter to my basic conviction we should keep an open door for dialogue with just about anyone, it would have been the wrong thing to do. Later on in the embassy, I talked to communists when they came to present petitions. As is so often the case, probably around the world, they mostly turned out to be nice affable people, but we didn't get anywhere convincing each other, and you landed up accepting the petition with a minimum of argument, in a fairly cynical ritual.

Q: Were we looking at the position of Koreans in the society at that point?

SELIGMANN: Yes. That is a good question. The Korean community was split down the middle, and the vast majority belonged to Chosen Soren, which was the North Korea affiliated organization of the Korean community.

Q: Why would that be?

SELIGMANN: Well, they were radicalized, which was easy to do because of the discrimination against Koreans within Japanese society and the way the Japanese had treated them during the war, when many Koreans were brought to Japan as forced labor in factories and mines, often in appalling conditions. Many Koreans were repatriated to Korea after the war, but many were not. They had put down roots in Japan, but they remained politically radical. Yes, we reported regularly on Korean organizations and political activity, relying mostly on the Public Safety Investigation Agency. CIA, you know, often goes after the same information, as I discovered down there and in the embassy. CIA may well have traded information with Japanese intelligence agencies or collaborated with them in other respects - I just don't know - but for the sort of information I wanted, they were very open and it was very easy. I often felt over the years that I could get for free something that...

Q: Well, one of the themes that comes through here from time to time with these interviews is that you are getting information for free, but often if CIA is paying for it, it has greater force when it is used with the powers that be, the decision makers back in Washington because gee, we paid for it you know. So, I mean this must be better, when actually paying for there is a taint.

SELIGMANN: Yes. I think sometimes the other way: if someone tells one of our officers something and it is clearly sourced and derives from a well-identified conversation, maybe that is more credible. It can cut both ways. Of course the funny feeling I sometimes had was, "Are they giving this to me because they are paying for it?"

Q: Well, how about contacts within I guess it is University of Kobe, University of Osaka, in other words at the university level? Was this pretty much USIA was doing this?

SELIGMANN: They were doing a lot of it, but there were professors with whom I would meet

periodically, especially at Kyoto University which was the number two university in Japan after Tokyo University and had some prominent professors of international law interested in foreign relations, security issues, and what was going on in the intellectual movement in general. One Kyoto University professor I saw often, Masamichi Inoki, became one of Japan's foremost security experts for many years heading up the government financed Research Institute of Peace and Security in Tokyo. I can't say, however, that I was deep into the academic community.

Q: Did you find the Japanese I mean at this point very much interested in what was going on in the United States or elsewhere? Was this, I mean were we finding out a lot more about them than they were interested in finding out about us?

SELIGMANN: Oh they were much interested in everything that was going on in our country. USIA, which then had an extensive network of branches and cultural centers throughout Japan, went about disseminating information in a planned, methodical way, but you could not help but be a source of information about developments in the United States that entered into countless conversations - and we also played our part in the selection of nominees for leader grants, and in making suggestions for the programs of those who were contacts of the Political Section. I had mentioned the business community, and here I have always felt and feel today that even though Japan's business leaders are in constant touch with American business leaders, both individually and through countless organizations, we are a bit delinquent in not cultivating top business leadership. Lew Gleec, who was a model in this regard, and I probably could not do all of what we were doing then at the same level today. Now you have to be at the top to do it, but I think we should be spending more time with business leadership, talking to them about their attitudes, not just on business and economics but on politics.

Q: One always hears about the Japanese bureaucracy is a unique experience in decision making and all that, but in your type of work, you really didn't come across it did you?

SELIGMANN: No. Back in the Embassy later on, yes, but I wasn't negotiating anything down there. After all, representation, reporting, and negotiation are the essence of your job. In Kobe-Osaka I was engaged in representation to a considerable extent, and reporting to a very large extent., but not much negotiation. To the extent we had anything to do with negotiation it would probably have been the responsibility of economic officers supporting our negotiation of the first of many trade issues to come.

Q: Did we have much in the way of military in your particular area?

SELIGMANN: No. There was a little bit, and it pretty much closed down while I was there. The major installation that remained in our consular district was the Marine Air Base at Iwakuni. I didn't have much to do with them and it presented no major problem of the sort that gradually built up around some of our bases. The commissary near Osaka closed down so we placed periodic orders with the Embassy commissary, principally for liquor, and did most of our shopping locally - in a pinch you could always place an order for commissary goods with the local black market that would be filled promptly.

Q: Well it was sort of a golden time.

SELIGMANN: It was. Professionally, it was fulfilling and I learned a great deal; it was a wonderful place to raise children; travel was easy and affordable; and friends were easy to make.

Q: I thought we might stop at this point and pick it up the next time in 1959 you left Kobe-Osaka, whither?

SELIGMANN: To the embassy in Tokyo.

Q: All right, why don't we pick it up in 1959 when you go up to the embassy.

Today is February 22, 2000. Now you were in Tokyo from 1959 to when?

SELIGMANN: 1962.

Q: So when you went up there, what was your job?

SELIGMANN: I was a political officer. It was a large embassy with a large political section My specific task was to cover the opposition parties, especially the Socialist Party. By the way, there is a tale on why I went there in the beginning of 1959, not the end of 1958. I had a telephone call directly from Tokyo from Outerbridge Horsey sometime in the early fall of 1958 telling me to pack my bags and say my farewells, inasmuch as my orders were on the way and I should be in a position to get up to Tokyo without delay after they arrived. So I did what I was told. I didn't literally pack the bags, but I said all my farewells, had all my farewell parties. And then personnel in Washington dug in. They were getting angry with Ambassador MacArthur for running his own personnel shop without going through Washington channels and decided to show their pique by putting my assignment on hold. So it was a bit embarrassing, having said all my farewells to stay in place for another three or four months.

Q: Well, when you got up there, MacArthur was the Ambassador.

SELIGMANN: Yes.

Q: This is Douglas MacArthur II. Can you describe your impression, I mean you were fairly junior, but how he ran the embassy and the embassy itself, I mean having come from a relatively small dukedom to come up to the kingdom.

SELIGMANN: I suspect you asked that question with malice aforethought because there are so many MacArthur tales. It depended who you were. If you were "in," you could do no wrong. If you were "out," you couldn't do any good. The trail was littered with the bones of fine honorable officers who he somehow decided were out, not in. It was very rough on them. I was fortunate; I was in. I think there was a geographical constraint that bothered people. We worked in a wonderful old chancery, one of the first in the world we built as a chancery. It had large beautiful paneled rooms, with bathrooms shared with the office next door, but it could only accommodate a core staff, mostly the political and economic sections, and a few attaches; the rest were packed into an annex a couple of blocks away. MacArthur was very demanding, autocratic in the sense

that he tended to preempt section heads and dictate the day's doings at the beginning of the day: I want a telegram on this, I want a telegram on that. He wasn't a model for me, but he could also be very thoughtful and kind.

Q: Could you give an example?

SELIGMANN: Of kindness?

Q: Yes.

SELIGMANN: Sure. My wife's father was terminally ill and she got a phone call that it was time to fly home to see him. It happened to be the same day that MacArthur was leaving for Washington to sign the new security treaty. He took time out to telephone me to ask whether we had enough money - of course you didn't have compassionate leave in those days. That was one of many instances. He showered praise if he liked what you did, but if it he didn't he could excoriate you, too often in front of others.

Q: How about Mrs. MacArthur?

SELIGMANN: Wahwee, the Veep's daughter, Vice President Barkley's daughter. Very similar. She scared many embassy wives to death, especially at a time when wives were still rated in efficiency reports and the Service expected to get two for the price of one, but she didn't scare my wife or me. We were frequently invited to the residence and treated well - no problems. She too could be thoughtful. For instance, at a reception if you were working the door, greeting guests and introducing them to the ambassador, you didn't get much time to enjoy the reception. Wahwee always saw to it that there were drinks and hors d'oeuvres placed behind the door for the officers there, small things. Once she got the wife of a newly arrived officer mixed up with someone she recalled being a Georgetown neighbor and invited her over for coffee. The wife in question had no idea why she was being singled out, but when she arrived, and Wahwee soon discovered her mistake, she invited her in and treated her graciously, making her feel at home. Of course, I could tell tales of an opposite nature, but I am sure you have heard many.

Q: Well now, what was the position, you were dealing with the left. What constituted the left that you were dealing with during this time starting in 1959?

SELIGMANN: The core was the Socialist Party, formed from a merger in 1955 of the Left Socialist Party and the Right Socialist Party, but for all practical purposes still badly divided. It was the major opposition party holding a little over one-third of the Diet seats. The left wing relied for votes principally on Sohyo, the trade-union federation, that embraced public service workers at both the national and local levels; it also found support from left-wing intellectuals in and out of the universities. A small, extreme leftist fringe was virtually indistinguishable from the communists. The right wing drew heavily on private-sector union support with its ideology articulated by a few more moderate intellectuals who saw themselves as part of the Socialist International movement. In addition, you had the Communist Party, which at that time only had one or two seats in each house of the Diet, but which was strongly represented in key positions in a wide variety of front organizations that it skillfully manipulated. The focus of our efforts in the

embassy was renegotiation of the security treaty which was opposed, often violently, by the left, with well-documented outside support from mainland China and the Soviet Union. My task was to report on what they were up to, and in so-doing, I found I had pretty easy access to key Socialist Party officials, including both Diet members and functionaries. My contacts with the Communists and representatives of their front organizations were pretty much limited to receiving petitions, a chore that came with the job. I was a great believer in receiving petitions as a way of letting off steam on the part of demonstrators, a process that usually involved preliminary negotiation as to how many petitioners would be permitted to enter the Embassy. They usually turned out to be amiable enough, and once in a while you could sense that one or more members of a delegation were receptive enough to warrant the effort to make a substantive point or two, but for the most part we found little to be gained from extensive dialogue and the petitioners did not press hard for their part. Ambassador MacArthur did not always agree. I'm digressing a bit, but it just reminds me of a time when I had accepted a petition from a group of Communist Party leaders, but MacArthur was so angered at the content, he instructed me to return it. I had never returned a petition before and was unaware of precedent on how one went about it. I decided the best thing was to call in a trustworthy embassy driver, to whom I gave explicit instructions to take the petition to party headquarters, ring the bell, and if nobody was there, slip it through the door. I don't know if they ever realized they got their petition returned or not, and I didn't care.

Going back to the Socialists, however, I got to know many of their Diet members with whom I would have lunch or who accepted dinner invitations to my house. This included a few on the extreme left who advocated nationalization of all major segments of the economy, the banks, the mines what have you, and promoted policies hard to distinguish from communism. Arguing with them never convinced anyone, but it gave us an idea as to their thinking and kept conversational doors open. Many moderate right-wing Socialists, on the other hand, were not much different in their thinking from the far right of the party which was like the Labor Party in Britain or the SPD in Germany.

Q: Were we doing anything to convince them, I think of contacts with the American labor movement, visitors grants to the United States, you know, trying to show these people how one can deal with sort of the left?

SELIGMANN: Very much so. The labor attaché and assistant attache, a language officer, worked closely with union leaders, mostly from the private sector, sometimes coordinating their efforts with the consulates, and sent a good many officials to the United States at the same time that American labor leaders were sponsored in Japan for programs worked out in conjunction with our cultural centers. Similarly, we made a special effort in our leader-grant program to reach the moderate left at both a national and local level, not only focusing on politicians, but especially on university professors and journalists. Many accepted, including some who later became leaders of the Socialist Party or prominent in their fields. These grants didn't always pay off, but they usually did. I am a great believer in grants. This runs through my post-foreign-service life as well. When you asked what I was doing, one of the reasons that I talked about efforts to maintain contacts with the left was that I was outraged when Reischauer, even before he was named ambassador, published an article in Foreign Affairs that received a great deal of publicity, entitled "Broken Dialogue," in which he harshly criticized the embassy for not

maintaining contact with the left wing. I took this kind of personally. To his credit, after he was named ambassador by Kennedy, and the Embassy files were opened to him, he acknowledged that this was not the case, and watered down some of his assertions in the Japanese translation of the article. As noted earlier, dialogue is one thing, convincing your interlocutors is another. In the end, Reischauer extended his dialogue no further than we had, even though he had an improved image compared with his predecessor, who was loath to hear out the other side.

Q: Well how did you view the socialists, I mean from your perspective? Did you think that we had become so connected to the LDP that the socialists were almost beyond the pale, and it was hard for us to envisage a socialist government or not. I am talking about the embassy as a whole from your perspective at that time.

SELIGMANN: There were certainly those who felt that way, and we clashed a bit on it. I felt the left wing of the party was beyond the pale but they were so impractical that they were never going to form a government nor would the majority of the Japanese people ever permit this to happen. On the other hand, there were right-wing socialists who saw themselves as a moderate, constructive opposition. Some were in it for career advancement so to speak. To give one example, Eki Sone was a career diplomat, who after the war was at odds with Yoshida, long-time Prime Minister, whom he personally disliked. Sone, wealthy with an aristocratic bearing, might well have risen to become Foreign Minister, but he threw his lot in with the Right Socialist Party, becoming its Secretary General. I remember one reporting telegram in which I said something about Sone - I don't remember the specifics. Bill Leonhart, who was DCM, called me in to his office and disagreed with what I had written, saying, "Sone is just a communist." When I replied to the effect that that was ridiculous, he got red in the face, and told me to get out of the office and not to come back. I was shook up but that too passed, and we remained friends. He felt strongly that the socialists were no better than communists. Or to give another example, at the height of the security treaty fracas, which ran pretty much from 1959 through 1961, Asanuma, who was Secretary General, later Chairman of the Socialist Party and had been head of the Right Socialist Party, made a trip to Beijing (Peking), in the course of which he signed a joint communiqué with the Chinese containing the requisite language of the day stating that American imperialism was the common enemy of China and Japan. Not only that, but when he got off the plane back in Tokyo, he wore a Mao cap. Now you have to understand that Asanuma was quite popular with a reputation for being a hearty, bluff, "man of the people," but not much of an intellectual: he led a simple life, lived in a small apartment, walked his dog in the morning himself, etc. Shortly after he came back from China, he asked to meet the ambassador together with his leading associates both right- and left-wing.. First, the ambassador said he wouldn't see them; then he changed his mind and said he would. He quickly reversed himself again, but they were on the way. I was the intermediary for conveying all this through the party's International Bureau, while sitting in the conference room around the table waiting for the ambassador to enter. When the party arrived at the gate with the press corps waiting, MacArthur did not have much choice.

Asanuma and his delegation of about a six representatives were ushered into the conference room where they were kept waiting for about ten minutes. When the ambassador came in, Asanuma started to greet him, but instead of letting him have his say, before he could get a sentence out MacArthur seated himself at the head of the table and asked, "Mr. Asanuma, when

you were in China, did you say that American imperialism is the common enemy of Japan and China?" Asanuma started to reply two or three times, but each time the Ambassador cut in, "Did you or did you not say that American imperialism is the common enemy?" And each time his voice rose to a greater crescendo. I wanted to crawl under the table, as I believe did the one or two other Embassy officers who were present; it was embarrassing, and the meeting broke up in a total shambles without Asanuma ever getting in his two cents. Needless to say, this was all reported in the press without the gory details, but the gory details soon got around town.

Q: What was the purpose of this meeting? Why did they want to see...

SELIGMANN: Well, pretty much the same reason you deliver petitions: you take a stand and you want to show your supporters you are doing something. I don't think it was much more than his desire to go back and say, "I told the ambassador what our position was." To my way of thinking that is sounder than not being able to meet him at all and have him say, "He wouldn't even talk to me." To be sure there are some instances where you have to do that - nothing is black and white - but the approach here was counterproductive. (One unpleasant aftermath was that a year and half later Asanuma was stabbed to death on live TV at a political rally by a 17-year old fanatical ultra-rightist.)

Q: Did this cut off lines of communication after that?

SELIGMANN: No. I could never figure out exactly what was going on, but my contacts at a working level with the leading party bureaucrats in the international and policy bureaus, who represented both wings of the party, remained intact and they fed me all sorts of good information, including internal party documents. Perhaps it was a matter of schisms within the party or a desire to keep lines of communication open, hedging against the future.

Q: You were saying if there was an article in the paper...

SELIGMANN: Often the press would provide leads that needed to be pursued - in any event articles often were the source for demands from on high for a reporting message. I would telephone or make an appointment to see one of my party contacts, who more often than not would fill me in on details, give me some of the background, and frequently help me sort out what was real and what was window dressing. If policy pronouncements or other documents were involved, I would often be given copies, sometimes stamped "Confidential." I recall one internal JSP document that must exist in the archives somewhere that spelled out prefecture-by-prefecture the organization of the anti-security- treaty movement, the names of the organizations within each prefecture which belonged to the umbrella organization, and the names of the officers of each of them, asterisking those who belonged to the Communist Party.

Q: Did you ever feel that you were being used in the intra-party business to say sort of discredit...

SELIGMANN: Absolutely. I had that feeling all the time: that the more moderate socialists would like to see the left-wing ideologues fall on their face. And yet, the left-wingers would see me too. I didn't get to close to the few whom I knew to be communist party members, but I don't

think I was ever turned down if I asked to talk to an official.

Q: Was there a tie into the socialists of Europe? I mean this was, we think of Scandinavia and there was always the Labor movement. The socialist movement in Europe has always been quite strong, very legitimate. Right now it dominates Europe, but at that time what was the tie?

SELIGMANN: As I mentioned earlier, representatives of the JSP right wing attended the meetings of the Socialist International, where they met with the European socialists, which was salutary. It reinforced, gave courage to the moderates. From the perspective of other world socialists, however, Japan was probably a side show to their own battles with the extreme left at home.

Q: Well, during this 1959-1962 period, as you mentioned it was dominated by the security treaty debate and all that. Could you explain what the security treaty was and let's talk about how it developed from your perspective.

SELIGMANN: The original security treaty was negotiated in the eyes of many historians, I think rightly, as the price for the peace treaty with Japan, which went into effect in 1952. The whole process was hastened by the Korean War and the need to establish Japan as an ally and gain its long-term cooperation, in consideration of U.S. security interests in Asia. The original security treaty called for Japan to provide the U.S. with bases in Japan, and gave us pretty much carte blanche in terms of freedom of action within Japan, what you might call extra-territorial jurisdiction rights over our military personnel, as well as freedom to use our bases and forces in Japan as we wished in the event of contingencies outside Japan. We had a large presence at that time both geographically, especially relative to the amount of arable or usable land in Japan, and numbers - about 100,000 servicemen. It was seen as a one-sided treaty, notwithstanding that it brought Japan under the U.S. security umbrella; it even provided that the U.S. could intervene to maintain internal order in Japan. Demands for the treaty's revision to make it more consonant with relations with a sovereign nation began to gather steam among Japan's conservative leadership by the mid-1950s. So, the United States was foresighted in agreeing at a policy level in Washington that it would be a mistake to wait for pressure to build up to abolish the security treaty, in which case we might end up without any treaty. There was a choice whether to revise the treaty or negotiate a new one - we probably would have settled for either course - but by 1958 we agreed with the Japanese Government's preference to negotiate a new treaty, a process that got underway toward the end of that year. That said, there was still a deep course of pacifism running in Japanese waters, a carryover from the end of the war, reinforced by what we had preached during the occupation and by the new constitution, which renounced war as an instrument of foreign policy, I was not involved in the day-to-day negotiation of the treaty, although we in the internal political branch were much aware of it. The political-military branch worked on the negotiation with the ambassador, Bob Fearey being a key player. Essentially, we worked out a treaty that gave us what we needed: Japan would still provide bases and facilities for the use of U.S. forces, which we would continue to station in Japan, in return for which the United States undertook the obligation to come to the defense of Japan if attacked. While Japan was obliged to defend against an attack on U.S. forces in Japan, in deference to the Japanese constitution, there was no reciprocal provision for Japan to come to the defense of the United States if the latter were attacked. We also agreed to consult with Japan before using our bases in

Japan for military action outside Japan and before making major changes in our deployments to Japan. The question of nuclear weapons was fudged, especially in regard to their possible presence aboard 7th Fleet vessels, as we fell back on our policy “neither to confirm nor deny.” Okinawa, where we retained administrative rights, was not covered by the treaty, so we retained more freedom of action there. You had the first stirrings of the movement to return Okinawa but it wasn't a major movement at that time.

Intellectuals, the left wing in general, and an unsympathetic press understood what we were doing all right, but they felt that the new treaty was tying Japan into a long-term military alliance with the United States that ran counter to the “peace constitution,” and risked dragging Japan into war should the Cold War with its Soviet or Chinese neighbors turn hot. Many of them sincerely felt that a neutral Japan could survive as the Switzerland of Asia, and they would rather throw themselves on the mercy of the world if you will. They did not represent the majority of the Japanese people, but it was a strong voice. The Soviet Union and Communist China in turn - we never said PRC in those days, and the language I use here is pretty much the language used at the time -

Q: That's good. It captures the flavor.

SELIGMANN: ...felt that this was indeed checking their ambitions, and went all out to support a mass movement in Japan, not just a political-party movement, to oppose the revision of the security treaty. We had considerable intelligence on the details of outside financing of the opposition movement, and it was not too hard to calculate the rough cost of mass demonstrations that repeatedly brought 200-300 or more busloads of demonstrators, many from remote parts of Japan, to Tokyo with lunch money; and stipends to enjoy the town a bit after a demonstration. So the lines were drawn. Added to the picture was the public image of the prime minister, Kishi Nobusuke, who had been a member of Tojo's cabinet and had served time in Sugamo prison as a class A war criminal. Kishi had been a career bureaucrat, a brilliant one, and was doubtless fully committed to democratic principles as being in Japan's postwar interest, but he left a bad taste with much of the public, including many LDP leaders. (Senior career bureaucrats played an important roles in postwar Japan, but just as I never met a former Nazi in Germany, I never met a former pro-militarist mainstream Japanese leader.) Kishi symbolized to many Japanese the military-zaibatsu-bureaucratic clique that had led Japan down the path to war, which did not make him the ideal figure to negotiate the new treaty. It was difficult to sort out opposition to the treaty per se from opposition to Kishi as a person. What was clear, but not to the American people, as this thing built up to a crescendo, was that there was little anti-American feeling in it. I could have debates, anywhere from taxi drivers on up, the latter being be as good as New York taxi drivers in turning around to argue...

Q: In that traffic and doing it left handed too.

SELIGMANN: ...but the tone was never anti-American. The demonstrations built up. They took a violent turn at times. They were mounted principally in Tokyo but outside Tokyo as well, involving in all hundreds of thousands of people.

Q Were you finding the normal pattern: universities leading the way and all that?

SELIGMANN: There was a structured Anti-Security-Treaty movement with branches throughout the country. The mass of participants came from the left-wing labor unions, the Sohyo unions, including the huge railway workers union, postal workers union, and teachers union with roughly 500,000 members each, as well as from a variety of front organizations. Leadership of the movement was largely political, Communist and Socialist, with the active participation of some left-wing intellectuals, including professors. Left-wing student organizations participated, but the universities themselves were not in the forefront. Through manipulation from the top, large masses of demonstrators were turned out on the streets, but most of them were relatively passive - the rank and file of teachers, for example, marched along dangling briefcases and chatting with one another, methodically echoing the slogans called out by the leaders over bull horns. A friend of mine once described wartime Japan as a nation of watchdogs, who did as they were told, and the mass of demonstrators impressed me as falling into this category - basically nice people who were not that politicized. The student movement was split, but the majority were extremists who could be relied on for wholehearted participation.

Q: Could you talk a little about it because everyone I recall at the time was quite worried about Zengakuren being sort of maybe this is the way Japan will go.

SELIGMANN: I don't think we ever felt this was the way Japan would go. Not all students were members of Zengakuren, and not more than a few thousand were in the forefront, snake-dancing and leading the demonstrators in the chant, "Ampo hantai" ("Down with the security treaty.")

Q: I remember with the headbands.

SELIGMANN: The headband signified your seriousness of purpose - a samurai put on a headband when girding for battle (or suicide). Indeed, they wore headbands. One of my good colleagues at the foreign ministry who is still active - he is ambassador to Moscow right now - when he was head of the security division of the American Affairs Bureau, responsible for implementing the Security Treaty, used to joke, "You know, I was out there in the forefront demonstrating against the embassy." So, it didn't mean all these people were die-hard leftists any more than the radicals of the 1960s in the United States are all radicals today. A year or two later, it was said that large company recruiters on campus held nothing against student movement leaders, but to the contrary, credited them with showing initiative. The demonstrations at the time were threatening, however, culminating in the so-called Hagerty incident.

Q: Did you have a piece of that action?

SELIGMANN: In that I had the only television set on the floor and Whawee MacArthur, concerned about her husband's safety, was in my office to keep informed. What had happened was that President Eisenhower, on a trip that was to bring him to Moscow, Tokyo and Seoul, had already been forced to cancel the visit to Moscow when Gary Powers' U-2 was shot down. He still planned to come to Japan, a visit that had been arranged months earlier after the security treaty had been signed in Washington in January - security passes in Russian, Japanese and Korea had already been issued, with the Russian blacked out, and elaborate preparations had been made. James Hagerty, his press secretary, came on ahead as an advance man on June 10,

but when he got into the Ambassador's Cadillac after arrival at Haneda Airport and started to drive off, about 2,000 Zengakuren demonstrators broke through the police line, surrounded the car, and started stomping up and down on the hood and roof. That was what we were watching on TV, and, of course, there were plenty of dramatic photos later carried by the press around the world. After a while the police restored order and they drove off to a helicopter that took them into town.

To back up and put the incident in context, it was directly related to Japanese ratification of the Security Treaty. The opposition parties had boycotted Diet debate on the treaty, which Kishi was desperate to have in place by the time of the President's visit. Under the Japanese constitution, if a treaty is approved by the House of Representatives, it automatically becomes law after 30 days, even if the Upper House fails to act. On May 19, exactly 30 days before Eisenhower was due, the Socialists, understanding that the LDP was likely to force a vote on the treaty, physically attempted to block the elderly speaker from reaching the dais to open the session. Toward midnight, a flying wedge of the more martially talented LDP members, however, managed to get him to his chair, whereupon in about a thirty-second action he convened the session and called a recess until the next morning. In the interim, police were called in to restore order, and the Socialists departed.

What just about nobody anticipated was that the Speaker, safe in his chair, immediately opened the next session and in about a minute called a vote on the treaty, which was approved unanimously by a voice vote of the LDP in the absence of the opposition. By happenstance, I had turned the radio on after coming home from a party and listened to all this as it unfolded. I resisted my first impulse immediately to call the Ambassador, and waited for a quick recap to make sure I had heard what I thought I had, and then woke up MacArthur to pass on the news.

Q: Well was there discomfort at the embassy by the fact...

SELIGMANN: We didn't expect that...

Q: This had been sort of rammed through. I mean it sort of tainted the whole thing.

SELIGMANN: It did. We were not too happy about it. In retrospect, you know, it is hard to tell. It set the stage for a potential visit that in the end did not occur, but it was not a parliamentary procedure one would ever favor. On the other hand, the unanswerable question is what would have happened otherwise: had Kishi shown less determination: would the treaty have survived? In the days that followed, the demonstrations grew in intensity, directed at Kishi's use of "tyranny of the majority," a favorite Socialist phrase, as much as at the treaty, and took on the added purpose of blocking the President's visit.

The day after the Hagerty incident, the largest demonstration of the whole period took place. While press figures were usually exaggerated, well over 100,000 persons participated. It was a Saturday and I had driven to the embassy early in the morning, but I wasn't about to try to drive out with a sea of demonstrators massed in front of the closed embassy gate, guarded by maybe a couple of hundred police. About five or six o'clock I decided enough was enough, so I walked out between the cordon of police and the demonstrators. Those in the lead were chanting and

snake dancing; I turned to some of them and said in Japanese, "gokurosama deshita, which loosely translated, means, "Sorry for getting in your way." They all burst out laughing. You don't use humor lightly in Japan, but this worked. They turned to me and one of them replied, "kochira koso, - "Oh, no, it's our fault" - which only goes to underscore that there was not a great deal of anti-American feeling in all this.

The question before the house, then, was whether or not the President's visit should proceed. MacArthur came under pressure for not recommending that it be canceled, but took what I believe was the correct position that this was a decision for the Japanese Government to make. Kishi, in turn, procrastinated - I am in a small minority, but I felt he had some reason. In one of the larger demonstrations in late May or early June the daughter of one of the intellectual leaders of the anti-treaty movement had been trampled to death, not in a scuffle, but accidentally by fellow demonstrators, leading to the beginning of what subsequently built up into a torrent of self-reflection on the part of the media as well as more moderate opposition elements. My contacts in the Socialist Party assured me that if the President did come, there would be mass demonstrations, but they would be staged so as not to interfere with the visit! That never had to be put to the test. As the clock wound down, Eisenhower found himself killing time in Manila, when Kishi finally withdrew the invitation and announced his resignation.

Q: Did you find, you know, one always thinks of the Japanese as with the Chinese being concerned about face and how they appear. To have an American president invited to a country and then particularly for the government but it also reflects on the people to say we can't take care of you. I mean this really sounds pretty awful, and I would think for a sensitive people like the Japanese, this would bother them. Did you find this...

SELIGMANN: Absolutely. It was the major reason the decision went down to the wire. The Japanese would much rather have had Eisenhower change his plans than to have to be the ones to say we can't guarantee your security.

Q: Well did this theme play out, continue to play out while you were...

SELIGMANN: After Kishi resigned, the bubble burst. The establishment of course blamed the extreme left for what had happened, but the left went through a period of introspection. Asahi, the most influential daily and a leader of the anti-treaty movement, ran an unprecedented mea culpa front-page editorial, other elements of the media were self-reflective and many Japanese were thoroughly embarrassed by the outcome. The opposition movement did not dissolve overnight, but it wound down and was never again hyperactive. In this respect, MacArthur deserves his due. The Treaty was in place, whereas a less motivated or less stubborn man might have backed away. As time has passed, the treaty has been accepted not only by the vast majority of Japanese people, but by all the parties that opposed it and all the countries in the region, including China.

Q: Well it keeps Japan under restraint.

SELIGMANN: Exactly, from their perspective, but they also see it as a stabilizing element in a historically volatile region.

Q: You had a feeling that this cancellation, did this, did you see a change in sort of embassy attitude in dealing with the left wing. You know, these S.O.B.s in the left wing kept the president from coming here. I mean I am talking about our officers and all because something like this can develop an attitude.

SELIGMANN: I didn't see much of that. Those on the scene or following events closely in Washington had a pretty good understanding of the situation with its complexities, although the Ambassador was doubtless bitter. I was scheduled to go on home leave just after the canceled visit, and contrary to my instinct that I would be asked to stay in place for a time, the Ambassador told me to go ahead; as he put it, one time was as bad as another. Going back to your question, while on leave I found that the demonstrations and the cancellation were generally interpreted at home as reflecting widespread anti-American sentiment, and the media, exemplified by an extensive story in Time magazine fed the flames. I found myself in Washington and with friends in New York spending a good bit of time trying to convince people this was not so. By the way, just interposing, we have talked about nothing but the treaty. I helped keep my sanity doing other things during that time.

Q: Well, what were some of the other things you were particularly concerned with?

SELIGMANN: The political section was divided into branches so I was not doing external affairs, but I dealt with the American Affairs Bureau in the Foreign Ministry on a variety of matters. Working with USIS, I was responsible for renegotiating a Fulbright agreement with Japan, which put the program on a more solid, long-term foundation with expanded Japanese government support. This was shortly after ratification of the treaty, but a major unsung accomplishment was the conclusion of an agreement whereby Japan repaid a major portion of the emergency relief it had received from the United States during the Occupation under GARIOA (Government and Relief in Occupied Areas) and the earlier EROA (Emergency Relief in Occupied Areas) programs. For a long time the U. S. had asked for repayment of these costs, which is almost unprecedented - as far as I know, Finland had a reputation for being the only country to repay its pre-WWII debts to the United States, and I do not think any other country did so after the war. To many this seemed like pie in the sky. Maybe we could get something of a token nature but could you really expect repayment when Japan was still getting back on its feet? Phil Trezise, the economic minister, headed the negotiation, and asked me to join his team for political input. We did not have a great deal to go on beyond a non-binding statement by Yoshida as prime minister that Japan intended to repay its obligations. The Japanese side having agreed to enter into negotiations, not unreasonably asked for documentation of the expenditures, but to our embarrassment all Washington could provide were some batches of receipts in a warehouse. In the end we came up with a nice round figure in the neighborhood of one billion dollars, and the Japanese side agreed to repay almost half of that, roughly fifty cents on the dollar. I had some input into a provision the Japanese wanted to set aside \$25 million for educational and cultural exchanges. It took years and years to get Congress, which took the position that the repayments should simply go into the general account, to agree to implement that part. I never dreamt the Japanese would be so forthcoming - the bad taste of the fight over ratification of the security treaty probably had much to do with the outcome - but Phil Trezise deserves tremendous credit for attempting the impossible and succeeding. Otherwise, life went on: there were elections to

cover, other chores to be done, numerous visitors, many of them interesting...

Q: Well, with the visitors, did you find, I mean sometimes when you get to a place like Paris or London, I mean the interest is minimal in what is going on, and maximal in dealing with shopping, night life what have you, tourism. How did you find the visitors coming to Japan at that time?

SELIGMANN: You had all sorts.. Sometimes if their interests were nocturnal, you'd turn them over to a trusted embassy driver, who knew his way around. When Senator Fulbright came out as he did for an Interparliamentary Union meeting, I was his control officer, having shepherded him on his first visit to Japan while I was in Kobe-Osaka. He was not only serious when it came to substance, but wanted to observe ordinary life. We were doing something or other downtown, when I reminded him that a briefing with the Ambassador was scheduled shortly before noon. He had no love for MacArthur and replied, "I've heard all that before. Is there a good place to eat around here?" When Eleanor Dulles was in town, the political counselor, Coburn Kidd, an old friend of hers, asked me to take her to a typical Japanese restaurant. My wife and I went with her to our favorite yakitori restaurant, a small insider's kind of place, down an alley near Kyobashi, where they took no reservations, and you had to wait on stools outside. She was a grand sport and loved every minute. Eating yakitori has since become a ritual with Jimmy Carter and more recently George W. Bush (2002) doing the same, but they went to places used to foreigners.

Q: In 1960 you had a very active campaign of Richard Nixon and John Kennedy. The Far Eastern thing seemed to concentrate on the Quemoy and Matsu islands off the Chinese coast. Did this election during the campaign season at all, did Japan come up at all? I mean was there any concern about one side or the other, how sound they were on Japan, or was it just not really a subject?

SELIGMANN: I do not really recall. In general there is always a certain amount of nervousness in Japan when we have a presidential election. The establishment is always afraid that just when they have become used to dealing with one set of players they will have to get to know another, and that there might be unforeseen policy changes. As far as Japan entering into the campaign back home, I felt pretty far removed but remember nothing pertinent.

Q: But I was just wondering, sometimes you have an election campaign and one can get...

SELIGMANN: Oh yes.

Q: I mean I was in Korea in the '76 campaign when Carter was talking about withdrawing our ground forces.

SELIGMANN: I was going to say I was in Japan at that time.

Q: The Koreans were very nervous.

SELIGMANN: As were the Japanese.

Q: But I was wondering whether there was anything comparable to that?

SELIGMANN: I can't think of anything.

Q: Which probably speaks to the point that there probably wasn't.

SELIGMANN: I don't think so. It was a breaking-in period for the treaty. It had just gone into effect. We were feeling our way. New institutions had come into being as a result of the security treaty. You had a new high-level Security Consultative Committee, established in large part to provide a vehicle for prior consultation, which required a first meeting, even with an artificial agenda, to get off the ground. You had the biweekly meetings of the Joint Committee, which administered the SOFA, a new Status of Forces Agreement accompanying the treaty, which quite different from the original SOFA. It provided for Japanese...

Q: The SOFA being a, do you want to explain what a SOFA is?

SELIGMANN: It contains the details for working out our military relations on the ground. The "Security Treaty" itself is shorthand for the full title, "Treaty for Mutual Cooperation and Security." It is a short document, much of which talks about economic cooperation - there are only a few paragraphs on security. The Status of Forces Agreement, on the other hand, details what Japanese responsibilities are, what ours are, how they pay certain costs, we pay certain costs. It specifies, for example, that the Japanese will provide facilities for our bases and we will pay all operating costs, including labor costs - that was a provision I had occasion to revisit about 15 years later. The SOFA also covers such matters as jurisdiction over U.S. military involved in crimes. While there remained some restrictions on Japanese authority in such cases, the new SOFA was far more equitable than previous arrangements.

Q: Well also I rather imagined this being sort of thrashed out before the election before a new administration came in meant that you know you didn't have to worry about political posturing of a new administration early on which often happens.

SELIGMANN: There was no posturing in regard to a change of policy, but a good deal of what you might call benevolent posturing in the aftermath of the conflict over ratification of the security treaty.. Kennedy, for example, had never met Reischauer before, but was impressed by his Foreign Affairs article, which he had read, and appointed him as Ambassador to Japan. While MacArthur was well thought of by the Japanese establishment, his public image suffered by reason of personality and association with Kishi. Reischauer, on the other hand, was regarded as knowing Japan; spoke Japanese; was married to a Japanese wife; had no trouble listening to others; and had ties to the academic community. In short, he was a totally different personality. I don't think he changed any policies while he was there, and I doubt whether he would have been able to have gotten the new security treaty in, place, but he was probably the right man for the time in that he presented himself as a sympathetic figure interested in broadening dialogue - while we never lost touch with the opposition, he renewed it at a higher level.

Q: Well the appointment of Reischauer to Japan and John Kenneth Galbraith to India and George Kennan to Yugoslavia was considered, these were sort of major beacons, and this was

going to be a new Kennedy administration. Later on the same old political hacks sort of appeared, but these ones stood out, and they were highly touted at the time.

SELIGMANN: That's right, and Reischauer made a very fine impression, although he scared the Japanese establishment to death. They were not happy. They thought this guy is just going to listen to everything the left wing intellectuals have to say and get carried away. There was in fact something of an educational process. For a while Reischauer kept a chart in his office which showed the LDP's voting strength going down and the Socialist Party's going up, with the lines intersecting some time around 1970, leading him to tell visitors that the socialists would be in power by 1970, which I and my political-section colleagues felt was sheer nonsense.

Q: Well, how did you find, I mean here you were sort of the point man in the embassy for dealing with the left. How did Reischauer, I mean, when he arrived there, how did you work with him, interact with him?

SELIGMANN: I never worked all that closely with him on a personal level. He preferred to see people by himself, and relied heavily on some of his former students and a former close friend and academic colleague, Burton Fahs, whom he brought in to head USIA with the title "Cultural Minister," displacing the Economic Minister from his quarters so that he could have the proper ambiance to entertain intellectual leaders. All said and done, while the moderate left now had easy access to the top levels of the Embassy, they were pretty much the same people we had established close relations with at a lower level, and I saw little evidence of broadening our outreach to the more extreme Marxist wing of the opposition, be it intellectuals, politicians, or labor union leaders.

[Q: This is tape four side one with Al Seligmann.]

SELIGMANN: One of the more dramatic developments prior to the ratification of the security treaty that I skipped entirely was the split in the socialist party, which resulted in the formation of a separate Democratic Socialist Party (DSP). It had long been rumored that such a development was in the offing, inasmuch as the right wing of the party deplored the use of violence and the idea of boycotting Diet proceedings. When the split occurred, however, it had all the appearances of a spontaneous event. One of my less enjoyable chores was to cover Socialist Party conventions. There is nothing more stultifying: Socialist Party functionary friends commented that I was probably one of the few persons inside or outside the party who ever read the policy documents they gave me that were often the focus of convention debate. I had been at this boring annual convention all day long - I believe sometime in 1960 - and went on to a social event in the evening. There had been something in the air, however, which I could not put my finger on, and late evening I decided to return. The only other observers in the balcony besides myself were officers from the German and Israeli embassies, both interested in the socialists. At about two in the morning, Suehiro Nishio, who had the backing of the moderate private-sector trade unions, took to the podium and made his move, announcing that he was resigning from the party. His right-wing colleague Kawakami, who was also a long-time bitter political rival, got up and made an impassioned plea for Nishio to stay in the party for the sake of unity, etc., but the deed was done. Long in the making, the break itself occurred in the height of political passion and was seen by many as premature in the sense that planning was far from complete. It was

happenstance that I was on the spot and in a position to fire off a cable that scooped the media reporting back home. Incidentally, there were rumors that the United States had something to do with this development, but if so, I was not privy to what might have been going on. The new Democratic Socialist Party was initially unable to take more than a handful of Socialist Diet members with it, but it gradually grew in strength over the next few elections, and dramatically placed in perspective the unsavory extra-parliamentary tactics of the extremists.

Q: Well just on a social level, sometimes these conventions, one has the feeling that when the labor party goes down to Blackpool or wherever they go, they can whoop it up at night or something like that. Did you have the equivalent geisha party?

SELIGMANN: Unfortunately, no. These were terribly dreary affairs. Endless meetings that I was not involved with in the background, and they always had their meetings in a shabby old building which was the martial arts hall.

Q: Well by the time you left in 1962, I take it you could see a fairly clear line for the next few years anyway of the rocky road to our relations had been taken care of with the new treaty and all.

SELIGMANN: And by some of the other measures which were taken by Kennedy, with input from Reischauer, which were well timed and had a life span of varying degrees with positive results for U.S.-Japan relations. The first was the establishment of something called the Committee on Trade and Economic Affairs, made up of the key economic cabinet ministers on both sides and chaired by the Secretary of State and Foreign Minister. The first meeting was held in Hakone, a resort not terribly far from Tokyo in late 1961. It was quite a show with the secretaries of State, Treasury, Labor, and Commerce; the Chairman of the President's Council of Economic Advisers; and their Japanese counterparts. This particular institution fell by the boards, or at least was downgraded to a deputy-secretary level at the time of President Kennedy's assassination.

Q: People were in the air on the way.

SELIGMANN: Exactly. So they decided they must never again risk having so much of the Cabinet traveling together at the same time. The other institution that was innovative - and I am sure that the ambassador in view of his proclivities and interests had a lot to do with it - was the U.S.-Japan Conference on Cultural and Educational Exchange, CULCON for short, that still meets every other year. Unfortunately, we have never had exactly the same approach to it as the Japanese. We saw it initially as a meeting of eminent leaders in cultural and educational fields of both countries, and our delegation at the first of these meetings which I attended, also at Hakone, included Robert Penn Warren...

Q: "All the King's Men."

SELIGMANN: ...Arthur Schlesinger, Aaron Copeland, my mentor, Hugh Borton, by now President of Haverford College - about seven or eight in all. The Japanese side then as now, tended to take a much more bureaucratic approach, giving the lead to the Vice Minister of

Education, but it was a fine idea, and has given endorsement to various worthwhile initiatives. Another benchmark development was the visit of Bobby Kennedy, the Attorney General, to Tokyo in 1962. In a sense the Japanese saw it as the proxy fulfillment of the presidential visit that had been canceled, but he also personified the image of vibrant, youthful leadership that his brother was projecting to the world. He was an inspiration to younger Japanese, and inspired some of the younger politicians to adopt PR techniques they had never dreamed of. Up close, Bobby could be cold and demanding, sometimes unrealistic, but this was not what the public saw. Examples I remember were a request to round up some orphans for touch football at the residence, and asking to go ice-skating with workers early in the morning, not exactly a Japanese custom. Dave Osborn managed his extraordinarily successful visit with great aplomb.

Q: By this time, by 1962 when you left there, you had been dealing with the Japanese equation, the American-Japanese equation for some time now. Have you seen a maturity on both sides with knowing how to deal with each other because I mean these are two, the bureaucracy, I mean everything is really there are different reflexes within both of these entities. The professionals who are dealing with them, do they know how to deal with it by this time did you think?

SELIGMANN: Perhaps better than at any time thereafter - or maybe "better" is not the right word, "more comfortably." The relationship was still an intimate one, and the primacy of the United States in importance for Japan was beyond any challenge. That may still be true today, but Japan for many years has been an important player in the foreign relations of just about all of the most important nations of the world.

Q: Were we trying, maybe it wasn't your job, I mean you were part of the apparatus trying to get the Japanese to begin to look at the world as a major power. In other words, have their embassies deal with Indonesia, Philippines, what have you? Were we pushing that at all or just letting them figure it out?

SELIGMANN: I don't think we were pushing the Japanese in those terms at that time, although we have from time to time in later years. Many of us felt it was best to let nature take its course as far as Japan emerging as an international player was concerned and that a close interdependent U.S.-Japan relationship was healthy not only for both countries, but for Japan's neighbors. A good many Japanese shared this belief. By the same token, we gave some priority to urging better relations with other allies in the Pacific, such as Korea and the Philippines, where reparations issues festered and much ill will was left over from the time of Japanese occupation. Bill Gleysteen, then in the political section, spent a good bit of time and effort on Japan-Korean relations, coordinating with our embassy in Seoul. Before long, we did lean on the Japanese to increase foreign aid, especially in Asia, to supplement our efforts.

ARTHUR F. BLASER, JR.
Financial Attaché
Tokyo (1956-1963)

Arthur F. Blaser, Jr. was born in 1908 and raised in Cleveland, Ohio. He

received an undergraduate degree from Yale University in 1929, an M.B.A. from Harvard University in 1932, and a Ph.D. in economics from Columbia University in 1941. In addition to Japan, Mr. Blaser served in England, Germany, and Brazil. He was interviewed by Raymond Ewing on October 16, 1996.

BLASER: In 1956 I was asked to go to Japan as Financial Attaché on the Ambassador's staff. Arrangements between State and Treasury had been changed since I was in London. Treasury people selected for overseas duty were designated as Financial Attaché (or Assistant) and given diplomatic status. The Washington part of the Treasury involved in this program was renamed "Office of the Assistant Secretary for International Affairs (or OASIA for short).

In Japan one of the main jobs was to collect, after negotiations, the money Japan owed the United States for GARIOA (Government and Relief in Occupied Areas). In this the staff work was interesting, difficult and significant. However in the end the decision rested on what the Ministers felt the Japanese public would tolerate and when, as well as what the Government could afford. Finally after some years the Finance Minister told us they could pay a figure just under \$600,000,000, so it was fixed at \$595 million.

Another interesting assignment arose when we and the Japanese wanted to get rid of military payment certificates (MPC's), the scrip, equivalent to dollars, which was used in our extensive military installations in Okinawa. A special mission was set up composed of officials of the Defense Department, the Bureau of the Budget and myself from Japan. Our wish was to substitute our regular paper currency and coin but the Japanese were hesitant because of their concern about the impact the change would have on their exchange control. After the mission had concluded its work in the field, I was asked to come to Washington to report on the work. I consulted with various officials and the US Executive Director of the International Monetary Fund. In the end all worked out smoothly, and regular US currency and coin replaced MPC's. I was asked to return to Okinawa during the actual conversion period to report on progress.

As Japan grew in strength, the US hoped that Japan would assist more in maintaining our troops stationed on its territory. Efforts were not as successful as we might have hoped but some progress was made.

A part of the job, as it was in all my foreign assignments, was to report on financial developments, notably balance of payments and the government budget. The US Export-Import Bank and the International Bank for Reconstruction and Development were making loans in Japan and I met with their representatives about financial developments. Similarly American private banks were becoming interested in resuming old connections or establishing new ones and I met with many of those representatives, either as they were visiting Japan or with those stationed in the country.

After seven wonderful years I told my wife we had better go home before our eyes took on the oriental slant. We left in 1963 and spent the next two years in Washington. The Treasury's international office had been reorganized in our absence and I was assigned to a unit called Office of Industrial Nations. This of course included Japan so that continued as one of my major responsibilities in the Office.

OLCOTT H. DEMING
Consul General
Tokyo (1957-1959)

Olcott H. Deming was born in New York in 1909 and raised in Connecticut. As a Foreign Service officer, he served in Thailand, Japan, and was ambassador to Uganda. He was interviewed by Horace G. Torbert on April 20, 1988.

Q: Let's see. We have just left the UN, or about to leave it. And where did you go after that?

DEMING: Let me just catch up with my history here in my mind.

After a long tour in the United Nations Bureau here and in New York, I was assigned, without much prior notice or expectation, to the post as Counselor of Embassy, Tokyo, and Consul General in Naha, Okinawa, which was still occupied by the American military and administered by the United States Army. At that time things were still very unsettled in China only 400 miles across the South China Sea from Okinawa. The military called Okinawa "the bastion of the Pacific." While the war with Korea was on, Okinawa was a base for jet fighters that could make just two bombing runs over Korea and get back without running out of fuel.

So you can imagine that the priority of Okinawa as a Pacific base for not only the Seventh Fleet but for the Air Force and the Marines. I had never served with the Army or in the military. It probably would have helped me if I had. But I found the "military mind" not inscrutable but difficult to accommodate to.

Q: Channeled along somewhat different lines than you were yourself.

DEMING: Than the diplomatic service, you're absolutely right, Ambassador.

When problems came up I'd have to consult with the High Commissioner, who was a three-star general, and I was the equivalent of a one-star general. When on an Army base civilian officers have an assimilated rank. As a Class 3 Officer I was equivalent to a brigadier general. The brigadier general on the base with whom I served, said, "Olcott on this base, Consul Generals rank with but after Brigadiers." So when meeting VIPs at the airport, I stood at the left of the brigadier general.

Q: Respectfully one pace to the rear.

DEMING: Respectfully.

When ran into a political matter, because I was really a political advisor although they didn't call it POLAD at that time, I would consult with the brigadier or the lieutenant general who were my superiors. The High Commissioner on occasion would point out to me that Okinawa is not a

democracy, it is not a sovereign country, it is an occupied island and we go "by the book." Don't you have a book to go by in the diplomatic field? I would say, no, we don't have a book. We improvise. It's the art of the possible, diplomacy is, within accepted limits.

The Commissioner might shake his head and repeat that the book tells us how to behave when you're on Okinawa. This is an occupied island, we are surrounded by the enemy. We do not fraternize with the enemy. At one meeting I noted that the army had a cultural program here that sends a great many Okinawans to the United States for education. The returned students called themselves "The Golden Gate Club." As a ranking civilian officer here, I give them receptions or parties from time to time. I said I'd like to have the High Commissioner come and talk to them.

That apparently was very difficult for him. He said, "we're still an occupied island and it must be perfectly clear to them that we are the conqueror. We do not fraternize."

I had a leading Okinawan up to my house one evening. He had to come through a check-point, naturally, before coming onto the military base. An incredulous Non Com phoned me up and said "this man says that he's invited to come to your house; is that right?" I said that it was.

As you can see I had some difficulty at first with "the military mind." I had a book by that title which I read assiduously. It was quite impressive and helpful. I thought, wouldn't it be nice in the conduct of diplomacy if we had such a book of rules. I was reminded of an episode during the retreat from Yalu during the Korean War. A correspondent asked a Marine general, "are you retreating, sir?" He replied, "Hell, no, we're not retreating. We're advancing in another direction."

The attitude of the military stemmed from their experience of the "Battle of Okinawa" and explained a lot of their longstanding feeling that this was the land of the enemy. I was told, it's hard to believe, that 153 ships of various sizes were sunk in the Battle of Okinawa. They had to advance from cave to cave, because the island is of volcanic formation. The caves were filled with Japanese with guns and hand grenades. It was a very bloody military operation, the first piece of Japanese territory that the American military had conquered. The Japanese fought to the last man to defend Okinawa. It was on a little island right off the main island that Ernie Pyle, as we may remember, was killed when he stuck his head up to see what was going on and they got him.

So it was a very learning experience for me. I tried to strike a balance. I had separate communications with the Department, which was always a sore point with the military. They got copies of my telegrams of course. The brigadier would often call me over to see him. He'd say, "I don't understand a paragraph here that looks like you're talking on behalf of the Okinawans instead of the High Commissioner." So we had quite a few run-ins of that kind. And it was difficult for them to have a diplomatic/civilian observer to some of their operations on Okinawa, which were often heavy-handed, and not sensitive to the feelings of the Okinawans who, after all, wanted to return to Japanese rule & were destined to do so.

It was significant that the Japanese had a representative on Okinawa who did not come from the foreign ministry or the Japanese foreign service. He came from the office of the Emperor. Had he come from the foreign office it would indicate that Okinawa was a foreign country. This was a

way of saying that Japan held ultimate sovereignty over Okinawa.

I was not there to see the treaty returning Okinawa to Japanese sovereignty.

Q: What year was that?

DEMING: That happened several years later, I think not until about 1970. And it was an occupied area all the time that I was there.

There was much linguistic misunderstanding. I used to follow the translation of the Okinawan daily press. Editorials often expressed the need for having a "confrontation" with the High Commissioner and the military government. This was due to poor translation. What it really meant was a "dialogue." The translators continued to use the term "confrontation" and this irritated the military highly. My Brigadier told me "if they want confrontation, we'll give it to them." I would try to explain that they felt the need for a give and take, a discussion of problems, frankly.

Q: Face to face.

DEMING: Face to face.

One of the interesting episodes of my stay on Okinawa was when John Foster Dulles and his wife flew in on his way back from Japan for an overnight stay. I gave a dinner for him at the officers' club. The Secretary was his usual cantankerous self. He at that time was suffering from rather advanced stages of abdominal cancer which later proved fatal. But he was still in a combative and energetic mood and wanted to know what my problems were as Consul General on Okinawa. I said that one of the problems is that the Okinawans want to know when they're going to return to Japanese rule. They did not understand what the term "residual sovereignty" meant. Trying to put a little humor into the situation, I observed that "residual sovereignty," with the Japanese difficulty with the letters 'r' and 'l', is almost impossible to pronounce. The Secretary said, "It's perfectly clear what I meant by 'residual sovereignty.' It means when we've finished with Okinawa the Japanese get it back. Any other problems?"

So that was that! (I found Dulles a man of extraordinary intelligence with a terrific bark but a rather gentle bite. He liked to drive you into a corner and make you stand up for what you think).

Continuing to make light conversation at the dinner, I mentioned that I had served under Ambassador Robert Murphy in Tokyo and that now he is Assistant Secretary of State for United Nations Affairs. Mr. Dulles barked, "my Robert Murphy! My Robert Murphy! He never served in the UN Bureau!" on that cheerful note the dinner ended. About 10 days later, I got a handwritten note from the Secretary: "Dear Mr. Deming. Robert Murphy was Assistant Secretary of State for United Nations Affairs for three weeks and one day. Sincerely. John Foster Dulles."

Q: Ambassador Deming, it's now April 21st, I believe. Anyway, it's the next day that we left off from. I guess it's time to go on to your African life, except that I understand you have something you wanted to add on Okinawa. So do you want to go ahead with that?

DEMING: Yes, Mr. Ambassador, thank you. I do have a footnote on Okinawa which illustrates rather dramatically the differing duties and priorities of the military in an occupation situation such as Okinawa, and the historic diplomatic reporting duties of a Foreign Service Officer.

In 1959 for the first time the High Commissioner agreed that there should be an election for the mayor of Naha, Okinawa, the capitol city. The Okinawans had been pressing for this. There were two candidates running for mayor. One, a Mr. Sanaga, who professed to be a Communist, was attracting more support than the other candidate. This presented a rather serious situation. Very shortly, the High Commissioner got in touch with me and said that we cannot tolerate having a Communist as mayor of the "Bastion of the Pacific" and I am changing the regulations under which candidates are qualified for mayor so that he will not be able to run. I said that this is going to be taken very seriously and with some alarm in Washington. He said, "yes, I know. That's why I wish you not to report what I plan to do." I said that this puts me in a very difficult position with my department. He said that yes, he knew that.

Then he took out the Executive Order establishing the authority of the High Commissioner of Okinawa and the Ryukyu Islands. A paragraph made it perfectly clear that the High Commissioner without consulting Washington could take any steps, military or political, which he deemed necessary to the security of the base, and to America's position on the base.

I suggested that we send a limited distribution or an "Eye's Only" telegram to the Department and the pentagon so that they would be apprized ahead of time and be prepared. The High Commissioner said that I knew as well as he that, in effect, there is no "limited distribution" or "Eye's Only." That means it will still go to top policy officers in several agencies. It would become a public matter very rapidly or difficult instructions will be issued to him, tying his hands. I said, "this may be very damaging to my position and career, but I understand your position and authority so I will not report in advance." He said, "I will help you any way I can if you get into difficulties."

The High Commissioner then issued a order abrogating or changing the rules for candidates for mayor of Naha, to this effect: That no one who had been arrested for a civil or criminal offense could run for mayor. It turned out that Sanaga, the Communist candidate, had one or more civil infractions of a rather minor nature, traffic or otherwise, but enough to come under the order. So the order went into effect. There was a great outcry in the Okinawa paper about "the failure of democracy, etc.," The election was held, Sanaga did not run, his opponent of course did win. A day later I got a short but hot telegram from the Department; it said, "Your failure to report has been taken to the highest levels. Please report. Dulles."

Of course I was prepared for this. And I reported, quoting from the Executive Order giving complete authority in such matters to the High Commissioner. And I said, if such episodes were not to happen again, the Executive Order should be amended. Then I went on to explain the origin of the crisis and ended by pointing out, as the High Commissioner had to me, that if I had reported and news had got to Washington first and Washington had directed that Sanaga not been ruled out for election and had been elected, the headlines in American papers would be "State Department Supports Communist Mayor of military base, or stories to that effect." That

apparently got them thinking a little bit.

Fortunately that blew over. But for whatever reason, after that John Foster Dulles was warmer towards me than he had been before. Whether it was because it gave him a chance to amend the Executive Order which had given such authority to the High Commissioner in an outlying province of Japan, with whom we had restored normal relations, and which was going to return to the sovereignty of Japan, or that he understood the position I had been put in under the military and the reasons therefore. I do not know. Changes were made in the Executive Order. I thought I would mention that because it shows the stresses that can develop between the diplomats and the military, each trying to carry out their obligations and responsibilities, as they see appropriate, to support American interests abroad.

Q: I think that's a very pertinent example of some of the problems that you do run into.

MARK S. PRATT
Consular Officer
Tokyo (1957-1959)

Mr. Pratt was born and raised in Massachusetts and educated at Harvard, Brown, Sorbonne and Georgetown Universities. Entering the Foreign Service in 1956, he studied Chinese and was posted to Hong Kong. Throughout his career Mr. Pratt dealt with Far East and Southeast Asian affairs, serving in Taichung, Hong Kong, Vientiane, Paris, Taipei and Guangzhou (Canto), where he was Consul General. His Washington assignments also concerned Southeast Asian matters. Mr. Pratt was interviewed by Charles Stuart Kennedy in 1999.

Q: So where did you go?

PRATT: Well, I was originally assigned to go to Hong Kong, which is the place that I wished to go because I wished to get as close to China as I could; and instead, I was at the last minute shifted to Tokyo. At that time, of course, the needs of the Service were very much the most important thing, and although we were allowed to express one or two preferences, it was not the way it is being done today. Tokyo, of course, was perfectly acceptable.

Q: You got into the right area, too.

PRATT: Yes, in the right area. Of course, obviously, most of us did not wish to go into visa work. We had not joined the Foreign Service to do that kind of work. After all, majoring in history and political science and so forth are not the things which have inspired one to get into visa work. But of course it was considered the "entry assignment" for almost everyone.

Q: So what was your first assignment?

PRATT: In late December 1956 I went into the Consular Section at the Embassy in Tokyo,

which was visas and passports, citizenship work.

Q: Let's talk a little about visa work there. This was early on as far as Japan was concerned. What type of people were you talking to, working with?

PRATT: Well, this, of course, was mostly business visas at that time. The money was just not there for the personal tourism. We had a certain number of student visas, of course, but not too many of those, nothing compared to what happened later.

Q: I would rather imagine that there was no particular problem, as there was in posts like Naples or Mexico City, where you were concerned about people going to the United States as tourists and staying on.

PRATT: No, this was not a real problem. There were Japanese who did. Of course, we had the usual "Wristonees" heading the section, who had brought their paranoia with them from the United States, where everybody was just scheming to get into the United States, therefore you couldn't take anything which was said at face value; but of course, those of us who knew a bit more about Japanese society realized that was not at that time and at that place a major problem. It was not like China or Hong Kong or even, at one point, Korea.

Q: Yes. How about the American community. When you're talking about passports and other American services, was the American community a pretty stable one? Were there any problems with them?

PRATT: Not really, although passport and citizenship was more interesting even than visa work because we were still living with the fallout of the Second World War, which meant that there had been a couple of Supreme Court cases which had ruled that Japanese who had been impressed into the military had not necessarily lost American citizenship. Though much of this had been cleaned up before I got there, nonetheless, there were residual aspects of that. There were also, of course, a lot of Japanese Americans who had gone over to be in the occupation, and then, of course, the racial laws of marriage had changed, so we were still dealing with open marriages and children, some from some rather complicated backgrounds with very interesting legal ramifications. One of the key things, I think, which we all learned from this is to have a great deal of respect for our Japanese colleagues, in other words, for those working for the embassy, many of whom had started out working for SCAP [Ed: Supreme Commander of the Allied Powers] back in the MacArthur days and then came on the rolls of the embassy. And these persons, of course, were very, very competent and capable and gave us, I think, a very different view of our overall operation there from what one might have gotten in other places. In general, I found that American local employees had been head and shoulders above many of the Americans we sent out.

Q: Oh, yes. I think we've all learned to rely on them. Who was the ambassador when you were there?

PRATT: Ambassador Douglas MacArthur II.

Q: *Well, now, did you get much involved, were you in the Visa Section the entire time?*

PRATT: Well, visa and passport - we had a rotation. I did not get to Special Consular Services because that was a much smaller office, and therefore you couldn't rotate everyone through it.

Q: *You were there during the demonstrations against the 1960 Eisenhower visit, I guess - or were you?*

PRATT: No, I had just left, in 1959, I think. Yes, I was in Tokyo from 1957 to 1959.

Q: *Did you get any more of a feel for the Orient being in Japan?*

PRATT: Oh, very much so, and of course it was the other side of the Orient. In other words, when I was in Qingdao, I had seen that the Japanese had been there, and then of course got to Japan and saw the Japanese on their home ground, and it was obviously a very, very different environment, even at that period when the recovery was just sort of starting. Nonetheless, it was a very different society from the Chinese society I had seen.

Q: *How would you contrast them?*

PRATT: Well, when I was first starting out on working on Asian matters, one person who had basically spent 30 years, I guess, in China said that most foreigners find that after they go to the Orient they discover whether they are really themselves, in addition to being an agent of their own country, whether they're Chinese or Japanese. In other words, you either like one or the other. You find it difficult to like them both. And I did not find this to be true because I found the Japanese to be very different in general from the Chinese but really quite impressive.

Q: *Were there a lot of GI marriages and all?*

PRATT: Quite a few, yes.

Q: *Did this cause any problems?*

PRATT: Well, obviously, I ran into some cases where the family of the girl was very unhappy because it was a fairly good family and they couldn't understand why their daughter couldn't hold out until they could arrange a marriage for her. But in general that was not the case because so often the girls were ones who came from not very good families or impoverished, parents dead and so forth. And they seemed to work out pretty well.

Q: *Was social life pretty well confined to within the American community at that time?*

PRATT: Not really for us. I mean there was quite an active American social life, and then also there was quite a diplomatic social life. But also we had a certain amount of contact with the Japanese. One aspect was, for example, the Japanese language school, which for younger officers studying Japanese, there were all their teachers, who were about the same age and we had each had university education and so on, and so you had a certain amount of social life

within that area of the Japanese language group. And then also my local employee, the one I worked most closely with, was very closely tied in with the Ministry of Justice and the police agency and so forth, because her previous work was with the occupation forces, and also it was part of what she did in the Passports and Citizenship Section. And so through her I met many of the other people. Then in addition to that I wanted to keep up with my Chinese, so I cultivated a woman who was working for FBIS in Tokyo, who was married to the man who had been the last minister of the interior in the [end of tape]. . .

The Chinese [inaudible] who was studying at Tokyo University in a postgraduate course in neural anatomy, and he became my Chinese tutor. So through him I met some of his Japanese colleagues and also other Chinese living in Tokyo. A very unusual group there, but these were persons, of course, who were forced out by the fall of the Mainland to the Communists, and so they were living in rather precarious circumstances in Tokyo. So I knew Chinese, I knew the diplomatic community, and we were very much involved in that - the British, the Italians, and so forth, and the French. And one of the French there was the basically air and parachute army attaché in the French Embassy, who was a close friend of these friends of mine in Paris I had mentioned earlier, and obviously when in 1958 de Gaulle took over, the man who had been the head of the military attaché section, and admiral, was somewhat eclipsed by somebody who was much more tied in with de Gaulle and not with Admiral Darlan. So one got a certain amount of French involvement there.

Q: Did you have any connection in the big embassy with Ambassador MacArthur at all or any reverberations of his rule?

PRATT: Not too much. Obviously, we occasionally were called on to do certain things, when we were either duty officers or something of that sort, and so one did get to know him, and in particular we got to know well his secretary, Betty Foster, who was one of those marvelous great old Foreign Service secretaries who realize that one of their principal tasks is training a new generation of young diplomats. So I got to know even better, for example, the DCM, Elizabeth Swarcie.

Q: It was a very professional embassy at that point.

PRATT: It was very professional, and we had some very competent and capable people working on... Dick Snyder was there in the Political Section.

Q: He was my ambassador in Korea.

PRATT: I thought he might have been. And Martin Hertz was... and I had a certain amount of dealing with him because one of the more unusual visa things I had to work on was the contingent from Sumatra that was trying to get to the United States when they had their uprising against Sukarno. And it was Martin Hertz who was handling that on the political side.

Q: Did you ever run across Mrs. MacArthur?

PRATT: Oh, yes, many times because, you see, as young bachelor officers we were often called

upon to fill in for certain things such as one dinner when the secretary of agriculture, Ezra Taft Benson, came through with two daughters. And so my colleague Frank MacNeill, who was also a classmate, and I were summoned up to be the ones to sit next to the two young daughters of Ezra Taft Benson. Also, for example, I escorted a person who was put in charge of the newly established and expanded refugee section. I accompanied him up for one... I think Madeleine MacArthur invited him for drinks and so on. So one did see Wawee.

Q: The stories about Wahwee [Ed: Mrs. MacArthurs given name was Laura, but he never referred to her by any other name than Wahwee, her nickname from childhood.] are legend in the Foreign Service.

PRATT: And they should be. She was a legend.

Q: Did you -

PRATT: Oh, I had some wonderful ones, yes.

Q: Could you tell one.

PRATT: Well, one, for example, was as you know she did generally start her first martini a little bit earlier than most, so that when we get up close to the man who was the refugee, she had already had her martini and they had nice big glasses, so we had ours. But she generally apparently continued a bit through the day, not always but sometimes, so we worked up for the Ezra Taft Benson dinner.

Q: Who was a Mormon, by the way.

PRATT: He was a Mormon, yes, and of course she had great instructions to give again and again to the servants, don't you dare offer him any alcohol, no Coca-Cola, no coffee, no tea. But he arrived, and it was a winter evening, and we arrived early, as we were generally called upon to do, and then she came down to give us our instructions, our marching orders, and so she walked into the room rubbing her hands, and Meany, I guess, came a little bit behind her, and said, "It's very chilly tonight." And I said, "Oh, would you like me to lay a fire?" And she said, "Well, if after looking around the room the best thing you can think of laying is a fire, go right ahead." And I said, I think, "In any case, I brought my matches."

But nobody had a really negative view of her. I mean she was a legend, and you had to make sure you didn't rub her the wrong way, but they were most reactions were really quite generous to her, because we did think that she was an outside figure and had many, many qualities. Another woman, of course, whom we knew was Liz Bonnard Green, and the stories about her were a little sharper.

Q: How about with her? Did she not suffer gladly, or what?

PRATT: Oh, she was not nearly so . . . She just was merely so much stuffer and took the Foreign Service so much more seriously, and she was much more difficult to the women. The

women, of course, would be told what color they could wear, what color they couldn't wear, and gloves or no gloves, and so forth.

Q: Mrs. Green's parents had been in really the old Foreign Service, when it was more a society thing.

PRATT: That's right. And this was not, of course, anything that Madeleine MacArthur would take very seriously. On occasion, for example, she would say, "Don't get too worried if I use some rather colorful language, but any words I did not learn from my father I learned from the stable boys."

Q: Of course, her father had been Vice-President

PRATT: That's right. He won't tell the President.

Q: Obviously you were tied up with language training, but what was your impression of the political situation on the island in this 1959-60 period?

PRATT: Well, as I've mentioned earlier, I had been there in 1947 when I was in the Navy, so I had had at least a glimpse of the old Taipei, which was, of course, pretty much untouched by the Second World War. But it was beginning - but only just beginning - to develop economically. I was also trying to maintain my Japanese, and I was trying to complete a thesis for Georgetown, which was on Japanese materials concerning Islam in China, a very abstruse thing, but it was something dear to the heart of one of my professors at Georgetown who became my thesis director. So through the Japanese contact, that is the person whom I had engaged as a Japanese tutor, I got involved with aspects of the Taiwanese society, as opposed to the Mainland society, which I knew, Chou, my contacts in Tokyo, for example, the gentleman in Tokyo who had been minister of the interior in Nanjing recommended me to... He had a son studying there. He had his former colleagues, a general and others, and his wife had a brother who was in the Ministry of Finance. So these were the persons whom I would see up in Taipei, the old Mainlander KMT types, and then down in Taichung with my friend who was teaching me Japanese I would be able to see the Taiwanese, who of course were very much unhappy under the yoke of the Mainland Kuomintang. And so very early on that bifurcated society was something which we got very much into.

Q: Were there signs at the time that the Kuomintang group was going to be sort of aged out or moved out, or how were we seeing this? Were the Embassy and all pretty well read into the KMT at that time?

PRATT: The Embassy was not. The Foreign Service people were not. It of course was the political leadership which, of course, found it convenient for the United States to let the so-called China lobby and its views of the situation be spread around. I think it was also another good indicator of just how difficult it is when you have a democracy and the persons who are your leaders come in knowing very little if anything about foreign affairs and knowing, however, that they do have another election coming up and therefore it's far more important to pay attention to what domestic concerns are than what the foreign realities are. It didn't bother me particularly

because we took that for granted. We realized that we were expected by the Foreign Service to keep track of what was going on in elections, even though, of course, the persons who did so would be called in by the ambassador and the ministers would have fingers wagged at them telling them how we should not be permitted to talk to any of these Taiwanese, we shouldn't go anywhere near polling booths, we shouldn't try to compile biographic information about the Taiwanese and so on. So we knew that we were in an adversarial situation to a certain extent.

Q: *Was Walter Robertson's hand apparent?*

PRATT: Oh, yes.

Q: *He was the head of the Asian Bureau at the time and very much the creature - a strong term to use - but very much part of what you called the China lobby in Congress.*

PRATT: Well, I had had for a short time Pat Paul Weinbarger, who, of course, had been earlier tied in with Sun Yat-sen and very early tied in with also Chiang Kai-shek. So I was not unaware of these people. I heard, for example, when I was a student here, a debate between Fulbright and Walter Robertson. So of course the China question was one which was a big problem in the United States and something we were well aware of. But we did see that one of the realities was that the Taiwanese were not that happy to be under the Kuomintang, and I had to remark also that most of my KMT friends in Taipei had nothing but the greatest of contempt for Chiang Kai-shek, and what the military leadership was going. They blamed them for the loss of the Mainland. They said, "I wouldn't be here if they hadn't been such a miserable bunch of corrupt officials back in Nanjing." So I found that the Mainlanders at that time - and that was 1959-60 - were far more willing to criticize the leadership of the Kuomintang than they were when I went back in 1979.

CARL EDWARD DILLERY
Vice Consul
Tokyo (1957-1958)

Economic Officer
Kobe-Osaka (1958-1961)

Ambassador Carl Edward Dillery was born in 1930 and raised in Seattle, Washington. He graduated from Seattle Pacific University with a degree in history and received a master's degree in administration of national security from George Washington University. Ambassador Dillery served in Japan, Vietnam, Belgium, England, Greece, and the Fiji Islands. He was interviewed by Charles Stuart Kennedy on March 2, 1994.

DILLERY: Afterwards I went to Tokyo as vice consul.

Q: *What was our embassy like at that time?*

DILLERY: Of course it was big. Remember the occupation had ended in 1951, but even at this time there was still a large vestige of American military presence. I think we still had 300,000 or so American military in Japan. In Tokyo itself there were a lot of military facilities that were being closed up. But there still was a PX and housing area right in the middle of the city. The strangest installation was an old-fashioned American drive-in restaurant right in the middle of the city but all by itself. So the US military presence was still very strong there.

The embassy itself. My first ambassador was Douglas MacArthur and then Edmund Reischauer. David Osborn was Political Counselor during part of that time. Al Seligmann, who I see is one of your interviewees, was there. One of the really best Foreign Service officers we had was on the economic side, Martin Hirabayashi, a Japanese-American who had actually been educated at Tokyo University and knew all the economic leaders in government and the private sector. In those days we had the current chancery and the "Mantetsu Biru", which was the old Manchurian Railroad building. That was where the consulate was and the odds and sods of administration and other agencies, etc. I think in the consulate we had six or seven FSO's in the visa section; probably three people in the passport and citizenship section; and two full time officers in the American Services section.

Q: What were you doing?

DILLERY: For most of the year and a half I was there, I did American Services. The biggest job was marriages. In Japan marriage is legalized by having an entry in the family register -- a complete record of everyone's birth, marriage, divorce, children and death kept at your local ward office. Of course, foreigners don't have family registers. So the way to take care of this is to get an affidavit which you have to take to the ward office. They enter it in a special place and issue a very flimsy piece of paper which is the only legal certificate of marriage. Not very satisfactory for Americans who are used to a certificate of marriage that looks impressive.

As a result, there was a special section in the consular handbook in Japan which allowed us to be witnesses to marriage even though we did not go to watch the transaction at the ward office and also authorized us to issue a "Certificate of Witness to Marriage" that most of our clients must have considered to be their formal certificate. Any religious document or ceremony is not important. During the year I was there we did about 3,000 marriages of which I officiated in about 2,000. Most of them were American serviceman marrying Japanese women. But there were lots of other combinations as well.

Q: Did you find at that time that there was a problem of fraudulent marriages or were these for the most part real?

DILLERY: Not many fraudulent marriages. Most were pretty real, although there were a lot that failed, I think, later on. One of the things we did was to counsel people in that situation. The military were quite strict and you had to have the permission of your commanding officer to marry. So basically they had been counseled by chaplains and commanding officers.

There were odd anecdotal cases. I remember one where in doing all the paper work, and there

was a lot of paper work to be done, we came to the end of the day without finishing a case. When he found he wasn't going to finish that night, the American husband-to-be turned to one of our foreign service nationals, and said, "Oh, if we are not going to be done tonight, would you please tell my fiancé I'll pick her up in the morning?" He couldn't even communicate with his wife-to-be. So that is a partial answer to your question.

I am not sure how strong the marriages were, but I think basically they turned out pretty well. We thought they were good because in Japan, of course, women in those days were very heavily influenced by their culture to support men. The boy of the family had to be helped and waited on by the girls, etc. American men treated women in a fashion that Japanese men never did - much more gallant, and perhaps a bad word now, thoughtful. The combination was a nice one.

Q: What about Americans who were in jail? How did this work?

DILLERY: A lot of Americans were in jail because the American military presence began to recede and kind of left a little debris on the beach. A lot of black marketeering had gone on and it was starting to stop by the time I was there. You have to remember that Japan was just emerging from a very difficult economic situation. It seems impossible now, but American products were very popular and a lot of smuggling out of PXs, and things like that, went on. What we found was that there were persons who would take discharges or drift into Japan, pursue illegal activities and then be caught. We did have a couple of cases of actual criminals. One man stayed over at the Imperial Hotel and called the hotel jeweler upstairs, hit him over the head and took his jewels, tried to escape and got caught.

So they ended up in prison. It was not very nice. I think the allowance for prisoners in those days was 81 yen. You have to realize that the yen was 360 to the dollar so this meant about 23 cents, not much for even 1957. That was the food allowance and it only exceeded the food allowance for the Japan Self Defense Force which was 80 yen. But it was basically seaweed and rice and once a week, fish. Americans were a little weak on that score. So we visited the prisoners and we tried to intercede for them. We had quite a few death cases. We had several active cases at all times during that period.

Q: Did you get any feel for Ambassador MacArthur at that time, or was he too far away?

DILLERY: Well, he was a very powerful character and we certainly felt his presence in the consular section but we had little direct contact. The DCM was Outerbridge Horsey who was just about as remote. The chief character in our work was an old-line Consul General, LaVerne Baldwin.

It was the old Foreign Service where you occasionally got invited to the residence, so we would see MacArthur in that environment. We didn't go to staff meetings or anything. I don't recall him visiting the consulate. But we knew he was a very strong willed character and very much in charge of Japan-American relations. He was a presence. Baldwin was a very traditional Consul General and an old line Foreign Service person. One little anecdote. His wife -- a lovely person - - was the daughter of an admiral. I can remember on first arriving that she called in the four or five new young families who had just arrived, and gave us instructions of what our duties would

be at official embassy functions -- arrive early, mix with the guests, take people off the receiving line. One of the little customs at the embassy, on the few occasions that we did go to the residence, was that if it said 6-8, the MacArthurs really meant that. MacArthur's wife, you remember, was the daughter of Vice President Alben Barkley. At eight o'clock, all of the people from the embassy got on the side of the room opposite the door and starting moving shoulder to shoulder gently pushing people right out of the door.

Q: You were there when Eisenhower was going to pay a visit and it didn't come off. What was our reaction?

DILLERY: First of all I should say that occurred a little later -- after I transferred to Kobe-Osaka. One other funny thing in relation to the transfer. I arrived in Tokyo in March, 1957 and left in August, 1958, on direct transfer to Kobe as an economic officer. I remember LaVerne Baldwin calling me in and saying, "You have been transferred to Kobe-Osaka as economic officer. With all these good young Foreign Service officers I can't figure out why they picked you, but I hope you do well." So I was textile reporting officer for Japan then from 1958 through 1961.

I worked in Osaka and lived in Kobe. We had our apartments in Kobe in those days, in the compound of the Consulate General.

Q: Where were you during the Eisenhower business?

DILLERY: I was in Kobe at that time. That was very interesting. We read about and saw what happened in Tokyo. The problem was what the Japanese called the tyranny of the majority. The Eisenhower episode happened in 1961. When the occupation ended and Japan resumed sovereignty in 1951, part of the settlement was a ten year Security Treaty. In 1961, it came up for renewal. In Japan at that it appeared that parliamentary procedure was that when there was an controversial issue, with say a 70-30 majority, (which I think the LDP had) the majority negotiated with the minority. The Socialists would get a few concessions in the negotiations and they then would vote against it and all parties would be satisfied.

But in this case, the 1961 Security Treaty renewal was imposed on the Socialists by the LDP. The LDP couldn't negotiate because we insisted on the terms. Many Japanese felt this was a violation of their culture. The Socialists weren't exactly noble either. They barricaded the speaker of the Diet physically in his office and wouldn't let him on the floor to call a vote. After two days of this, maybe it was even three, he finally said, "I give up and am going home." He went out and drove a couple of blocks, the Socialists went home because they were tired, and the Speaker came back, had enough LDP votes for a quorum and passed the renewal in the absence of the Socialists.

That caused an uproar; all the national newspapers were against this saying that it was an un Japanese thing to do. They complained of the "Tyranny of the Majority".

Q: It was Yoshida wasn't it?

DILLERY: Yes, I think he was Prime Minister. And so there were demonstrations including at our Consulate General in Kobe. The demonstrators came to our office -- and of course, our apartments, with signs "Go Home Yankee" and "Don't Sign the Treaty." But the event was fairly good natured. One of my colleagues, who by this time had learned to speak Japanese quite well, saw a couple of demonstrators afterwards and said, "Throw your signs in the back of my car and let's go have a drink," and he talked to them for a couple of hours. He kept the signs which our children then used to play "Go Home Yankee" in the garden of the Consulate General.

One other anecdote about that. My daughter was in Japanese kindergarten with two other American girls of the same age, three years old. All three were coming home from kindergarten in the custody of a Japanese family servant from one of the families. They were walking down the street and came right through the demonstration. The demonstrators saw the three Caucasian girls and started shouting, "Go Home Yankee". My daughter responded, "But I am home. This is my home."

There was no real threat to the Security Treaty itself but the situation in Tokyo was tense, especially when the Press Spokesman arrived in Tokyo to advance the President's trip to sign the treaty. The automobile was mobbed and violence almost occurred. As a result President Eisenhower did cancel. My evaluation now is that it worked out well because the President served as a lightning rod and diverted some of the heat away from the Japanese Government and the Security Treaty still is in force.

Q: Yes, the Spokesman got rocked in his car.

DILLERY: So, it was a serious moment but didn't last long. The Japanese really recognized that we were providing security for them.

To change the subject, I might report on my job in Kobe-Osaka. I hesitate a little bit about this, but it was our job at that time in the economic section to encourage Japanese exports to the US. Look how well we did. The one commodity that they were not exporting that we thought might be a good idea and suggested to them was automobiles.

Q: Tell me a little bit about your work. This would be from 1959-61. How did you work as an economic officer?

DILLERY: Well, I devoted all of my time to textiles. There were two aspects to this. One was that we were trying to promote the sale of American cotton to Japan. We did a lot of reporting on trends and how we thought new ideas could be used, new ideas for cotton. There was an Association of Textile Manufacturers and we had a wonderful Foreign Service National, Mr. Kondo, who was probably the third most important person in the textile industry in Japan. He knew everybody in the industry, all the people in the trading companies. We were able to get reports and statistics that were not available from anywhere else. So a lot of what we would do was statistical trends on imports.

Textile exports to the US, of course, began to get significant about that time. Just before I arrived there was the "dollar blouse" controversy. The Japanese were actually making a blouse that could

be sold in America for a dollar apiece. This caused great consternation in the American textile industry. So we had to begin to track and try to predict and keep Washington informed about what was going on in their textile manufacturing industry.

My day was composed of working with Mr. Kondo on statistics and looking at trends and then going out and visiting the textile companies and trading companies. The trading companies are very important in Japan because they pull together everything related to supplying raw materials, coordinating manufacturing, financing same and arranging for sales; nobody buys direct from the manufacturers. So we got to know the trading companies and how they worked and tried to inform Americans about that.

Another thing that happened in 1961, we had our first voluntary agreement with the Japanese on limiting exports of certain textiles to the US I did a lot of the preparatory work of research on textiles in the area they were talking about. In this case it was cotton zippers and certain kinds of cotton fabrics and manufactured goods. Then I was part of the delegation that negotiated with them to achieve that first agreement. I believe the delegation was led by Secretary Christopher.

In that connection I did a lot of traveling around the countryside to look at actual manufacturers and try to get some feeling for the potential for exports to the US There was the famous case on woolen suits where a Japanese manufacturer had arranged for a suit cutter from America to come over and cut suits (that is where you make your money in suits) and they were making wool suits which could be retailed in the United States for \$45. Even in the late 1950's, that was cheap. A department store owner whose establishment was across the street from the main office of the International Ladies Garment Workers put the suits on sale. You can imagine the uproar.

Q: Probably New York.

DILLERY: It wasn't New York, I think Pittsburgh or some place like that. Maybe it wasn't the Garment Workers but one of the other unions. I can't remember the name of the union now. But the department store was across the street and he had these Japanese suits advertised for \$45. He caused a great furor and Congress got interested. So we had to ferret out where the suits were coming from. We had to really snoop around because the location was not well known. A small trading company was handling the deal and the factory was way up on the Northwest coast of Japan. There were three Foreign Service nationals who worked with me and this time not Mr. Kondo but another one and I visited the factory and quickly realized that this was not going to be a major threat to the American suit industry because the factory was too small and there was only one cutter. So we were able to tamp down the controversy on that.

Q: How were you received by Japanese businessmen at that time?

DILLERY: Very courteously. I am sure they were not telling us everything they did, but courtesy is such a strong element of Japanese culture that we were able to winkle out a bit of information. Remember they were very dependent upon us at that time. As I noted, we were trying to help them. All of our formal trade opportunities for the Commerce Department were for exports from Japan to the United States. So anything in the Journal of Commerce that we sent back was for American importers, not American exporters. We were trying to encourage their

recovery from the war because they were really just barely emerging from a deep recession. So they were very friendly.

And then we were so fortunate in that...I remember that our man who worked on the silk industry, which was centered in Kobe, had been in the Consulate General for many years and came from a good family in Japanese society and was very well hooked into the industry. So we had very good access there.

Again, I must note that Mr. Kondo was really wonderful. He later, when he finally retired from the State Department, went to work for the Association of Japanese Trading Companies or Textile Manufacturers and continued to be very significant in that relationship.

I had one very positive relationship with a Japanese textile firm. I went to visit the Japanese subsidiary of one of the Sumitomo companies, a licensee of ACRILAN, which happened to be called EXLAN in Japan. As I was interviewing them and seeing how that agreement was working, they said, "We need an English teacher. Would you help us find one? We want our senior executives to be able to work well with our American colleagues but they don't speak English well."

So I said, "Sure, I will be glad to do that for you. Why don't I do it." I noted that I couldn't take anything for the teaching -- even in those days with less emphasis on ethics and conflict of interest. That was significant because in those days English teachers were paid handsomely. I think people were making \$7-8 an hour, or something like that. They said, "Fine. How about Thursday from 5-6?" I went to USIA and got materials for teaching English. When the Thursday session was over they said, "How would you like to have dinner?" And I said, "That sounds very nice." So they took me out to dinner. It was a lovely dinner in real Japanese fashion. We did a little bar hopping and I took the last train home. And that became the pattern for every Thursday night. So I am afraid they spent more entertaining me than they would have if they had paid me. I got to know them so well that I kept in correspondence with them for many years afterwards.

Q: Right now one of the major concerns between Japan and the United States is the fact that the Japanese seem to be such a closed market with many regulations that seem to close things off. Did you find that the Japanese regulation situation was a problem then or not?

DILLERY: It was not a problem, but, of course, part of the reason for that is that there wasn't really much of a market for anything. The yen was very weak so anything imported was very expensive. Japan was heavily devoted to organizing for export. And, of course, in those days the US domestic market was strong and there was not a lot of American interest in exporting, especially in things like textiles. So, since there was not great interest in the US Government or even in industry, we really didn't have any pressure on us to try to encourage US penetration in the market. Remember the American economy was strong and we actually saw what we were doing in Japan as positive. No, that was not a factor then.

The bottom line was that we were starting to see some of the symptoms of the current difficult trade relationship with Japan but real problems were only a cloud on the horizon. Japan's exports to the US were increasing rapidly but textiles still were the major item and much of the rest was

characterized by lower quality items. Automobiles were not in the picture and even the small amount of electronics items were mostly not competitive with US-manufactured products. But the textile situation did give us a clue as to how hard it would be to work out problems when Japanese exports significantly affected major US industries.

Q: How about leftist influence in the labor movement? Were we watching that? The textile industry had rather poorly paid labor. Was this a problem?

DILLERY: Well, we were keeping an eye on the Socialists and sort of Communist influences, but in those days the Liberal Democratic Party was so strong. It had been in power for a long time then and it continued, as we all know, for many years. Japan operated very much on a traditional basis and the Socialists were on the fringes, not even in the center of the academic field. Labor was the only major Socialist stronghold but that was even modest by the standards of labor in other countries. In fact, the Japanese idea of a strike in those days was to wear an arm band that said, "I am on strike, but keep working." There was no real labor unrest. There was a bit of leftist views in the university, but once again, being pragmatic, the Japanese were going to university to get into business or government and it was not the thing to be a Socialist. There were no particular left leaning newspapers. It was a pretty quiet period.

JAMES R. LILLY
CIA Officer
Japan (late 1950's-1958)

Ambassador James R. Lilley was born in China in 1928. After serving in the US Army from 1946-1947 he received his bachelor's degree from Yale University in 1951. From 1951-1958 he worked as an analyst for the US Army. His career includes positions in China, Japan, Thailand, Cambodia, Philippines, Laos, and ambassadorships to South Korea and China. Ambassador Lilley was interviewed by Charles Stuart Kennedy in May 1998.

LILLY: Then I went to Japan in the late 1950s. At that time, I think, I began to see a process of maturing in the clandestine service. We had gotten rid of the "big fabricators" of intelligence and the big, para-military programs. Programs in Taiwan such as "Western Enterprises" had failed. Ray Peers had headed it. He had been a big hero of the Burma campaign against the Japanese during World War II in "Detachment 101." Almost none of the guerrilla operations which he ran against the China Mainland were successful. We were told that there were a million, anti-communist guerrillas in China. As Peers said: "If I ever find a Chinese guerrilla, I'm going to stuff him and put him in the Smithsonian Institution." People were getting disillusioned.

During this experience I developed considerable skepticism about big programs. I myself had "nailed" one or two fabricators of intelligence. I went out on my own and saw the duplicity of some of the people I was working with. However, it was interesting to me. Communist China was the enemy, and we worked against it. We had a sense of frustration that we couldn't crack it. Our partners were not up to it then.

In Japan we got a sense that we were beginning to get on the right track. We were beginning to focus our energies on getting things done. I had a very brilliant chief that ran the China operation in Japan and I became very interested in the agency at that time. The work was interesting. It was actually much more interesting than what our colleagues in the Foreign Service were doing. They were issuing visas and handling low level, political reporting jobs. We felt that we were doing much more relevant and interesting work.

Q: What was the official view toward China? A couple of things happened. One thing was the "disintegration" of China or whatever you want to call it. There was the "Great Leap Forward" and that sort of thing, which was first played up as, "Well, they may be on to something." Then the split developed between the Soviet Union and Communist China, beginning in about 1959. How did you look at it?

LILLEY: That's when the situation became interesting, and we began to become relevant. My assignment to Japan had involved strictly well-focused foreign intelligence objectives, such as trying to recruit Japanese to go into China. We began to do that. They came back with real information on what was happening in mainland China. It wasn't critical information, but we were beginning to get into the collection process realistically. We were also working on the Chinese Communist community, we were getting people to go to Mainland China, come back, and tell us what was happening.

ROY T. HAVERKAMP
Special Assistant to the Ambassador
Tokyo (1957-1960)

Japan Desk Officer
Washington, DC (1960-1961)

Roy T. Haverkamp was born in 1924 in Missouri. He served with the U.S. Air Force in World War II and later earned degrees from Yale University and The University of Cambridge. Mr. Haverkamp joined the Foreign Service in 1952, serving in Korea, Sweden, Japan, Cambodia, Congo, Benin, Vietnam, Guinea, United Kingdom, Jamaica, Grenada, and Washington, DC. He was interviewed on April 11, 1994 by Charles Stuart Kennedy.

Q: You were in Japan from 1957 to 1960. What were you doing in Tokyo?

HAVERKAMP: For a couple of months I was in the commercial section doing world trade directory reports, trade complaints and things like that. Then I became very lucky and became special assistant to the ambassador which was above being a staff aid. For instance, he did things like send me with George Bush to see the Prime Minister. At that time George Bush was the son of an influential former senator and a businessman. I got involved in a lot of things that I thought were very interesting there.

Q: What was the political and economic situation in Japan then?

HAVERKAMP: Our main interest there at that time was a political strategic interest. Their self-defense forces were just building up, we had to begin to change our military strategic relationship in conformity with Japan's move to independence. We still had AID and the MAAG missions there. We still had large US military presence, the Fifth Air Force, US Forces Japan. On the economic side, the ability, aggressiveness, motivation to succeed of the Japanese was showing itself already. We had serious problems with textiles which were finally settled at that time when President Eisenhower agreed to the idea of voluntary quotas. We had the same problem with plywood, stainless flatware, umbrella frames, but not with automobiles or electronics, although the electronics business was just beginning. The basic problem of the Japanese was that they had a greater propensity to save than to spend, unlike us. They put too much money into increasing capacity. In other words, if plywood sold in the United States, never mind the Americans complaining about the effect on production and employment in the U.S., you put more money into plywood. Success deserves support. The trade problem had already begun.

We had no real answer to Japanese efficiency, their strong predilection to save and invest over spending. The most we could say to them was why don't you diversify and try exporting more to the Europeans and stop making so many problems for us. One of our main problems with Japan was that the Japanese on the one hand wanted to be treated as a budding, first world power in terms of it growing economic strength, but at the same time they wanted all of the concessions that were given to them during the period of occupation and recovery. There was also a highly active left wing in the press, the schools and universities and the labor unions as well as in the Socialist Party that was always ready to put on the headbands and demonstrate against anything American.

Q: There are a lot of countries that pull this. Poor little us, but treat us with respect at the same time.

HAVERKAMP: Or, give us all the concessions that we need to outdo everybody else.

Q: You spent most of your time there as special assistant to the ambassador. Who was the ambassador?

HAVERKAMP: Ambassador MacArthur.

Q: Douglas MacArthur II. I have a series of interviews that I have done with him. Could you describe his method of operation? He has a reputation you might say.

HAVERKAMP: He was a very hard working, very loyal, dedicated Foreign Service officer. He did all of his homework and knew what he wanted and he liked to micro manage everybody. If you wanted to tell him something that you knew he wouldn't like to hear, you had to do it in an indirect kind of way. If you just went in and said it, he would dismiss it. But if you wanted to be effective, you thought carefully how you wanted to present an issue to him. He wanted to be on

top of everything. You would go into his staff meetings with senior officers there with the rank of ministers of economic and political affairs; the MAAG chief was a Major General and we still had the aid program there...and he would tell them, for instance, to report things out of the newspaper. He had some outstanding officers like Phil Trezise, who was the number two in the economic section and some of the younger Japanese language officers. But Ambassador MacArthur's way was getting into the nittiest, grittiest of detail with people. At the same time, if he had confidence in you, he would let you do very interesting things. But he wanted to know everything that was going on. He did not want anything to happen in that mission that he didn't know about. When something unexpected and unfavorable happened he felt it was directed at him personally.

Q: Did you find yourself in the traditional role of a special assistant of going to people and saying, "The ambassador wants to know if you have finished this thing that you are supposed to do," and that sort of thing?

HAVERKAMP: Oh, yes. I would attend all the staff meetings and make note of his assignments and then follow up. But you also had an intermediary role. You had to make judgments at times that the ambassador probably had changed his mind. He had several very ambitious, very able, officers working on economic issues, on security issues...we were then negotiating the Security Treaty. With Ambassador MacArthur it was never "The Ambassador wants to know", but rather "The Ambassador wants, now".

Q: How effective was he and what was his style in dealing with the Japanese?

HAVERKAMP: I never went along on any of the meetings concerning the Security Treaty. He always met alone with the Vice Foreign Minister and they always met at some secret place and at night to keep the press from speculating what was going on and put it into the public domain which would have made progress impossible. To build a good relationship with people he would tell them things that sometimes they might not want to hear, but you can't do this to the Japanese. Like, criticizing the Foreign Minister's staff. He didn't understand that their reaction was one of embarrassment and shame to be put on the spot this way. That is not the way that you dealt with the Japanese. Although he, himself, felt in relation to the military, and others back in Washington that he understood how to deal with the Japanese. I will say, however, that the Japanese had great respect for him and not only because they knew that he had access to the President when he needed it. I think his greatest accomplishment was the successful negotiation of the Security Treaty. He had information from some staff members and advice and at times, direction from Washington but he did all the negotiating alone. As you know the treaty is still the cornerstone of our security posture in Asia. Moreover, Washington's instructions usually reflected his ideas.

Q: He was very close to the President during the war.

HAVERKAMP: During WW II he went with the U.S. Army after the D-day landing in France and was later General Eisenhower's Political Advisor at SHAPE. He also served as counselor of the Department for Secretary Dulles.

Q: So, it was not just a residue of being Douglas MacArthur's nephew?

HAVERKAMP: No, although I think that some people in the Eisenhower administration may have thought that. He would have deeply resented that because he was well aware that he had the talent for the assignment. His father-in-law was Melvin Barkley, former chairman of the Senate Foreign Relations Committee and later Vice President. I was told that Mr. Barkley was always very proud of him because he never asked for special treatment.

Q: He wasn't that close to his uncle anyway. In my interview with him it came out that he earned his own way. During the war he was interned and he was a war time adviser to Eisenhower and all that.

HAVERKAMP: He was a very hard worker. I remember I got into the office one day at 7:45 and there was a note on my desk: A diller, a dollar, a ten o'clock scholar. But he was somebody that I enjoyed working for in a support role because he knew what he wanted, would listen if you made the proper approach and certainly in my case, had me do things far beyond my rank. Many in the Embassy frequently viewed his way of dealing with the Japanese in a different way than he did. But on the major issues, security and trade, he did as much as anybody could have done.

When Professor Reischauer who went out to succeed him had written an article in Foreign Affairs before he went out criticizing the Embassy for not having any contact with the left wing Socialists and the students. Well, they didn't want contact...they wanted contact but to insult you sort of the way you would have contact with the Soviets in those days and exchanged insults. Reischauer didn't establish it either. He also knew, that the students, were going through a process, as students in France did and still do. When they got their degrees and jobs, they were mostly as conservative and supported the Liberal Democratic Party. One of the big things I found frustrating there was that we were not allowed to report the attitude of the Japanese towards China and the Chinese because Ambassador MacArthur was very much Secretary Dulles' man in a personal sense as well as a professional sense and Dulles probably did not want to hear that. The Japanese had to live closer to the Chinese than we do, had a sense of cultural inferiority toward them and saw no reason to antagonize them.

Q: And also you had Walter Robinson or had he left by that time? It was very definitely a topic you didn't raise in that administration and actually the next couple of administrations...any possibility of opening up China.

HAVERKAMP: Our instructions were to tell the Japanese that the Chinese were dangerous trading partners who would key into some critical sector in the economy and after building up a trading relationship would use it as a threat to get political support on issues dangerous to U.S. interests and U.S. Japanese relations. What that will be is hostile to our interests and yours.

In my subsequent assignment in Washington in Japanese affairs, we always were saying long before the rapprochement and Kissinger, that when we recognize China we have to tell the Japanese at least an hour in advance before we do it or we will be in very difficult times there.

Q: What was your impression of the Japanese government and bureaucracy at that time?

HAVERKAMP: I think I had a better chance to see them than many political officers did because I was frequently with the ambassador when he was with them, so I knew many of them.

What was my impression? In the sense of responding to the new post-war generation, I don't think the Kishi government was quite up to snuff in the sense that the post-war generation wanted somebody, I think, not tainted by World War II and willing to assert greater independence in dealing with the U.S. That being said, the main support for the Kishi government came from farmers who had benefitted from the agricultural reforms during the occupation and from business people in the Kansai and Tokyo areas. Not the press barons, but others. There was a transition regime between the WW II generation and the post occupation regimes. They were people who were adequate to the demands of the time. The security relationship with the United States was critical for them. Trade with the United States was critical for them. They wanted to maintain internal discipline within government and society to move forward in an orderly kind of way. But I think the bureaucracy in the Foreign Office, MITI, Finance and the Prime Minister's office, were very effective. The Foreign Minister's position has always been a jumping off place to the Prime Ministership so he could be less reliable and disciplined at times.

Politicians and bureaucrats were accessible for everybody in the US embassy, from the Ambassador on down. Everybody was tacitly aware at least that in the background of our relationship was our security relationship which provided protection for Japan and was a real deterrent for them. That helped us. At the same time they knew trade was becoming a very important part of the relationship. We, at that time, operated on the doctrine that Japan will be allied with and have close relationships with countries with whom it can trade because Japan cannot afford to take any chances on not having sufficient foreign exchange. They had no natural resources other than a little bit of coal that was not of industrial quality and agriculture was mainly rice. So trade and the strategic relationship were the big things.

At the same time it was also clear that the bureaucracy and the politicians were united, that it was not possible to drive a wedge between them and play one against the other to our advantage. We tried often. They were Japan, Inc., as they later began to be called.

Q: One has the feeling that Japan, even more than Italy...you have your political class who go running around but actually outside of making sure en masse they support you, they really don't have an awfully lot of power. The power seems to rest within the bureaucracy. Did you find that true at the time?

HAVERKAMP: Yes, very definitely, except that it is different in Japan in the sense that you have the Liberal Democratic Party which was the dominant party largely because of the land reform and other programs that were put in during the occupation. This gave land to farmers who in the fifties and sixties were becoming middle class people, with a higher standard of living than they had ever dreamt of before. The farmers and rural population were also traditionally conservative, had conservative values. The big business people, were also backers of the Liberal Democratic Party. So the Liberal Democrats did not have to worry about the Socialists or any kind of coalition government as the Italians always have to do. Then the Communist Party in Italy was, I believe, the biggest in terms of membership outside the USSR. In Japan the

communists were nowhere near so important and had little if any influence in government. Their main threat was their support of the Chinese and the Soviets.

Q: One of the major problems while you were there was the cancellation of the Eisenhower visit and the Security Treaty. Could you give your impression of how this went?

HAVERKAMP: The aborted Eisenhower visit was after I was back here working on Japanese Affairs. I believe most Japanese knew that Japan needed a guarantor for its security at the end of the occupations and wanted the U.S. to play that role. They also supported the famous article 9 of the post war constitution which severely limited the right of the government to build an armed force. Some educated Japanese felt that they did not need a security treaty to have U.S. protection because in case of a threat from the Soviets or the Chinese we would come to their defense. A treaty on the other hand might oblige them to help us in a situation in which they would rather not become involved. Then there was the crisis created when the Kishi government pushed the Security Treaty through the Diet in a sub rosa manner which was contrary to the Japanese way of seeking consensus before acting. The government did try to prevent disruption by opponents in the Diet. Mr. Kishi also came to Washington for the Treaty signing. I believe the main impetus for the riots that caused the postponement or cancellation, I can't remember which, of the Eisenhower visit was a desperate reaction to the success in completing the Treaty.

We did the right thing and I think it worked and is still working. I think we may be making a mistake when we tell the Japanese to take on more responsibility for their defense because one of the things that we get from their dependence on us for security is that we have access and influence that we would otherwise not have. It doesn't always show in our trade relationship, but it is there. Demonstrations protesting the Eisenhower visit were organized by the far left and dominated by them although there were other elements in there as well. The fact was Prime Minister Kishi got the Treaty through the Diet and then went to Washington to sign it was a rallying cry for opponents of the Treaty. Signing it in Tokyo would have made no difference.

Q: I am reading the memoirs of George Shultz in which he took issue with the Pentagon...we are talking now in the mid eighties...which was trying to get the Japanese to get more of a military. Shultz was asking the question of whether this would be a good idea and decided no. Does one want to build up an overly strong Japan for really short term American gains and military investment.

HAVERKAMP: I raised this with Bud McFarlane a couple of years ago, he was the National Security Adviser, and asked if this had been thought through. He said yes. As I said earlier there are benefits, strategic and other, as well as costs to our security effort in Japan. But the balance is heavily in favor of the benefits.

Q: Obviously Shultz mentioned that he felt the National Security Council and the Pentagon were wrong. What was your impression of our American military there in Japan? One of the difficulties always is when the American military get in they obviously want all the advantages....to keep their bases, to keep any foreign country from interfering in the way they run things. They are a difficult force to deal with for an American Ambassador. How did this work at the time you were there?

HAVERKAMP: Well, less so under Ambassador MacArthur than under other ambassadors because he never hesitated to assert his primacy. He made sure everybody understood that, and nobody would have touted him on it. The main problems with the military were not the big issues but problems such as when an old woman and a young boy went out collecting shell casings from an artillery range, despite warning signs, and were killed. One day a GI aimed his rifle at a train that was passing, fired and killed somebody on the train. A navy wife down in Yokosuka, who was a pyromaniac, set schools on fire. That kind of thing. The shootings were big incidents in the press and raised the question of jurisdiction. Who should try the accused, the U.S. military or the Japanese? Those were always big problems and obviously spilled over into political relationships because the government had to do something and had to show that they were doing something that was effective in inserting Japan's new sovereignty over us in those cases.

I think most of them were settled to our satisfaction and accused U.S. military got off very lightly. They got off much more lightly than they probably would have had they been tried by American courts. Our SOFA with Japan was the first, I believe, in Asia and was precedent setting.

The land issue is always a problem. The government and I think most people knew what we were doing there and that it was in their interest as well as ours. Unlike many people here who seem to believe because we had troops there or elsewhere abroad we were doing other people favors and we were not getting anything out of it.

The main problem was Okinawa which was still under military control, where the Japanese wanted to take a more active role to assert their "residual sovereignty" and the military were adamant in refusing them. A request to fly the Japanese flag over the schools was rejected and became a big issue. The military even issued laissez-passes to Okinawans who traveled off the island. It was not recognized outside the U.S. Because the military occupied so much of the usable land and since there were so many of them, there were constant frictions with the local people and between the Embassy and the government in Tokyo.

Q: Did the Japanese in general have a pretty good idea of the problem of the Soviet Union and what it represented?

HAVERKAMP: Yes. I think the Japanese in general thought of the Russians as the Koreans did as people that they really had to be afraid of. I think they felt they knew us and what we had done during the occupation, etc. and they knew what the Russians had done in North Korea and above all they knew what they had done in seizing the Northern territories of Kunashiri, Iturup, and Habomai. I first ran into that, as a matter of fact, when I was in Stockholm. The then Prime Minister Hatoyama, after having raised it on a visit to Moscow in 1957, stopped in Stockholm on his return to Tokyo. I forget the terms proposed for a settlement but they were not occupied and the issue still unsolved.

Q: It continues today and has always struck me as an irritant that the Soviets could have taken care of a long time ago, but I guess because of their military priorities they wouldn't.

HAVERKAMP: Militarily that area is useful for them for moving in and out of the Pacific by sea and by air.

A funny case happened when I was there. One day the Soviet Ambassador, who was a very aggressive, very vigorous man named Federenko, was on a train coming back from Kobe-Osaka to Tokyo. He was in the dining car having a meal and a drunk came in and went up to him and said, "I hate Americans" and hit him. He stood up and said in Japanese, "I am the Russian Ambassador." So he hit him harder and said, "I hate the Russians more."

Q: As the special assistant to Douglas MacArthur, I have to ask about Mrs. MacArthur. Mrs. MacArthur, who is now deceased, is renown as being one of the dragons of the Foreign Service along with Mrs. Henderson and a few others, and being an extremely difficult person which had effects on embassies and all. How did you find her influence, was there a problem there?

HAVERKAMP: There certainly was a problem for morale. Let me say first, I know neither Mrs. Armin Meyer nor Mrs. Loy Henderson, but the stories I have heard about them are not like those about Mrs. MacArthur. She didn't slap the servants. She did not criticize the U.S. or Americans, she was insecure and uptight. He spent so much time in the office that there was always tension. I think they were genuinely and deeply in love with each other. They fought like cats and dogs and I think they liked it. Her treatment of the embassy wives was very sad at times. I have seen perfectly delightful and wonderful women reduced to tears. One day a woman came and didn't have the list of people for luncheon and Mrs. MacArthur put her down and the poor woman burst into tears. She was at times crude in her handling of embassy wives and was insensitive to others generally. I saw her slightly before she died and had been converted to Catholicism. She had an angelic expression and didn't have a bad word about anybody. Too late for many who suffered under her.

Q: Did she cause problems for you? Did you find yourself sort of in between trying to smooth feathers?

HAVERKAMP: Yes, because whenever she did something that was really awful I had to try and salvage her reputation. She threw me out of her house once because I was impudent enough to disagree with her on something. I went back to my office and packed my things thinking I was going to be put on the next plane. After about a half hour he called me in and looked at me and handed me back a simple letter I had done for him and said, "You did a really good job on this" giving me a look that said, "Don't be so dumb as to argue with her." Otherwise I got on with her. In those days given the role that the wives played it was not always easy.

Q: Wives got the equivalent to an efficiency report in those days.

HAVERKAMP: In a confidential section that people did not have to show. Non-embassy people may have heard what she was like, but she didn't do the type of things that Mrs. Henderson and Mrs. Meyer were said to have done.

Q: I have heard stories about Mrs. Henderson in India insulting the Indians in public places and

that sort of thing. Is there anything else we should cover on this Japanese tour?

HAVERKAMP: Well, Okinawa was a big problem.

Q: Can we talk about Okinawa? You are talking about the issue of reversion.

HAVERKAMP: Yes, it didn't happen in my time but the pressure and tension was there both when I was in Tokyo and back here in Japanese Affairs. When I was in Washington, I was told General Lemnitzer, Chief of Staff of the Army, who had been Commander of US Forces Japan and UN Forces in Korea, he had a red flag on everything about Okinawa in the Pentagon. The military felt rightly that the Okinawans knew they had been treated like poor relatives by the Japanese and were just sort of pushed out of the way and never really accepted in the way Japanese on other islands were. The military felt they could play on this and the poverty of the island to try and foster an independent country under their control with Okinawan fronts. For instance, they gave them some kind of a laissez passer which couldn't be called a passport because few if any countries would accept it. Then they would travel to Europe or some place on the way to the United States or on their way back and couldn't get in the country because almost nobody accepted the document that they had. They did not really understand the real attitude, the sort of dual attitude the Okinawans had towards Japan. On the one hand they did not like their second class citizenship, but on the other they saw themselves as Japanese nevertheless and wanted no other citizenship even if we could have offered it. The Japanese wanted to fly the flag over the schools in Okinawa. There was a gentleman called Fritz Kramer working on Okinawa in DOD. He wore a monocle, spoke with a German accent and was solid as concrete. He was always telling me about Bosnia-Herzegovina and its relationship to the U.S. in Okinawa. His point was that I didn't understand Bosnia-Herzegovina and consequently couldn't understand Okinawa.

Q: He had been a Colonel in the army.

HAVERKAMP: You could just see him dazzling the Pentagon with his European manner and Germanic condescension. He used to tell me, "Flags over the schools are like camels noses under the tent."

Q: Did you find the embassy and the ambassador were trying to make the military understand that they really had to start working on this problem?

HAVERKAMP: Yes, certainly the Ambassador and the Embassy worked on it all the time. We had a junior officer from State on the Island. It was always a crisis atmosphere to keep Okinawa from becoming a further irritant in our relations with Japan. The attitude was very pragmatic -- do what you have to do to keep things from getting worse. People in State did recognize that someday we were going to have to give up our control, but for the military that was inconceivable.

Q: Then you left there in 1960?

HAVERKAMP: In December, 1959.

Q: You came back to Washington and...?

HAVERKAMP: To the Japanese Desk.

Q: For about a year?

HAVERKAMP: From 1960-61, two years.

Q: Before we move to the Japanese Desk you mentioned one thing about Douglas MacArthur and his talking about the military. That he was always conscious and always saying that many people in the military, particularly back in Washington, did not understand that the occupation was over and that you deal with the Japanese in an entirely different way now than you did before.

When you came back, this was still the Eisenhower administration, who was running East Asian Affairs and what were your major concerns?

HAVERKAMP: The desk officer, Dick Sneider, and under him three officers. Above him you had the Bureau of Northeast Asian Affairs with a director and deputy director which had Korea and Japan.

My main concern at the time was Okinawa and various odds and ends of domestic politics.

Q: Was the desk getting involved in the abortive Eisenhower visit, which was very dramatic?

HAVERKAMP: Yes, we were involved in the planning of the whole trip from the beginning.

Q: Was it seen at the beginning as being a rather tranquil trip?

HAVERKAMP: I think people expected that there would be demonstrations against the visit, but that he would certainly come to no harm. I don't think anybody anticipated what happened to me, Haggerty and that the visit would have to be aborted.

Q: This is James Haggerty, Eisenhower's press spokesperson who along with Ambassador MacArthur were shoved and pushed around in a car at the airport looking over facilities and the demonstrations were such that they decided Eisenhower would not come in. It was quite unprecedented, particularly in a society such as Japan where face is so important, where the President didn't feel he could visit. How did that impact on how things were being called in Washington?

HAVERKAMP: The main impact was on Premier Kishi and the Japanese government and they were pushing us to the end to go through with the visit. They kept saying they could guarantee his security. They felt that it was a definite blow to their prestige and status as the government to say that for this most important foreign visitor they could have they couldn't provide for his security...

Q: It would have been the first American president to visit there.

HAVERKAMP: Right. So, I think in that sense it made the government, Kishi himself, more unpopular. Eventually it led to his demise as Prime Minister. So I think it was very serious.

Why it happened? I don't remember seeing any reports from anybody that such a thing was a possibility, so I think it was a failure to be informed of something that certainly we should have been informed of by the embassy or Intel people. That being said, even if we were informed it would have made little difference to the outcome. Kishi and his government were adamant in having us go through with the visit. An option to make up an excuse would not have been viable.

Q: I am not a Japanese expert, but I gather that one of the things was that the Kishi government tried to railroad the thing through rather than reaching the general consensus that is so traditional within the Japanese political system.

HAVERKAMP: That is true. He came here first to sign the treaty in January, 1960. What happened was the opposition in a very undemocratic way, tried to prevent a vote so the government outfoxed them and approved it. This was atypically Japanese on both sides.

Q: Who was calling the shots as far as to visit or not to visit? Was it the White House that was pretty much calling the shots?

HAVERKAMP: The White House.

Q: This caused a real blip in Japanese-American relationship, a political one rather than economic this time. What were you getting from the Japanese Desk about wither Japan and all that?

HAVERKAMP: As a result of the aborted visit?

Q: Yes.

HAVERKAMP: I don't think anybody anticipated any disastrous consequences other than the possible fall of Kishi as Prime Minister earlier than it would have come about otherwise.

Q: So this was an occurrence rather than an epic shaping event?

HAVERKAMP: Right. It was dramatic but the main issue, the Treaty, survived and still survives.

Q: While you were dealing with the Okinawa issue, were there any developments at that time?

HAVERKAMP: Labor problems, the things that had been going on, there was really no progress anywhere. I think eventually we did allow the schools to fly Japanese flags. There was mainly, I think, the restraining of the military and trying to get them to be more open with the Okinawans

and their relationships with them. To try to understand their allegiance to Japan.

Q: Did you have any contacts over at the Pentagon while working on this?

HAVERKAMP: All the time.

Q: Real diplomacy is not between nations. Nations have interests, and fancy footwork really doesn't help that much. Real diplomacy is within Washington and particularly between two major dukedoms like the State Department and the Department of Defense. How did you find dealing with your counterparts over at the Pentagon?

HAVERKAMP: Frustrating because they were unimaginative people with one exception, who didn't want to see things as they were, who wanted to see them the way General Lemnitzer wanted them to see them -- the Army is there and will be there forever, will control it and will keep the Japanese hand out of it. The only relieving factor, professionally there were not many relieving factors...there was a wonderful guy over there named Colonel King who liked to eat and about once a month he would take me to the Army Navy Club for lunch and discuss the issues. He was smart enough to know that what the military was trying to do was not very realistic. He had a good understanding of and great sympathy for the Okinawan people.

Q: You felt they were just saluting and taking their instructions?

HAVERKAMP: Yes, without any imagination. Kramer and the other guy I dealt with were naive, both had Ph.D.s but no understanding of how politics in Japan really worked or the nature of the relationship between Japan and the United States and how Okinawa affected that.

Q: That has always been one of the major tasks of the Foreign Service to explain that these countries are not simple and have their own dynamics and you have to understand them if you want to get somewhere. Dick Sneider, who some years later is my ambassador in Korea, what was your impression of his knowledge and feeling towards Japan and how he operated from where you were seeing it at this particular time?

HAVERKAMP: I admire Dick. He was very tough. He would go into a meeting prepared and if you weren't prepared you probably got slammed. Now that may not have been good, it may have been bad. But, after all, that is how the system works. If your job is Okinawa and you don't know about Okinawa the U.S. is in a bad way. He was very bright, aggressive, very abrupt...sometimes I would be talking on the phone the Pentagon and he would listen in. Half the time with the Pentagon I would put the phone down, walk away and come back again and here we would be on Bosnia Herzegovina. He was very ambitious. He knew exactly how to trim his sails to serve his ambition.

Q: I found this when we refused visas that he wanted to have issued. Did you note any change when the Kennedy Administration came on?

HAVERKAMP: There was a big one policy wise in that Dean Rusk understood what we were trying to do on Okinawa and stood up to the military on it. Early on there was one big issue on

which he stood firm and we prevailed. In other words, before that State deferred largely to the military. With Rusk, State played its proper role in that relationship. Rusk arranged that with Secretary MacNamara early on.

We also had a new career officer who came in to be the Assistant Secretary for Far Eastern Affairs, Jeff Parsons.

Q: And then Walter McConaughy came in.

HAVERKAMP: For a very brief time.

Q: Dean Rusk had been Assistant Secretary for Asian Affairs so that essentially in many ways, it was said later on, particularly with Vietnam, he became the desk officer for the Far East. Here was somebody who was Secretary of State who knew the turf.

HAVERKAMP: Right. I had contact with Dean Rusk subsequently on another part of the world. He took an interest in everything. He didn't say the third world is no concern to me until it becomes a crisis. He made decisions, not on nitty gritty, but if anything was a critical issue he wanted to know about it.

Ambassador McConaughy had served in Japan before the war. He was Ambassador in Korea and came back to be Assistant Secretary. It was a big change and I think there was even a bigger change when he left and Mr. Harriman took over.

Q: What sort of a change was there when McConaughy came?

HAVERKAMP: McConaughy was much less engaged. He didn't seem to have any real agenda that he wanted to fill or get involved in. I remember early on I was the duty officer one Sunday morning and he was going to see the President. This was the critical time of in Laos. I had been in early, seen the telegrams and put them in priority order. Finally, about ten after 10:00 he wandered in, didn't see any telegrams and went over to the White House. About five days later there was a rumor in the paper that he was being replaced, which he was. A very nice guy. He and his wife were loved by the staff wherever they were.

Q: But apparently with the Kennedy Administration they needed somebody...

HAVERKAMP: He was just not an effective operator in that atmosphere.

Q: You were there until 1962?

HAVERKAMP: Well, actually I left the desk around September, 1961 and studied Cambodian for some months.

Q: Were there any other issues during the time you were on the desk that you feel were important?

HAVERKAMP: Trade problems were increasing.

Q: Were there any Congressmen particularly interested in our relations with Japan during this time?

HAVERKAMP: We had no Congressmen or Senators from Japan as we did from Taiwan. When I was in Japan I spent a lot of time with congressional delegations. We had an enormous number of congressional visits. I didn't handle all these visits but I did Senator Hiram Fong's visit. A Chinese-American, because he was getting a lot of press, coming in on the first jet, etc. I remember one of the first questions the Japanese press asked him about was special interest in Asia, including Japan, and his answer was that while he was a Chinese-American, he was a Senator for the State of Hawaii and that included all the people of Hawaii. He was not the Senator for China or any place else.

Many, of course, were very interested. The appropriations people, the foreign affairs people, the members and staff of the Armed Services Committees. There was a great deal of interest, but nobody was aggressively pushing a contrary policy or putting any blame on State. The Japanese were then paying Dewey Balentine, Tom Dewey's firm, something like \$300,000 a year to represent them and they were very active. But that was mostly on trade issues. The differences between the governments were not on strategic issues, the differences were on trade issues. There was a congressman from Illinois who took a close interest in Okinawa from the military point of view.

Q: In those days from the President and the Secretary of State on down, Congress was full of veterans of World War II, many of whom fought against Japan. You found that we were trying to take the long view on Okinawa, but the short view was the Pentagon view of we took Okinawa, let's keep it. Did you find that there were Congress people who responded to that type of thing?

HAVERKAMP: Yes. They had one man, Mr. Price, from Alton, Illinois, who was the Pentagon's man. He got a Bill passed that was not helpful in the end because it limited the amount of aid that we could give to Okinawa to, I think \$5 million a year. That was a good figure at first but when more was needed, it was impossible to top.

There were other Congressmen with whom they were in contact. As you know they, the military, are the only government Department allowed to have liaison officers on the Hill. People are actually stationed there and work on the Hill for the Department of Defense. However, I don't remember getting a great deal of pressure from Congress on this issue.

Q: Were you every called to testify or work with staffers in Congress on Japanese things?

HAVERKAMP: Other than telephone calls and preparing testimony and questions and answers, etc., no.

RICHARD W. PETREE

**Assistant Labor Attaché
Tokyo (1957-1960)**

Richard W. Petree was born in Jamestown, New York in 1924. His career in the State Department included assignments to Japan and Ethiopia. He served as political counselor to the United Nations from 1976-1981. Mr. Petree was interviewed by Paul McCusker on July 22, 1993.

Q: When did you get your first foreign assignment, and where was it?

PETREE: Well, I went right on working in DRF for another two years, and finally was able to dredge up one possible assignment as Assistant Labor Attaché in the Embassy in Tokyo. I was assisted a great deal by a man whom I came to admire tremendously, named Phil Sullivan, who was the Regional Labor Advisor for the old Far Eastern Affairs Bureau in the Department (FE). Phil later, the following year, went down in a PanAm crash -- the plane disappeared between San Francisco and Honolulu. He and his wife were lost right after I went to Tokyo. In any event, he arranged the assignment, and it involved some interim training in the Department before I went to get into labor affairs. And I reported to Tokyo in June of 1957 and worked at the labor business in the Political Section of the Embassy, 1957 to 1960.

The highlights of that period really had to do with learning the ins and outs of reporting, in general -- on labor cost factors that affected Japan's early trade patterns with the United States, its competition with the United States. But beyond those traditional areas of work for Labor Attaché offices, I became very much caught up in the political reporting on leftist worker organizations and political parties in connection with the whole drive of the left-wing to upset the stability of Japan, which culminated in really large-scale demonstrations against the conservative government in the spring and early summer of 1960. It was during those demonstrations that President Eisenhower's scheduled trip to Japan had to be called off because of all the instability.

Q: Did you run across this fellow -- his obituary, I don't know where I picked it up -- but Shoriki died a couple of years ago -- founder of a Japanese media group which, I guess, was his vehicle to confront the Communist-run labor unions that he helped to destroy, virtually? I don't know whether that's true or not.

PETREE: Well, I don't think that's true. They're still in existence, but on the other hand, he was very much a part of the general right-wing point of view which was dead-set against the liberal development of trade unions' strength in the Japanese economy and in the society. His group was called the Sankei.

Q: Then it became Fuji-Sankei Communications.

PETREE: That was when television came in.

Q: Then you had your own post. That's pretty good so early in your career.

PETREE: In 1960, partly because of all the reporting work I did on the left-wing movements during the upset period, Ambassador MacArthur selected me to be Principal Officer down in Fukuoka, which was the southwestern-most constituent post in Japan. In those days, we had a Consulate of about eleven Americans and twenty or so Japanese, and an American Cultural Center, a USIS post, with at times two Americans and another thirty or forty Japanese employees. So it was a fairly big post in terms of those small Consulates. I also had in that consular district three large U.S. military bases.

Q: Oh, that must have been fascinating...and the problems of the military.

PETREE: And that was, as it turned out, the real substance of what I did for the next three years.

Q: Liaison with the military...well, that will teach you lessons in tact and diplomacy.

PETREE: Well, it is kind of a familiar problem for lots of people in the Foreign Service.

Q: That's right. But there must have been also a lot of consular work there -- straight consular work in terms of registration of Americans.

PETREE: There was. In the district, I had at that time something like 80,000 Americans living there.

Q: With dependents?

PETREE: ...marrying and birthing, citizen work, plus, of course, there were the usual seaman cases and one thing and another that came because of the busy ports.

PHILIP H. TREZISE
Counselor for Economic Affairs
Tokyo (1957-1961)

Philip H. Trezise was born in Michigan in 1912. His career in the Foreign Service included assignments in Japan, the State Department's Economic Affairs Bureau, and the Organization for Economic Cooperation and Development. He was interviewed by Willis Armstrong on May 17, 1989.

TREZISE: Well, the fact is that MacArthur asked me to come to Japan with him. He went to Japan in the early part of 1957, and before he left, he had arranged for me to join him there as Economic Counselor. Why he chose me, I have never known. He didn't explain. But he had had long talks with Bowie; and Bowie, no doubt, had some part in it.

Q: MacArthur, himself, was not a great Far Eastern expert, was he?

TREZISE: By no means.

Q: I knew him. He was in EUR.

TREZISE: That's right. He was in EUR.

Q: Western Europe...yes.

TREZISE: He had been in France during the Vichy regime, during the war. He came to have a close acquaintance with General Eisenhower -- not during the war, but certainly after the war.

Q: Yes.

TREZISE: So he had, really, a direct line to the White House, which few Ambassadors had. He could pick up the telephone and reach the President without the problems that most Ambassadors would have encountered.

In any event, I went to Japan in the spring of '57 and stayed there through MacArthur's tenure and through the first six months or so of Ed Reischauer. Ed took over after the Kennedy victory in 1960. He came in March, I believe, of 1961, and I stayed with him until October of that year.

Q: So you had four years there?

TREZISE: I had four years there. A bit longer than that, actually, because I should have gone home in April, and I stayed until, I think, October. I sent my family home earlier and stayed on because the Deputy Chief of Mission had left. I was acting as DCM until he returned.

Q: That was an extraordinary period for Japan.

TREZISE: It was indeed. I have often remarked that the first month I was there, the Japanese had a balance-of-payments crisis. It was a true crisis. Their foreign exchange reserve had been drawn down to a few hundred million dollars, and they were really in quite a stew. The reason for the problem was that the country had been growing so fast and had been sucking in imports at a fabulous pace. In those days, believe it or not, Japan had a deficit on trade account. While they were exporting -- their exports were growing fast -- imports were growing even faster.

Q: I suppose the imports were largely capital goods.

TREZISE: Capital goods and raw materials. Yes, in those days, consumer goods were not imported on any sizable scale.

Q: Never were.

TREZISE: To this day, they're not terribly great. Well, the extraordinary things about this episode were, first, that the Finance Minister resigned. That was Mr. Ikeda, who later became Prime Minister. He resigned, and somebody else was put in his place.

The Bank of Japan and the Finance Ministry then imposed a credit squeeze on the economy. Its results were really something to see. I made a trip around Japan at that time to get acquainted with some of the other cities. Everywhere I went there were buildings that had been started, and construction had stopped. There were shells of buildings everywhere in the country. The construction boom, which was part of a total boom in Japan, was just choked off because nobody could get credit, and they simply could not continue. There was great anguish in the business community about the policy, but the government stayed with it.

By the winter, the external account was approaching balance again. Their big deficits were behind them. And by the next summer, the boom had resumed. All that investment activity that had been stopped was under way again.

Q: They've never looked back since.

TREZISE: Haven't looked back since. But that would have been '58. Well, '58 and '59 were big years. In '60, they had the political upheaval which involved us, of course. That was the year President Eisenhower was going to make the first ever visit of an American President to Japan. We turned the Embassy upside down to plan for that visit. I was writing speeches for the President -- not my job at all. The administrative people had everything organized to a T. Everybody knew where he would be, whether he'd turn left or right, where the President would stop and who would get out of the car first. Everything was organized.

But then, for reasons really quite extraneous to the United States, a political upheaval arose against the then Prime Minister, Mr. Kishi. We had renegotiated our security treaty, which had been imposed on Japan as a price for the peace treaty. We had renegotiated it to meet many of the Japanese quite legitimate complaints about its one-sidedness. But the opposition parties, including some of the left-wing trade unions, organized and moved against ratification of the treaty, even though, in fact, all the objectives that the Japanese government had had been achieved.

Nevertheless, they mounted this enormous campaign, primarily street demonstrations. And just before the President was supposed to arrive, they had a small riot near the Diet building, and a young girl was crushed to death in the fighting between the police and the students. There were mainly students in that demonstration. This was a culmination of some weeks of demonstrating. The upshot was that the government lost its nerve and said it could not guarantee the President's safety if he came. So the visit was called off. The President was already in the Philippines. Instead of going to Japan, he went to Taiwan and had a visit there. He was, of course, furious.

Q: He had quite a temper, Mr. Eisenhower.

TREZISE: Yes, well, it was kind of crisis in U.S.-Japan relations.

Q: I remember it. I was in Canada at that point. It was a real black eye for the United States.

TREZISE: It was. It was indeed. And though I'm not an expert on Japanese politics, I have always believed that the problem that Mr. Kishi had was not the treaty. That was chosen by the

opposition parties and the trade unions as an excuse for trying to drive Kishi out of office because he had earlier proposed a new police powers bill. Some of the elements in that bill seemed to hark back to the pre-war system of police control.

Q: Oh, I see.

TREZISE: This caused a great deal of unhappiness not only among the students and the trade unions and the left-wing parties, but in parts of the business community as well. People saw this as something that might turn Japan back toward a period that most Japanese would like to forget.

Mr. Kishi was the author of this. Indeed, when he came into power, one of his positions was to strengthen the powers of the police over internal security matters. So he was removed from office not long after the aborted Presidential visit.

Q: Did the Americans think it was basically a pretext?

TREZISE: Basically, it was an excuse chosen by the opposition as the first opening they had. Actually, the police power bill was never enacted.

Q: Never was.

TREZISE: The Diet -- the Parliament -- simply sat on it because of the widespread opposition. But the thought that somebody would propose it was enough to make Kishi a target. He had been a great friend of the United States. Indeed, there was a point of view that he was the American Prime Minister. We had chosen him for the job, or so it was said.

Q: There's a downside risk in that.

TREZISE: In any event, out he went. Mr. Ikeda came in. There was a wonderful example of a politician doing the right thing. He didn't talk about the security treaty, which by then, had been ratified anyway. He said he had a plan for doubling national income in ten years, and everybody seized on the so-called plan. It wasn't a plan at all.

Q: Release the forces.

TREZISE: It was just a political statement. We will double national income in ten years. In fact, the economy rose at a pace faster than his double national income objective. That would have required a bit more than seven percent growth per year, whereas the economy grew at more than nine percent a year during the decade.

So Mr. Ikeda's regime was a success. He was a Prime Minister for a long time. He died in office, or he got cancer and had to leave office and died shortly afterward. During his tenure, Japan began to come out of its shell.

Q: How long was he in office? From about '60 . . .

TREZISE: He was in office, I think, for eight years, I believe -- or almost eight years.

Q: Eight years.

TREZISE: He was succeeded by his brother, who was named in the Japanese fashion. It was not Ikeda, but Sato. I think they had been orphaned and had been adopted by a family. One took the family name, and the other did not. In any event, his brother, Mr. Sato, became Prime Minister just before President Nixon won the election in the United States. He was the man with whom Nixon and Kissinger dealt.

Q: There was a long period of great continuity in Japanese politics.

TREZISE: Oh, yes. Well, of course, they have had the same ruling party since 1955 -- and even longer than that, really. In 1955, the two conservative parties -- the Liberals and the Democrats -- consolidated into a single party, the Liberal Democratic party. That party has governed Japan since.

Q: It's had a few ups and downs in the more recent years, but it was very solid for a long time.

TREZISE: Yes, and even in recent years, the downside periods were not so serious. Certainly not as serious as the one they're now in, which is the first true crisis that that party has ever encountered. And it's by no means clear how they will get out of it.

SIDNEY WEINTRAUB
Political Advisor to Commander of U.S. Forces in Japan
Tokyo (1958-1959)

Sidney Weintraub was born in New York in 1922, and graduated from the City College of New York with a BBA in 1943. From the University of Missouri and Yale University he received an MA and in 1966 got his PhD from American University. He served overseas in the US Army from 1943 to 1946. His assignments abroad included Madagascar, Mexico City, Tokyo, Bangkok, and Santiago. Charles Stuart Kennedy interviewed Mr. Weintraub in 1996.

WEINTRAUB: I went to Tokyo in the political section.

Q: From when to when?

WEINTRAUB: Just one year. What happened was that my relationship there with the ambassador was not good - maybe my fault, maybe his. The Ambassador was Douglas MacArthur III. He and I never got along. This could have been for any one of a number of reasons. I didn't like him. I don't think he liked me. I thought he was an egomaniac. He thought I was probably incompetent. We never got along. I was transferred out of Tokyo. It was a direct transfer.

Q: While you were there, what developments were there?

WEINTRAUB: I was actually there trying to work on some of the backup, getting ready for the security treaty negotiations. I was also the political advisor to the Commander of U.S. Forces in Japan, who was resident in Tokyo. The political issues were really quite important in the sense of getting through the security treaty and then handling all of the other political sensitivities of one kind or another that came up, and trying to follow the developments in Japanese politics, which were really quite interesting at the time. The beginnings of what is now the Liberal Democratic Party were taking place.

Q: Were you in the Political Section of the Embassy concerned about the opposition that was beginning to build up to the Security Treaty? This became sort of a focal point. This is how the other political parties and other groups, students and all, had something to work on, wasn't it?

WEINTRAUB: That's right. I left before the thing exploded. Remember, it exploded during the proposed visit by President Eisenhower. I was in Thailand by then. I don't think the embassy ever fully understood the depth of the opposition. If I can be frank, the ambassador listened only to himself. In other words, I didn't really think he was that deep an analyst. I'm not sure, if I had stayed, whether I would have seen any more. I don't know. But it was quite clear to me that the embassy was caught by surprise, even though I was away at the time. There were some very bright political officers in that embassy, some very bright Foreign Service Officers. So, I have no doubt that some of these stirrings were being reported. This was a group of quite able people.

Q: What about your time dealing with the American military? Were they, at the top, at the level where you were dealing, do you think they were aware of the sensitivity, of the problems, of the doings, that their troops were causing?

WEINTRAUB: I think so. They were intelligent men. They were impatient with all of this, and I think they welcomed having a civilian who was trained to look for sensitivities and to provide guidance from time to time on some of these things. I think they appreciated it. I never really sensed any tension or animosity. They were aware of the political sensitivities, but that was not their job in life.

Q: Was there concern about a Communist or an extreme Leftist takeover at the time?

WEINTRAUB: Not really, no. It was pretty clear to most of us that the traditional parties were in control. There were several parties. The Liberal Democratic Party was created about that time. There was really not much question that they would dominate the electoral and the governing process.

Q: Did you get any feel of the role of the Soviet Union there?

WEINTRAUB: I didn't have any of that.

Q: You didn't speak Japanese, but-

WEINTRAUB: I studied it a couple of hours a day. No, I didn't really speak Japanese. I could make simple conversation, that's all.

Q: How about your contacts? Were you mainly working with papers?

WEINTRAUB: Papers? That was one of the problems with a lot of us. There were few people who could speak Japanese, not many. Most of us worked from papers, from governmental contacts of one kind or another, a few journalists, and others - people who, in other words, could speak English. Even those who could speak Japanese had very little contact with the general population. The ability to break into Japanese society by American diplomats, even those who were fluent in Japanese, was quite limited. It was not easy to do. I remember asking a lot of my business friends, Americans, Europeans, if they had much success. They said, "Yes in business. Socially, very little." The embassy personnel who could speak Japanese, even some who had Japanese wives, had similar experiences, except with the family into which they were married. It was not easy. It was a hard assignment. Part of the difficulty of understanding what was going on was that limitation, of being able to easily get around in Japanese society.

Q: You didn't get along with the Ambassador and the Ambassador didn't get along with you.

WEINTRAUB: So I was transferred out.

JAY P. MOFFAT
Vice Consul
Kobe-Osaka (1958-1960)

Jay P. Moffat, a third generation Foreign Service officer, was born in New York in 1932. His career with the State Department included assignments to Japan, France, Switzerland, Trinidad, Morocco, and an ambassadorship to Chad. He was interviewed by Charles Stuart Kennedy on November 13, 1989.

Q: Your first posting, you went to Kobe-Osaka. Is that right? This is 1958-60? What were you doing there?

MOFFAT: I was a Vice Consul, and I did consular work -- a year of general consular work and then visas the second year.

Q: Weren't you given the impression that this was a period in which Japan was not yet showing the sort of economic muscle that things were beginning to move there? Do you get any feel about how Japan and the United States were fitting together, at least from the Vice Consul viewpoint?

MOFFAT: In terms of economics, I always like to cite hidden indicators that told us that the boom was on. For example, we lived in a Japanese house, and when we arrived, the "honey bucket" man, as we used to call, him would come and pay for the privilege of emptying the stuff,

and by the time we left, we had to pay him to do it.

Q: In my time, the "honey bucket" man was the man who came and removed the human waste to use for fertilizer. All around the Far East, the fields reeked of this, and it was very good fertilizer -- not very healthy sometimes.

MOFFAT: I would say we were out in left field out in Kobe-Osaka. Douglas MacArthur II was the Ambassador at that time. He never penetrated into our consular district, which was a very close second to the Tokyo area in importance -- never in the two year period. It was also the period that riots were beginning -- demonstrations I should say -- only occasionally riots. We had our share down in Kobe and Osaka, but except for the Korean population, of which there was a considerable number in the area, the demonstrators at that point were very amiable and polite.

Q: This was the time when President Eisenhower was scheduled to come and didn't because of the treatment obviously awaiting him. Were you getting much of this in Kobe-Osaka? And was this anti-American, or was this something else?

MOFFAT: I think it was something else. It certainly was not anti-American in personal terms, and there was no feeling of personal danger. You could walk into the middle of the demonstrations. It was a lively period.

Q: Were you working on things? Was there much to do?

MOFFAT: We were an incompetent bunch down there at that time. We had some good people, but the post was mismanaged. As I say, we were out in left field.

Q: This was a time of change in Japan. Looking at both the time you were there and later on, what should the officers have been doing in Kobe-Osaka during this 58-60 period? The Japanese were beginning to stir.

MOFFAT: I think individual officers were doing the right thing. We had very professional officers below the top two levels. What they did was perspicacious and all the rest of it, but the post was not well run. Embassy Tokyo was absorbed in itself and didn't pay much attention to the provinces, so I think a lot of what we did was wasted or misused. We had a number of Japanese-language officers there who were very able. Again, I was very young, very junior, and I had more than I could handle with my own work and only looking back on it reached these conclusions. Embassy Tokyo was slow to take an interest in what was going on with the Japanese people and in the provinces. This wasn't too long after the war and the occupation arrangements. I think everything lagged behind the developments.

ELLEN M. JOHNSON
Economic Section Secretary
Kobe-Osaka (1958-1961)

Ellen M. Johnson was born in New Brunswick, New Jersey in 1934. Her career in the State Department included assignments in Japan, Poland, England, Czechoslovakia, Yugoslavia, and Germany. She was interviewed by Charles Stuart Kennedy on April 27, 1994.

JOHNSON: After being sworn in and experiencing three days of "training," which consisted mostly of looking at and being told about various forms of communication -- the dispatch, the telegram and the airgram -- I packed my bags and sailed for Japan and Kobe-Osaka. The thirteen-day cruise was my first trip outside the United States and was very exciting.

Q: It was a consulate general you were headed for, and you were there from 1958-1961.

JOHNSON: Yes. I discovered afterwards that it was unusual to have a three year tour as a first tour, and I don't know why it was set up that way. A two year tour -- or eighteen months home leave and eighteen months tour -- would have been much better.

Q: What was Japan like at that period?

JOHNSON: It was not the easiest place for a single woman. A nice woman didn't work in those days. One year, I commuted to the Osaka office from Kobe, where I lived in the consulate general compound. It was about a twenty-five minute train ride, and often young Japanese would come up to me to practice their English. I was twenty-three at the time, and there were always the questions, "Where are your parents? What are you doing here?" They were always amazed when I told them I worked at the consulate general.

The Japanese did most of their entertaining at public restaurants, although some of the officers occasionally were invited to a Japanese home. There was only one Japanese that I got to know socially, and that was the head local in the economic section who invited the office over to his house for dinner once. His wife waited on us, but didn't join us at the table. It was almost impossible for a single woman to get to know Japanese at that time.

Westernization was just beginning to creep into the Japanese culture, which made living there much more interesting and different. Once I adjusted to the culture, I enjoyed staying at Japanese inns, strolling around shrines and discovering new ways of doing things. I don't think I would like to return to Japan because I fear it has become too Westernized.

Q: You worked where?

JOHNSON: I was in the econ section doing typical secretarial work.

Q: Who was the consul general then?

JOHNSON: A man by the name of Emory, who previously had worked for AID. This was his first Foreign Service post and I believe his last. He and his wife had a drinking problem which was very evident. The foreign community talked about them all the time, which was very embarrassing to a newcomer to the Service who was proud of being an American and in the

diplomatic service.

We had a wonderful senior Japanese national in the econ section who had his Masters in economics from Harvard. He knew a great deal more than his American supervisor did and in effect, ran the section.

It was a small consulate, although all the usual sections were represented, including CIA, USIA and the military.

Q: Did you get any feel for what we were thinking about the Japanese economy at that time?

JOHNSON: We were trying to encourage the economy at that time. We certainly weren't worried about competition from them yet. Shipbuilding was thriving in the Kobe area, which has one of the largest natural harbors in Japan. The textile industry was also doing well. I don't think anybody thought the automobile industry would develop the way it has. The Toyota was being manufactured, but the electrical system was so poor that people bought a Toyota only when they couldn't afford anything else. If you were important, you drove a four-door, black sedan...an American car!

It was becoming evident that the Japanese were good copiers and thought nothing about flooding markets. Whenever a new fad, like the hula hoop, developed somewhere in the world, most notably in the United States, small cottage industries would spring up immediately throughout Japan, and they would flood the market, soon putting themselves out of business. They would then wait for the next fad and then start manufacturing the new item, again flooding the market. Somebody may have begun at this time to worry about these tactics, which might be used with larger items as well as the Japanese industry developed.

Q: I take it you liked it but didn't like it, is that right?

JOHNSON: I liked it but wasn't very happy with the head man and hoped he was not typical of principal officers. I had a wonderful time in Kobe outside the consulate. There was a large foreign community in Kobe, many of whom were single, British men working in the Kobe branches of various banks and insurance companies. I was young and loved to party. So it was fun. But three years without home leave was long enough. I was in need of a rest and recuperation period by the time I left.

JOSEPH P. DONELAN, JR.
Principal Officer
Nagoya (1958-1961)

Joseph P. Donelan was born and raised in New York City. After serving in the U.S. Army during World War II he attended Georgetown University's School of Foreign Service. He joined the Foreign Service in 1955 and served in France, Japan, India, as well as Assistant Secretary for Budget and Finance and later

Assistant State Secretary for Administration. Mr. Donelan was interviewed in 1989 by Charles Stuart Kennedy.

Q: All right. I'd like to come to Nagoya. You were assigned as principal officer to Nagoya in 1958. How did that come about?

DONELAN: I told you about being a new FSO?

Q: You're saying a new FSO because prior to that you.....

DONELAN: When I went to Paris I became a Foreign Service Staff Officer with Attaché status; prior to that and when I was hired for the Foreign Service Planning Division I was a departmental employee.

Q: Civil Service then?

DONELAN: Yes, right. Then I was made an FSS to go to Paris, became an FSO-3 in Paris, and then returned to the Department

Q: Under the Wriston Program.

DONELAN: That's right. I took the short route to become an FSO, Foreign Service Officer; the usual investigations, the essay and appearance before a Board of senior officers from the Embassy. I'll always remember the Chairman of the group, was Fred Lyons, who at the time was Supervising Consul General in Paris - that is in addition to the Embassy responsibility he was responsible for the oversight of the operation of all of the Consular Offices in France. Did you ever know him? He was fine gentleman of the Old School. (I'm not sure if he really approved of the Wriston program, but I made it).

Q: No, I never did know him.

DONELAN: After I was back in the Finance job for about a year and a half, although still technically Director, I went to work for Bill Hall, who was THE Budget Officer for the Department My particular assignment was to work with Ambassador Loy Henderson who then was Deputy Under Secretary for Management, who did all the opening statements on the budget, before the respective Congressional Appropriations Committees. Specifically I prepared supporting documents, briefing book, and helped draft statements for his presentations. I say helped draft statements, because he plunged right in himself, nothing hands off about him. One little quirk, he abhorred "split infinitives" and I never more consciously split an infinitive after working with that marvelous man. In time I got to indicate to him my preference for an overseas assignment, and given his long service abroad he was sympathetic to the idea that a new FSO should rack up overseas time instead of being in the Department Findley Burns was in personnel at the time (guess he went from there to be Ambassador to Jordan) but I let him know that if something came along I didn't think Mr. Henderson would object to my leaving. Shortly thereafter Outerbridge Horsey (one of the famous foreign service names) who was Deputy Chief of Mission in Tokyo came back to the Department on consultation. Seems he was looking to fill

two jobs in Japan: one was the Executive Officer slot at the Consulate General in Kobe, the other was the Principal Officer job in Nagoya. Findley of the agile mind, said he might talk to Joe Donelan. Outerbridge Horsey said, "Is he a Japanese language officer?" And in his best Findleyesque style, the answer was that he didn't know, but he thought my French was pretty good and maybe my Spanish was okay also.

Horsey did call me and I went to see him. He said he'd looked at my background and history and he said: "I don't know. There are two jobs", and then he described what I had heard about Kobe and Nagoya. He then asked me if I had a choice, which position would I select. I told him that if I were he, in looking at my background one might conclude that I could do the job in Kobe but that my personal preference was the Principal Officer job in Nagoya, where I would have full responsibility for the operation.

Q: So you opted for the PO job. Then what happened?

DONELAN: In about eight weeks, incredibly, along came a cable from Ambassador MacArthur saying he would accept me for the Nagoya job. I almost couldn't believe it....

Q: ... What were your principal duties?

DONELAN: As you know a Consulate is pretty much a branch office of the Embassy, with a political, economic-commercial and consular functions, but with in the case of Nagoya considerable emphasis on economic and commercial work, and of course all usual in the consular line - service to Americans,(very few in the area), issuance of visas, handling ships papers, etc. There were fourteen people on the staff, six Americans and eight foreign national employees. We also had a branch USIS office in Nagoya. My personal responsibility in addition to overseeing the work of the office was in political reporting, such as it was, and maintaining contacts with the Japanese business and government community. Nagoya in addition to being the third largest city in Japan at the time, was the headquarters of the Aichi Prefecture with a Governor resident in Nagoya. It's port was the principal port of entry for American raw cotton bought by the Japanese.

The Embassy would task all the Consulates at different times and for different areas of reporting, for example, labor unions encouraged under the occupation were starting to feel their oats.. and the Embassy would call for a country-wide round-up on what was going on, what was happening or who was doing what to whom in local elections.

Q: Was it easy to report in Japan in about the late 50's? Did you have fairly easy access or not?

DONELAN: Generally yes, the atmosphere was right, business was booming, the Toyota Auto had just begun exporting cars to the States, with I might add not too great success at first, Noritake shipping to some 76 countries, but the US was the best customer; the plywood industry was just getting into stride; Japanese were selling things to the US and they were buying things from the US. It was fascinating. Having been in the Pacific during WW II (Okinawa) I went to Japan with this mental image built in, and when I talked to these people and they were so pleasant and so friendly I used to think, "What is he really thinking? What is going through this

man's mind?" Nagoya was 95% fire bombed in the final months of the war (the site of the Japanese aircraft industry). I wonder how many of his relatives were killed? You had to think a lot.

But an incident occurred, a natural disaster, the result of which gave me incredible entry in the community. The worst typhoon in Japanese history swept up the Ise Bay, almost crushed the city of Nagoya, and in passing flooded the port areas, up-rooted trees, power lines, smashed thousands of homes and killed some 6,000 people. As Consul I found myself in charge of the American relief operation.

Q: That was in '58?

DONELAN: This was in '59. We had gotten to Japan in August of 1958, and it was now May 1959. It's a long story. But power was out for days, houses down the street from me were sliced in half; my car was immobilized under some huge trees which fell, and I got to the Consulate the morning of the first day by bicycle. I got in touch with the Embassy through the Japanese Tactical Air Wing Communications operation in nearby Gifu. Relief supplies were in by NorthWest Airline; Admiral Kivette who was the commander of the Sixth Fleet sent in a small aircraft carrier the USS Kearsage which was on its way for duty in Japan; we had forty eight American helicopters, Army, Navy, Marine, Air Force working off of a huge field in front of the City Hall; the Kearsage sent boats and medical parties out over the flooded areas, the choppers dropped food, blankets and fire wood to the little islands of people on the clumps of land which had been the high ground, and they picked up hundreds and hundreds people and lifted them to safety. They did the work and the American Consulate got the credit. And the credit line was almost inexhaustible.

Q: I notice you received a superior service award. Was this because of the ...

DONELAN: That was just one of those things. A piece of paper the Department gave you.

Q: Well, they don't pass them out too often.

DONELAN: That was basically what it was all about, yes.

Q: Well, how were your relations at the post with Tokyo? Did you find that it worked well or not so well?

DONELAN: I think the relationships were really good. I went to Tokyo infrequently, but I preferred Nagoya to Tokyo anyway. The Embassy would call us in for special occasions, like briefings and preparations for special Trade Missions, who then came to our districts. Ambassador MacArthur came for a visit for a few days and it was a whirlwind, but successful. He was very popular being a namesake of the General, but extremely capable in his own right. After MacArthur left, Reischauer became Ambassador, a very distinguished man, who knew more of the Japanese language than many Japanese.

I had one big battle with the Dept of Commerce in Washington who seemed to think that the Japanese were never right, but the Embassy, and our Minister for Economic Affairs really supported my position and you can't ask any better than that.

Q: That was the Economic Counselor in Tokyo?

DONELAN: Actually he had ministerial rank. He's long since retired but I believe he's still with Brookings, here in Washington. But, the fact is, the support was excellent.

Q: I'd like to move on. You worked a relatively short time as Consul General in Tokyo. Was that long enough to talk about really before you moved to New Delhi?

DONELAN: Not really. In fact I've always said it must have been the shortest tenure as Consul General on record. It's probably worth noting that the Foreign Service Inspectors came to Nagoya to inspect the operation. They said three and a half years in Nagoya was enough and I should move on to a larger operation. I really didn't want to go. Nagoya was the greatest experience in my career; I took a Japanese lesson every day; gave speeches all over the place; traveled throughout the Consular District; went to factories; plant openings. The Inspectors meant well, but I thought now they're moving me just when I really know this place.

We went on home leave, and then on to Tokyo. We were there some weeks, and on the day that Mrs. Donelan finally cleared the last of the excelsior and packing material out of the apartment, a Personnel Officer in the Department phoned the Embassy. Now in those days for the Department to make a phone call to Tokyo, you knew there was big trouble. The upshot of it was that I was transferred to New Delhi.

WILLIAM H. GLEYSTEEEN, JR.
Political Officer
Tokyo (1958-1962)

Ambassador Gleysteen was born in China of Missionary parents. Educated at Yale and Harvard Universities, he entered the Foreign Service in 1951. After service in the State Department's Executive Secretariat, Mr. Gleysteen studied Chinese and was subsequently posted to Taipei, Hong Kong, and to Seoul, Korea, where he served as Ambassador from 1978 to 1981. He also served in Washington with the National Security Council and in the State Department as Deputy Assistant Secretary for East Asian Affairs. The Ambassador was interviewed by Thomas Stern in 1997.

Q: In 1958, you were transferred to the Political Section in Tokyo. Was that an assignment you had sought?

GLEYSTEEEN: Yes, as I recall, I did seek the assignment, although it was one of several possibilities offered by Personnel. I was attracted by the opportunity to work in a political

section, and I had an interest in Japan. The combination seemed ideal for me.

As a junior officer in the Political Section, my job was to report on Japan's relations with China, Taiwan, Korea, and East Asia generally as well as to assist the ambassador in a vigorous US effort to promote normalization of relations between Japan and Korea. Like my assignment to Embassy Taipei, my posting to Tokyo began with a jinx. Ambassador Douglas MacArthur complained about the Department's sending him a Chinese language officer who didn't know Japanese. Probably for lack of alternatives, the Department dug in its heels. I survived pretty well for four years despite a very real handicap.

Ironically, MacArthur, having complained about my language inadequacies, seemed to enjoy interrupting my language study. I used to come to the Chancery one hour early every day and worked hard on the language. MacArthur, an early riser, would call me almost every morning - usually about fifteen minutes after my lesson had started - and often give me an assignment to be done "immediately." These tasks could have been easily left for the regular working day, but he persisted to the point that my language teacher just got tired of waiting outside while I did whatever MacArthur wanted. It got so bad, I was eventually forced to drop my lessons.

My language deficit was a detriment to my work; I had to use translators and interpreters. I leaned heavily on some my colleagues in the political and economic sections, particularly Al Seligmann and Rick Straus, to help me; they were very kind to do so. Fortunately, most of my contacts in the Foreign Ministry spoke English, and I was able to use my Chinese extensively in my work on China. For example, the head of the China Office in the Foreign Ministry, Okada, did not speak English; we communicated in Chinese in which we both were adequately fluent.

Something over half my time was spent under Ambassador Douglas MacArthur, II with Edwin O. Reischauer succeeding him in 1961. Bill Leonhart was DCM for most of my time in Tokyo, although John Emerson took over in my final months. Among the political counselors, the one I remember the best was Coburn Kidd-a German specialist. He was a wonderful, fine officer, but he was a rookie to East Asia. He was replaced by Jack Goodyear, another new comer to the Japanese scene, as was MacArthur. Dave Osborn, the senior officer in the section, knew Japan well as did several others. I don't know whether there was a conscious attempt made to bring Europeanists to Japan; probably not. MacArthur was given his assignment because Japan was the largest post in Asia and he was being rewarded for service under Eisenhower at NATO. Having served much of his life in Europe, he was attracted to officers with similar experiences, such as Leonhart who succeeded Outerbridge Horsey, another Europeanist. In part this was the result of an over-supply in the service of European experts; they still dominated the personnel system and got first choices. The Japanese language officers got second pickings. This European bias in embassy Tokyo had a minor negative impact on staff morale. There was some resentment about key jobs going to people unfamiliar with the territory, particularly when there were available well qualified officers who knew Japan and Asia. Of course, these officers had to do all the work anyway. They were the heart and soul of the embassy.

In any event, the embassy seemed to function pretty effectively. With a major exception of messages bearing on policy issues, which I will discuss later, the embassy was proficient in its reporting. There was not much interference from the top with normal political and economic

reporting on domestic or foreign affairs-so long as it was not on a hot topic or policy matter. There were adequate numbers of Japanese language officers throughout the structure.

I shared an office with Martin Herz and later Jim Sutterlin who dealt with revision of the Security Treaty and Okinawa. Although we both reported to the political counselor, we usually worked very directly with the ambassador and DCM, who hovered over our shoulders because they knew Washington was particularly interested in the subjects we covered. Thanks to understanding political counselors, plus our own active effort to maintain solidarity with our colleagues, this peculiar system worked tolerably well. My ready access to the ambassador certainly saved me a lot of time and gave me more authority in dealing with outsiders than was usual for a relatively junior second secretary.

I had an enviable position in the embassy - even under MacArthur and certainly under Reischauer. I had ample status with my colleagues, and contacts in Japan seemed relatively easy to make even as a non-Japanese speaker. At the Foreign Ministry my contacts were normally at the office director level, quite senior in the Japanese tradition. Not infrequently I would go up a level to the director general of Asian Affairs or his deputy. That of course was exceptional in the Japanese bureaucracy; Japanese officers at my level and age were astonished that I had to gall to ask to see these high level officials, even more that I was received by them. Some of the junior officers - all very high officials later - resented me for this and occasionally told me so over drinks. My view was that as a representative of the US government, I should try to contact the highest level official who would see me. My success was probably a hangover from occupation days. The practice is certainly over now.

In general, the living conditions of the American staff were good. We didn't like living in the embassy's huge housing compound, because it inhibited work as a political officer; e.g. Socialist Party members would refuse to come to the compound, and if they were to have tried visiting us, they might well have been turned away by the police guarding the compound. After about nine months, we finally got permission to rent a house - to which Japanese would come.

Of my tasks, the hottest issue was Korea. Thirteen years after Japan's surrender, Japan and Korea still had not established diplomatic relations. The Koreans had a substantial Mission in Tokyo from occupation days; the Japanese had no representation whatever in Korea and were pretty well barred from most activity in Korea. The atmosphere between the former colonial ruler and the resentful victim of its imperialism was tense. The main disputes were: fisheries; treatment of Koreans in Japan; repatriation of Koreans from Japan to North Korea; and reparations or "compensation" for the colonial period. Some of those issues are still alive today.

The repatriation of Koreans to North Korea was in many ways a more contentious issue between Japan and ourselves than between Japan and Korea. Having been brought as almost slave labor to Japan during WWII, Koreans who wished to return to South Korea had been allowed to leave shortly after the end of the war; not so for those from North Korea. When it became possible in 1959 for these people to return to North Korea, the Japanese were prepared to assist the return. We objected because a voluntary return of anybody to a communist police state was virtually unthinkable for us in the midst of our ideological fervor. We dragged our feet and tried to impose our wishes on Japan. The Japanese managed quite skillfully to pacify us, using third party

(International Red Cross) inspections to insure that return was voluntary. Fairly large numbers returned to the North.

The Japanese and Koreans struggled or bickered over everything, often violently in the case of fisheries. President Syngman Rhee frequently whipped up anti-Japan nationalism to deflect domestic criticism of his heavy handed rule; the Japanese in turn often infuriated the Koreans - and sometimes us - by their patronizing attitude and behavior toward their former colonial subjects. Steering around these rocks was a constant challenge, and despite enormous effort on our part, we made little real progress until Rhee was overthrown in 1960 and Park Chung Hee came to power a year later with a clear understanding that his great plans for Korea's economic development wouldn't work without a reconciliation with Japan. Beginning in 1961, the two countries became really serious about normalization. They welcomed our good offices, and quickly established a practical, if still tense, working relationship. Normalization occurred in 1965 while I was in Hong Kong.

I discussed our efforts toward Japan-Korea normalization in an article I wrote for the Japan Foundation's quarterly publication, *Kokusai Koryu*. Written from memory, I dubbed it a "fragment of oral history." I understand it will be attached as Annex A.

China and Taiwan were also lively issues for Japan in those days. The Chinmen-Matsu off-shore islands had led to a major dispute in 1958 between the two Chinas. The Japanese were very uneasy about our tough but defensive position; in fact, the issue had caused a semi-crisis in US-Japan relations before I arrived. In 1959 the Japanese were still nervous, though less so once Khrushchev publicly disassociated the Soviet Union from Mao Zedong's militant posture.

In general the Japanese favored a softer line with the PRC. Within Japan, there were several voices. The LDP reluctantly supported us; the Socialists opposed us - the left wing Socialists particularly because they were very close to the Communist Party. But within all parties there were cleavages - moderates and extremists. Sorting out who was on which side was sometimes very complicated, but I found it extremely interesting. I had to know which faction favored what if I were to have a dialogue with them.

Despite much sympathy for Taiwan, Japanese generally felt China was more important to them than Taiwan, and if it had been left to a majority vote, the country would have switched recognition long before 1972. However, the conservative, anti-communists who dominated US China policy also kept Japan in line by firm advice and trade offs, beginning with Prime Minister Yoshida during negotiation of the Japanese Peace Treaty, and still continuing while I was in Tokyo. I spent a great deal of time talking to varieties of Japanese in contact with China: officials, politicians, and journalists. From these contacts I tried to convey an accurate assessment of Japanese opinion, and, of course, did my duty in explaining our own policy - even though I was out of sympathy with some aspects of it. My years in Tokyo were a wonderful introduction to the kind of detailed analysis that I had to do when moved to Hong Kong in 1962.

As in most of my posts I had relatively close relationships with CIA officers dealing with my subjects. Don Gregg, one of my successors as ambassador to Korea, was one of my counterparts in Tokyo and I got along very well with him. I was generally aware what the Station was

reporting and doing in my areas of responsibility. My considerable contact with CIA people was very helpful to me - and I hope to them.

Revision of the US-Japan Security Treaty during 1958-60 was the defining issue during my tour in Tokyo. I think we were caught off guard. In seeking modification, we were genuinely motivated by a desire to ease Japanese concerns and naturally assumed our move would be welcomed in Japan. We were of course aware of strong opposition to the revision - and the whole Treaty for that matter - from the Socialist and Communist parties. Since militant leftists had not been able to prevent the original Treaty from being ratified and were not in control of the Diet or the government, we didn't believe they would succeed in blocking the Treaty's revision. What we underestimated was the existence within the Liberal Democratic Party (LDP) of a substantial dovish faction, which had some sympathy for the left's views.

Back during the Korean war, the US military used Japan as a rear base for operations on the peninsula. Even after the end of our occupation of Japan, the new security treaty gave us the right to use bases in Japan for the defense of Japan and the Far East. The Japanese were concerned that some provisions of the Treaty were inconsistent with Japan's rights as a sovereign nation; in particular that US activities under the Treaty might automatically drag Japan into war in the face of a strongly pacifist mood among its people.

From the beginning, the treaty was severely criticized by leftists and others, and that stimulated the conservatives, who supported the treaty, to push for treaty changes that might dampen public criticism. I was in Washington at the time-a young civil servant. I remember cables from the embassy in the mid-1950s suggesting the Treaty should be revised. MacArthur, who was the counselor of the department at the time, was responsive, and when he later became ambassador in Tokyo he got Washington's agreement to revision. Americans in general thought the Japanese would be receptive, underestimating opposition sentiment. The process of revision opened up a great debate on Japan's role in the world based on its history and future. I am convinced we missed the passion of this in our initial reporting.

When the revision process came to its final stages in 1959-60, the opposition used bodily force and other blocking tactics, provoking the government into foolish responses. After the opposition physically prevented the government's efforts to have the Treaty ratified by its large majority in the Diet, the LDP steam-rolled ratification through by stealth. There were other instances of undemocratic behavior that dismayed the public and middle of the road forces, adding tension to the national debate. My sense was that the debate was most vigorous among young people, particularly intellectuals. There were more disaffected people than we had assumed. In the midst of the storm, James Haggerty, President Eisenhower's press secretary, arrived in Tokyo to prepare the way for the president's long-scheduled visit. The students went on a rampage at Haneda Airport, physically attacking Haggerty's car, threatening his party, and forcing him to continue his journey to Tokyo by helicopter. This outburst of student protest and violence culminated a couple of years later in extraordinary extremism - extensive burning and closing of Tokyo University as well as the formation of the "Red Army" and its terrorist tactics. In the chancery that evening, the atmosphere was extremely tense, since we feared things might rip out of control. With most of my seniors at the airport with Haggerty, I remember summoning up all my unexalted authority to order the Naval Attache, a US Navy captain, to pull back from the

windows where he was running frantically back and forth with a loaded automatic rifle. I was convinced his behavior would prove incendiary if he were seen by the angry clouds outside.

The protests continued after Haggerty's departure. With the public looking on neutrally, huge numbers of students and left-wing union members occupied the center city area near our chancery and the Diet building to stage noisy but largely peaceful demonstrations. Several times a day I had to pass through a sea of them on my way to and from work or going to the embassy annex a few blocks away. With rare exception I found the students cheerful and rather friendly, the labor unionists less so but not hostile. Eventually, however, the tactics of both demonstrators and police became rougher, and violence broke out in the vicinity of the Diet. As I recall at least two students, including a girl, were killed; quite a few others were injured. The protest movement persisted until the government finally capitulated and canceled the Eisenhower visit.

I certainly fault the embassy for its management and reporting of this whole affair. We left the impression that the LDP, which had been formed by the amalgamation of the Liberal and Democratic parties, was strongly in favor of treaty revision. This basic embassy view, effectively dictated by MacArthur and Leonhart, understated the depth of the opposition to the revision, even in conservative circles, and it discounted the degree of popular opposition. So when opposition voices were finally heard loud and clear before the president's scheduled visit, it was an enormous embarrassment to the US in general and the American embassy in Tokyo in particular.

Clearly, MacArthur and Leonhart, who were so confident about everything and so eager to have a successful summit meeting in Tokyo, deserve most of the blame. The political section - and CIA - at least tried to introduce a cautionary note through comments from lower level Foreign Ministry officials, journalists, and politicians who questioned prospects for treaty ratification. Some of this material was reported but usually in a low key manner and framework of ultimate confidence. As the unrest progressed after ratification and fissures appeared within the LDP, many Japanese wondered why we could not see what was coming; it was so obvious to them that the Japanese Government was having second thoughts about the desirability of proceeding with the Eisenhower visit. At this point some key officers of the Section took a stand, urging cancellation or delay. John Stegmaier, a man with a real feel for the Japanese mood, was one of them. For the most part these late signals and embassy second thoughts were not reported or not reported accurately. To put it bluntly, MacArthur's and Leonhart's censorship played a major role in the embassy's mishandling of the visit.

Of course, there was some collective responsibility for the embassy's misjudgements. My colleagues covering Japan's domestic scene should have been more alert to the extent of domestic opposition, particularly within the LDP. Herz and I should also have had a better sense of it. We all should have tried harder to warn Washington. All of us were too influenced by the steadily optimistic line taken by MacArthur and Leonhart. However, these two men were really responsible for the mess. The worse things became, the more compulsive their confidence. Trapped by earlier misjudgments, they squelched pessimistic reports and misleadingly jazzed up embassy assessments. Their role was reprehensible - sometimes stunningly dishonest.

By happenstance I was present as the note taker when Prime Minister Kishi sent one of his

cabinet members, a close confidant, to tell Ambassador MacArthur that the government had reluctantly concluded President Eisenhower should not visit Japan during his East Asian swing. Despite forewarning intelligence, MacArthur appeared surprised and stunned, and for a while he tried to argue with the messenger. More understandably, Washington also was stunned by the turn of events, because even after weeks of turmoil in Japan, the embassy had persisted with its flawed assessment.

It would have been helpful if the US government had a better comprehension of the ambivalence existing in Japan regarding the Treaty. We might have been more active in trying to calm Japanese fears of being dragged into a conflict between Cold War antagonists, explaining more clearly to them the advantages of a US-Japan Security Treaty. We should have worked harder in general and particularly with the LDP to prevent the Diet debacle. In fact, we may have inadvertently fostered LDP parliamentary errors, because we pushed so hard for prompt action on the revision vote. In any event, the US government failed to understand the reality of the Japanese public mood, a mood which sustained the demonstrations and the Diet maneuvers that eventually forced cancellation of Eisenhower's visit.

In the long run, revision of the Security Treaty was good for Japan; in the short run, the process of revision and the need to cancel a US Presidential visit was an enormous strain and humiliation. The Japanese were relieved when the trip was canceled but at the same time ashamed. The humiliation was made worse by the overwhelming reception Eisenhower received in Seoul.

As a result of the confrontation, Prime Minister Kishi resigned and was replaced by Ikeda. I was assigned as escort officer for the congressional delegation that came for Ikeda's inauguration or equivalent ceremony. Ikeda received the delegation at a garden party accompanied by his entire cabinet. He apologized for all the confusion, promised to sustain good relations with us, and announced the powerful economic development drive that later led to the coining of the phrase "Japan, Inc." When the head of the congressional delegation got up to respond, he forgot his entire briefing. He didn't know Ikeda's name, didn't know Ikeda was the prime minister, and couldn't figure out why "this nice Japanese gentleman" was being so hospitable. I was so dumfounded I don't remember what I did.

My complaint about intellectual dishonesty in Embassy Tokyo is not a casual one. During this period MacArthur and Leonhart bullied their staff into conveying a picture of steadiness and progress which was contrary to reality. Finagling with the truth was a problem throughout MacArthur's and Leonhart's tenure. I remember one message which I wrote reporting a conversation with the director general of the Foreign Ministry's Asian Bureau regarding Dutch behavior in Indonesia. Leonhart, who seemed to favor the Dutch over the Indonesians, completely changed the thrust of my telegram by casually revising my verbatim quotes. It was so bad I told him I would not sign the telegram. If he insisted on sending it, he would have to be shown as the drafting officer. Leonhart backed down after a couple of hours of reflection, but we didn't talk for a couple of days.

I had similar confrontations with MacArthur. There were times when he would disguise his authorship of an idea by reporting it as a Japanese one, for example putting his own words in the

mouth of the foreign minister in meetings that I attended as the note-taker. He would also fudge the facts in reporting cables, suggesting in the commentary that the Japanese had originated an idea or approved it when in fact there was no sympathy at all with the US view. Effectively, we were conveying a distorted picture to Washington. When I confronted MacArthur over this practice he laughed me off, but the practice stopped at least in my messages.

I especially remember my refusal to include MacArthur's nasty invective about Marshall Green, our charge' in Seoul, in a message to Washington. I won the battle. Even my softened version of the message brought a rebuke from the State Department - asking both Tokyo and Seoul to mind our manners. I don't think I solicited the Department's action, but it was beautifully timed.

Perhaps, I was caught up in this kind of conflict more than others because of my personal standards but I suspect the main reason was my working so often directly with the ambassador and DCM without the political counselor serving as an intermediary. Fortunately for me, my stubbornness eventually led to a more satisfactory relationship with the front office - far better than some my colleagues who failed to draw a line in the sand.

While on this subject, I might mention the effect on the embassy of the ambassadorial change from MacArthur to Reischauer. It was tremendous. MacArthur was viewed by the embassy as a little dictator. He was uniformly disliked. There was considerable criticism about his lack of appreciation and understanding of Japan; he rarely left Tokyo to visit other parts of Japan. Because of these characteristics and the censorship that he and Leonhart exercised over a key sector of embassy reporting, the atmosphere in the embassy was overbearing - in some sense, I suspect it was very much like the atmosphere generated by his uncle General MacArthur a decade earlier. The nephew was equally high handed and equally full of himself.

So when MacArthur left, there was a great sense of relief in the embassy. Bill Leonhart served as charge'. He was just a little less unpopular than MacArthur. He also had a huge ego. He was very competent and intellectually superior to MacArthur. But he suffered from the same weakness: a compulsion to control all things in the embassy - reports, personnel assignments, etc. Substantively, he and MacArthur viewed Japan in the same way.

As chargé, Leonhart took some very strange actions, so strange I thought he might be off his rocker. For example, he issued orders about working on Saturdays, about duty officers on Sunday, and finally a statement about wives' "obligations." Today, those orders would be attacked in court; in those days, they just seemed out of line or crazy. By pure coincidence, an inspection had begun just as MacArthur was leaving, and Leonhart got himself into terrible trouble with the inspectors. The orders that I just mentioned were rescinded, and I believe that the unfavorable inspection report effected both men's subsequent careers. MacArthur was offered the ambassadorship to Belgium, rather than one of the large posts that he really sought.

Reischauer was popular. The political section had some initial reservations that he might be naive. He had written an article for *Foreign Affairs* which mentioned the "broken dialogue" between Japan and the US, suggesting that the Embassy needed to broaden its outreach to include the opposition, especially the Socialists. Obviously he was not well informed about our extensive contacts with the Socialists. Despite some brief resentment over this, Reischauer was

known to us as a highly influential Japan scholar who knew the country well. Moreover, after he arrived any concern about him seemed to evaporate relatively quickly. He was very open to the staff and it responded to his civilized style. Not everything was as I would have liked it, but in contrast to MacArthur, Reischauer was a real blessing. More important, the Japanese responded well to Reischauer, seeing his appointment as the end of an undeclared "post occupation era" under the general's nephew. Reischauer had certain prejudices about Japan, but they were honorable and the embassy staff could live with them without much difficulty. His arrival gave the embassy a new lease on life. Control from the front office was much more benign - far less domineering. I found that Reischauer shared my views on China, and almost immediately, the embassy began to take different line on the PRC's relations with Japan and its neighbors. Whenever we could, we stressed the need for direct US-PRC communication. I was delighted. His views on Korea were similar to MacArthur's but he was more imaginative and considerate. In general the embassy loosened up. Reischauer never tried to censor my reports. In fact, unless the report had something to do directly with him, Reischauer didn't insist on prior approval; he would simply read a copy of what was sent.

So much for the nature of Embassy Tokyo and the problems we faced during my tour. Let me ramble on a bit about the way Japan was looking at the world and itself at that time. When I arrived in Japan in 1958, it was the end of the post-occupation period. The Peace Treaty signed in 1951 formally ended the occupation, but it still took another decade for us to stop trying to guide Japan's domestic affairs. During this period, Japan's economy was beginning to perform very well; GDP was increasing every year by large percentages. There were unmistakable signs of the "new Japan." Actually there were two co-existing Japanese societies, new and old, and both very visible in Tokyo. Sony had a new gleaming white transistor manufacturing plant that was the state of the art. The Japanese military, given their close relationship with US forces, were was pretty much up to date. The Japanese bureaucracy, particularly that part involved in new initiatives such as industrial development and foreign assistance, was modern minded. On the other hand, there was also the "old Japan." One could still see lots of small manufacturing plants that were quite primitive. The taxis were dirty and worn; the drivers from the countryside didn't know the city and drove recklessly. Getting one's car fixed properly was difficult. The criteria that we use today to judge Japan's modernity were just beginning to emerge. Back then Japan might have been categorized as a "developing country in some respects." Today everything is done with white gloves on. That was not so in the 1950s....

...Now let me get into greater detail about the Japan-PRC relationship. They did not have diplomatic relations; Japan recognized Taiwan as the government of China, just as we did. But behind this facade, considerable contact developed. PRC officials came to Tokyo where they visited with foreign ministry officials, politicians, and businessmen. Our rules precluded my seeing them. Generally, our Japanese and foreign hosts took this prohibition into account whenever they invited us to social functions. They accepted it as being a silly rule. There were a number of LDP politicians who visited Beijing in addition to greater numbers of Socialists, often shown making deferential approaches to Mao Zedong. So a substantial relationship was developing. Trade was growing. The LDP was trying hard to prevent the Socialists and Communists from monopolizing relations with the PRC. That approach was not viable with our stubborn policy and got the LDP and government into hot water with us on occasion.

The United States tried vigorously to block Japanese contacts with the PRC, sometimes in feckless ways. We sought to hinder the growth of trade as much as we could; failing that, we tolerated trade in civilian areas, such as agriculture, but correctly we stood firm in our objections to Japanese exports of advanced technology and items that could be used for military purposes.

Our negative posture did not change measurably during the four years I was in Japan, but it was clear to me by 1962 that Japan-China relations would grow closer as time passed - regardless of our policy stance. Furthermore, I felt that the Japanese were right and we were wrong. From the beginning of my Foreign Service career until Nixon's visit, I thought the US was wrong in its China policy. This made my tasks sometimes very difficult.

The Japanese had been forced to recognize Taiwan as part of the peace treaty process. They maintained better than just "proper" relations with the Nationalists in part because Chiang Kai-shek had forsworn a demand for reparations. In addition, the Japanese had a nostalgia for Taiwan, their former colony. Unlike Korea, the people of Taiwan had a view of Japan that was almost positive. The occupation had been much more benevolent than Korea's, and some compared Japanese behavior favorably to the early years of Nationalist rule.

Although economic considerations helped drive Japan toward a closer relationship with Beijing, the Japanese wanted to get along with the government on the mainland for moral and strategic reasons as well. Following the disaster of the war against China, the prevalent view by this time was that it would be smarter for Japan to accommodate itself to the powerful ruling government in mainland China. They hoped a closer relationship would advance Japan's security and trade interests. The Japanese thought that we should be more understanding of their position, and I thought they were absolutely right.

There were also some sentimental factors at work, although these were often exaggerated by Japanese under the influence of alcohol. Japanese felt indebted to China for its influence on their culture, and quite a few of them were genuinely remorseful about the barbarity of their past behavior. In those days the Koreans didn't fare so well; the Japanese were much more deferential towards China than Korea.

When I was in Tokyo, the Japanese were much less concerned about China's military strength than we were; there was some talk about Chinese power having a negative effect on Japan, requiring perhaps some degree of remilitarization, but the concern was buffered by the alliance with us. Japan-China relations are much more complicated today than they were in the 1950s and 1960s.

We also spent a lot of time on the Soviet Union. Washington in its directives to us tended to assume a relatively monolithic communist world. Most of us in Tokyo felt differently and when talking to Japanese, we tried to express our views in more sophisticated ways than the black and white oratory stemming from Washington. To their credit the Japanese had a rather accurate sense of complex relations within the communist camp. They would stress that the Chinese communists were quite different from those in the Soviet Union and that within the Chinese Communist Party there were divisions about domestic and foreign issues. The Japanese would provide me with the analysis of their intelligence community, which I eagerly reported to

Washington. -particularly since I agreed with much of the Japanese analysis. My reporting was well received at least by some factions in Washington. Since strains were becoming so apparent in Soviet-Chinese relations, it is amazing to me that our ideologues managed to hold off a realistic assessment for so long....

...Last, I might just make few remarks about the Japanese decision-making process. When I was in Tokyo - and I think this is still very much the case - bureaucrats, all the way down to lower levels, played a powerful role and were exceptionally aware of the political context in which they operated. For example, in making recommendations to the office director, the third ranking officer in the Korean section of the Foreign Ministry would know our views, probably from being the silent note-taker at a variety of our meetings with Foreign Ministry officials. He would also be familiar with opinions of key Diet members, often by having talked to politicians himself as a result of personal relationships. My sense was that Japanese bureaucrats were more knowledgeable of views in the Diet than we were about the Congress. This exposure helped young officials shape decisions to be approved by their bosses. Incidentally the number three on the Korea or China desk was often a marked man expected to rise to deputy foreign minister or ambassador. Many of the senior officials I worked with later started there.

In addition, every level of the bureaucracy was more conservative than the one below - which is not uncommon in any bureaucracy. Decisions made by consensus moving upwards were hard to overturn; sometimes we did succeed but it was always tough sledding. The process gave the Japanese bureaucracy an image of independent power, but it was not quite as self-contained as people imagined. It is interesting to note that much of the consensus building between the government and the politicians was done at junior levels. That these officials could advise their superiors about political sentiment struck me as quite a contrast to the Department of State.

In conclusion to these long winded comments I must say that my Japan assignment was one of the best I ever had. It was fascinating. I witnessed some tumultuous events which were part of Japan's effort as an independent, sovereign nation trying to wean itself away from the dependent psychology associated with the American occupation. Furthermore, I found the embassy's management under MacArthur and Leonhart a negative learning experience I will never forget. I was lucky that during the early part of my career I was in a political section that gave me heavy exposure to the embassy's front office and the opportunity to work with so many gifted officers. That was invaluable and served me well in my later assignments.

ROBERT S. STEVEN
Consular Officer
Tokyo (1959-1961)

Mr. Steven was born in Massachusetts and raised there and in Rhode Island. He graduated from Brown University and served in the US Army before entering the Foreign Service in 1957. Mr. Steven became a specialist Latin America, where he served in Mexico, Chile and Argentina. He also served in Burma, Vietnam and Japan and had several senior assignments at the State Department in

Washington. Mr. Steven was interviewed by Charles Stuart Kennedy in 2001.

STEVEN: In '59 we went out to Tokyo; I think it was midsummer.

Q: Obviously being in the management business you had a chance to pretty well work your own, so why Tokyo?

STEVEN: Well, I'd been in Okinawa and I was interested in the culture, and I hadn't gotten to Japan during the time I was there. There was an assignment that looked interesting, a consular assignment. Having been a major in sociology and with my family background, I was more interested in people than I was in policy. In consular work you're going to meet lots of people and work directly with human beings. So there was an opening there a consular office, a vice consul slot in the consular section in Tokyo, and my wife was thinking Tokyo would be an interesting place to go. So off we went. Those in our generation remember that in those days we traveled first class. By golly, we flew out to San Francisco on United Airlines, but then in San Francisco they put us on one of the old Boeing Stratocruisers of Pan American Airways, the double-decker.

Q: Double-decker, yes, with bunks.

STEVEN: And we were first-class passengers. Before they started the engines, the captain came back and greeted me by name, "Mr. Steven, we're so glad to have you aboard going to your assignment in Japan." Wow! That was the one and only time I was ever personally greeted on a flight. But off we flew to Japan with one young child and got settled in there as a vice consul in the consular section.

Q: You were there from '59 to when?

STEVEN: '61, two years.

Q: How would you describe the situation in Japan at that time?

STEVEN: It was fascinating because the security treaty was coming up for renegotiation, renewal, in Japan and there were many Japanese opposed to the presence of American troops, etcetera, so there were riots going on, the famous riots. There was an organization called the Zen Nakurin, they were students.

Q: There were students - I remember seeing pictures - with headbands and they did snake dances.

STEVEN: And one technique was a fascinating one. They would line up 30 or 40 across and take a pole about this thick and they would wrap their arms around the pole and then march forward and it made a battering ram just like this with that pole, lengthwise so they just held on to the pole, and it made it extremely difficult to stop them because they were being pushed from behind by more students. We watched them go down the width of the street, the pole having been scientifically measured to the width of the street, and then the police in front with their shields

were in a solid line, their shields locked together, and then they would be pushed back. They would retreat back a few yards, and then the whistles would blow and the police would surge forward and push the students back. The discipline was astonishing. There was no bloodshed, there was no fighting as we now see it. Nobody threw anything at the police. It was all chanting and shouting and bullhorns and push and then push. I never saw a missile in the air. I never saw any teargas. It was beautifully disciplined, choreographed shall we say. Nobody ever came near us. I remember once when the building where the consulate was - it was not at the embassy; it was a block away - going out the door there to walk up to the embassy were these enormous crowds of chanting, yelling people out there. And as soon as I stepped out on the steps they opened a path for me, and I walked through, the Japanese, and greeted people and said, "Good morning." They said, "Good morning," and they bowed, and I continued on up to the embassy, and they closed behind me and kept yelling. It was a wonderful exposure; for a sociologist. What a different type of a mentality it was.

Q: Who was our ambassador at that time?

STEVEN: When I got there it was Douglas MacArthur II. Douglas was the nephew of the general, had taken his name. His wife was the daughter of Alben Barkley, the vice president, Wahwee. We had the interesting experience of working with them for about the first 18 months of our tour over there. I met the ambassador himself probably three time in the entire tour. I was with all the vice consuls in a different building, so logically I didn't see him. It was an interesting to be there to watch the style, the imperious style, of a man who I think consciously probably tried to pattern himself after his uncle. It was fascinating. And, of course, Wahwee has a reputation, you know as well as I do...

Q: But did your wife run across Mrs. MacArthur?

STEVEN: Oh, yes, yes, yes, my wife was then active, as wives were expected to be, in things like the women's association and so, yes, she'd be at the residence and working on something. She wanted, as I think most of the young wives did, just to step very carefully and try to behave.

Q: Were you there when the president came out? Eisenhower was supposed to make a visit.

STEVEN: Oh, yes, yes, he was there.

Q: How did that go, from your perspective?

STEVEN: I remember distinctly the honor in the position that I was given. I and another junior vice consul were assigned to be at the airport when the party arrived and the two of us were to take personal charge of the President's personal bags and his family's bags, and we were to make sure that those bags were taken straight to the residence - I guess he was staying in the diplomatic residence - and our job was to ensure that those bags reached the residence and were properly installed in their rooms. I thought, wow, this is an honor, the Presidential baggage. Plans were going on, and a good friend of mine, Bob German - do you remember Robert German? He left the Service many years ago, but he was known then. He was the ambassador's aide, staff assistant. He was the coordinator for the Eisenhower visit. I do remember all of us

assembled in the cafeteria of the consulate building. It was the final briefing. Everybody had their folders, their assignments. Everybody was coordinating everything. Bob was sitting there working on it, and somebody came in and handed him a piece of paper, looked like a telegram, and he looked at it and just sort of sat there in silence looking at this thing, and then he reached down - he had this folder thick with a lot of paper in it - pulled it up and looked at it. Then he took a deep breath and he threw it into the air, throwing paper all over the room, just a tremendous heave. He said, "He ain't comin'!" - I'll always remember that scene - "He ain't comin'" and threw the papers up in the air, and that was the end of it.

Q: This was a terrible shock to the Japanese.

STEVEN: Well, to probably the government, but there probably were just as many in the Japanese population who had no problem at all with the American President not being able to come.

Q: You mentioned how polite the Japanese were even when they were demonstrating. Did you find that being an American was giving you any problem in your daily...?

STEVEN: No, no, not at all. If anything, probably it was an advantage socially. You had money, which they didn't have in many cases, and you had access to military facilities, PX's, things of that nature. The Japanese invariably were polite. I think probably as late as the time we were there, they still had the image, and we, after all, were the conquerors. We had been the occupying power. The respect that the Japanese gave to us carried over to diplomats. I recall no single incident in two years in Japan of any rudeness or anti-American personal reaction. It was always polite and open and receptive. We made a few Japanese friends, which was difficult to do. We were not fluent in Japanese, but we made some personal friends, were invited to a few homes, which again was unusual. The Japanese don't normally entertain at home; they take you to a restaurant or something. It was a good two years, and I enjoyed it. I rotated through the consular section.

Q: What sort of work were you doing in the consular service?

STEVEN: Well, I did all of them. I started off in the protection and welfare of American citizens, taking care of lost tourists and death case and all these things. Had many good experiences which would make fine anecdotes some day.

Q: Can you tell me, just to give a feel, in dealing with Americans in trouble, do you recall any cases?

STEVEN: Oh, the most famous one - oh dear, should I use his name? Well, I'll use it and you can edit it if you think I need to; Mr. Wolfson is all I remember; his name was Wolfson - an American, as I recall, a retired US military type who had been living in Japan. There were quite a few of them; they took their discharges there and stayed in Japan, had a wife or a girlfriend or something; they stayed there. Mr. Wolfson died, inconsiderately on a Friday night in his little apartment. I was notified by the Japanese police, and I had to go. He had died apparently accidentally by inhaling gas; the gas burner had been disconnected or something. The Japanese

police investigated, and they were pretty efficient and very good, and they said, "Yes, we're satisfied it was an accident, not a deliberate attempt." He was asleep and it sort of overwhelmed him. The man was probably in his 60s. But Mr. Wolfson had to be disposed of on a Friday. What do you do? Well, Japan doesn't have the facilities that we have. They cremate everybody, so they don't have much in the way of morgues or holding facilities. We had an arrangement with the US military down in Yokohama, who did maintain a morgue, left over from the Korean War, where I could dispose of his body. So there he was, and how do I get him to Yokohama? We had to get his body out of the sliding refrigeration case in the medical examiner's office. He had to get rid of it - it was Friday night - because there was no other room. He'd done a quick autopsy. So he handed me this body. I got an embassy station wagon and had it loaded with the body to Yokohama. It was an interesting experience. Then it turned out Mr. Wolfson didn't have a family that could pay to have the body shipped home or anything, so we arranged to have him cremated. Then his ashes were given to me as the custodial officer, and I had the ashes sitting on my desk in an urn at the consulate waiting for instructions. What do I do with these ashes? Finally I thought I'd better put them in the vault at least. It would be embarrassing if the ashes disappeared or got broken. So I put it in the vault on a shelf and sort of waited until I got instructions from the remaining family back home. Finally the young American woman who controlled the vault, the secretary - classified, so it was an American - came and said, "What's that vase up there, that piece of ceramic on the shelf that you put in there?" Without thinking I said, "Oh, that's Mr. Wolfson - the ashes, you know. Remember that case we had. We had him cremated, and those are the ashes, and I put them there." She said, "Not in my vault. I don't go in there with ashes. Get him out of there." So I did and stashed him in the bottom drawer of my desk. It was a typical day in protection and welfare work.

Q: How about Americans getting into trouble?

STEVEN: We had a few of those, people who got into trouble. We had at least a couple at any one time in Japanese prisons serving time. That was always interesting because the Japanese were very, very correct. The prisoners were very carefully tended to, regular medical attention. I went, I think, every month at a minimum and sometimes more often, took them magazines and little things. The Japanese were very good at this. They had one prisoner - a Scottish name; it'll come - who had again been US military there, had left the military, stayed in Japan, and was probably not the most intelligent of men. He went to the famous Imperial Hotel and checked in and then from his room called the jeweler from the hotel to bring a tray of jewelry up that he wanted to look at. He wanted to buy some diamonds, he said, so the fellow went upstairs with this tray. Our American then hit the jeweler and knocked him out, left him on the floor, and dumped all this jewelry into his bag and then walked out of the hotel, having registered under his own name and his own passport and everything. The Japanese police were not amused, and they found him within about two hours. He was a fairly big man; he stood out, shall we say. And they had him in jail by the time I heard about the thing. I remember asking him, "What on earth were you thinking?" He said, "Well, I don't know. I didn't think they'd know it was me." He ended up serving, I think, five years or something there. When I was seeing him in the prison, he had told the Japanese authorities that he would be treated like any Japanese prisoner and he'd eat the same thing they ate. They said, "All right," and they started to feed him the standard diet of the Japanese prisoners but in much larger amounts. He was a big man; he was at least 250 pounds but all muscle, a big fellow. They gave him all that he could eat, but it was the Japanese diet, and

his health started deteriorating. The Japanese doctors examined him and they told me, they said, "We can't do this. He's not getting what he needs out of our diet to keep him in good shape. He's got to have more" of whatever it was.

Q: Meat probably.

STEVEN: Meat probably, so they insisted on putting him onto at least a mixed diet, and he finally agreed that he'd do that. But I was impressed at the care. It was very correct, very strict, and very careful, always correct but not abused, and he was given a certain time for recreation and he could receive magazines and correspondence and so on. They did a good job.

Q: On the visa side, I imagine that on the immigrant visa side you had an awful lot of Japanese wives. Did you?

STEVEN: A great many, yes.

Q: Did you have the problem that I had and frankly that it usually the girls a GI would meet, a significant number of them, were professional ladies, and according to our laws they weren't allowed to get visas? This must have been quite a problem for you, wasn't it?

STEVEN: As I recall, it was not as much of a problem as you might think, because the Japanese have very sensitive ways of dealing with these things. We would get the young lady's police record, which was required by law. It didn't identify her as a prostitute or having had any arrests. It just wasn't in there. Shop girl or something, and then the question was: do we go behind the Japanese police record and challenge it? Do we say, "You're liars. We know this girl's a prostitute. Just look at her." Unless we had somebody who was willing to come in and testify that he had indeed paid this girl for sex, how do we know? So I could sit there and look and know with complete moral certainty that this young lady somebody had picked up in the red-light district, but the police certificate was clean and I had no testimony that she was a prostitute. What else can you do? I acted like all the other regional officers and I was told to sign her off. What are you going to do? The Japanese police didn't want trouble like that, so they didn't usually record that sort of thing. Now, if they'd been involved in drugs, that was different, and you'd get a certificate saying there'd been a drug conviction.

Q: My experience was that an awful lot of these young men were ending up with ladies who had been around for a long time. They were almost marrying their mothers.

STEVEN: We had one. I remember a young man came in and he had his wife's Japanese birth certificate and her other papers, which he couldn't read, of course, but the clerks that I had, my Japanese Foreign Service locals, we called them then, brought it to me and said, "Mr. Steven, she has erased her age date even in Japanese and tried to rewrite it in, and we can still see what was originally written under, and she'd subtracted almost 20 years." Her husband thought she was maybe in her mid-20s and she was actually well over 40. So we called her in separately from him, and through the interpreter I said, "Have you altered this?" Yes, and she was afraid if he found out that he wouldn't want to marry her and she thought maybe that she could do this. I said, "You've got to tell him about this. We've got to send you back to get another certificate,

and eventually he's going to find out. You really ought to tell him now," and tried to be nice about it. So I loaned them a little side office that we had, and the two of them went in privately while she was explaining to this young man that she was old enough to be his mother. In a few minutes they both came out with big smiles, and he said, "That's okay. I love her." So we got the new papers. Sociologically - it's interesting - I was interested enough to follow up. There was a study done - and I was able to get the study later to look at - of a large number of these, I think 1000 cases, Japanese brides who'd been taken back over the years to the States and followed up how these marriages worked out, what were the rates and so on. Fascinatingly, the rates of stability in the marriage were roughly the same as the American population of the same people. American soldiers marrying American girls in America had about the same rate of divorce and so on as they did. The conclusion of the sociologist was that the soldiers were marrying the same type of women they would have married back home. In other words, if the boy himself were from a low socioeconomic group with not an awful lot of education, etc., that's what he was marrying in America and that's what he was marrying in Japan. Therefore, they tended to be in so many ways the same type of people with the same expectations, and the divorce rates and breakups and so on were no different really than the ones prevalent at the time in America. We found this quite a revelation. It went against the conventional wisdom. The conventional wisdom is they must all be breaking up, and they weren't.

Q: You were doing consular work the whole time you were there. Any problems with passport work, American citizenship problems?

STEVEN: Yes, we had at that time the larger problem of what to do about Japanese Americans. At the beginning of World War II there were many Japanese, both people who had American permanent residence and American-citizen Japanese who were in Japan.

Q: A lot of families had sent their children to get an education in Japan to make sure the cultural ties were closer.

STEVEN: Exactly, they were there, and I'm sure it's the same thing that you found. When the war broke out, the Japanese government didn't want to hear anything about "I'm an American citizen and you can't draft me." They took one look and said, "You're Japanese. Get your ass over there to the draft board," and they were conscripted and fought through the war. They said, well, they were full-fledged Japanese soldiers. After the war, of course, we said, "You're no longer an American citizen, or you've lost your residence, because of service in an enemy army." The Japanese challenged it, and I forget the exact timing of it but I think it was while I was there that the US Supreme Court finally said, "No, if they were coerced into the Japanese military, they didn't voluntarily renounce their citizenship or anything," so they had to be reinstated. I had the marvelous experience of having a Japanese businessman come in shortly after all this took place to apply for a visa and go to the States on business. We looked at his documents and found out that he had been born in the United States, originally had been an American citizen, had lost it at the end of the war because of his Japanese military service, precisely the case that we talked about. So I called the man in and said, "I have good news and bad news. The bad news is I can't give you a visa to the United States." His eyes got wide. I said, "The good news is you're an American citizen. You don't need a visa." He was stunned. He had no idea. His English had pretty well disappeared. He was a young man when he left and this was many years later. He

finally said, “What is this? Yes, I was made an American, but they said no.” I explained the situation to him. He was just wide eyed. He said, “How does this affect my Japanese citizenship?” I said, “It doesn’t at all. You’re allowed to keep them both under these circumstances.” He said, “What do I do?” I said, “Here’s a passport application.” He filled it out, we handed him an American passport, and off he went happily to the States. This type of situation was prevalent then.

Q: Did you get any feel, or were you somewhat removed, from, you might say, the embassy Japanese-speaking officer group at the embassy?

STEVEN: There weren’t that many, number one. You’d be surprised how few we had. There was one case, a very interesting one there. The officer’s name was Sakaue, Muneo Sakaue. He’s long retired, I’m sure, but there would be people who would remember him. Muneo and his wife were Japanese Americans but of something like the third generation, and they didn’t speak Japanese. They were studying it, like we were, the basic how to get around the street, but he wasn’t a Japanese native speaker by any means. Both he and his wife had constant difficulty, because the Japanese, of course, looked at them - and they were racially entirely Japanese - and assumed that they had to speak Japanese and would not believe, literally, that they couldn’t speak the language other than the basic few words that I had. It became apparently quite difficult for them in certain circumstances because people thought that they were refusing to speak Japanese just because they were American citizens. Muneo had a great deal of difficulty with that. I remember him talking about it. He sometimes wondered, I think, even if it had been a good idea to assign him there, because the Japanese all expected him to speak Japanese, and when he didn’t speak Japanese, it was very difficult for him to establish a relationship that I could, for example, because they kept looking at the man and saying, “How can you not speak Japanese?” So that was a problem for him. There’s another officer, whose name I long ago forgot, who had been with the US Marines during the war, another Japanese American, as a translator and had been in combat and so on against the Japanese. He spoke so fluently that, of course, unless he told people that he was an American, they would never have known it. He said he used it very selectively. Oftentimes he would just pose himself as a Japanese until the question came up of what he was going, etcetera. But it varied.

RAYMOND C. EWING
Commercial Officer
Tokyo (1959-1961)

Vice Consul
Yokohama (1961)

Raymond C. Ewing was born in Cleveland, Ohio in 1936. His career in the State Department included assignments in Washington, DC, Japan, Austria, Pakistan, Italy, Switzerland, Cyprus, Tanzania, and an ambassadorship to Ghana. He was interviewed by Charles Stuart Kennedy in the fall of 1993.

Q: Your first assignment overseas was to Tokyo. You were there from 1959 to 1962. Is that it?

EWING: Yes, it was from 1959 to 1961. Tokyo, in many ways, seemed like kind of an odd assignment -- the kind of assignment that we would not be giving in the 1980's or 1990's, I hope. I had had German language training, and there I was, sent to Tokyo. I can't explain why I went to Tokyo. I think that the circumstances under which I learned about going to Tokyo were sort of interesting and perhaps indicative of the times. I was playing on a softball team -- actually the FSI (Foreign Service Institute) softball team -- and I got a hit and ran to first base. The first baseman on the other team was from the Bureau of Personnel, or, at any rate, he worked in Personnel. He said to me something like, "Hey, that was a good hit, but I hear you got a good assignment."

I said, "Oh?"

He said, "Yeah, I think it's Tokyo."

And that's the way it turned out. So I didn't have a chance to use my German and went to Tokyo without any Japanese language or any other kind of specific training or preparation for that assignment. I went as a commercial officer, so that, in a sense, followed up on my experience in the Economics Bureau.

I also was able to go a month earlier than was originally planned at the request of Tom Beale, who, at that time, headed the United States delegation to the meeting of the Contracting Parties of GATT (General Agreement on Tariffs and Trade), which was having its first meeting on that side of the world. It really was the first international conference of any consequence which Japan had hosted since the end of World War II. It was a major event as far as the Japanese were concerned. My first office in Tokyo was in the old Imperial Hotel building, where our delegation was quartered. This was the first great earthquake-proof hotel -- designed by Frank Lloyd Wright -- which was eventually torn down to give way to a high-rise building. That's how I spent the first period of my assignment in Tokyo.

Q: You were there first under Ambassador Douglas MacArthur II, and then Edward Reischauer was the Chief of Mission. This was your first overseas post and experience. What was your impression of the Embassy when you got there?

EWING: My initial impression was very limited because I had very little to do with the Embassy during the first month. I was part of the GATT delegation, which gave me a wonderful opportunity to experience Tokyo and an international conference. The Japanese were wonderful hosts. They took us on several tours. I went on a tour to the "Ajinomoto" food additive factory, which made monosodium glutamate. We were even interviewed on television. We were such a sensation.

Then I went into the Commercial Section of the Embassy. I felt that I was a very small piece of a very, very large puzzle. It seemed like such a large Embassy. I enjoyed the commercial work, but I was only in that job for about three or four months because in 1960, the Embassy became totally preoccupied with a planned visit by President Eisenhower, scheduled for June, 1960. I

was asked in March, 1960, or thereabouts, to come and work in Ambassador MacArthur's office. The staff aide to Ambassador MacArthur, whose name was Bob German, was completely occupied with preparations for the President's visit. The Ambassador felt that he needed somebody else to help with everything else. I was brought into the office to do that. Then, when President Eisenhower's visit was ultimately canceled, Bob German was given an opportunity to take some leave. Ambassador MacArthur had gotten used to the idea of having two staff assistants, and a conference of the Inter-Parliamentary Union was coming up in Tokyo. The long and short of it was that I stayed in that job for most of the rest of my time in Japan.

Q: You had a pretty good view of how this Eisenhower trip was canceled. Was there concern about anti-American demonstrations and all that? How did this work out?

EWING: Certainly, it was a time of great tension, and there was a lot of strong anti-American feelings, particularly on the part of the university students. It was really related more to the negotiation and signing of the U.S.-Japan Security Treaty, which they saw, in effect, as a continuation of the American occupation, which included the risk that Japan would be involved in some future war because of the presence of American forces in Japan. I think that the Eisenhower visit became a symbol of their frustration and anger. It wasn't the visit so much, per se, that was the problem. There would have been demonstrations. There would have been strong feelings expressed even if there had been no Presidential visit coming up. There were university students continually in the streets around the Embassy. I certainly didn't feel any threat, any danger, any anti-American feeling directed at me, and I don't think that any of us in the Embassy did. It was all kind of half policy and half what U. S. Forces represented than opposition to us as individuals.

Q: Was there a feeling of "let down" or unhappiness at the fact that the President didn't come? Was this seen as a blow at the United States?

EWING: There was certainly a feeling of "let down" and disappointment on the part of those of us who had been preparing for the visit. I don't know how many scenarios and schedules we prepared, but we'd been working for months preparing for the visit. So it was certainly a disappointment that it didn't take place. I think that we were not all particularly surprised that the decision was made to cancel the visit. President Eisenhower was actually on a trip to the Far East and was in the Philippines when he decided that he would not come to Japan. But prior to that, there had been an advance visit by Jim Haggerty and Tom Stevens, the Press Spokesman and Appointments Secretary to the President, respectively. Their visit to Tokyo was a very scary experience for them.

Q: Rocks were thrown at their car by a crowd. Were you involved in that?

EWING: I was not at the airport. I remember being at a meeting in the conference room at the Embassy after they came in from the airport. They were quite shaken by the whole experience. I remember picking up a note afterwards that had been written by one of them to the other, referring to a rock that had apparently come through the window. The note said that this rock should be put with their collection, along with a rock thrown at them in Kabul (Afghanistan in a demonstration during a previous visit. There certainly was great relief that they were not hurt and

that the incident wasn't worse. I think that if we had known what was going to happen over the next thirty years or so, the visit would have been canceled far earlier than it was because there certainly were great risks. Rocks were thrown at the car, as you said.

Q: Ambassador MacArthur was the nephew of General Douglas MacArthur. He had the reputation of being a very demanding person. One can't avoid mentioning the fact that his wife was known as one of the "Dragons of the Foreign Service." How did you find this? We're trying to get a feel for life in the Foreign Service, as well as the political considerations. I would have thought that this would have been, for a young officer, a rather difficult and vulnerable position. How did you find that?

EWING: Mrs. MacArthur was certainly a demanding and difficult person. But I was unmarried. I think she probably looked at me, in a way, as her son, or nephew or something like that. We always had a friendly and cordial relationship. She never yelled at me or made life difficult for me in any way. On the contrary, several times they hosted small functions for the immediate staff of the Ambassador, which went beyond what they really were expected or needed to do. They were very nice -- birthdays and times like that. I tend to think that Ambassador MacArthur was the right kind of ambassador for the United States to have in Japan at that particular time. The key thing was to stabilize the security relationship with Japan and the role of the U.S. Armed Forces in Japan. Ambassador Reischauer was exactly the right person to follow him. Reischauer was much more attuned to Japanese history, culture and personality and less convinced that the military relationship was the most important aspect. He felt that there was a much broader role that the United States could play in Japan.

Q: Both these Ambassadors had extra "clout," you might say. Ambassador MacArthur was very close to President Eisenhower because he had been his Political Adviser at one point during World War II. Ambassador Reischauer was a professor at Harvard and close to President Kennedy.

EWING: That's true, although Ambassador MacArthur, in his previous positions, had certainly had contacts with a wide range of people. I remember that shortly after President Kennedy's election, there was a very warm exchange of letters between them. They had known each other over a long period of time. I think that Ambassador MacArthur may have known President Kennedy as well or better than he knew Vice President Nixon. As you say, his service and his own background, in many ways, were more in Europe where Eisenhower...

Q: John Kennedy had stayed in MacArthur's house in France when his father was Ambassador to England.

EWING: I didn't know that, but I knew that they had known each other for a long time. I don't know how close Ambassador Reischauer's personal relationship with President Kennedy had been, although obviously, there was a Harvard connection.

Q: How about the way Ambassador MacArthur ran the Embassy? You were, I guess, his "point man," in that respect.

EWING: He was very strong and even overbearing, in many ways, with people in the Embassy. I think that the further you were from him, the more you may have felt that. He tended to work a lot through Bill Leonhart, the DCM, who was also very strong and, in many ways, also a difficult personality. If Ambassador MacArthur had people that needed to be dealt with or new projects that needed to be undertaken, he probably would use the DCM as much as he would the staff aide, who tended to be more involved with visitors, shuffled papers, did the minutes of meetings and that sort of thing.

Q: Did you perform the same function when Ambassador Reischauer was there, or did you cover much of his period?

EWING: Reischauer came in 1961. I don't recall the month, but I think that it was roughly in June, 1961 -- after the Kennedy administration had entered office. Ambassador MacArthur left, I think, in about April, 1961. One of the things that I remember about the transition was that the request for agrément for Ambassador Reischauer arrived in the Embassy on a Sunday morning. Ambassador MacArthur was leaving by ship that afternoon from Yokohama. The request for agrément was addressed to the "chargé d'affaires." Ambassador MacArthur came into the Embassy that morning -- his last day in Japan -- in his usual, workaholic spirit, to see what telegrams needed attention. He saw the request for agrément for Ambassador Reischauer and was furious, feeling that people in Washington were moving too quickly before he had a chance to leave. He let the State Department know that. In any event, there was a period of six weeks to two months when Bill Leonhart was chargé d'affaires.

I worked for Ambassador Reischauer until about September, 1961, and then moved briefly to the Consulate General in Yokohama before leaving Japan in early December, 1961. Ambassador Reischauer brought a staff assistant with him from Harvard University -- a kind of scholar-graduate student. There was a feeling, as far as I was concerned, that it was time for a change. They also brought in a staff aide from elsewhere in the Embassy. Actually, he came from the Consulate in Osaka to give more continuity with the new political appointee's staff aide. During the couple of months that I spent in Yokohama, I had my only opportunity to do consular work during my career in the Foreign Service.

Q: What was your impression of Japan? What were you getting from people you were working with who were dealing with the Japanese? What was the feeling about how the Japanese system operated?

EWING: I think that by that time, the immediate post-war period was over, and there weren't many signs of rubble or damage left over from World War II. The Japanese Foreign Ministry and Government were beginning to function again and to display more self confidence. The GATT Conference I mentioned was their first international "coming out." A delegation headed by George Ball came to Tokyo to initiate steps toward having Japan join the OECD (Organization for Economic Cooperation and Development). A decision had been made that Japan would host the Olympic Games in 1964. So we were really at the beginning of the next period of Japanese economic expansion, dynamism and growth. As far as the Japanese Government was concerned, I had a lot of dealings with my counterparts -- the private secretaries to the Prime Minister and the Foreign Minister. I certainly found them very effective and easy to work with. These people

were primarily from the Japanese Diplomatic Service, so their English was excellent. In most cases, they had served previously in the United States. I didn't have a particularly wide range of contacts among the Japanese, but those I did get to know -- I taught some students English -- I certainly was impressed with. Several of the problems which have since emerged in the Japanese political system weren't apparent at that time. That came much, much later, with the Liberal Democratic Party.

Q: Then you left Japan in 1962?

EWING: I left in late 1961.

DAVID I. HITCHCOCK, JR.
Japanese Language Training, USIS
Tokyo (1959-1960)

Public Affairs Officer, USIS
Kobe (1961-1962)

Public Affairs Officer, USIS
Fukuoka (1962-1965)

David I. Hitchcock, Jr. was born in 1928 and raised in New Haven, Connecticut. His career with USIS included posts in Vietnam, Japan, Israel, and Washington, DC. He was interviewed by G. Lewis Schmidt on November 17, 1992.

HITCHCOCK: We went on to Japan and language school and after that, a short tour in Kobe. There was a proposal made to combine USIS activities in Kobe and Osaka and, to some extent, Kyoto. Kyoto would maintain its independence and have its own PAO. There would be a director and deputy director of USIS Kobe-Osaka. Stu Bohacek was the director, and I was the deputy. It was a crazy idea.

Q: Was it in Kobe or Osaka?

HITCHCOCK: That was the problem. We had offices in both cities.

Q: The Consulate was still in Kobe wasn't it?

HITCHCOCK: Yes. We kept seeing each other going in opposite directions on the train. We would start out in the morning in Osaka and have a lunch in Kobe and a reception in Osaka at night. It was just mad. There was some effort, however, to take advantage of talented Japanese staff and use them beyond the confines of one of those three cities, whether it was the Advisor for Labor or Advisor for Academic Affairs or International Affairs or the Cultural Arts. We tried to use the best of each of those centers' advisers to branch out and get interested in what was going on in the other two cities that would be of interest to USIA.

In any case, after a year in Kobe, I was transferred to Fukuoka and became the director of the center there, which covered all of western Japan -- all of Kyushu Island and Yamaguchi Prefecture, the southern tip of Honshu.

Q: By that time, they had closed the center at Kumamoto.

HITCHCOCK: They closed all the centers in Kyushu except Fukuoka. The last center before Fukuoka was Nagasaki, and it had already closed. But there was a Japan-America library still in several cities -- including Nagasaki -- which we tried to support, but that wasn't working very well.

I think the most important thing that we did in those days in Kyushu was with two groups: one was the labor unions and the second was a left-leaning and very suspicious major newspaper in Fukuoka, *Nishi Nihon*, which simply means "western Japan newspaper." It would be nice sometime to document this, but over the years, starting I think with my predecessor, Charlie Medd, and with those who followed me, we had an enormous effect over time. We were clearly not the only influence on these labor leaders and on that newspaper. The labor leaders were invited to participate in a very large and effective exchange program which brought Japanese Marxists, labor leaders from the coal mines, shipbuilding and others of the left in Kyushu to the States in a group and let them see the dynamism, muscle, wealth, power and influence of the American labor movement and how effective it was.

Q: What evidence did you have that there was any change of opinion on the part of these people after they returned? Did you have a clear indication?

HITCHCOCK: A clear indication of a change in attitude toward the United States in general -- a greater respect, much less harsh treatment of the United States. They were still members of the Socialist Party, most of the unions were, and they had to mouth the usual dogma, but they were just awe struck by how a capitalist society could develop an independent, free, strong and influential labor movement. They were also influenced by our society -- our churches. I made sure they all went to church in a small town. This is an aspect of America that they had never thought about.

Q: In that respect, Kyushu was, of course, one of the first places in Japan that had experienced any kind of Christian influence. Were any of these people influenced by that, or was it just a matter of going to church because they wanted to see what it was like in the U.S.?

HITCHCOCK: It was mostly the latter. Very few of them were Christian. There were some. One of the major patron saints and intellectual gurus of the Socialist Party in Japan was Masao Takahashi, who was then a professor of economics at Kyushu University. There was one other, his life long rival, who was on the left of the Socialist Party, and Takahashi was on the right. I had one ally in the university who helped me to develop contacts with the left in the labor movement. I think that program was very effective.

The other aspect of our work there was to develop confidence -- a really professional relationship

-- with the regional newspaper. The International Visitors Program, over the years, played an enormous role in getting that paper out of its shell, letting it see the rest of the world as it really was.

The programs we ran at the center always included reporters from the newspaper. I started an English language class just for journalists. In fact, it wasn't really a class. We would read one of the Japanese daily English papers in English and then talk about it slowly in English. We did the same thing in Osaka. Years later, some of those young men who were really only my age or younger then became senior editors. One of the people who came to our seminars became the head of *Asahi Shimbun* later on. These contacts in those early days in Osaka and Fukuoka helped me to get a lot of things done many, many years later in Tokyo.

We also regionalized things. We tried to make Fukuoka a truly regional center by inventing a Western Japan International Journalists Seminar which was held every year in a different city and co-sponsored by the Fukuoka American Center and the local coordinating committee of all the newspapers in western Japan. We did the same thing with labor and with women. I think we were the first center to hold an annual women's seminar on the role of women in modern society.

Q: Dorothy Robins Mowry had not yet come to Japan at that time, had she?

HITCHCOCK: She had. She came in with Reischauer in 1961. Ed Reischauer, of course, was my...well Douglas MacArthur II was Ambassador when I was at language school, but I didn't serve under him. Reischauer brought Dorothy in. She heard about what I was trying to do, and it just suited her plans perfectly, so she was a great help in getting prominent Americans, including Esther Peterson, to come down to Fukuoka and participate in some of these seminars.

Q: It must have been very encouraging to Dorothy because I understand she had some rather rocky times trying to persuade the main office in Tokyo that there was any need for a women's organization in the country.

HITCHCOCK: Absolutely. She and I just plotted a lot of this on our own pretty much. I think Walt Nichols and Frank Tenny were helpful in Tokyo, but Ed Nickel and Bill Copeland, both PAOs at that point, were not necessarily against it but were skeptical.

So in journalism, women's affairs, labor...and then we started it with university newspaper editors, again regionalizing things. Then I finally figured out that in all of Kyushu, we probably had about twenty-five, or even less, well-known professors in economics, law, government. But they were all scattered. And to try to bring a well-known American down there and just have a handful -- it seemed like just a waste. So I helped inspire the starting of the International Problems Research Council (*Kokusai Mondai Kenkyu Kai*) for *Nishi Nihon*, with all the universities represented individually. In that way, we would hold a seminar conference two or three times a year in a different campus. We brought Reischauer down for that.

By this time, Vietnam was heating up. Itazuke, the US Air Force Base near Fukuoka, was not directly involved, but on the other hand, it was supporting the war to some extent. The students were radical already, and Vietnam was a perfect cause for them.

So we had Reischauer coming down for this distinguished group of professors and the university which was supposed to sponsor the talk by Reischauer...the university president came to my office one day looking very sheepish and embarrassed and said that he did not think he could sponsor it at his campus, could I find some other campus? We shopped around, but basically, the universities were all scared to hold that meeting with Reischauer, even though it was co-sponsored by their own organization.

In the end, they came to me and said, "Look, you ought to have it right here at the center." One of the things they said I always took as a compliment. They said, "In fact, you are really the most 'neutral' place in town." By "neutral," I think they meant objective. I thought that was remarkable. The Consulate was not in the same neighborhood as the center, and they saw the center as a place where people could come and get information and get the truth. We were never demonstrated against. The Consulate was, but we were not. So that was what happened. We had it at the center, and there wasn't even a demonstration outside.

Q: Who was the Consul General at that time?

HITCHCOCK: It was a Consulate, not a Consulate General at that time. When I got there, it was Dick Petrie. He was succeeded by Tom Shoesmith, who, of course, went to the very top as a Senior DAS in State for East Asia and Ambassador to Malaysia and is now the President of the American-Japan Society of Washington. So the "*Fukuoka Kai*," or the "Fukuoka Group," meaning those American officers who served there, did well in their careers.

Q: Were you the only American at the center?

HITCHCOCK: Yes. I was the only one.

Q: What years were you there?

HITCHCOCK: In Fukuoka, 1962-65, three years.

ULRICH A. STRAUS
Political Officer
Tokyo (1959-1964)

Ulrich A. Straus was born in Germany in 1926. His career in the Foreign Service included assignments to Japan, Germany, and the Philippines. Mr. Straus was interviewed by Charles Stuart Kennedy in 1992.

Q: You went back to Tokyo from 1959-64.

STRAUS: I was initially slated to go to Nagoya, where we had a Consulate at the time. That was changed at the last moment, and I was sent to the Embassy political section in Tokyo as the most

junior of junior officers.

Q: Did you feel like you were back at home?

STRAUS: In many respects, yes.

Q: Were you given a particular slice of Japanese politics?

STRAUS: Yes. My job initially was to follow the newspapers and do whatever didn't fall into anyone else's bailiwick. I think, to some extent, it included things like the judiciary and court cases. I remember writing a report on a big typhoon -- sort of odds and ends. I did that for a year.

Q: How big was our political section in Tokyo at that time?

STRAUS: I would guess about twelve people. It was getting to be fairly big.

Q: What was your impression of the Embassy? At that time, Douglas MacArthur II, a career Foreign Service Officer and nephew of the General, was Ambassador.

STRAUS: Yes, he was.

I was in Japan in 1955, when he was appointed, and I thought that it was a big mistake to appoint anyone with that name. But the Japanese saw it differently. He had been the Counselor in the Department, a man who obviously had the ear of the Secretary of State, one of the high and mighty, and the Japanese were flattered to get an important person like that.

However, I found the Embassy was not a very happy place. In fact, compared to all the others places I have been subsequently, it was a very unhappy place. I remember one incident, for example. This was a time of turmoil in the spring of 1960 with a lot of demonstrations going on. The Ambassador held forth for all but a minute of this fifty minute interview, where he tried to persuade the president of a prominent university that these demonstrations against the security treaty and against Kishi, the Prime Minister at the time, were all wrong. And that it was his Christian duty, as it were, to oppose this kind of thing. At the end of that fifty minutes, he was rather summarily dismissed and thanked for contributing his views, which the man never had the chance to do. I think that was kind of the way MacArthur ran things.

At a later point, we were asked our thoughts about the Eisenhower Presidential visit, and it was clear to everybody, at least below the DCM level, that it needed to be postponed. But at that point, I think the Ambassador's ego was involved in the visit, and he wanted to continue it until finally the Japanese indicated that they were concerned about the safety of the Emperor as much as anything. Protocol demanded that the Emperor go out to the airport. So at their insistence, it was postponed.

Q: These demonstrations were over a security treaty we were developing with the Japanese. How were we reading this?

STRAUS: Well, let me go back. As part of the peace treaty of 1952, we had negotiated with Japan a security treaty which allowed for the stationing of American forces in Japan. By 1959, with Japan starting to feel more independent, it was clear that the treaty that had been negotiated earlier was not adequate. It had to be revised because it provided for such things as the possibility of American forces interfering militarily in Japan. That wasn't appropriate any more. So it was revised really to provide more powers to the Japanese and to limit American powers. So there was nothing wrong with that except that the left wing force in Japan didn't want any security treaty. They wanted so-called unarmed neutrality and to rest their security on the tender mercies of the United Nations as well as non-aggression pacts with the United States, the Soviet Union and China.

Q: Those of you who were dealing with these groups, how were you reading these?

STRAUS: I think our reading was that these demonstrations in Japan, which were, I think, conveyed in the press to the American public as being anti-American demonstrations, were only partly that. That the majority focus, maybe seventy percent, was really directed against Mr. Kishi, then the Prime Minister. Kishi's background was that he had been a very prominent politician, a member of the wartime Tojo cabinet and got within a whisker of being tried as an A Class war criminal. He was probably the most conservative of the post-war Japanese politicians - a very wily politician.

It was Kishi's somewhat Japanese idea that the revised security treaty should be a present for Eisenhower. It should all have been wrapped up by the time he came. But given the opposition to this treaty among the trade unions and the left wing in Japanese politics, it became impossible to get it through without ramming it through...what the Japanese call the tyranny of the majority.

Q: -- rather than reaching the sort of consensus which was the normal Japanese way.

STRAUS: Yes. It was then that the anger of a lot of middle-of-the-road people also exploded. It was roughly seventy percent directed towards Kishi, maybe another twenty percent against having the security treaty with the United States and ten percent against the planned Eisenhower visit. I think maybe the Japanese were in a way disappointed that the President of the United States wouldn't come. So I think there was, at least on the part of the press in the United States, a misreading of this. I am not so sure that our reporting at that time carried the full flavor of what these demonstrations were all about.

Q: How did you find the reporting? Obviously, as a junior officer...they tend to focus more on the opposition...this is sort of a traditional role that they always feel that the old guard at the top sits on what they have to say.

STRAUS: The reporting, first of all, was excessive. MacArthur was an early riser, and by the time he came to the office, he had read the English-language *Japan Times*, which was his bible. He would mark virtually all the articles that dealt with Japanese domestic or international affairs for reporting. We were required to report them, even if the articles turned out to be false. I remember I was told, "Well, then you say that the *Times* said this, but on further checking, it wasn't true." So it was excessive. I felt that the lower ranks, certainly people like Dave Osborn,

knew the score exceedingly well. But the reporting that was done above the political counselor level was often slanted.

Q: When you say also excessive, were you finding yourself getting down to the county level? Were you learning an awful lot about Japan that you might not have?

STRAUS: Oh, yes. You see, I did this job for one year, and then I became the assistant labor attaché. For a language officer, that was a fabulous job. My boss, the labor attaché, was Lou Silverberg, a very fine individual with a tin ear. Despite having been in Japan eventually for ten years and getting along very well with the Japanese and learning a lot about Japan, he never had the slightest facility for Japanese. Like most people, he didn't particularly like to work through interpreters, so his contacts were generally with the Labor Ministry and with the ILO office and the ICFTU office, and he left the labor leaders to me because there wasn't one who spoke any English. That was great stuff, particularly as the labor unions were the bulk of the people out on the streets demonstrating against the government. That was a very exciting time for me.

Q: We have put a lot of attention into labor movements around the world, and the Japanese was one of the major ones. We made certain calculations early on that this would come out all right, didn't we? It was one of the big debates with General MacArthur -- whether to have labor unions or not.

STRAUS: No, that was never a matter of debate.

Q: Wasn't there something about that?

STRAUS: Well, I think you are referring to the general strike which was called and which he cracked down on early on in the occupation.

Q: How did you see the labor movement in those days? This was in 1960.

STRAUS: Well, I learned a lot. I learned that the rhetoric was often very extreme and hardly distinguishable from that of the Communists and that sometimes the private views of these labor leaders was much more moderate. Was that important? I got along pretty well with them. There was a difference between the government unions and non-government unions. The non-government unions in the private sector from the beginning were much more moderate because they often identified their interests with their employers. On the other hand, the railway workers, teachers union, etc. were implacable foes of their employer -- the Government.

I do recall talking to a journalist friend of mine about the head of SOHYO, the then Japanese equivalent of the AFL-CIO, on the left side of the spectrum. I said, "Mr. Ota, the President of SOHYO said this and that." I rather took exception to his strong views on American policy, whatever it was at the time. I said, "Why does he keep saying these things?"

"Ah," said my friend. "You don't understand. Mr. Ota really comes from the private section unions, and his personal views are known to be very moderate. Therefore, he has to take special pains to express radical views in public." So that was another lesson about Japan.

Q: This is always one of the hardest things. An officer who gets down and gets more intimate with labor and political leaders can often see what is going on underneath. Yet your masters at the top of the Embassy see a different picture because in a way, they say, "This is all very nice, but this is what their official position is." And this is what gets reported. Did you find yourself having a problem of translating this within the Embassy?

STRAUS: Yes, although I have to agree too that yes, they may be moderate in the inner circles, which usually doesn't get out. It is very hard in a society like Japan to figure out to what extent this alleged moderation translates itself into action or, as the case may be, lack of action. We never really know that. At least we certainly didn't then. We may have a little bit more insights today than we had then about what was going on within the decision making inner circles.

Q: What was our attitude towards the labor movement at that time? Being the assistant labor attaché, did you feel the heavy hand of the AFL-CIO and its attitude, which is violently anti-Communist and anti-left?

STRAUS: There was a great deal of interest in the labor movement. Many of them came to visit on exchange programs. We sent teams of labor leaders to the United States under the so-called productivity councils. It turned out that all these people who went to the United States took very extensive notes and learned a great deal about productivity in the United States which they diligently applied to their own workshops. I am not so sure, frankly, that the American labor leaders who came to Japan were as diligent in learning about Japan, with one possible exception. That was the Reuther brothers, Walter and Victor. They came to Japan repeatedly, especially Victor. They certainly stand out as being very serious people, not just being interested in getting entertained. They were trying to learn about the Japanese system.

Sure, elements of the Japanese labor movement were not with the ICFTU -- International Confederation of Free Trade, headquartered in Brussels.

Q: This was set up as a counter to...?

STRAUS: The WFTU, which was Communist. It was headquartered in Prague, I think.

The SOHYO unions were not affiliated with the WFTU, but they were very close to the WFTU unions, nevertheless. But again, a fair number of these people on a personal basis were very approachable and would tell you a good deal of what was planned. They just shared the views of many Japanese at that time that a close alliance with the United States was not a good thing. It was seen that the United States would possibly lead Japan into a war not of its choosing, particularly against China. You recall we had this very bitter anti-Communist China policy at the time. We had literally forced the Japanese to recognize Taipei; otherwise, they would not have done so. With bases on Japanese soil, this was not totally a wild notion.

Q: At that time, Okinawa was not part of Japan.

STRAUS: It was not. It was administered as an American fiefdom. John Foster Dulles came up

with an interesting notion in international law that the Japanese retained sovereignty, but we exercised sovereignty -- residual sovereignty was what the Japanese had. I should say, of course, it was an interesting period. I wasn't involved with Okinawa at the time. At that point, Ambassador Reischauer had come in with the Kennedy administration, replacing MacArthur. He had some problems with the Commanding General on Okinawa.

Q: What was your impression of Reischauer? Here was a man who was the guru of Japanese and Chinese studies from Harvard.

STRAUS: Well, it was a major change from MacArthur to Reischauer. It was a more relaxed style of leadership. For example, the Embassy had a swimming pool, which nobody other than the Ambassador and DCM could ever use. Immediately, that was opened to everybody, which greatly endeared the Reischauers to us. We got to know them as people, and they were delightful. Politically, his views were very close to what I felt about Japan. He, of course, was a graduate of the American School of Japan, like I was. Haru Reischauer, his wife, was a graduate of that school as well. I had known her younger sisters. So they were very fine people. I think the views, particularly of Dave Osborn -- one of the shining lights of the Foreign Service and certainly in the Japan and China service -- were very much taken to heart by the Ambassador.

Q: Did we have a feeling after the abortive Eisenhower trip, which stands out as a real shock to Japanese-American relations, that we had to get this relationship back together?

STRAUS: Reischauer, of course, had written an article for *Foreign Affairs*, which, I guess, Kennedy had read and decided to make him Ambassador. He spelled out a number of things that needed to be done. Immediately, relations were established at a high level by the Ambassador himself with people on the left, which included much of the academic establishment, where, of course, his credentials were superb -- and also with the left wing politicians, leaving aside the Communist Party, and the trade union movement. Sure, I and others had relations with them, but it was a different thing for the top level of the Embassy also to see them and invite them to Embassy functions. It was very different. It was very nice.

Q: Under the MacArthur and the Reischauer regimes, were there people that you could not deal with?

STRAUS: Yes, I think it was our view that we shouldn't deal with the Communist Party, and we didn't. That really didn't change, but I don't think there was much to gain at that time. They were still very much kept under either Moscow's or Beijing's sway. We weren't going to get anything that wasn't in the official newspaper, for example.

Q: At that time, what was the feeling you were getting about how the Japanese viewed both Communist China and the Soviet Union?

STRAUS: There was a great distinction that the Japanese have always drawn between the Soviet Union and China. They were never, I think, as persuaded as we were of the unity of those two countries. There was always a feeling that somehow or other they could get along with the Chinese -- that there was a great deal of affinity between them. There was also a feeling of some

shame and remorse of what the Japanese had done in China and the feeling that they hadn't really squared accounts with them. They did not feel any sense of threat like we did. Therefore, there was a divergence in our policy, very clearly. There was a time when I think we feared the Communist Chinese more than the Soviets.

The Soviet Union was a very different matter. The Japanese did not feel any sense of remorse vis-a-vis the Soviets. After all, it was the Soviets who attacked them, not vice versa, and they attacked them at the very end of the war and then took a good deal of booty. Not only the Northern Territories and Karafuto (Sakhalin) but in Manchuria and the Japanese infrastructure there. Then, perhaps worst of all, they kept hundreds of thousands of Japanese in captivity. They were sent to work camps, and many did not survive that. So there is a very strong negative feeling which survives even to this day in Japan about the Soviet Union. But, as you recall, our view at that time was that Communism was universal and undistinguished, whether you were talking about Albania or Czechoslovakia, North Korea, or whatever.

Q: Did you ever get involved with our relations with the American military in Japan? Was it a problem for the political section?

STRAUS: Not at that time -- there were people who dealt with that. Bob Fearey was one who dealt with that, and Buck Borg was the other. That was their main thing. It was usually things that arose out of the management of the security treaty and agreements that dealt with the utilization of the bases.

There was a problem throughout that period in the sixties, which I dealt with later in Washington, of pressure from the Japanese about wanting to get some bases back. But it wasn't something that we couldn't deal with.

Q: Well, back to being the assistant labor attaché, just to get a feel for the period within the Foreign Service, were you concerned that by being there, although you were part of the political section, that this would taint you as not being a regular FSO or not?

STRAUS: I wasn't worried about it that much. I didn't really want to be a labor attaché the rest of my life. But on the other hand, I had not gone through any labor course. Whether it existed then, I don't know. But I had no such concerns.

I might say one thing about the demonstrations. We used to have demonstrations in front of the Embassy. We had large demonstrations there. But unlike, I guess certain other countries, I never felt insecure. These were all well choreographed Japanese demonstrations with the police on one side and the demonstrators on the other. Both sides were careful not to step on the grass. Indeed, I can recall leaving the Embassy and walking right through the demonstrators and not having any thought in my head that anything could happen to me. I don't think I would do that in certain other countries.

Q: How did we read these demonstrations? Who was organizing them?

STRAUS: There were different groups that were involved. The largest groups were always the

trade unions. Indeed, I think it is fair to say that the Japanese government really didn't have much to worry about so long as only the students were demonstrating and even if some Communists were demonstrating along side. When the trade unions joined, then it became a really serious matter, and it became at least a threat that the government could be toppled by that. In a sense, the demonstrations did remove Kishi from office.

Q: Looking at the students at that time, in some countries, students are expected to be as radical as all hell. In Korea, students generally are anti-American, but as soon as they get out, they basically put on another hat and join the establishment. What sort of contact did you have with the teachers?

STRAUS: We had friends at the university level and some of whom said they used to go to demonstrations; it was the thing to do. Anybody who was anybody participated in the demonstrations. It was considered less as something anti-American and more to get rid of this son-of-a-gun Kishi. It was also a sense of adventure. It was fighting the police, and that was a good thing. It was the "democratic" thing to do. For a Japanese at that time, I can understand that. To demonstrate your democratic instinct, you fought against the government at your first chance to do that.

Q: Also there was more of a sense of participation. You put on a headband. You had kind of a uniform to demonstrate.

STRAUS: It was a phase in your life. And as you said, some of the business leaders had the wit to hire some of these people, the leaders even. They felt they showed leadership qualities that they wanted in their business. It was a little more difficult to get into government with that background and record, but not impossible.

Q: What about our analysis that you were seeing of the university system? Often it is sort of at the assistant professor instructor level who are the great instigators of this who haven't quite gotten rid of their undergraduate thoughts. Was that still true there?

STRAUS: Oh, very much so. You know the Japanese are not great individualists, and certainly at that time, the thing to be in the university if you wanted to get ahead was to be a Marxist. That was certainly true in the social sciences. Indeed, some of the students were telling me at the time that if your papers didn't have a Marxist bias, you might as well forget about a good grade. And that was something that worried us.

Q: Did you find that there was much of a spill over into the thinking later on, or was this something that the people who were doing well could shuck very easily?

STRAUS: There was a spill over for a while. You did have -- even then in the large industries -- an element in their twenties who were rather radical, but gradually they turned. Some never did change -- some of the journalists, for example, and opinion leaders. So Marxism in its rather strange and extreme Japanese form did persist in Japan longer than say, in Western Europe.

Q: Then you left Japan?

STRAUS: No, I still had one more year in Japan. I was in charge of the Socialist Party.

Q: What does that mean?

STRAUS: Well, keeping contacts in the Socialist Party and reporting on it -- the main opposition party.

Q: At that time, did you see the Socialist Party presenting much of an alternative to the Liberal Democrats?

STRAUS: I am afraid we did. We thought that the economic basis in Japan by the mid-sixties, with rapid industrial growth and rising living standards, was not all that different from Western Europe and that you would have a moderation of the Socialist Party, such as you had in Germany, France and England. And it didn't happen.

Q: Were we looking at them in a sort of benign way -- this is the group that will eventually take over?

STRAUS: We tried to, but the party split, and you had some fairly conservative elements which eventually formally split off, and you had some people in the middle. Then you had the majority very radical elements in the Socialist Party, which, for a long time, prevailed and set the tone for the Party.

Q: I assume you were following the Party's strategic moves. Did you think they were doing the right thing at the time, or did it seem to be an odd Socialist Party as compared to some of the others?

STRAUS: Well, we probably exaggerated those occasional mild shifts to the center because through the sixties and the seventies, not all that much changed. You did have some changes, but it was so much slower than what took place in Europe.

Q: Looking back on it today, were we missing anything that was happening with the Socialists as far as how we were reporting on it because they are still not in power?

STRAUS: The right wing Socialists, who, in many respects, were the easiest for Americans to talk to, proved singly inept in getting themselves elected and staying in the Diet. So they have lost out. The centrists have done somewhat better. Perhaps they were seen as not really Japanese enough. I think we may have underestimated the LDP -- the conservatives. They, of course, have presided over an unparalleled economic growth and prosperity and peace. That is a very strong prescription for staying in office.

Q: Did you have any feeling about the basic corruption, or was that not much of a problem?

STRAUS: Oh, there was always some corruption, and then, as now, it is less about personal aggrandizement and venality as it is about power. Being in politics requires a lot of money, and

the election laws are very strict -- very idealistic, if you will. Then there is going to be corruption. It is very much part of Japanese society that you have gift giving. That smooths entrees into difficult, personal relationships. You are required as a politician to go to a lot of weddings and funerals, etc. Every time you do, it requires a gift. So it is not surprising, although I think it has been excessive in the last few years. At that time, it was less. By and large, I think the Japanese were less corrupted then than they are today.

Q: How did it work within the Embassy? You were reporting on the Socialists, and there was somebody reporting on the Liberal Democrats?

STRAUS: Yes, that is right.

Q: Would you have a joint meeting of what was going on, and each would present your side?

STRAUS: Well, we jointly would attend the staff meetings of the political section. Obviously, the person who reported on the Socialists was the more junior officer. I don't think we had any great differences of view, but I did get to know some of the Socialists, having been the assistant labor attaché and knowing the labor types -- some of them had previously been in the labor movement. That was one way to get rid of more senior labor leaders, to send them off to the Diet.

Q: You left Japan in late 1964. How did you feel about whither Japan at that time?

STRAUS: By that time, I think it was pretty clear that Japan was on the move. I don't think I or anybody else thought that their success would be as fast. I was concerned already then about Vietnam -- about our growing involvement there. It was clear to me, perhaps because I was working for Reischauer, who was opposed to this adventure from the very beginning because it could cause a rift in our relationship with Japan. So I looked at it perhaps differently than my colleagues did later on in Berlin. Perhaps having lived in Japan, I had absorbed some of the attitudes towards China -- China not being the unalterable enemy of the United States that it later proved to be.

ROBERT L. CHATTEN
Assistant Press and Publications Officer, USIS
Tokyo (1960-1961)

Robert L. Chatten received an undergraduate degree in journalism from the University of New Mexico and went on to receive a masters degree in communications and journalism from Stanford. He was sworn in as a Foreign Service Officer in 1959. He was stationed in Japan, Colombia, Bolivia, and Ecuador. He was interviewed by Fred A. Coffey, Jr. in 1994.

CHATTEN: From Manila, I knew that there were three assignments coming open in East Asia. On April first in those days and for a number of years thereafter you were asked where you

would like to go. It was known as the April Fool List. There were two openings in Indonesia and there was one in Japan. I asked for that one but I thought, its going to be Indonesia for me, boy. Miraculously, I ended with the Japan assignment as Assistant Press and Publications Officer in Tokyo. "Please be there yesterday," the cable said.

Q: *What year was this, Bob?*

CHATTEN: This was about Thanksgiving of 1960. And true to personnel's continuing way of doing things, they waited and waited to make a decision, and then said we had to be there immediately. One of my earliest, mild-mannered acts of defiance of the Agency was, asking permission to at least let us go via Hong Kong and buy some winter clothes. They reluctantly agreed.

We got to Tokyo in the last days of one of the great characters of the Agency of that day - PAO George Hellyer. He had been a tea planter in Indochina and had been swept up in the Agency's early net cast to get people who seemed appropriate to the task. He had reorganized the post into thinkers and doers, which was one of the great items of discussion of the whole Agency. It hadn't worked. There had been a program division, supposed to think about either an audience (labor or politicians) or a subject matter (economics). This was familiar ground later in the Agency but it was tried on a major scale first in Japan. Then there was the doers, the production division, which was supposed to crank out all the stuff aimed at either these audiences or the designated subject matter that the thinkers thought up. I became the Junior Doer. The production division was headed by Hank Gosho as Information Officer, who had been a thinker, and who as a Japanese-American had been one of World War II's Merrill's Marauders in Southeast Asia. He was a colorful, wonderful man heading a colorful cast of characters.

Q: *Who was your immediate supervisor?*

CHATTEN: My immediate supervisor was, again, one of the unique characters that the Agency doesn't have very many of anymore, Charlie Davis. Charlie Davis spoke fluent warehouse Japanese, which he had learned while in the military. Charlie was a high roller. Flamboyant and lazy, he very much enjoyed the contact part of his job and very much disliked the part of running a Press and Publications staff of 25 Japanese and trying to get a product out the door every day. When I showed up, he said, "Thank God you've come, I've got a lot of leave that I'm going to lose. Ciao." So straight off of this JOT experience, straight off of my week in Hong Kong buying my 3-year-old boy a coat, and my first custom-made suit...

Q: *I hope it fit.*

CHATTEN: I may still have it. Here I am with a whole crowd of Japanese to supervise and I didn't even know what the hell they were doing. Open the door and there would be a whole room of six or eight ladies operating Japanese typewriters. Perhaps you remember what Japanese typewriters look like, with several thousand characters on trays, but it looked unlike anything that I've seen before. But they were a vital cog. There was a whole copy desk which looked very much like my old copy desk in a newspaper newsroom. It was staffed with translators, who loved Adlai Stevenson when he went to the UN because he spoke in full sentences, and hated

Eisenhower because of the ups and downs and lapses and long pauses in his syntax. Add a bunch of other people who were doing God knows what, dealing with the press, turning out publications. This was the deep-end-of-the-pool school of personnel management. I was lucky to dog-paddle my way through the earliest days of this.

Q: Bob, initially did you get any language training?

CHATTEN: No. Assistant Press and Publications officer was considered an inside job. I came, during the course of our stay in Japan, to that most frustrating of points, the ability to ask several questions and not understand any of the answers. But there were a number of very talented and dedicated staffers who would accompany me on business out-of-doors. The Japanese staff certainly spoke English. This orientation ultimately led to my perspective on the importance of language. To take the case of another famous PAO to Japan, Alan Carter, he never spoke a word of a foreign language and who, for good measure denigrated the importance of speaking another language. He seemed to have arrived at the conclusion that if you know what you want then it's the other guy's problem to learn it, or, alternatively you can always get somebody to perform the basically technical function of interpreting. Most people know how much baloney that is, but it was one of those things that, for want of prior experience, I learned in a hurry in Tokyo.

We're talking about a period in Japanese-American relations in which Douglas MacArthur II was ambassador. He was a smart, colorful man and he interviewed all new staff in the mission. It was very much a period of transition, in which MacArthur looked upon himself as being the one who was finally going to break down the occupation status and the occupation mentality. Whatever the legal status of occupation was at that moment, the occupation mentality was still there on both American and Japanese sides to some extent. So there were some situations analogous to my previous experience with colonial status in the Philippines. Partly as a function of this, MacArthur would not be seen publicly with any American uniformed officers, with the possible exception of some of the generals and admirals. But he wouldn't be photographed with them. I, as the junior doer, found myself in what seemed to me a curious position of having bird colonels come into my office and tell me the troubles that they had of liaison with the Embassy. But I was about the level who was authorized to talk freely to those guys. I'm sure there were people in the political section who were doing so at some level or other, but it was a strange time indeed.

Our Japan days saw the transition to the New Frontier. Kennedy had been elected but Eisenhower was still in office when we went. MacArthur was replaced by Edmund Oldfather Reischauer, a Japan scholar born in Japan of missionary parents, and fluent Japanese speaker, about whom some of the people in USIS Tokyo thought, "He'd be a good CAO." It was a yeasty period in Japanese-American relations because the nature of the relationship was changing dramatically, with the change further dramatized by these two very, very different characters of Douglas MacArthur II the nephew of the General and married to Vice President Alben Barkley's daughter, and Ed Reischauer, married to the granddaughter of a former Prime Minister of Japan. Much of what USIS attempted had to do with trying to interpret the nature of the relationship or the proper nature of the changing relationship, as we envisioned it. There aberrations in the US-Japan relationship, like "the nature of the labor movement" which was our creation but which went off in political directions that we had never anticipated. We were seized with trying to

communicate the new look in the United States, with Camelot coming on line, and the Space Race. I can remember coming back into the office in the middle of the night in order to make sure that releases on Alan Shepherd, first American in Space, were properly pushed out to the media.

Q: Did you get involved with any program which you thought made a difference in Japanese-US relationships? And our country programs and our country objectives? Did you get excited, did the hair stand sometimes and say, "Boy, this is it?" or "What are we doing here?"

CHATTEN: Hair-raising may not be totally apt but, sure, there were times when we felt we were doing something that really needed doing. In the Philippines it was the programming that we hung on the visit of the president. Then, as now, a Presidential visit provides wonderful hooks upon which to hang all kinds of messages and I was really an integral part of that.

In Japan I persuaded post management that what they needed was a Press Officer and a Publications Officer and that I ought to be the Publications Officer. That allowed opportunities to do all kinds of things. One of them, the first time that anything I did ever got incorporated into Congressional testimony, was the production of the Kennedy Inaugural Address in a bilingual version pamphlet. It had the specific purpose of marrying Japanese desire to learn English to their curiosity about, and our need to explain, the new leadership in Washington. The English language is one of your great program assets in Japan, and it was then and is today. It was a real rush to be able to come out with something that at the same time was a manifestation of the new winds blowing in Washington and the new winds blowing in Japanese-American relations. It had a huge acceptance among the Japanese. By the time I left we went through nine printings of that thing. I would order up some number that seemed large to me, 20,000 or so, and they'd be gone in a week. So I'd order it again. You could approach an important university's language people or their English Department and say "Look what I've got," and they'd say, "I'll take a zillion. That was exciting.

Q: In some countries I know, the Publications Office had quite a bit of money and so they would reach out and grab titles, grab topics that weren't particularly pertinent. Did you inherit some of that? Did you have to make some hard decisions in saying, "Some of these things are not useful for our program?"

CHATTEN: Sooner or later, everybody has had to deal with ten thousand pictures of Lyndon Johnson or something equally difficult, but that's the cost of doing business. The sparks were really on the side of what was exciting. We started two magazines while I was there. The Labor Information Officer and I put together a new periodical, a quarterly aimed at labor audiences. That was great fun, yeasty stuff for anybody at any level, let alone somebody who's not out of his '20s yet.

Q: Did you find some interesting reaction to that labor magazine?

CHATTEN: No question about it. There were elements within the heavily politicized Japanese labor movement that still looked to the United States as a model, as a source of information and wisdom. Organized labor hadn't been one of my interests, but here we were with an interested

audience in the Japanese labor movement at a time when the relationships between post-war power blocs were still being shaped.

The other excitement in publications began with a cable in the middle of the night telling us to get together with the Brits, the French and the Japanese, quickly. Washington was going to supply camera-ready copy on a worldwide pamphlet about the Berlin Wall, which was still under construction. I have over the years kicked myself, I don't know how many times, that I did not keep my copy or copies of this thing that we put out on a crash basis. We met at the British Embassy but the US was supplying the copy and photos. The Agency was going to get the text to us in the fastest way possible, which was to be translated into Japanese and fitted into Washington's layouts. It was a first class piece of work, really good visually. We put a lot of effort into it and we got that sucker out in record time, in tens of thousands.

Q: What was the Japanese reaction to this?

CHATTEN: It's hard to measure in retrospect. I think probably very good. Here's an issue around which we, they, the world, might retreat into war and they wanted to know everything that was knowable about it. They certainly wanted to know how we felt about it, and there we were with a quick-hitting product. Remember, those were the days before you could tell a story like that instantaneously via television.

Q: Would you think there was any connection to the symbolic bit of the Berlin Wall and our reaction to it for the Japanese to assess how reliable an ally we are, we were. How quickly were we ready to respond?

CHATTEN: The question of the reliability of the US as an ally came later in my experience in East Asia after Vietnam.. If there was a question in policy terms it had more to do with United States' orientation toward Europe as opposed to Asia.

Q: For one reason or another USIS/Japan has been a particular pilot project, being pushed and pulled.

CHATTEN: While I was there, the post was reorganized into a more traditional model, away from the thinker/doer configuration, which was judged by Washington to have been a failure even though some of the ideas persisted and became Standard Operating Procedures later in the history of the Agency.

The Japanese must have thought us quaint indeed or at least "the inscrutable West" for doing some of the things that we did organizationally and because of some of the products we put out. I don't think they were very critical at all in those days, concentrating more on just trying to figure us out. That is, except for the people who would march every couple of days in front of the Embassy Annex, our building, on their way to demonstrate at the Diet. Anecdote: We were in the Annex, we were in the Mantetsu Building, which had been the Manchurian Railway headquarters. It was on the route that would be taken by all people who had reason to demonstrate outside the Diet, which was a Japanese thing to do in those days. As long as they were coming by the Embassy Annex, we would get included in the thing. My secretary was at

the window late one afternoon laughing, and saying “Come look.” The orderly, four abreast demonstrators were carrying signs protesting the high price of butter and eggs and cheese, dairy products, and the hydrogen bomb.

Q: *Well that’s an interesting mixture.*

CHATTEN: Not only was it funny at the time but it was instructive about the Japanese as well, both in their organizational tactics and in how they viewed us. As long as they had gotten together to harangue Parliament, they might as well take a shot at us as a target of convenience, the logic must have gone.

Q: *So you had two years in Tokyo?*

CHATTEN: I had just over a year, with Pat teaching English at Waseda University and a 3-4 year old, living in the old Perry House apartment building. We lost a baby during that time, in a nightmare experience of driving the streets of an unfamiliar part of Tokyo, with Pat in the midst of a spontaneous abortion, trying to find the Seventh-Day Adventist Hospital.

G. CLAY NETTLES
Claims Commission Legal Assistant
Tokyo (1960)

Rotational Officer
Yokohama (1960-1963)

G. Clay Nettles attended the University of Alabama and served in the U.S. Army from 1954-1956. In 1957 he entered the Foreign Service, having taken the exam during his final year of Law School. Mr. Nettles’s postings included Japan, Venezuela, Vietnam, Lebanon, Pakistan, Zaire, Italy, Turkey, and Switzerland. He was interviewed by Raymond Ewing in 1997.

Q: *You were assigned where?*

NETTLES: To Tokyo. I was sent there because of my legal background. Article XV of the Treaty of Peace with Japan provided that any Allied property located in Japan (it had to be located in Japan, not, for example, in the Philippines) at the beginning of the war would be returned, and if it couldn't be returned, compensation would be paid. There were over 300 American claims under this clause in the Treaty of Peace. All except 17 were settled, and those that were not settled were sent to this legal commission, composed of one Japanese member, Ambassador Nishimura, a former ambassador to France, and a former member of the Court of International Justice in the Hague; an American member, Lionel Summers, who had entered the State Department under the Wriston Program from the Legal Division; and a neutral member, Judge Salim, a Swedish judge who had served on an international commission in Egypt. I was the legal assistant for the American member, Lionel Summers.

Q: Did Lionel Summers have other responsibilities, or was he there just for this purpose?

NETTLES: He wore two hats. He was the supervising consul general of all of the posts in Japan, including Okinawa.

Q: The consular posts.

NETTLES: Right, and he even had two offices. He had one in the embassy itself, or rather what was known as the Manchesu Biru, the Manchurian building, an annex of the State Department where the consular section was located. Then, for this commission, we had an office in the old Imperial Hotel, which, as you know, was designed by Frank Lloyd Wright. I divided my time between the two offices.

Q: I think, in my oral history interview, I said that my first office, when I went to Japan in 1959 as a member of the United States delegation to the GATT Conference, was in the old Imperial Hotel. But I can see I have no particular distinction, because you have the same location for your first office. You say Allied properties; these were private properties, company properties and so on, primarily?

NETTLES: Both. In a few instances, there were claims for an American citizen whose house was destroyed by bombing. But over half of the claims were made by American companies that owned an interest in a Japanese company. For example, one American company owned a percentage, I believe about 20 percent, of Toshiba, and they brought claims for the damage which Toshiba suffered as a result of the war.

Q: You say there were how many unsettled claims, 17?

NETTLES: There were 17 American claims, but there were other Allied claims, also. But the U.S. had the largest number of unsettled claims. We were the first to have a formal commission and have hearings. The legal issues, particularly as far as the companies, were basically the same for the British or the Dutch or others as they were for Americans. So we worked closely and they were very cooperative, because the legal precedents that would be decided by our commission would be applicable to theirs.

Q: And they would have their own joint commission to take up their claims.

NETTLES: Exactly. But I think, as a result of our claims and the precedents which were established, it wasn't necessary for all of these countries to have a formal commission. I know the French settled all of theirs... I'm not sure about the British and the Dutch. They had the largest number of claims after us.

Q: Now the U.S.-Japan Peace Treaty, I think, was concluded in 1952.

NETTLES: I don't recall when it was signed. [Signed in 1951 in San Francisco.]

Q: But sometime well before you got there in 1960. Had the claims commission been working already for some time, or did it start about the time that you got there?

NETTLES: No, it had been working for some time. As I said, there were initially over 300 American claims, and all but these 17, which were referred to the commission, were settled. Basically, those that were not settled fell into two types: one, that the Japanese simply questioned the validity of the claims, or, two, the financial amount of the claim was so large that none of the Japanese negotiators wanted to take the responsibility of reaching a settlement. They preferred that it go to the commission.

Q: Was the commission able then to complete its work to deal with these, basically, two issues-- magnitude and ones where there was a dispute about the validity of the claims?

NETTLES: Right. We concluded the commission within six months. This was almost record time for a legal commission of this type. It usually takes much longer. But the Swedish jurist wanted to conclude and go home, and so he put pressure on us to really expedite the work. It was interesting work, and I think the American companies, for the most part, were very pleased with the outcome. They got pretty much what they wanted, with the exception of one American company, which I won't name. All the companies had brought claims, for example, for their buildings which had been destroyed by the Allied bombing raids, or the percentage which they owned. But the one American company filed claims for the profits which they lost when the war contracts were canceled. For example, the contract to manufacture torpedoes.

Q: For Japan?

NETTLES: For Japan. Of course, at the end of the war, in '45, all these contracts were canceled. But this American company filed claims for the profits which they would have made had the contracts been fulfilled to manufacture these armaments. I know you won't be surprised to hear that it was unanimous that this company's claim for their lost profits was denied.

Q: Now if a company was not satisfied with the judgment reached by the claims commission, did it have recourse elsewhere, or a right of appeal to somebody else?

NETTLES: No, there was no right of appeal.

Q: So this was final.

NETTLES: That was final. But I think, on the whole, the claimants were satisfied.

Q: The claims had to be filed by some specific date?

NETTLES: I think so, Ray, but I don't recall. There must have been a cutoff date, but I'm not sure.

Q: So the commission basically finished six months or so after you started.

NETTLES: Right.

Q: You were there for the windup phase.

NETTLES: That's right. I had been told by Personnel in Washington before going out that this would probably last for about a year, and then I would be reassigned to either the embassy in Tokyo or to one of the consulates and work in the consular section. After the completion of this work, I was sent to Yokohama, where I worked for two years as a consular officer.

Q: You initially had been in Tokyo for six months or so, and then you were reassigned to Yokohama. Did you move, or did you commute?

NETTLES: I moved.

Q: It's not a very great distance between the two cities.

NETTLES: No, but as I'm sure you recall, one could have commuted every day. The train service was quite efficient; it was much more efficient than driving. When I made the move, I just simply drove my car down to Yokohama and moved into furnished quarters. There were, I believe, five consular officers, so every fifth week, you were the duty officer, which meant that you were on call and had to come in whenever there was an emergency or a night-act cable, for example. You couldn't very well have commuted from Tokyo to come in to read a night-act cable, so it was essential that we live in the Yokohama district.

Q: As you remember, I was detailed to Yokohama the last three months I was in Japan. I commuted, because it was very near the end of my assignment. As you were talking about the duty-officer roster, I don't quite remember whether I was on that or not on that. In any event, it would have been hard to respond in the middle of the night or on a weekend from Tokyo, although I guess it would have been possible, because there are trains just about all the time.

NETTLES: Well, no, I believe the last one stopped at midnight.

Q: But you did consular work. You did the usual range of visas and American-citizen protection, and so on.

NETTLES: Yes, on a rotational program, which meant, for example, that I was visa officer for approximately 10 months; administrative officer for about six months; and protection and welfare, which included shipping, for perhaps 10 months (which may not add up exactly, but gives an indication). It was good training. You were the only visa officer, and yet, as you just mentioned, it was close to Tokyo, so if you really got into a difficult thing, you could always pick up the phone and call an expert who had done this for a long time and ask a question. You were on your own, but yet you could get assistance very easily. It was interesting, though, that very quickly, although I was a junior officer, I became the expert in shipping, because Yokohama was by far the busiest port for American ships (and by 'ships' I'm speaking of merchant ships) in all of the Far East. At other ports, Fukuoka, for example, I remember when they had an occasional American ship come there with some problem, they would call me and

ask for my advice, because I had by far the most experience of anyone in Japan at that time.

Q: I think that American consular officers had more responsibilities with regard to American shipping in that period than perhaps they do today. Of course, there isn't as much American merchant shipping on the seas. But what were some of the particular responsibilities that you had for American ships that came in to Yokohama? I guess some actually went up to Tokyo to dock, but Yokohama was the port on Tokyo Bay that, I think, did all the shipping work for American ships.

NETTLES: All the shipping work, that's right. Yokohama was normally the first and the last port of call for American merchant ships going to the Far East. Because of the law and insurance, particularly insurance, it is important to stop by the consular section before going home and file what was known as a note of protest. This was not a U.S. government requirement; it was done strictly for insurance. Executing this note of protest, which contained wording about rough and stormy weather (it always had that phrase), protected the company in the event of an insurance claim. Now I don't know the details, but I know that was the reason for this, and why almost all American ships docked there. Also, they could get from the consulate in Yokohama a crew-list visa if the American ship had foreign nationals on it. Individual visas were not required if it had one crew-list visa. Almost every ship docked for those two things.

Then, in addition, there were other reasons. For example, only an American consul could discharge a seaman. The ship's captain could not. The law (and it was written in the law) simply said (I could almost quote it), "Occasionally, a consul may be called upon to discharge a seaman for cause. This should not be done lightly." Fortunately, I was only called upon once to discharge a seaman for cause.

Q: At the request of the captain.

NETTLES: That's right. It was quite an interesting situation. The ship was located at Shimizu, a port about 100 miles south of Yokohama. I had to go down there and then go aboard the ship and conduct a hearing. The facts of the case were that, the night before, the seaman had been in a bar, and, like Burt Lancaster in those kinds of movies, broke off a beer bottle and cut up the face of the first mate pretty badly with the broken bottle. So the captain wanted to have him discharged. The union representative had sort of ambivalent feelings. They felt like they had to protect the seaman. On the other hand, I said, "Would you really want to serve with this guy on the way back to the U.S.? Aren't you afraid that he might do the same thing again?" This union representative agreed that, yes, he just might. So it all wound up they were happy with my decision to discharge him. Then I had to take the seaman back to Yokohama with me. He didn't speak any Japanese, and I did, so he was on his good behavior all the way back to Yokohama.

Q: Then what did you do when you got him back to Yokohama, put him on a flight home?

NETTLES: The agent for the company was responsible to get him back. So he went into the detention center. The detention center was where seamen who'd missed their ship, for one reason or another, would be held until either they were flown back or placed on another ship. But, again, it was the agent's responsibility to take care of the seaman. But many a week I would get a call

from some seaman saying, "I want to speak to the American consul."

I would say, "Well, I'm the vice consul. What can I do for you?"

He'd say, "All I did was miss my ship, and they've got me here in jail."

Then I would say, "Well, you're not in jail. You're in detention center."

The seaman would say, "Well, it's got bars on the windows. I can't leave."

They had a point, but I would say, "No, if you had seen a Japanese jail, the conditions wouldn't be quite as good as the detention center, and certainly the food wouldn't be nearly as good."

But, in any event, I worked closely with the agents, and we got them out as quickly as we could.

Q: The American consulate in Yokohama is now closed, I believe, and has been for some years. Can you sort of reflect, Clay, about the role that the consulate played, not only in terms of shipping and visas in the port city of Yokohama, but more generally in its consular district? Did you travel quite a bit? You mentioned going to Shimizu. Or was that what the consul general himself would do?

NETTLES: The consul general did, and he was basically just showing the flag. The rest of us did occasionally, but not that much. We traveled a lot, of course, unofficially. Japan, as I'm sure you would agree, has many attractions, and it was always fun to get out. Despite its reputation, basic Japanese is not difficult at all to learn. Japanese is very difficult to speak fluently. But with basic Japanese, which one could acquire easily, you could enjoy traveling where little English was spoken.

Q: You did not have formal language training, but you were able to take some part time?

NETTLES: Early morning language.

Q: In Tokyo?

NETTLES: Yes, and then I continued in Yokohama.

Q: The Foreign Service Institute's Japanese-language school was in Tokyo, not in Yokohama at that time.

NETTLES: At that time. Later, when the consulate was closed, our consular functions shifted to Tokyo.

Q: The replica of the White House, the original consulate building, I think went back before the Second World War.

NETTLES: Yes, it did. Yokohama was 80 percent destroyed by bombing, but there was a block right on the water that survived. That included the American consulate; a British bank; a British

company, Butterfield and Squire; and the Yokohama Grand Hotel, a truly grand hotel. These were all on one long block.

Q: There was a Foreign Service national employee at the consulate in Yokohama named Yamada, if memory serves me correctly, and I believe he was closely associated with U. Alexis Johnson. Do you remember that story?

NETTLES: Yes, I do remember very well. Mr. Yamada was in Mukden, Manchuria, working at the American consulate when war broke out. According to U. Alexis Johnson, he saved his life by preventing a Japanese mob from lynching U. Alexis Johnson. Ambassador Johnson was very, very grateful. Every time he went to the Far East (and when I was there, that was at least twice a year, because he was ambassador to Thailand at the time), he would come to Yokohama to see Mr. Yamada.

Q: There's one other part that I think is kind of interesting. That is, when Johnson came back to Japan with General MacArthur in 1945 to be, I think, his political advisor (and I think he eventually was the consul general in Yokohama, all this well before the peace treaty and before the embassy was reestablished), he broadcast on the Armed Forces radio that he was looking for Yamada-san, and would he please come, that Alexis Johnson was looking for him. He came and was rehired by Johnson after the war, out of gratitude for what he had done in Mukden at the beginning of the war.

NETTLES: That's very interesting. I didn't know that myself. Certainly Mr. Yamada deserves great praise for what he did in saving U. Alexis Johnson's life.

U. Alexis Johnson not only came to Yokohama often, but occasionally Mrs. Johnson would come, too. As you know, Mrs. Johnson had the reputation, as did so many of the top senior wives of that time, of being difficult. As you said, at one time he had served as consul general in Yokohama. So Mrs. Johnson, when she came to Yokohama, would go to the consul general's residence and rearrange the furniture the way it had been when she was there. Of course, when she left, the consul general's wife put it back the way she wanted it.

Q: Okay, is there anything else we should say about your assignment in Japan?

NETTLES: No, except that it was a very good initial post. The legal work was interesting, and because of the unique position, I was included in a lot of high-level functions that I wouldn't have been otherwise as a very junior officer. So that was interesting. Also, one is expected to have experience in every area of the Foreign Service. Yokohama was ideal for that.

Q: It was also ideal that management at the post recognized the importance of location, and scheduled you to do visa work, shipping work, and administrative work.

NETTLES: That's right. I should add, too, that we had the ideal consul general, who was there to support you and to guide you, but he didn't try to micromanage.

Q: I think there was one officer, maybe his deputy, who was very experienced at consular work.

NETTLES: Particularly shipping and seamen, Frances Taylor, that is correct. For years, she had served within the State Department in the Shipping Bureau.

Q: Whatever one would say about shipping work, Yokohama was a very important place where that was done. Probably one of the five most important in the world.

NETTLES: Yes, I believe it was considered the second most important. Only Rotterdam was more important at that time; more important in the sense of American ships that called there.

Q: Partly because of the nature of the Far East at that time, there probably were more problems with seamen related to shipping than perhaps there were in the ships going to Rotterdam.

NETTLES: Well, I would think so, simply because the voyages were longer, and that increased the amount of time in which problems could arise. Then also there were quite a few American ships, and when I say American, of course, we're talking about ships that were under its American flag, merchant ships. But that included tankers, and we had a number of tankers that made periodic trips between the Persian Gulf and Japan. Those seamen would serve normally for six months at a time, and then they'd be flown back to the States. Of course, six months is a fairly long time, so quite a few problems could arise during that period.

Q: Where you wouldn't come anywhere close to the United States and American ports. You'd keep shuttling back and forth.

NETTLES: Correct, correct. These tankers.

DONALD NOVOTNY
Agriculture Attaché
Tokyo (1960-1963)

Mr. Novotny was born and raised in Nebraska and educated at the University of Nebraska. After serving in India with the 4H Foundation, he joined the Foreign Agriculture Service and assigned to its Grain Division. He subsequently served as Agriculture Attaché in Tokyo, Japan and Wellington, New Zealand. In 1964 he returned to Washington, where he served as Director of the Grain division until retirement in 1974. Mr. Novotny was interviewed by Allan Mustard in 2009.

NOVOTNY: I was assigned as assistant ag attaché to the US embassy in Tokyo, Japan in January 1960 and spent four and one-half years there. The ambassador was MacArthur, nephew to the famous general, who was later followed by Reischauer. My immediate boss, the attaché, initially was Chuck Elkinton and later Joe Dodson. Serving with me there were Russ Strobel and Don Motz and then following me was Jimmy Minyard.

Q: And what did you do in Japan? Well, first of all why Japan, why were you interested in Japan, or was that offered to you? How did that system work where you were a civil servant in

those days and going out on your first tour, what was the dance like?

NOVOTNY: Oh, I hit the ground running. I wanted to get into this and so I studied Spanish for a year and of course I thought I'd mastered it, nothing of the kind, but any way I was getting so I could use it some; every day the morning classes at the Foreign Service Institute. And then I decided I'd branch out into something else so I took Russian for a year, and then, wouldn't you know, I got sent to Japan. (laughter)

Q: How'd that happen? I mean, how did they offer you Japan, was it just kind of a bolt out of the blue, or what?

NOVOTNY: I think Bob Tetro, Sr., who was then in charge of the attaché assignments, just felt this would be a good assignment, and that it would be a good fit, whatever. In those days nobody was being sent to language school. Certainly Japan was a place where a lot was starting to happen, and so indeed when we got there, we were just in the midst of a big review to decide whether to give up on the US Wheat (Associates) office and close it down and after a couple of months it was decided to go on. And they brought in a guy from Oregon by the name of Jim Hutchinson to head the office. Incidentally I take great pride and credit in that I helped Jim find an assistant, Paul Sone, who had worked for a governor and had excellent English. Paul helped not only the wheat office greatly, but also the whole cooperators group to get more established and vitalized.

Q: Was this the Jim Hutchinson who had been general sales manager?

NOVOTNY: Yes. In Japan he represented western wheat states for I think around 15 years, and then he came back to USA to serve as general sales manager in FAS for a few years and I think he retired after that. When Dick Baum of Western Wheat and Clarence Palmby of US Feed Grains Council made their first visits the attaché asked me to deal with them because I had some background in grain and I had been working with the western wheat office somewhat even before coming to Tokyo. So then I helped the Feed Grains office get their start. And the third main thing that stands out was starting the poultry market program. We had a visit from Joe Parker, who was the first head of the poultry export arm of the US poultry industry at that time and Japan looked like a good first target in the Asian area and again I worked with them to find a good local person who could head the office, Katzi Toyota was his name. Following Parker's visit, Katzi and I went down to visit some department stores in Osaka and the result of it was we started in-store promotion which was the poultry industry's first project. And that just grew and grew and grew; everything grew, I mean it was an exciting time for US ag exports and a time when one could really see the accomplishments of the ag attaché office. So soon the office grew rapidly in size.

Q: So you wound up in Tokyo and they transferred you to New Zealand?

NOVOTNY: Yes, yes. I wasn't all that enamored with the heavy social schedule and indeed in Tokyo it was extremely heavy. There was every night an important social engagement with Japanese counterparts and cooperators and government people.

Q: Every night?

NOVOTNY: Every night of the work week. And it would go from one gathering to another and to another. Those were also times when the social schedule in the diplomatic circuit was extremely heavy and a great emphasis was placed upon active involvement in that by the senior Foreign Service wives in the embassy. So by the time we were three, four years into that life, my wife and I were not sure we could raise a family in such settings and it's just not normal life. So when FAS talked to me about going to New Zealand to head the office where there was only one person in the office, I was somewhat ambivalent, and Dorothy as well. But we went and you know it was like being ag representative to the state of Kansas or something.

CLIFF SOUTHARD
Book Programs Officer, USIS
Tokyo (1960-1963)

Cliff Southard was born in Illinois in 1925. He joined USIS in 1955. His career included posts in the Philippines, Japan, Burma, and Nigeria. He was interviewed by Pat Nieburg in February of 1988.

Q: Maybe we ought to start with Tokyo, where you were Book Translations Officer from 1961 to 1963. What was it like?

SOUTHARD: Well, as I have often said, I still do believe that the book translations job in Tokyo was the most interesting one that I had in my entire Foreign Service career. I say interesting; it was interesting because I think it was the most cost effective and most personally satisfying job I ever had.

The budget was modest. I think it was something like \$30,000. This was in the early 1960's. I subsidized the publication of roughly a hundred books a year -- a hundred titles a year. It was certainly the lowest subsidy program -- the cheapest subsidy program -- of books we had anyplace in the world.

Q: What do you mean by that -- the lowest cost?

SOUTHARD: We would subsidize a book for about \$250 to \$300 on average for an edition size of two and a half to three thousand copies. Ten cents a book is about as cheap as you can subsidize book translations anyplace. For instance, today in Latin America, we are paying \$5 and \$6 a book per copy for subsidies.

The other equally interesting part of the job was that we had a monthly magazine. The only USIS magazine ever that was devoted alone -- totally -- to books. It was called, "*The Monthly Review of American Books*," in Japanese. This magazine probably, I think, was the only USIS magazine that had advertising -- that carried paid advertising.

First, the magazine was an integral part of the whole book translation program because each issue of the magazine would review fifteen new American books that we would like to see translated in Japan. The magazine went to translators. It went to publishers and distributors, and the bulk of them went to university instructors -- professors.

Many of the translators would read our reviews in this magazine and decide that that was a book they would like to translate. As you know, many translations flow from a translator's interest rather than a publisher's interest. Some publishers would see the reviews of these books and choose to get in touch with us, ask us if we would like to support the publication of their translation.

The magazine itself, as I mentioned, was distributed to publishers, translators, and the primary end users were the university level instructors in the country. About half of the magazine edition was distributed by the two largest book distribution firms in the country -- the two that monopolized book distribution in Japan. They went from us to the distributors and from the distributors to the book retailers, who had a special interest in American books or translations of American books.

The magazine had a price on it -- thirty yen -- which was a lot less than it is today. The bookseller who eventually got the magazine at the end of the distribution line was free to either give it to customers of his that were interested in American books, or they could sell it.

I mentioned the advertising. As you know, it is illegal for a USIS post to accept money and use it in its programming. If it accepts money, the money has to go back to the Treasury of the U.S. There is nothing in the regulations that says you may or may not carry advertising in a USIS magazine. My device, which Washington apparently accepted, was to first have a contract with the Japanese printer who was going to print the magazine. Then, if an American or Japanese publisher wished to buy advertising space in the magazine, we developed a rate card. One whole page ad was worth the production and delivery to USIS of a thousand copies of that very issue of the magazine. Harper, for example, Harper's representative in Tokyo would send a purchase order to the printer, *Tosho Insatsu*, for 1000 copies of the May issue of the USIS magazine, with instructions to deliver those 1000 copies to USIS for distribution. For several months, our advertisers were paying for about half of the production costs of the magazine. Circulation of this magazine, by the way, was 10,000 copies -- not a small magazine.

It was a very interesting part of a circular pattern in the whole book program because once our subsidized translation was printed, then we would have a review of the translation, which would be carried in the magazine. The magazine normally carried fifteen reviews of new American books and reviews of fifteen new translations of American books. So once the book was published in translation, we would give it a little additional sales promotion push by doing a review of the book.

Q: Cliff, you operated in probably one of the highest literacy societies of the world.

SOUTHARD: It is the highest.

Q: If you look at it from your perspective now, Japan is also known as the electronic society. Was there a drawback, or was there competition from other media than books? In other words, did you feel, at that time you were there, that radio or even the infancy of television had an impact that would change the interest in books per se?

SOUTHARD: Certainly, television was going full blast in Japan at the time. The Japanese, however, had always been very, very heavy readers of books. It is the most literate society in the world. They produce more books, I think, per capita than any other society in the world, even today.

As a matter of fact, the number of books produced in Japan today is roughly equal to the production of books in the United States. We think of ourselves as the biggest book producers in the world, but the Japanese, with a smaller population, produce as many titles a year as we do.

Q: What kind of titles did you produce?

SOUTHARD: Well, if you are acquainted with the USIS program, there are all sorts of titles -- American literature, economics, American politics, a great deal on international politics. I remember during that time that I was there, we did translations of two of Kissinger's books, "Nuclear Weapons and Foreign Policy," for example, before Kissinger was known much elsewhere. Lots of anti-communist books, of course.

Q: Did any of the books wind up as textbooks at universities? I mean, if there were literary works, or did you publish any textbooks, per se?

SOUTHARD: No. We were not in the textbook business as such, and I do not recall that any of these books became texts -- possibly as reference readers in some university courses -- but not as texts. I just cannot think of other titles right now.

Q: Did you have any say on the production in terms of make up, promotion of the books, or was this all written into a contract so that these were quality books, or were they paperbacks?

SOUTHARD: There were all kinds. We had a paperback series, with one publisher, Juji Press, that was a low priced paperback book program. We did about twenty titles a year. These tended to be more popular type books on all facets of American life.

Q: Do you recall one other thing? Do you remember the VOA Foreign Series? Were any of those translated in those days?

SOUTHARD: Yes, several of them were. I think there was one Schram book on communication that I remember got translated there. There were several others.

Q: Tell me, Cliff, what was it like to live in Tokyo at that particular time? There was pollution then, I am sure, as there is now. A lot of people felt it was difficult living in Tokyo. How was it for you and your family?

SOUTHARD: Tokyo was much less crowded than it is today. I have been back in recent years. I would not like to live there very much today.

We enjoyed it quite a bit in the early 1960s. We did live in those Embassy ghetto apartments -- I think we were up in about the sixth floor of a lovely apartment building -- all of which have been torn down to build even larger apartment buildings, which are there now. Those you see today are not those that were there in the 1960s, but those in the 1960s were very attractive buildings.

I had two children, my number two and number three daughters who were both born in Tokyo. This was during the period preparatory to the Olympics -- the 1964 Olympics. Tokyo was adding considerably to its subway system then.

Our children were born in the Seventh Day Adventist Hospital, which was on the far side of town. The streets were so ripped up at night with the underground construction that both of these births had to be induced. My wife reminds me from the far bedroom that we also had three children living in a two bedroom apartment in that ghetto. One baby lived in a closet.

Q: Would you go to work by car, or did you take the subway?

SOUTHARD: The Embassy housing area was not more than five or six blocks from the Embassy and from the Manchurian Railway building, the *Mantetsu Biru*, which was the building that included USIS and the Consulate. You could easily walk to work or, in those days, and I think even yet today, the Embassy maintains a little shuttle bus that runs back and forth.

Q: Did you make a lot of friends in the Japanese community? You must have had close contact, certainly amongst publishers and intellectuals.

SOUTHARD: I had a lot of good close relationships with publishers and professors. Many of the professors tended to be the translators. As a matter of fact, I was back in Tokyo in 1986 -- twenty-six years after I was working there in this program -- having dinners and social meetings with many of the same publishers that I worked with in the early 1960s.

Q: Let me ask you though, so many times we have experience in overseas posts that entertaining has been very much of a -- dominantly a one way street. We entertained, but depending on the society, hardly ever got to see the homes of our hosts. Was that true in Tokyo, too?

SOUTHARD: In Tokyo, you seldom saw any Japanese home. It is a custom among Japanese to entertain even their own Japanese friends in restaurants or public buildings. My wife, on the other hand, was invited to several Japanese homes by Japanese wives who used her as an English teacher.

I recall only a couple of Japanese homes that I visited in the whole time, but that is not unusual. Japanese homes are very small and are not really built for grand entertaining.

Q: Tell me, how much travel did you do while you were in Japan?

SOUTHARD: I made a few trips. The Japanese publishing industry is essentially centered in Tokyo. In those days, there was little outside of Tokyo. I did make a trip down to the southern part of the country, Fukuoka, Hiroshima, Nagasaki, Nagoya and then took vacations in other places at my own expense -- most to Hakone. I saw more of Japan as an inspector many years later than I saw when I worked there the first time.

MARGARET V. TAYLOR
Exchange Officer, USIS
Tokyo (1960-1963)

Margaret V. Taylor was born and raised in San Diego, California. She obtained a bachelor's degree from San Diego State University and a master's degree in communications from Stanford University. Ms. Taylor served in Israel, Japan, Finland, and Burma. She was interviewed by G. Lewis Schmidt on March 28, 1990.

Q: So you went to Japan from there, and what position did you hold in Japan, and can you tell us a bit about the programming while you were there?

TAYLOR: I went to Japan in January of 1960, where my first experience was to sit practically the day after arrival in Tokyo for the examination, which was one of the first steps in the Agency's career status accreditation. However, having survived that, I then was able to devote myself to my job, which was as exchanges officer, specifically working on the Leader and Specialist Program still under the operation of the State Department, although I was housed in the USIS offices in Japan.

Q: Now, let me ask you at this point, when I was in Japan, some years earlier, USIS had a completely separate section on the Educational and International Exchange Program. Was that still in place when you were in Japan and did you therefore cover a segment of that program? If so, who was the overall Educational Exchange Officer or were you in that position?

TAYLOR: No, I was part of a relatively large office. The head of the Exchange Program was Bob Boylan. There were four American officers and an American secretary just in that one section.

Q: That's the way it was when I was there.

TAYLOR: We were housed in the Mantetsu Biru, which was the only building left standing in that area after the World War II bombing. We were separate from the embassy proper, although close by. USIS had the top two floors of that decrepit building.

My specific responsibility was for the Leader and Specialist Program, both Japanese leaders and specialists going to the United States as well as American specialists coming to Japan to lecture before Japanese audiences in various fields, and in various disciplines.

I was very much aware of and to a limited degree involved in the Fulbright program and the other exchange activities of that office but almost my entire time was spent helping to select Japanese leaders going to the United States for periods of one or two months of observation and study. I also helped to program American specialists who came to Japan to lecture throughout the country on various aspects of American foreign policy, culture, economics, a broad range of American issues that we were trying to present to the Japanese.

It was quite a large program at that time because this was close enough to the war years that we still were trying to educate the Japanese both in terms of basic democracy as well as aiding them in coming out of their long period of isolation in the world and learning more about America.

I felt I had the best job in the embassy because this deeply involved me in Japanese society and I had an opportunity to get to know prominent Japanese whom we were sending to the United States. I had to discuss with them what they wanted to do in the United States, make suggestions and then send those messages forward to Washington so programs could be planned for them. On their return to Japan, I had find out what their impressions were and then to write that up and send it back to Washington.

It was a very interesting and I think extremely worthwhile program and provided an opportunity to cement in a very deep way relations between the United States and Japan.

Q: Now, when you staged these lectures by American specialists, did you do a good deal of that through the cultural centers that USIS maintained throughout the country, or did you mix that with appearances at universities and other economic or political forums?

TAYLOR: All of the above. We did work very closely with the rather large number of cultural centers in the country at that time. For a country the size of Japan, I think we had, maybe up to ten cultural centers.

Q: You still had that many? We started out with 24 when we took over the program from the Army in 1952 and we gradually reduced them. I am interested to know you still had ten left.

TAYLOR: I think it was about that number. I've forgotten exactly but it proved to be very difficult to close them because the Japanese clung to those centers. I think they were an very important part of their learning more about this strange phenomenon, the outside world. They had been so isolated throughout their own history that any information or outreach to foreign countries and to understanding foreign people was something that they both desired and felt that they could benefit from.

We worked through the cultural centers but we also planned lectures and meetings with American specialists' counterparts in Japanese society.

Q: Who was the PAO at that time, was that the time when George Hellyer was there? William Copeland was PAO when I arrived in 1960, then George Hellyer. Hellyer was followed by Burton Fahs who came, I think, from the Ford Foundation.

No, I believe he came from the Rockefeller Foundation of which Dean Rusk had earlier been president. I think it was a combination of Secretary Rusk and Ambassador Reischauer that decided that he would be a fine man to go out there and take that position. He was one of the so-called "super-cultural officers" really, and after a while this Agency brought in Ed Nickel to handle direction of the standard operational side. Burton Fahs was then turned loose as a high level cultural man. But I do not know whether that had happened by the time you left or not?

TAYLOR: It was happening, and Ed Nickel did come out while I was there. He was Deputy PAO and for precisely that reason, because Burton was not skilled in the administration of the program. He was more valuable in his high level contacts. He and his wife constituted a real pair. They were a team. She was very important in the work that he was doing.

Because of the special qualifications of Ambassador Reischauer and his Japanese-born wife, this was a period of very great receptivity and support throughout the embassy for the USIS operation. We all worked closely together. The Reischauers were extremely interested in the exchange program and were very helpful to me with these prominent Japanese who were going to the United States. I think they saw it as a very important element in the whole activity of the embassy.

Q: It sounds strange now, but at the time that I left Japan, which was about four years before you got there, one of the largest U.S. programs was conducted by the AID mission and USIS supported their work on the Public Affairs side. Productivity was all the issue at that point because the Japanese were thought to need knowledge of our productivity methodology, which they did at that time. Was that still continuing when you were there or had that phased down?

TAYLOR: The AID program had phased down considerably and there were only a few people left. That function passed along into the economic section and we had a very effective economic officer, Phil Trezise.

Q: Yes, he later became the U.S. Representative in the office of the OEC in Paris.

TAYLOR: Yes. It seems an anomaly now that we were able to tell the Japanese about producing anything but, in fact, it was true then.

Q: They still, I guess, had not exploded into the productive stage they have reached today.

TAYLOR: Well, that economic miracle was gathering all this time. I left in August or September of 1963 when the Japanese were preparing for the 1964 World Olympics. It was the Games and all the activity developed around them, that were the watershed of Japan's emergence into the world economically. They were able to present almost flawless Olympics and the world became aware that Japan was poised and ready to do what they were embarked upon, which was to turn that country around economically and to make it important again.

Q: You left before the Olympics was actually staged?

TAYLOR: Yes, I did, and was sorry, of course. There was a lot of preparation prior to that so I was involved in some small part of that preparation. The Japanese have always had great trouble with English as we do with learning Japanese. It's an equal trade. But I remember traffic signs being put up in Tokyo saying in English such things as: "may parking and stopping" or "proceed to immediate inside left," which were largely incomprehensible. Somebody official thought that that was proper English so they printed them up on metal signs and set them around town.

Q: Do you have any further comments on your Japanese experience before we pass to your next area of responsibility?

TAYLOR: Well, only to say, and this is a personal aside, but I think many of us who served in Japan have carried with us an abiding fascination for that country. It's a country which you never really get to know thoroughly.

There is a point with Japanese beyond which you simply can't get in terms of becoming familiar and really thinking that you thoroughly understand them. Because of Japan's importance now, I find that in my present day life there is a bond with the Japanese and with the Americans whom I knew in Japan which seems to surpass that of any other nation. I'm continually fascinated by Japan. We get so much in the papers and magazines and through all the media about Japan now and it's a matter of intense personal interest to me still.

Q: Yes, I think all of us who have served in Japan as you and I did, (myself over three different periods of time) still have that feeling about the country. It is a fascinating nation and they are a remarkable people.

HUGH BURLESON
Information and Cultural Officer, USIS
Niigata (1960-1963)

Assistant Cultural Affairs/Policy Research Officer, USIS
Tokyo (1963-1969)

Mr. Burleson was born in South Dakota and raised in California. After graduating from the University of California, Berkeley, he served in the US Army before joining the United States Information Agency in 1957. A specialist in Southeast Asia Affairs, Mr. Burleson served variously as Policy Officer and Public Affairs Officer in Niigata, Tokyo, Saigon, Madras, New Delhi and Seoul. He also had several tours at USIA Headquarters in Washington, DC. Mr. Burleson was interviewed by G. Lewis Schmidt in 1996.

Q: How did you finally get out of the administrative field and go into the Foreign Service Officer category?

BURLESON: After my first year as a management intern, the Agency suffered a severe budget cut and was not able to offer me an interesting position in management. I heard that there was a job available in the Agency Research Office as a Japan/Korea Analyst. That seemed quite interesting, so I jumped at it and spent the next three years in that work. Then, in the summer of 1960, the Agency made it a lot easier for people in the domestic service to transfer into the Foreign Service, and I took that opportunity. My wife and I both went through the oral paneling. Within a few months I received my first assignment, which was to Niigata, Japan, a branch post of the Agency.

Q: How did you find the attitude of the Japanese people? Did they demonstrate any antipathy toward the Americans in the period?

BURLESON: It was really... not personal antipathy. It was always, might I say, generic or generalized in the sense that they had complaints about U.S. security policy, but they didn't take this out on Americans personally. So, it was not really an anti-Americanism in that sense, but against U.S. policy. That was what it came down to. When I had arrived at post in 1960, about three or four months after the big to-do over Security Treaty renewal, which had caused cancellation of President Eisenhower's visit, things had quieted down considerably. So, we didn't experience anything but warm hospitality and quickly established friendships among the Japanese and developed good rapport with them.

Q: What were the essential parts of your work? What were you promoting in U.S. relations?

BURLESON: We had a full-scale information and cultural program going to get better understanding of U.S. society. We brought American specialists in to lecture and speak at the university and with various groups in the area on economic and policy issues. We had cultural presentations -- musicians and so on -- coming through. Of course, I did some speaking myself around the area whenever I was asked to. We also taught English at the Cultural Center. We put a lot of emphasis on our library as a solid resource for people who wanted to learn more about the United States. It was really a full-blown program in terms of using all possible means of facilitating communication.

Q: And how long were you in Niigata?

BURLESON: I was there for three years. I left there in the summer of 1963. I was transferred to Tokyo for an assignment in the Embassy.

Q: What were you doing in the Embassy?

BURLESON: The first year I was Assistant Cultural Affairs Officer, helping to carry out the cultural programs, especially lecture and cultural-presentation type programs.

Q: Was Glen Shaw still Cultural Attaché, or had he left by that time?

BURLESON: I think he left while I was in Niigata, or maybe just before I got to Niigata. He was leaving just about the time I arrived.

Q: Who was the Senior CPAO at that time?

BURLESON: Dr. Charles Fahs was CPAO. My immediate boss was CAO, Walter Nichols, for my first year in Tokyo. Then, the job of Policy Research Officer came open, and because of my already fairly lengthy Japanese experience and research job in 1957-60, I was chosen to fill that slot.

Q: Was this in Tokyo, also?

BURLESON: In Tokyo. I held that position for another five years, 1964-69.

Q: Very extensive...

BURLESON: Yes. 1960-69. Three back-to-back, three-year tours. It wasn't that unusual at that time for people to spend a lot of time in Japan because of the difficulty of language; the cultural differences. You couldn't just be dropped in there and take off running. When I first arrived in Japan, there were people who had been there also for 8, 9, 10 years. It wasn't that rare a thing. Leon Picon was one of them.

Q: He was still there?

BURLESON: Yes, he was still there. So, it wasn't considered unusual or strange to have long stretches in Japan.

Q: This is working back a little bit but. . What did you find out about Vietnam? What was your experience with the officers and their feeling about the Vietnam war and the feelings of the general population of Japan at that time?

BURLESON: Well, the Japanese, of course, from their World War II experience mostly, had become very solidly pacifistic, and they really were repelled by any war situation, so that they were always critical of our involvement, thinking that we were being overly ideological in our approach to the Vietnam situation. The whole trend of opinion was simply to become, through those war years '65, '66 until I left there in '69, more and more set in their opposition to the war. They used to demonstrate along the street that went right by the Mantetsu building (Embassy Annex). We called it "demonstration avenue" because student demonstrations were going by there several times a week. So, I had a lot of exposure to all of that ferment, which also began to help kick off the student movement and radicalize the student movement in the late '60s.

Q: Did you have any personal contact with the Japanese who were critical in their conversation and who voiced anti-U.S. sentiment?

BURLESON: Yes, constantly. One of the interesting things, and also in terms of my involvement with security issues was that the Agency, certain parts of USIS Tokyo had spent a lot of time cultivating and identifying what we called emerging “defense intellectuals” in the media, academia, and in the Japanese Government, and we worked very closely in trying to make sure that they weren’t simply getting wrapped up in all their anti-war fervor, but would be trying to understand the rationale for, first of all, our security relationship, and secondly, the whole U.S. defense strategy for East Asia. So, we kept feeding them data of all sorts and having them interact with our own defense intellectuals. At the time we considered this a sort of strategic program of USIS Japan -- to develop these people in ways that would assure a rational dialogue was possible rather than the kind of dialogue that you might try to have with students demonstrating on the streets.

The effects of this began to take hold by the very late ‘60s, ‘68, ‘69. Their writings by that time were fairly rational, their articles would often include explanations of what the U.S. policy was and then maybe go on to criticize the policy, but at least they could do part of our job for us.

Also at that same time the left wing in Japan was beginning to focus on what they called the “1970 crisis,” because in the 1960s the Security Treaty had been renewed for ten years, but the leftwingers had failed to center on the fact that, after ten years, unless one side or the other declared they wanted to terminate the Treaty, it will just become open-end. Therefore, that meant that the Japanese Government could sit on its hands and do nothing, and the Treaty would go on indefinitely. But the leftwingers were trying to gear up for repeating the 1960 demonstrations, but more effectively.

So these “defense intellectuals” whom we were working with were also focusing on defusing that, because they wanted to continue basically their rational dialogue with the U.S. on defense issues.

I think, it was in 1968 or ‘69, that Japanese Prime Minister Sato said he wanted to visit Okinawa, the first such official visit in the postwar period. During his visit he said the post war period for Japan will only end when Okinawa was returned to Japan. Control of Okinawa was still under the United States High Commissioner at that time.

So Okinawa was to be one of the big focuses of what the leftwingers wanted to make a major confrontation with the Government in Japan. And the defense intellectuals we had cultivated by that time were organized enough to have their, sort of club, where they consulted with each other.

Q: You are talking about the Japanese?

BURLESON: The Japanese. .the ones that we had cultivated. Actually they often got together and would exhort and advise the Japanese Government. So, they organized a big conference with their American counterparts in Kyoto in the summer of 1969 about Okinawa and how it should be dealt with. And some of our own top people, retired generals.. really “A” class thinkers on defense issues in general participated.

USIS was not there. We didn't have anybody present, but we knew we could get the details from our Japanese friends that we had developed. Reischauer had been our Ambassador in Japan in the earlier '60s. He came as one of our participants in this Kyoto Conference on Okinawa.

The net result was that each side better understood how far they could push the other side, and it really laid the basis then for when the Japanese Prime Minister visited Washington in 1970, it laid the basis for him to work out an agreement with Nixon on the reversion to Japan of Okinawa.

So, those of us who were involved felt it was one of the great successes of USIS to help defuse, not only on this anticipated 1970 crisis, but also on the issue of Okinawa reversion to Japanese control, because we had helped to cultivate this cadre of Japanese defense intellectuals who could engage our defense intellectuals on a rational basis. Their reports of each side's positions at this conference would go to their respective governments, who then exchanged and translated these for the respective governments on the opposite side. The whole process was a kind of model for what can be done when you take a long-term view of the possibilities of this kind of dialogue.

Q: Were the meetings with the Japanese intellectual groups a strictly USIA initiative?

BURLESON: They were at first. They would attend seminars that we organized. But after, I guess, about '66, '67, the Japanese were beginning to organize such seminars themselves. Sometimes, it was sponsored by a major newspaper, sometimes the intellectual group itself and sometimes other groups organized this. By '68, '69, they were actually inviting some of our own (American) top strategic thinkers to come to Japan.

Thus, we got it launched, and we stayed involved up to about '68, '69. By then it was pretty much self-generating and it had enough support from the Japanese Government, especially the Foreign Ministry, but also from the Prime Minister's Office, that we kept sending the materials to them and still had speakers coming over to interact with them. But then the dialogue was much more between equals rather than one-side teaching the other as it was in the earlier stages.

Q: Were you the principal one involved in setting up the contacts with the intellectuals?

BURLESON: No. I was working with our Information Officer and Cultural Affairs Officer on this, and listening in and giving them the feedback. I was more in a supporting role but I was also looking for items all the time, helping them to identify useful materials, because I could read the language and listen also to the debates on television and knew what the issues were and where the areas of continuing misunderstanding were. I could convey this not only to our own officers but also to the Ambassador and the Political Section, so that they could better understand all aspects of this.

Q: Were the members of say, the Political Section of the Embassy and the Ambassadors and others from the State Department side of the program in touch with the cultural group that you were dealing with?

BURLESON: They were all standoff-ish at first. Their mindset was, “We deal with Gaimusho, we deal with the Foreign Ministry on this”. But as they saw that these people were more and more getting nationwide attention, appearing on nationwide TV, being debriefed even by the Foreign Ministry and really beginning to take on the aspect of being advisers to the Japanese Government, then our Embassy officers began taking them more seriously, and began being more active and supportive and involved in this dialogue.

Q: These were people who came, I presume, primarily from the Political Section?

BURLESON: Yes. The Political Section, but the DCM was most interested.

Q: Who was the DCM at that time, Bill Marshall?

BURLESON: No, John Emmerson was one of the first ones that got closely involved with some of this, and later, Dave Osborne (also DCM).

Q: Who was the Ambassador at that time?

BURLESON: Reischauer up till ‘66, and then U. Alexis Johnson from ‘66 to ‘69. Hodgson came a bit later... Somebody else was there... I don’t recall... No. Mr. Hodgson was right there in ‘74-’77. [editor’s note: Armin Meyer 1969-1972 and Robert Ingersoll 1972-1973.]

Q: In any event, it was basically the USIS personnel that instigated the...

BURLESON: Kicked it off and got the dialogue going. Writing...

Q: For which we never got any credit...

BURLESON: That, yes. The State Department doesn’t often like to admit that USIA sparked the opportunity before they were doing anything, but we did take our satisfaction in how it worked out. As I said, that was one of the things that contributed to my opting to go to the War College in ‘72-’73.

WILLIAM CLARK, JR.
Japanese Language Training
Tokyo (1961-1962)

Ambassador William Clark, Jr. was born in California in 1930. He graduated from San Jose State College with a B.A. degree in 1955 and served in the U.S. Navy intermittently from 1949 to 1953. In 1957, he joined the State Department. Ambassador Clark's career included service in Sierra Leone, Japan, South Korea, Egypt, an ambassadorship to India, and a position as Assistant Secretary for the East Asia Bureau in Washington, DC. He was interviewed by Thomas Stern in 1994.

Q: In June, 1961, you left Sierra Leone and were transferred to Japan. How did that come about?

CLARK: In those days, ever April 1 -- April Fool's Day -- a Foreign Service employee was asked to submit a list of three assignment preferences. When it came time to think about another assignment, I sent in my request, listing a German speaking post as my first choice, Japan as my second and the old standby -- Portugal -- as my third. I told the Department that the Japan assignment was however dependent on getting some language training first. I thought that was rather daring for me not being known as one of the world's great language students.

Japan seemed potentially interesting for a number of reasons. As I mentioned before, I had been brought up in California and had had some Nisei friends. I had served with the Navy in Hawaii. So the Pacific was not an unknown to me. Japan was well on its way to recovery from World War II. It was going to host the Olympic games in 1964. So it was becoming well known around the world and I thought it would be an interesting place in which to serve. A few weeks after having submitted my wish list, I got a nice letter from the Department informing me that I had been selected for language training for six months after which I was to be assigned to Yokohama as a consular officer. I did not know anyone in the East Asia Bureau or in Japan nor did I have any academic background in the country or even the area. I had no help in getting this assignment; it came out of the clear blue sky.

So I went to Tokyo for six months of language training. At the time, the language school had a policy requiring all wives to take 100 hours of Japanese, but no more. Judith first took the 100 hours and then clamored to have the policy changed. It was and she then took more than half as much language training as I did. The wives' training policy was dropped also because some of the wives weren't interested in taking even the 100 hours.

I had been assigned to language school only for six months as sort of a probationary assignment I had never been to Japan and neither I nor the Department had any way of judging how well we might navigate there. The plan was that if I and the Department were satisfied that Japan was the right place for me, I would have gone to Yokohama for a year or so and then returned to the language school to finish that course, That was fair enough.

One of my colleagues at the school was Gordon Beyer, who had been a Marine officer in Japan previously. He later became one of our ambassadors in Africa. But because he had had Japanese experience, his language assignment was for two years. As it happened, Beyer found Japan a different place for a young Foreign Service officer with two small children than it had been for a single Marine officer. He also was not very adapt at learning the language. So I found that I liked the language; he didn't. We both wrote letters to the Department; he asked that his training be shortened to six months and I asked that it be lengthened to two years. The Department honored our requests and Beyer went to Yokohama as a consular officer after six months at the language school.

The language school in Tokyo in 1961 had 22 students -- all Americans. The policy to permit non-Americans to attend wasn't instituted until many years later. Since I was going to be in Japan

for at least two years, the Department had authorized us to ship all our household effects. We had been told that it was most unlikely that, as a language student, the Embassy would find accommodations for us in its compound. Of course, it did and put us in Perry House, where the quarters were fully furnished. When I asked what to do with our household furniture -- fortunately, we didn't have very much -- I was told that the Embassy had no storage space and that therefore finding a home for our goods was my responsibility. Somehow, we managed to jam it all in the small storage area that was assigned to each apartment in the Perry House. When the Department decided to extend my assignment as a language officer to two years, the Embassy sent me a note saying that I was not entitled to be in government owned quarters and that I would have to find my own private accommodations. I am sure that the Embassy needed our apartment for one of its employees. So I was furious twice: first for having to live in government quarters when we first arrived in Tokyo and then subsequently for being booted out once we had settled in. We ended up renting a house behind Shamuya Station, which we could actually afford because the rent was low enough to be covered by our housing allowance. The house was a one Japanese-style bedroom and den, living room, Japanese-style dining room, kitchen and a maid's room. It had a small garden; it was rather nice. It had been built by a man who built another house right besides it and a third one behind that one for his son. He owned all the property between two streets, which today of course is worth a large fortune. I visited the area recently; our house had been torn down. It was a somewhat strange house. It had a western wing. The living room was 21x21 and had a fifteen foot ceiling. The den was 15x15, also with a fifteen foot ceiling. The maid's room was small. You walked from the western-style living room into the Japanese-style dining room which forced you to lower your head. The bedroom was Japanese, as I said. The kitchen was a traditional kitchen. The bath was Japanese-style -- an *ofuro*. So the house was a real mixture of East and West. It was a very nice house and very convenient to public transportation.

I enjoyed the language school. When we arrived, it was school policy to give the students quarterly exams to monitor progress. If progress had been adequate, then you were given \$100 to finance a week's field trip. In those days, you could exist in Japan for a week on \$100, including travel expenses. It was a challenge to see how far one could go in Japan on \$100. We found that little sum could get you quite far in the country. The school used to bring an outside observer to check the progress of each of the students. I had been at the school just two weeks when I had my first "inspection". I had learned to say "Good morning" and that was about it. But Judith and I were adventuresome and said that we would like to spend a few days in a Japanese inn in Kyoto. That was interesting. We didn't know whether breakfast or a bath was being announced or whether it was a fire drill, but we managed to survive; it was good fun.

The school was based on almost a "complete immersion" principle. That is we were supposed to speak only Japanese. But the school was located in Yohogihashiman near the Maji shrine. It was next to a US military housing compound, called appropriately Majimura -- or Maji Village. The compound had its officers' club, a PX, commissary, etc. We used those facilities for shopping so that the immersion was not total.

There were never more than two people in one class. The instruction day was four to five hours followed by three hours of self-practice. The classes were drills, the old-fashioned way. We used tapes, lots of tapes although not to the degree they are used today. The school had a couple of

reel tape recorders which one could listen to, but it was very primitive compared to today's language school facilities and equipment. Eventually we graduated to conversations. After a few months, the students began to work on writing the Japanese characters -- Kanji. The reason the school waited to do that is because it found out that the students became so fascinated by the characters they would never get to speaking the language. It was hard to judge progress if the student only wrote characters.

Even though we lived in the Embassy compound, our social life did not revolve around that community. We of course knew some of the people at the Embassy, but our social life was centered on the school and with the other students. Most of the students were Foreign Service officers, but we had some USIA and CIA personnel there as well. There may have been a couple of military officers as well. The school tried to bring the students into Japanese life. It would program field trips which enabled us to meet Japanese groups. We participated in a mini-exchange program in which we would teach English to some Japanese in return for them teaching us their language. The school put some emphasis on teaching us to navigate in the Japanese community we were living in. It taught us how to introduce ourselves to the saki shop owner and how to make sure that the policeman in the police box knew who you were and where you lived. Japanese do not use street names or house numbers. So it was very important that someone like the policeman knew where you lived because he could direct your guests to the right place.

Q: Had you stayed at the language school for only six months, how helpful would that have been?

CLARK: It would have been useful. If I had studied Japanese intensively for six months followed by a tour of eighteen months as a visa officer, I probably would have returned to the school to finish up the course. I liked Japan. I didn't want to become "Japanese" as some of the language students have become. They sometimes tend to become more "Japanese" than perhaps even the Japanese; they will view matters through Japanese eyes only. They come to believe that the Japanese can do no wrong. I never let that happen to me, but I have been fascinated by that syndrome. I was never very good at flowering arranging which may explain why I maintained some balance.

Language school brought our linguistic skill up an "average" conversation level; it was certainly not adequate for interpreting purposes. When I attended the school, we would be invited to the Residence for large functions, as I have mentioned. That was essentially because the Embassy did not have sufficient numbers of officers who could converse in Japanese. That was the only times we were involved in Embassy functions; by agreement, on the part of the Embassy and the School, we were not involved in the Embassy community. Our job was to learn Japanese, not to mingle with Americans.

By the end of the two years at the school, I could get by in Japanese, but I was not bilingual by any means. It was suggested that when I finished school, I'd be assigned to Sapporo as the Vice-Consul. Having just served in a two person post, that wasn't particularly appealing. I went to see Owen Zurhellen, then the special assistant to the DCM at the Embassy. He asked why I was reluctant to go to Sapporo. I told him that I had just served in a two person post. Furthermore, I

was on a promotion list which would have made me a Consul and there wasn't enough to do in Sapporo for two Consuls. He smiled and asked whether I'd be interested in Osaka. I told him that that sounded good. What I didn't know was that he was about to transfer to Osaka as the Consul General. So I ended up working for him. Zurhellen, by the way, was one of the best Japanese language officers that the Service had. He had studied during the war and then used it in his assignments.

Let me illustrate why I was not bilingual after two years of language school. When I first reported to duty in Osaka, Zurhellen told me that the Japanese Foreign Minister was coming to Kyoto for United Nations Day. He wanted me to go to hear the Foreign Minister and then to write a report on the speech. Fortunately, the authorities gave out copies of the text because the Foreign Minister was Mr. Shina, originally from the Island of Honshu. He spoke a dialect called Zuzuben which I didn't understand at all. I told Zurhellen that I might have wasted two years in language school. He said not to worry about it. A couple of nights later, we were invited by some local officials to a restaurant where we were served by some young ladies from local tea-houses. One of them sat next to me and I was looking forward to practicing my hard learned Japanese. She started speaking in an Osaka dialect which left me completely dumb-founded. I reported that episode to Zurhellen who again said not to worry about it. He invited me to a dinner at his house where he was going to entertain some senior Japanese businessmen. After dinner, one of the guest, the founding father of Matsushka (Panasonic), spoke to some of the guests who were sitting around. They were CEOs of their companies and were all graduates of Tokyo University. They were salaried. Matsushka owned his company although he had never gotten passed the fourth grade in his school in Osaka. Seeing his audience, he also began to speak in the local dialect. I asked him whether he was trying to do me in. After that episode, I decided I'd better learn some of the local dialect which I did. So the school could never have made its students bilingual because the dialects which you encounter in every part of Japan are so distinct that with rare exceptions, almost all Japanese can fall back into their local dialect leaving other Japanese from other districts almost completely in the dark. Most Japanese will claim that they can understand all dialects, but I think they have troubles with some, if not all of them. All Japanese could understand my standard Japanese, but I could not understand all dialects. The one that really mystified most Japanese was the Okinawan dialect, which is now dying out. Okinawa is the only place in Japan where I needed an interpreter. He would interpret my Japanese into the local dialect and vice-versa. The Okinawan I was speaking with could not understand Japanese; I could not understand the Okinawan dialect. Because of TV and other interchanges, dialects are being used less and less today. The "official" Japanese language is basically the Tokyo dialect.

C. ARTHUR BORG
Security Section
Tokyo (1961-1963)

C. Arthur Borg came to the Foreign Service in the mid-1950s after graduating from West Point Academy in 1948 and serving in the Korean War. His Foreign Service career included positions in Japan, Germany, Sweden, Finland, and Austria. Mr. Borg was interviewed by Hank Zivetz in 1990.

Q: You served primarily in Europe, although you did have a stint in Tokyo back in 1961-63. Was there anything that happened in Tokyo during your tour there as a political/military officer that might be worth including on this tape?

BORG: Probably in the context of my dealing with the political/military problems while I was there. I was assigned to what was called the security section. Our principal concern was administering the US/Japan Security Treaty and principal headache was trying to whittle down the ungodly number of military bases that we still had in Japan in the early 1960s. Close to 135 as I recall. Some of them were one man weather stations, but nevertheless an over-whelming American military presence. One of my principal jobs was working to try to reduce the number of those bases.

Q: Was the Japanese population at that time as concern as they are at the present with the nuclear weapons issues--nuclear weapons on our vessels? In the more recent years they have had regular demonstrations as our carriers enter ports there.

BORG: I would say much more so in the sense that when I was serving there, which was in the early 1960s, the Japanese had an aversion toward anything nuclear--nuclear power as well as weaponry. I can remember in 1961, for example, I tried to organize a visit by about a dozen Japanese journalists to Guam to go aboard an American nuclear powered submarine. This did not involve nuclear weapons, just an atomic reactor powering the submarine. It was a good project, but unfortunately it never came to fruition because a typhoon intervened. But it was symptomatic that the Japanese were really very skittish about anything to do with things atomic as compared today where they have a very active Tokamura power program.

Q: Was it our policy at that time to get the Japanese to increase their military? Some years later it became a part of our bilateral relations with Japan.

BORG: In terms of trying to get them to increase military spending? Not so much at that period. The goal that was set forth later of aiming towards at least 1% of GNP was quite a bit later. In the early 60s it was very much defense oriented the notion that the Japanese had to be restricted to the defense of the home islands.

GORDON R. BEYER
Administrative/Consular Officer
Yokohama (1961)

Political Officer
Yokohama (1962-1964)

Gordon R. Beyer was born in Illinois in 1930. He served as a Foreign Service officer in Thailand, Japan, Somalia, Tanzania, and was ambassador to Uganda. He was interviewed by Horace G. Torbert in May of 1989.

BEYER: I had been in Japan during the Korean War, and I was intrigued by Japanese affairs. I had studied under Reischauer at Harvard. Reischauer was the Ambassador to Japan; he had just been named. So I had myself assigned to the Japanese Language Training School.

Q: Let's touch briefly on Yokohama and what you did when you got there. I take it that, having known Reischauer, you probably had some contact with him, even though you were at a separate post somewhat removed.

BEYER: Yes. First of all, the school was in Tokyo. So, when I was up at the school, he would have Language Officers over from time to time, and we would chat with him. I was not the best Language Officer in the world, and I decided that maybe I didn't want to spend a whole career in Japan. So we were just initiating a six-month course. So I switched with another officer, who had been assigned to the six-month course. I went into the six-month course, and he went into the full two years -- Bill Clark by name, who is now Deputy Assistant Secretary in East Asia. Bill was a marvelous linguist and went on to become one of the better Japanese linguists in our Service.

I went on into the six-month course, and then after that, went down to Yokohama, where my first job was as a Visa Officer and an Administrative Officer -- not Visa, Passport and Citizenship, and Administrative Officer. And I did that for six months. It was quite a large Consulate General in those days. It had nine officers and about fifteen folks -- a big place. After six months, it was reduced to three officers -- a Consul General, who lived in Yokohama but worked in Tokyo, a Passport and Citizenship Officer, a Shipping Officer and an Administrative Officer -- he did all those things -- and me, who became the Reporting Officer. So the next year I did reporting, and then the third year it was reduced to one person, and that was me. We just did the shipping and what reporting we could.

Q: So you were gradually being phased out of existence.

BEYER: That's right. In fact, what happened, of course, is -- you probably know -- the school was moved from Tokyo to Yokohama. I was all for this because I thought that the young Language Officers could live in some of the smaller villages around Yokohama, such as Kamakura or so on, which are very lovely places, and they would really get into the Japanese ways and the Japanese society. In fact, of course, what happened is that the Language Officers lived right in Yokohama, went to the Officers Club and didn't get involved as much in Japanese life during those days that they were in the school as they might have.

One other thing that happened in Yokohama, by the way, is we had a child born there who died after two weeks. That was supposed to be our last child because Molly was Rh negative. This results in having to change the blood of the child. So we had been advised by the doctors down in Yokosuka not to have any more because it would be tough for the mother and for the baby. But, having lost this child -- it had a congenital heart disease, lesions in the heart which, in those days, they really couldn't fix, and I'm not sure they could have fixed her even today. But, after three months, we went back to Yokosuka and decided we would try one more time. The folks in Yokosuka said that they would do everything they could to bring the baby out in good shape. So that is when our youngest was born, Tom. He was brought on after seven months. He had a

variety of little things to get fixed up, including a complete transfusion of his blood and so on. But both he and mother survived, and both are doing quite well today.

Q: Isn't that great!

BEYER: Yes.

Q: Actually, our second was an Rh-negative one, too, except it was very early in the procedure, and they didn't do that complete drainage and oil change that they do now.

BEYER: Of course, I really have to put in a plug for the Navy doctors in the hospital in Yokosuka, which was made available to Foreign Service people in those days. They did, really, just a marvelous job. It couldn't have been better.

DAVID L. OSBORN
Political Officer
Tokyo (1961-1964)

David L. Osborn was born in Indiana in 1921. His career with the State Department included assignments to Taiwan, Japan, Hong Kong, and an ambassadorship to Burma. He was interviewed by Bert Potts on January 16, 1989.

OSBORN: The President's visit, the first ever by a sitting President, had been scheduled to coincide with the ratification of the revised security treaty with Japan. The visit touched off unprecedented student demonstrations in Tokyo; *Zengakuren* -- the name of the student union in Japan -- became a household word in the United States. Television news reports were full of these mobs of student demonstrators in Tokyo, surrounding the Embassy and so on, besieging the Japanese government. At one point in the demonstrations, a Japanese female student was accidentally killed -- trampled by the demonstrators -- and her death led to an intensification of the rioting and the protests. As a result, the visit of President Eisenhower had to be canceled.

I happened to be at the luncheon table when President Eisenhower's advance man -- Jim Haggerty, his press secretary -- was passing through Taipei on his way to Tokyo. Haggerty asked what was going to happen in Tokyo, whether the President's visit would go off smoothly or not. I told him not to worry; surely the Japanese police, who were expert in these matters, would be able to take care of any problem. This was a case of "famous last words."

The cancellation of the visit was a big trauma. One incidental result was to put me back on the trail toward another assignment in Tokyo. One, it reminded me that I was supposed to be a Japanese expert, and I had just shown in my remarks to Haggerty that I was in need of updating. Also, those riots and the cancellation of the President's visit -- were among the things that led to the assignment of Ambassador Reischauer to Japan.

Ed Reischauer was our foremost academic expert on Japan. The events leading to the cancellation of the Eisenhower visit made the Department realize the need to have a real Japanese expert in Tokyo, and Ed Reischauer was sent there. Ed Reischauer had been my instructor in Harvard, and his appointment may have been another factor.

Q: So you did return to Tokyo, and what was your job?

OSBORN: I was assigned to the Political Section, on the desk which dealt with conservative party affairs, that is to say, government party affairs. I was responsible for reporting on events in the Japanese Diet and on elections and other political affairs in Japan.

Q: What were the highlights of this over three-year tour in Tokyo?

OSBORN: Well, it was an exciting period. We had as one important focus the Japanese protests over our resumption of nuclear testing in 1962. As one of the most fluent Japanese speakers in the Political Section, it fell to me to deal with most of the protestors who were coming not only to demonstrate and protest against our resumption of nuclear testing but also to demand the return of Okinawa. So day after day, I would meet with small groups of protestors, bring them up to my office, talk to them, argue with them and, as necessary, bring them in to see Ambassador Reischauer, who was very good at dealing with them.

For me personally, one of the highlights of my tour was the visit of then Attorney General Bobby Kennedy. The Bobby Kennedy visit was set up and largely financed by Japanese politicians, who saw in this visit a way of trying to inspire the Japanese public with some sense of momentum in the relationship with the United States -- of bringing a little bit of the "Kennedy spirit" to Japan. And they saw this as a way of improving their own political situation. Anything that made the United States look good to the Japanese people tended to make the Liberal Democratic Party look good because the LDP was so strongly identified with the United States. Conversely, anything that made the United States look bad tended to strengthen the Socialists, who were the principal opponents. At any rate, the Japanese put a lot of effort into making the visit of Bobby Kennedy a terrific success. It was the most successful goodwill visit, I think, that Japan had had up to that point.

After that, the opposite pole perhaps was the assassination of President Kennedy, which struck Japan almost as painful a blow as it did the United States. No one who was there at that time can forget the sight of thousands of Japanese in the street, mourning the death of the President. All of us in the Embassy had to take our turns in appearing at different gatherings to join with the Japanese in tribute to the President. It was a very moving time.

WENDELL W. WOODBURY
Economic Officer
Tokyo (1961-1964)

Wendell W. Woodbury was born in South Dakota in 1920. He attended college at

the University of Iowa and then served in the United States Army. Mr. Woodbury joined the Foreign Service in 1949, serving in the Dominican Republic, Algeria, Japan, and Denmark. He was interviewed in 1993 by Virginia Crawford.

Q: Did you request to go back to Japan then?

WOODBURY: Because of my background on developing countries, I was recruited as Technical Secretary for the Colombo Plan when we hosted it in Seattle. Secretary of State Dulles went out for a whole week to chair it after two weeks of meetings at the lower level. I was one of three technical secretaries under the secretary general. So I developed another specialty -- in multilateral diplomacy and international organizations, and I got to see the Secretary of State close up. It was basically a British Commonwealth organization for South and Southeast Asia. The Japanese were hosting it two years later and they asked for some help because it was the first international meeting they had hosted after the war. They were worried about their command of English and they wanted some people with experience to help out. They asked for four people from State, and particularly asked for me because the Japan delegation knew me from the first meeting in Seattle. It ended up that they only got me from the U.S. There was also a British financial commissioner from New Delhi who spoke Japanese, and an Australian and a New Zealander. We were assigned to the Foreign Office for three weeks as members of the Japanese delegation. The Japanese didn't really need much help because their post-war foreign service officers are great in English. The pre-war English of officers was generally pretty awful, even after a thirty year career because they learned their English from other Japanese. They taught it to each other so just replicated the accents and awkward usage. Now all entering officers are sent to American or British universities for two years and become very fluent but with either American or English accents.

My friends in the Foreign Office told me I was the first American since the Meiji Restoration to serve in the Foreign Office. My British colleague Stanley Charles from New Delhi and I acted as integral parts of the Foreign Office and sat with them on the dais which caused a few raised eyebrows. The Japanese did not need our help on English, but we earned our per diem by advising on Robert's Rules of Order and in an all night session helping draft the Prime Minister's speech.

As a result of this assignment through Ed Doherty, my former boss in INR who was economic counselor in Tokyo, I got to know the economic minister, Phil Trezise. I indicated an interest in coming back because I wanted to see Japan from an Embassy instead of under military occupation and my wife loved Japan. So after a quiet four years in INR, this provided an opportunity to get my foot in again in post-war Japan. As the result of my unusual assignment to the Foreign Office, I had friendly relations with several dozen Japanese diplomatic officers at all levels which stood me in good stead not only in Tokyo and Washington but all over the world at international meetings until my retirement.

Q: So you went to Tokyo in 1961 as an economic officer?

WOODBURY: Yes, as division chief of the internal division. We did the economic analysis of Japan and conducted the diplomatic negotiations on bilateral economic issues. The first thing I

got into was textiles, so that became my temporary specialty; but my primary responsibility became the analysis of Japan's economy. It was an interesting time. They were just beginning the ten year doubling the income program; this was when the tremendous rate of growth started. Trezise, Doherty and I were among the few who believed they could do it. Actually, we were too conservative. The Japanese had to revise the plan after the third year because they were already so far ahead.

Q: Was there a large economic section there at that time?

WOODBURY: Oh yes. It was one of our largest embassies.

Q: And we had large economic interests there at that time?

WOODBURY: Yes. Trade was growing by leaps and bounds and the Japanese had worrisome problems that were politically sensitive. One was cotton textiles; we were enforcing the voluntary quotas -- the Japanese used to call them the "involuntary" voluntary quotas. They were right, of course, but that was the payment of President Kennedy to South Carolina and North Carolina because they elected him after Ohio went for Nixon. The other sensitive point was the balance of payments deficit -- theirs, not ours. It was about \$100 million a year. They complained that we wanted them to restrain their exports when there were few things they could make and sell to us. We used to tell them that they should look at the balance of payments in the context of global trade, not bilaterally; also that a country developing as fast as Japan should expect a large deficit on the balance of payments. So they worked hard to overcome that and they sort of over compensated for it -- by a factor of ten.

I used to do a briefing on the textile issues for the political and public relations types who usually are not interested at all in something as mundane as trade, except when it becomes a sensitive item between governments and peoples -- in the headlines in other words. The average American had practically no interest in foreign trade, but every Japanese knew virtually everything about it and was extremely conscious of it. My complaint about our political officers was not so much that they didn't know anything about business or economics but that they said it as if they were proud of it. That attitude sometimes infuriated hard-pressed U.S. businessmen.

I have never met a Japanese foreign service officer who is not able to talk intelligently and vehemently about complicated economic issues. As an introduction to my textile briefing, to show how things turn around, I used material that my wife, who is interested in Japanese history, found and knew would interest me. During our Civil War when the cotton imports were cut off we used to import raw cotton from Japan. While I was in Japan, we were exporting huge quantities of raw cotton to Japan to make into cloth and telling them that they should not send the finished product back to us. On trade, I have always maintained vis-a-vis Japan that we were and are more sinned against than sinning but are too ready to resort to petty protectionism weakening our efforts to open up their markets.

Their economic growth was absolutely incredible; we could hardly believe it; seventeen percent for one year in real terms. I remember there was a steady change in the composition of the trade, both imports and exports, which foreshadowed future problems. We could see even from

quarterly statistics how the exports to the United States were changing from conventional things like tea and raw and manufactured silk, simple machinery, etc. to much more sophisticated products. That was the beginning of what they called their star export system. Japan never had an overall economic plan like most developing countries, but MITI and the Finance Ministry would work together with industry and the banks and decide where the credit and resources should go, concentrating on foreign trade, while largely ignoring Japanese consumer interests, a pattern that largely obtains today although it can no longer be justified on any grounds. Japan's consistent huge surpluses on their balance of payments threaten the stability of the international trade and financial system on which their prospering depends.

Q: Who was the Ambassador when you were there?

WOODBURY: Edwin Reischauer

Q: How was he as Ambassador? Did he do well at running the embassy?

WOODBURY: Personally he was a charming person. At first he had a DCM, Bill Leonhart, who ran the embassy like a Navy ship. Reischauer was really only interested in the U.S.-Japan relationship long range. He was born in Japan of a missionary background -- he had a Japanese wife who is a descendant of the Meiji aristocracy. He had a deep emotional attachment to Japan and I think the war must have been a traumatic experience for him as it was for the Japanese who had a foot in both camps. After the occupation ended we showed our finesse by sending out a Foreign Service officer by the name of Douglas MacArthur II; I think that was about the dumbest thing we have ever done. Many of my friends told me he was a terrible man to work for and his wife was even worse. So after them, Reischauer and Mrs. Reischauer seemed like saints. Everybody liked them, in fact he was almost revered, especially by the language officers.

MacArthur II, while unlovable was such a strong man that he made the American ambassador The President's representative in Japan rather than the commander of U.S. Forces, Far East. We still operated pre-Reischauer pretty much as if there was a senior/junior relationship. I found out recently while working on some files for publication that an American ambassador, John Allison in the 1950's, called over the senior man on American affairs in the Foreign Office to read the riot act to him regarding Japanese export controls to the Soviet Bloc. This amazed me because an ambassador always goes to the Foreign Office; you don't call over a senior Foreign Office man to report to you. Imagine trying that with the Europeans, even a small country! The Japanese let it be known that that was going to end when Reischauer came out there. From then on only the Ambassador would deal with the Prime Minister and the Foreign Minister, and he would do the calling, not the Japanese. That is exactly what happened, Reischauer treated the Japanese as equals.

Reischauer's analysis of the political situation in Japan was that as Japan became more prosperous, country people would be moving into the cities to work in industry. Instead of voting conservative as they had before, they would join trade unions and vote for the more left wing anti-American or neutralist parties which might gain control thereby. This could bring into question our base agreements and alliance. I have been thinking a lot about what went wrong. A friend, a former FSO and noted Japanese scholar, questioned it then; he said the Ambassador was

wrong. He thought the extremes, the nationalist right and the communist left would become less and less important and it would be impossible to form a government without a coalition with the Liberal Democratic Party which would act as a brake on any move to the left or isolation. As it happened he was right but he has just told me that Japan still does not have a viable opposition. It is a too complicated an analysis to bring up here.

Q: There must have been a huge difference in Japan in 1961 from the Japan of the occupation, was there not?

WOODBURY: Well, they are always rebuilding Japan but the people and culture change much more slowly. It is hard to make a comparison, but I liked it much better the second time. There had been a lot of racism and condescension in the occupation. The Japanese were segregated on the railroads and other places as late as 1951 until MacArthur was relieved and Ridgway took over. Ridgway saw the long lines of Japanese waiting for the trains and next to them a yellow and black pipe and next to a large empty space. He said, "What the hell are these things?" and was told that the empty space was for Americans. "Take them down!" was his reply; you should have heard the wailing. So all that had gone and the atmosphere was much better. You dealt with the Foreign Office as equals, and that is very easy for Americans because they all speak good English there now.

One of our deep, dark secrets is that most of our language officers are not really capable of carrying on technical discussions in Japanese although that may be changing. I have been gone a long time.

We take advantage of that too. One of my biggest responsibilities was the Joint Annual Economic Committee meetings of cabinet ministers of both countries. That came in with the Kennedy administration; Secretary Rusk used to attend with six cabinet members with economic responsibilities. They would meet for three days in alternate capitals and discuss every subject of mutual concern. After the first meeting in 1961, I was responsible for the organization and coordination, both substantive and administrative, at the next five meetings first in Tokyo and later in the U.S. They included wives so programs had to be arranged for the spouses, and all the advisors. It got to be immensely complicated -- transportation, social events, etc. Substantively, there were the briefing books and at the end negotiating the communique, always an all night session. That was a liberal education in the operation of the United States government in diplomacy. I don't think I could have recruited any of our Foreign Service officers from around the world who could have negotiated the communique in Japanese. We always did it in English and it was translated into Japanese later. So much for equal treatment; it is an enormous advantage for us to be able to do that. I had a brush with history in Tokyo in late 1963 when I was coordinating the Joint Committee meeting at that end. I had buttoned down the last loose end and had gone to bed early in preparation for the early morning arrival of Secretary Rusk and party. About 3 a.m. I was awakened by a telephone call from the head of TIME/LIFE for the Far East asking about the effect of President Kennedy's death on the meeting. Of course, Rusk ordered Air Force One to turn back to Washington. Five of the six cabinet members were aboard.

THOMAS P. SHOESMITH
Political Officer
Tokyo (1961-1963)

Principal Officer
Fukuoka (1963-1966)

Thomas P. Shoemith was born in 1939 and raised in Pennsylvania. His career in the State Department included posts in Japan, Hong Kong, South Korean, and an ambassadorship to Malaysia. He was interviewed by Charles Stuart Kennedy in 1991.

Q: Well, then, you spent the next, what, two years in Japanese language training again?

SHOESMITH: No, when I was in Hong Kong, I had studied Mandarin on a part-time basis. I enjoyed the language, and I had hoped that I could go to Taichung (Department of State language school in Taiwan) to continue the study of Chinese. I continued part-time study of Chinese in Korea. I tried to learn Korean, but it is a very difficult language. I spent a few months at it, and then gave up. However, Dick Sneider had me reassigned to the Japanese language school in Tokyo. At the time, he was the Japan desk officer in the Department of State. He was one of these officers -- and I believe that we have always had them in the Foreign Service -- who are always looking at personnel matters, trying to put people in the best place, where we could use them, and so on. He had the idea that I would spend a year at the Language School and then fill in behind someone who was in the Political Section in Tokyo. Well, I wasn't terribly disappointed by that. And in point of fact, I think that it was a very sensible thing to do because it meant refurbishing my Japanese, whereas if I had gone to the Language School in Taichung, it would have meant starting from scratch. At that time, I was twenty-eight years old or so, and that's pretty late to start learning, really learning a language. So I went back to Tokyo and spent a year -- a little less than a year -- in the Language School. As I say, it was largely a matter of refurbishing my Japanese, although it was there that I really learned to read Japanese. Previously, I had not really been able to read Japanese, even after the two years' training in the Army.

Q: Well, then you ended up in the, what?

SHOESMITH: The Political Section, and again working on Left Wing political parties.

Q: Were you known as "Mr. Left Wing"?

SHOESMITH: I don't know why it happened, although, of course, that had been my background. I knew something about the Socialist Party, the Democratic Socialist Party, the Communist Party and so on. And so I was put in that job, again doing the same sort of thing that I had been doing.

Q: How had these Left Wing parties developed since you'd been away from them and come back? Did you see any change in either their focus or their power?

SHOESMITH: No, not really. As far as the Socialist Party was concerned, it was then, as it has

been until relatively recently, very ideologically hidebound. That, combined with the fact that it had no real platform for governance if it were to gain power, meant that the Socialist Party, even with substantial trade union support, was simply not going anywhere. It could not present an effective challenge to the Liberal Democratic Party. The Democratic Socialist Party was not in much better shape. As a matter of fact, it was in worse shape because it had less support within the trade union movement. The Communist Party was still, what, ten percent or so of the electorate.

So there had been no real change in the balance of power among the political parties in Japan between 1950 and 1960, and subsequently, there was some thought in the early 1960s that the Socialist Party would be able to gain a greater measure of popular support. I think that you've interviewed Dave Osborn. He was the Political Counselor for whom I worked at this time. I think the Socialist Party may have been gaining some increased support at the polls, which led some people to think that maybe they were really going to make it to the top. But it never did.

Q: Well, how did you make your contacts in the Japanese political movement?

SHOESMITH: They were easy to make among the socialist parties -- among the Democratic Socialist Party and the Socialist Party, but not with the Communist Party. We had no contact with the Communist Party.

Q: Was the fact that we didn't have contact a result of orders, or was it because they were less receptive?

SHOESMITH: It was the policy of the Embassy. We did not contact the Communist Party. We followed them in the press and in intelligence and other reports, but we did not contact them personally. There were no effective contacts, even if we had tried, because the Communist Party simply would not, I think, have been receptive to it. However, among the two socialist parties and the trade union people, contacts were easy to make. They were relatively open. They would meet and talk with us either in their offices or elsewhere. Oh, it was not difficult.

Q: Well, your Ambassador was Edward Reischauer at that time?

SHOESMITH: Yes. When I first got there, MacArthur (Douglas MacArthur II) was the Ambassador. But that was only for, maybe, three or four months -- perhaps six months. Reischauer came, as I recall, in the early 1960s, but I'm not sure of that. Anyhow, he was there for the whole time I was there.

Q: What was his style of operation?

SHOESMITH: Well, he came with the notion that the greatest need, as far as our government and the Embassy were concerned, was to establish some sort of effective dialogue with Japanese intellectuals and journalists -- opinion leaders. At that time, certainly within the Left, and to a considerable extent in the press and in academia, there was a great deal of very critical comment about the United States. Among Japanese academics, Marxist views were quite prevalent. These views probably were shared by people in journalism and among students. Therefore, the

Ambassador's primary concern was to establish a dialogue with these groups. That's what I remember best about Reischauer's time there, when I was close enough to be able to see.

I don't recall his being terribly concerned about the economic relationship between Japan and the United States. At that time, of course, this was not a matter of great concern. The Japanese were worried about their trade deficit with the United States. As the Vietnam War became more prominent, Japanese movements in opposition to our involvement in Vietnam became stronger. I think that the Ambassador was very much concerned that confidence, trust and support for the U.S.-Japan relationship were at a very low ebb. I recall that it was in 1960 that President Eisenhower was going to make a visit to Japan. That visit was aborted because of student and labor union demonstrations against it. As a result, the atmosphere in Japan, a sort of an overriding concern to Ambassador Reischauer, was this opposition. . .the strength of the opposition within Japan to the U.S.-Japan Security Treaty relationship, the U.S. posture in Vietnam and our presence -- our military presence -- in Japan. In other words, our bases.

Q: Well, I remember that there was a political, almost religious movement in Japan at about this time. Forgive my pronunciation, but wasn't it called Zennikira? It was supposed to be very powerful, but it seems to have faded from view.

SHOESMITH: Umm, I'm not sure. I don't recall that, but what I recall mostly, of course, were the student movements, and, of course within the student movements, there was a wide variety. There were radical students, militant students and the trade union movement -- the trade union people. And I guess that Ambassador Reischauer felt that part of this was the result of the fact that important segments of Japanese political and opinion leaders -- not so much the politicians, but the academicians, the student people, journalists and commentators of one sort or another -- simply were locked into a very negative view of the United States. What he, I think, hoped to do and felt that he had achieved to some extent when he left Japan -- some time in 1966 -- was the reestablishment of a measure of exchange and dialogue and confidence with this group.

Q: Well, did you either have instructions or were you working on trying to contact Japanese opinion leaders to explain what made the United States run?

SHOESMITH: I did not have instructions. I mean, not in that part of the Political Section where I was assigned until 1963. You see, I was only in the Embassy approximately a year because I was in the Language School for approximately a year. That would have been up to the end of 1961 or some time in 1962. I was not Ambassador Reischauer's Press Counselor, or USIA or others who were involved in this sort of thing. I was not personally involved in that.

Q: Well, when you went to Fukuoka as Consul, what was the response to you as Principal Officer there? What were you doing?

SHOESMITH: Well, in point of fact, as I recall it, we got very little guidance from the Embassy as to just what we were supposed to be doing. You pretty much decided for yourself what you were to do. At the time I went to Fukuoka, there were about four officers and myself assigned. We did the traditional range of Consular functions, including visas and all of that sort of thing. We had a small economic unit. At that time, there were many Japanese businessmen in the area

that were interested in striking out in new ways, finding out more about the American market and so on. We helped in that. We helped in tourism and so on.

A main concern in this climate that I have already described was the U. S. military presence in western Japan -- large Air Force base outside Fukuoka city, a big naval installation in Sasebo and a few smaller installations scattered about. A major focus of what we did politically was to gauge receptivity or lack of receptivity in the area to these military bases.

This was highlighted when the first U.S. nuclear-powered submarine visited Japan. I think this might have been in 1964 -- somewhere around in there. There had been a great deal of agitation in Japan against the arrival of this first nuclear-powered submarine both because it was nuclear-powered and because it was seen, I presume, as another expansion of the U.S. military presence in Japan. This focused the opposition of the students and Left Wing groups of one sort or another. We in the Consulate had the responsibility of providing political advice to the base commander in Sasebo on how to handle this first visit. We were certain that this was going to lead to very large demonstrations in Sasebo, as in fact took place. The business groups and the local government people in Sasebo were quite cooperative in seeing that the visit came off as well as possible. I mean, they helped as much as they could. We were in contact with them. We helped arrange their visits to the submarine and so on. We did that. We talked with the press and tried to explain the purpose of the visit and the safety of the vessel itself. We worked with the naval authorities in providing certain monitoring of the vessel when it came in. There were other incidents involving the bases.

Q: What bases, what were they?

SHOESMITH: The Air Force base at Itazuke, and the Naval base at Sasebo -- these were the two big bases. But occasionally, you would have ship visits at Kagoshima or Beppo, or something like that, which we would facilitate or try to help. These generally did not involve expressions of political opposition, but the submarine did. It went on for a long time. However, the visit came and went, and then there were later visits at Yokosuka and other places.

What I'm saying is that I think that the major focus of our political activities centered around the base problems. The governor of Fukuoka Prefecture was a Socialist. He was personally opposed to our base presence, yet we needed his help from time to time. If we were trying to extend a road, or something like that, or get passage through a certain area, I would meet with him to try to get his cooperation. I was modestly successful on some occasions. And I would imagine, though it's hard for me to recall with any precision, that the bulk of our political reporting was probably on this issue and whatever thoughts we might have had on our policy with regard to basing in Japan and the U.S.-Japan Security Treaty and popular attitudes toward it and so on.

Fukuoka leaders of all groups, including journalists, students, opposition parties or the conservative parties -- they were all very open. We used to see a lot of them. We used to arrange for meetings with these leaders when people would come down from the Embassy in Tokyo so that they could talk with them. The discussions were very lively. I don't know -- I'm sure that they didn't change anyone's mind, but they were at least a very open exchange of views. There was no problem with the dialogue down there. Of course, it was a situation unlike Tokyo. Most

of our work in Fukuoka had to be done in Japanese.

Q: Okay, you say that you were working in Japanese...

SHOESMITH: Very often.

Q: Now, how did you find public knowledge of the United States? Was it pretty much a Hollywood version of...

SHOESMITH: It was very limited, very limited. But attitudes among most people that I met, even people that were opposed to our base presence, were very positive. Oh, sure, students would demonstrate outside the Consulate with "Yankee, Go Home" and so on, or "America, Get Out" or whatever. However, in conversation, I found that there was not much antagonism.

There was a great deal of interest in what was going on in the United States. We had a cultural center and a USIS (United States Information Service) program there which was very active. Programs were well attended. What more can one say? I mean, I don't think that there was a great deal of understanding of our policies, particularly with respect to Vietnam. We worked a lot on that sort of thing. But there were very strong, visceral feelings involved about the war in Vietnam.

Q: Was it seen as an Occidental race against an Asian race?

SHOESMITH: Well, I don't know that it was all that so much. There was just a feeling that this was the wrong thing for us to be doing. There was a concern that Japan might be drawn in and so on.

Q: Was Okinawa an issue -- the fact that we were basically occupying Okinawa? Well, we were occupying Okinawa, at least large parts of it. Was that a problem?

SHOESMITH: The Okinawa reversion issue began to achieve more prominence. But it was not an issue in the sense that people in Japan were terribly concerned about it. There was a good deal of pressure from the Japanese Government to move in the direction of reversion, as actually took place in 1972. But the Japanese people do not spend a great deal of time thinking about Okinawa. It wasn't something that came to our attention very much.

Q: Before we leave this, what about feeling toward the Soviet Union?

SHOESMITH: Oh, great feeling, always. You know, this is a persistent thread in Japanese thinking when they look outside Japan. There is great suspicion about the Soviet Union. And the Northern Islands issue was one that you would see from time to time. No sympathy at all -- good deal of apprehension and concern about the Soviet Union -- this is still true today.

PAUL K. STAHNKE

**Economic Officer
Tokyo (1961-1965)**

**Japanese Affairs, Bureau of East Asia Affairs
Washington, DC (1965-1968)**

Paul K. Stahnke attended the University of Chicago and received a master's degree in international relations. He served in Hamburg, Kiel, Palermo, Venice, Tokyo, Mogadishu, Copenhagen, and Paris. This interview was conducted by Thomas Dunnigan on June 1, 1994.

Q: So now you are off to Tokyo to function as an economic officer I presume?

STAHNKE: Yes, that is correct.

Q: How large was the economic section there in Tokyo?

STAHNKE: It was fairly large at that point. We had complete division between the economic and the commercial sections. We had between eight or nine people in the economic section, divided into internal and external branches. I was in the internal branch..

Q: Officers?

STAHNKE: Officers, yes.

Q: A good sized economic section.

STAHNKE: Even then we were becoming concerned about the growth of Japanese exports to the United States which, at that time, were generally of low technology with strenuous efforts to upgrade into higher quality products.

Q: That was rather a boom period for the Japanese wasn't it?

STAHNKE: The Japanese when I arrived were in a "recession" with growth rate slowed to 6.5 percent from double digit figures of the recent past. Of course we are talking about an economy that was much smaller in size than it is now. They were hell bent in getting out of the mild "recession" and improving their trade balance, particularly with the United States. They were then in a deficit relationship with us. We are talking small numbers compared to what they are today. They were about three-quarters of a billion dollars in deficit with us in 1961, quite different from the large deficits we have been running with them now for many years. So, beginning with their prime minister, the establishment (which we now refer to as "Japan Incorporated") pulled out all stops to encourage all industries to focus on exports, not just to the United States, but to anywhere in the world. In that regard, shortly after my arrival in Tokyo, I visited a small tool and dye maker near Kobe. He told me that he had a large backlog of domestic orders but he was putting in maximum effort to go into exports, an area in which he had no experience, all because his prime minister told him he should do so - not at all like the reaction of

an American manufacturer in similar circumstances.

Only one officer in the economic section was a language officer and he was forced on the section. Both the Economic Minister and Counselor wanted officers competent to handle economic, financial and trade issues and believed, rightly in most cases, that the majority of the Japanese language officers were not competent to handle these matters. Actually, few of our non-Japanese language officers had any real economic training, unfortunate because one had to be a rather sophisticated economist in Japan to deal with the well-trained Japanese economists, both in government and without. Most of those with whom I dealt spoke English almost as well as I did. I, as the others, rapidly learned enough Japanese to get through to our contacts in the various ministries where the telephone operators and secretaries didn't speak English. Japanese, of course, was also very useful in our travels of which we did a fair amount which, in my case, was very useful in getting a better feel of the state of Japanese industry and to talk with local businessmen and officials. Fortunately we had a sufficient travel budget to do that. We had no real problems in our lack of proficiency in Japanese. We all knew just enough Japanese to convince our Japanese friends that we were interested enough in their culture to learn a bit of their language and much of their culture. This was very helpful to us in our personal relations with them.

I dealt mainly with the big industries, utilities and iron and steel, for example, both of whom had received a fair amount of loans from the Ex-Im Bank as well as from the World Bank. In fact, our own steel industry protested periodically that it was through our help, directly through Ex-Im Bank loans and indirectly through the World Bank, that the Japanese steel industry was able to revive so quickly from the wartime destruction and become so intensively competitive with ours in the US market. That was perhaps my area of most activity because of this concern. US steel officials came frequently to talk to us about their concerns. I had a set "lecture" which I often used saying that they could be more competitive with the Japanese if they would modernize their plants with the American equipment that the Japanese had put into their plants. I found it wryly amusing that US steel firms had to come to Japan to look at a Mesta cold steel rolling mill which a large Japanese steel firm had imported from the US which sharply cut costs of manufacture; something none of them had.

Q: Was that because we bombed them out and destroyed their steel

STAHNKE: To be fair to US steel companies, that was in fact true. We had destroyed most of the Japanese plants with our bombing and they had to start from scratch while our industry continued operating with relatively old equipment. Only one exception was that of the Fuji steel mill near Kobe. When I went to visit that plant, they apologized for the prewar equipment and said it was all our fault because we didn't bomb that particular plant - all in good humor, of course. That remark was indicative of how little animosity remained from the war years. In fact, I found none at all in my time in Japan. We were much admired and much emulated, both in business and in culture.

In my four years in Japan, I developed a particularly close relationship with a number of officials in the Japanese steel industry which proved very useful when several officials of Eastern Gas and Fuel Associates, which owned coal mines in West Virginia, came to me in frustration after a

week of trying to sell coking coal to Japanese steel - totally frustrated because they couldn't get to first base with those officials with whom they had talked. I told them that one must treat the Japanese differently than an American or European. One doesn't just go in and make an offer, no matter how good, without carefully establishing a social relationship first. At my instigation, the Economic Counselor (Ed Doherty) organized a luncheon to which we invited the raw materials managers of the principal Japanese steel companies. The Ambassador (Reischauer) made a cameo appearance to emphasize our interest in the matter. I had carefully coached the American steel executives not to raise any business matters at the luncheon but to make appointment to meet them in their offices which they did and a few days later came to me triumphantly stating they had gotten contracts with a consortium of Japanese steel companies for \$1.5 billion in coking coal for delivery over the next ten years. We, in turn, were delighted that we could be of positive service to an American company. In an expression of their gratitude, they got Senator Jennings Randolph of West Virginia to make a statement in the Congressional Record regarding my and the Embassy's efforts on their behalf. I told them that if the US government would have permitted me to collect a 10% finders fee, I could retire early. They had offered me an executive position with their firm which would have meant a considerable increase in remuneration but I preferred remaining in the Foreign Service and the continuing interesting life it offered.

Q: I thought Korea was a great exporter of coal in the Far East?

STAHNKE: I think not, at least not at this point. The biggest exporter of coke and coal at that time was Australia, which had the principal share of the Japanese market and, since Australia was much closer to Japan than West Virginia, it took some organizing by the American company to get the coal to Japan at competitive prices, which they managed to do by having large coal carriers, so large that they couldn't go through the Panama Canal. But, they managed to be competitive.

Another area which was very rapidly changing was the electronics area in which I was also involved. At that point the Japanese had already knocked out of business all American manufacturers of cheap, small transistor radios which were popular at the time. They were able to sell them in the US at a price below the cost of US production. At the same time, Japanese firms such as Sony began making televisions and hi fi equipment of excellent quality and lower prices than our firms could. When visiting a Sony plant in Tokyo where small black and white TV sets were being assembled, I was asked to note the age of the young ladies on the assembly line. All seemed to be somewhere between 18 and 25, keen-eyed and diligent in their work. The Sony official remarked that, in a recent visit to an American competitor's plant, he saw that all the women were 35 and over, less nimble-fingered than their Japanese counterparts. This, he claimed, was the main reason why their costs were lower. Of course, the young ladies were also paid much less than the Americans. The rapid transition into manufacture of higher-priced and more sophisticated electronic products was the start of the gradual takeover of almost all electronic consumer products by the Japanese and the gradual closing out of these operations by American electronic firms. At the end of my tour in Japan, the only American company that was still making televisions, but increasingly with foreign parts, was Zenith. The rest had all abdicated to the Japanese.

Q: I believe that is still true isn't it?

STAHNKE: That is probably still true. Certainly on all hi-fi products that is true though to a lesser extent on computers. The Koreans are now also a significant competitor in electronics.

Q: Did you enjoy your tour in Japan?

STAHNKE: It was a most interesting, intellectually rewarding and exciting period. When I first arrived in Japan, having topped off whatever knowledge I had of economics in my year at Berkeley, I had to unlearn a great deal because the Japanese operated differently than western economies. After a year of exposure to this different and vibrant economy, a new economic counselor arrived at post whose experience had been mostly in Europe. Shortly after his arrival, he called me into his office to criticize me for having written such affirmative, optimistic reports on the Japanese economy because he had looked at the economy and said it wouldn't work; it was going to go bust. I told him that, upon arrival, I had the exactly same impression. I suggested that he trust me and wait and see. Eventually, he reluctantly admitted I was right. This same man never did learn the peculiarities of either the Japanese economy or its culture, despite the advice that several of us "old hands" tried to give him. Fortunately, Tokyo was his last post since his resignation was "requested" upon the completion of his assignment. However, this didn't happen until after he had given unjustifiably bad efficiency reports to several officers who had attempted to educate him on Japanese ways - myself included. The system doesn't always work right.

Q: Apparently they didn't go bust from the news in subsequent years.

STAHNKE: No.

Q: Were we still giving the Japanese loans at that period or had they ended?

STAHNKE: The period of the major body of Ex-Im Bank loans had passed as had AID activities. Although we had periodic visits from Ex-Im Bank officials they came mainly to look at what was happening to the loans that they had made over the years. Of course we remained interested in encouraging US exports and, as I recall, Ex-Im did make several more equipment loans to Japanese firms. As in steel, they had a double effect. On one hand, they provided financing for US equipment exports but, on the other, they made Japanese firms more competitive. This was the case with a new Nissan auto plant near Yokohama which imported a semi-automated plant from the US, making it the most modern, and efficient, auto plant in the world and, thus, a start to the upgrading of Japanese autos which now figure so prominently in world trade and have had a significant effect on the US auto industry.

Q: Now, after four years in Tokyo you were summoned back to the Department. Is that right?

STAHNKE: I was summoned back to the Department at what happened to be a very inconvenient time for me because they wanted me back in February, 1965 to participate in some very important aviation negotiation with the Japanese plus some other things. I had three children in school at that point and it was not a very good time to leave. So I managed to delay my departure until April. I left my family in Japan and went back to Washington and worked on the Japan desk, ultimately becoming the deputy country director.

Q: Who was the country director at that time?

STAHNKE: When we established the country director program, which was about a year after my arrival, Dick Sneider became the first country director. He was brilliant, argumentative and difficult but one of the best persons I ever worked with in the Foreign Service. Each morning, we argued forcefully and loudly about policies and the business of the day. I told him once that I much appreciated those vocal sessions because I'm a slow thinker early in the morning and these discussions got me primed intellectually for the always busy day that followed. Dick eventually was appointed Ambassador to Korea. He is now, unfortunately, deceased.

Q: Well, tell us something about what you did in that assignment.

STAHNKE: After our morning priming "discussions", Dick often came to my office to find me on the phone. So, he would leave scribbled notes to me on things he wanted done. Most of my time on the phone involved explaining to others in the Department and other branches of government the peculiarities of dealing with the Japanese, usually on specific issues. Dealing with the new Japan was a difficult new phenomenon for most Americans, even those who had been in Japan during the occupation period. It was quite different than dealing with the Western Europeans or Latin Americans.

We had a continuing series of mini-crises on a whole range of trade issues with the Japanese which were important then as they continue to be presently. Many of the problems we had then are very similar to the ones we have now...the names are different, the commodities are different, the size and volume are different but the problems are essentially the same. That period was important because we concentrated on establishing a dialogue with the Japanese that would transcend cultural differences. We worked to make them hear and understand the political importance to us to have what we now call a level playing field in trade. While our chief interlocutors did begin to understand, I suspect that the Japanese, collectively, did not. Perhaps they are now beginning to understand.

In the latter years on the desk, I became heavily involved on the complex negotiations - both within the US government and with the Japanese - on the return of the Ryukyus to Japan. It was an extraordinarily complex matter, more complex than any of us thought at the time.

Q: We couldn't just hand them back and say you have them?

STAHNKE: No, we had to work out a basic agreement. We also had a very complex series of finance transactions because we had a good deal of property that we were occupying there and we were turning back to the Japanese some of it and retaining some of it. These matters heavily involved both the Treasury and Defense Departments as well as State. The issue was politically very sensitive, more so in Japan than in the United States. We did have some problems in the States with those, within and without government, who felt that, since we had won the war, we had every right to keep the islands and its important military bases.

Q: How did the Defense Department feel about it?

STAHNKE: They were quite reasonable about it at the higher levels. Some of lower ranks had to be pulled in kicking and screaming but we, and key elements in Defense got them to come around. Dick Sneider (country director) was the honcho and it was mainly his forceful direction and obstinate resistance to attempted distractions that we were able to pull this off successfully. The key negotiations were intra-US government - State (headed by Sneider), DOD and Treasury. After a fitful start, we developed a smooth cooperative environment. After the completion of each phase, we would consult with the Japanese to make sure they were on board. When they were not, we had to back to the interagency drawing board. The Japanese, of course, wanted to be as cooperative as they could because return of the islands was great political importance to them. Our most important weapon in encouraging their agreement was our position that the visit to the US much desired by then Prime Minister Sato could not be accommodated until agreement of the transfer was reached. This was an interesting process; one that was new to me. In the course of the year or so of intense negotiations, we (together with the Japanese) drafted the communiqué which was to follow Sato's visit to President Johnson. Only when all but the final "i" was dotted did we extend the formal invitation for the visit. We left it to the two heads of government to dot the final "i" which was, as I recall, a minor point of procedure. The visit, which included agreement on return of the Ryukyus, was a huge political success for Sato who, presumably in gratitude, gave me, and several others, a set of pearl cuff links which I still use. The communiqué drafting procedure we adopted proved to be an extraordinarily effective lever with the Japanese bureaucracy in order to get them, who moved ponderously at best, to move with relative rapidity to help us resolve the Ryukyu problem, several trade issues and a few minor ones. We found that a most effective way to develop a prime ministerial visit. One that was relatively foolproof. In other words, pre-scenarioed.

Q: Did our Congress show any interest in this?

STAHNKE: Oh yes. There was considerable interest. We had an almost constant interaction with the Congress. I, to some extent, but principally Dick Sneider, kept in close touch with elements of Congress, the Armed Forces Committee, Foreign Affairs Committees, etc., who were obviously interested in this and had their own inputs which we always took seriously.

Q: But they did not indicate that they were going to block such a transfer?

STAHNKE: No. Well, there may have been one or two who were quite negative, but they were not ultimately important. Most felt that the time was right to close out that period in our history. The Ryukyu issue had been a constant sore point between us and the Japanese which we had to be eliminated. A key element of the agreement was the maintenance of US military bases in the Ryukyus; without that we would never have gotten Congressional or DOD agreement. The final agreement gave the military and Congress all they desired and proved satisfactory to the Japanese as well. The Japanese fully understood that it was in their fundamental interest to maintain a strong US military shield as protection against outside forces such as the Soviet Union and, to a lesser extent, China.

Q: And we did get what we wanted in the way of bases, did we not?

STAHNKE: We did get what we wanted in the way of bases and the general authority to run them. This was the most important part of the agreement.

Let me go back to one incident during my time in Japan that shall always remain vividly in my memory. In the early 1960s, we had established the US-Japan Joint Economic Committee in which six US cabinet members and six equivalent cabinet members of the Japanese government participated in approximately annual meetings, alternatively in the United States and in Japan. The next meeting, I think it was the third meeting of the Committee, was to be held in late November, 1963 and I was the secretary of the US delegation. I was responsible basically for organizing the meeting from the Tokyo side. On a Saturday morning, Tokyo time, about 3:00 or 3:30 a.m. I was awoken by our code room which informed me they had received a FLASH telegram saying that the President had been wounded in Dallas. It was followed shortly thereafter with another telegram which said that he had died. A following telegram said that our delegation of six cabinet members, plus their staff assistants and others which had started out from Hawaii on their way to Tokyo, had turned around and were headed back to Washington, and that I was to inform, together, of course, with other members of the embassy, the appropriate Japanese government offices that unfortunately we would have to cancel our participation in the third Joint Economic Committee meeting. That was an extraordinarily dramatic period and of course the Japanese were as much affected by the death of President Kennedy as all the rest of us were and as the rest of the world was. The rest of Saturday and part of Sunday was spent in discussions with the various Japanese ministries that would have been involved in those talks.

Q: Paul, the years you were involved with Japan were those in which the United States was heavily involved in Vietnam, right up to 1968, one of the worse years of the war. What was the Japanese attitude towards our involvement in Vietnam?

STAHNKE: At best, they were very dubious about our objectives and about our tactics. I recall, I believe it was February, 1965, when we began our offensive bombing of North Vietnam, the first Japanese reaction was very, very negative. In fact, to reflect the Japanese view and his own, our ambassador, Edwin Reischauer, sent a flaming telegram back to Washington indicating the deep Japanese concern about our escalation of the conflict, including his own view which were strongly supportive of Japanese concerns. I would note that Japan was not a completely disinterested bystander since some of the aircraft used in the bombings initiated from US bases in Japan. As history shows, these concerns had no effect on the White House or elsewhere in Washington. Subsequently, as I recall, the whole Vietnam issue, this includes years that I was in Washington on the Japan desk, was never really a significant part of our dialogue with the Japanese. When they did express their views they were essentially not enthusiastic, to put it mildly, about our Vietnamese efforts. I suspect that this was at least in part, although much of that they didn't say, because they felt that we were involved in their own back yard which they knew better than we did. They felt the kind of things we were doing, concern about the domino effect, etc., was falsely based. When Prime Minister Sato came to visit the United States in 1967 or 1968, Vietnam was a minor part of his discussion with the President.

WILLIAM T. BREER

**Japanese Language Training
Tokyo (1961)**

**Consular Officer
Yokohama (1962)**

**Science Attaché/Political Officer
Tokyo (1963-1966)**

**Principal Officer
Sapporo (1967-1968)**

Mr. Breer was born and raised in California and educated at Dartmouth College and Columbia University. After service in the US Army, he entered the Foreign Service in 1961. Throughout his career, Mr. Breer dealt primarily with Japanese, Korean and general Southeastern Asia affairs. His overseas posts include Kingston, Tokyo (three times), and Yokohama. His Washington assignments also concerned principally Japan and Korea. He served as Deputy Chief of Mission in Tokyo from 1989 to 1993. Mr. Breer was interviewed by Charles Stuart Kennedy in 1999.

Q: You came back in 1961 and was at the Japanese training school from when to when?

BREER: I took the basic A-100 officer's class and had some area studies. Then I went to Japan and entered the State Department language school in Tokyo for six months.

Q: That was from when to when?

BREER: June or July 1961 through December 1961. Then I was assigned to the consulate general in Yokohama.

Q: How did you find the language school?

BREER: I found it very good. It wasn't dissimilar from the other language school. It started off with Mr. Naganuba's books and then people developed their own after that.

Q: How many were in your class?

BREER: There were 20 all together in the language school from the USIA, State and other agencies.

Q: Was the normal course six months?

BREER: The six months was really a test course to see if people were genuinely interested rather than forcing people through two years and having them quit after nine months or something. I, of course, came with a jump start to the six month program. Afterwards the junior officers were

given an assignment in Tokyo and if they wanted to pursue Japanese studies they went back to school for a year and a half more. So, there was no fixed program.

Q: What was the corridor word you were getting when you joined the State Department about taking Japanese and becoming a Japanese specialist?

BREER: I was never in the corridors very much. I was in the A-100 course at FSI (Foreign Service Institute). I didn't know very much about the Japan speciality. I guess the answer is that I just wanted to go back to Japan.

Q: Did you pick up anything about being a Japanese specialist when you went to language school in Tokyo?

BREER: Bits and pieces, but a lot of us were brand new to Japan. I didn't pick up anything like that right away. There were several senior officers, but they came later. The DCM (deputy chief of mission) at the time was not a Japan specialist, nor was the political counselor in 1961. Bill Leonhart was the DCM, left over from the MacArthur years, and Jack Goodyear was the political counselor. There were some Japan specialists at more junior levels at the embassy but I didn't know them. I didn't mingle with people from the embassy very much while at language school. Then a couple of old hands came back. Tom Shoesmith. Do you know him?

Q: Yes, I have interviewed him.

BREER: But, most of the people at the language school were beginners, I think. At that time we didn't have the year's training in Washington as a routine thing.

Q: You went to Yokohama from 1962 to when?

BREER: About a year, I guess, until they closed the post.

Q: What were you doing there?

BREER: I was a consular officer doing shipping.

Q: Who was consul general there?

BREER: Juan de Zengotita.

Q: What was his background?

BREER: I think labor. He later became labor attaché in Canberra in Australia.

Q: What was your impression of the Japanese government, how Japan worked at that time?

BREER: I thought it was kind of chaotic. Tokyo and Japan were in utter chaos when I first arrived, I think. Except for the A, B, C signs the occupation put up there were very few street

names, although there are many more now. In those days I really didn't know much about the Japanese government. When I first went to Yokohama there were about five officer there - political reporter, economic guy, a couple of consular officers and the consul general. We used to do shipping, dealing with long shipping documents. I had to sign off for some huge guy, a sailor. What do we do for shipping documents now?

Q: It has changed but I'm not sure of the details.

BREER: We had a visa section, of course, which they moved and consolidated with Tokyo over time. They left a skeleton staff there for a while. So, I moved into the consular section in Tokyo about the end of 1962.

Q: Were the visas mostly visitor visas then?

BREER: Well, there were a lot of marriages and a lot of immigration visas. A lot of business people and E-1s. Mostly men in those days. The wives sometimes didn't go or sometimes went a year later. Not so many tourists. A lot of students.

Q: What was the feeling towards Japanese business at that time?

BREER: I think we all admired it and were interested in its progress. We were more or less supportive of Japanese business and the expansion of Japanese trading companies abroad. We were concerned in the early '60s about the state of the Japanese economy, watching the trade deficit all the time and concerned that they would spent all of their foreign exchange reserves.

Q: What about Ambassador Reischauer? Did you get any feel for him?

BREER: We were all kind of in awe of him because he spoke such wonderful Japanese, but I didn't know much about him. I hadn't been in the East Asian academic establishment before. He was a very pleasant fellow and a great hero. He was very sociable with his staff. He came to our Christmas parties. I saw him quite a bit later but not so much in the early '60s.

Q: Was there much concern about student radicals or ultra nationalists? Reischauer was attacked at one point by, I guess, an ultra nationalist.

BREER: I don't know. He was stabbed by [a mentally disturbed Japanese youth].

Q: I somehow think it was the right that attacked him, but I may be wrong.

BREER: We were worried about the communist movement in those days and Soviet influence and later on the Chinese influence. The Japanese Communist party was a force to be reckoned with in those days. We weren't so sure that a left-wing takeover of the government was out of the question. When I was there as a student in 1960 there were demonstrations against the revision of the security treaty, which ultimately prevented President Eisenhower from visiting. I can remember then just walking by myself around government buildings down town that the periphery of the buildings were virtually undefended. Anyone could get in the front gate. Later

on they built 3 foot fences. I was watching television in a bar down town when it was announced that the visit was canceled.

Q: This was quite a blow to Japan actually. Here is a friendly country that is considered unsafe for the president of the United States, particularly in a country where face was important.

BREER: The student demonstrations were not aimed so much at the United States as they were Mr. Kishi. The Japanese resented our friendship with Mr. Kishi because they regarded that he was a war criminal. A member of the Tojo cabinet. How could you bring this guy back to political life?

Q: The Kennedy administration was red hot on student movements. This was Bobby Kennedy particularly. To get after the youth of a country, youth officers were proclaimed in all our embassies. Did you get involved in this youth business?

BREER: A little bit. USIA (United States Information Agency), of course, was responsible for running that in the embassy. We met with young people. After going back to language school for a year, I spent some time as assistant science attaché and then went to the political section looking after the left wing, the communist organization. It was the policy to see anyone who wanted to come and see you at the embassy. You wouldn't open the gates to a flood of people, but you saw small groups and took protests. We did a lot of that. We also tried to reach out to youth, although I don't remember spending a lot of time on that. USIA was doing most of that.

Q: At the time that you had this unrest there was an organization called Zengakuren. I remember there were articles saying that maybe this was the wave of the future. What was this organization?

BREER: Zengakuren technically was the national federation of student government which had been taken over by the left wing in the late '50s. There are a whole bunch of other organizations that were loosely affiliated with Zengakuren. Once you get a group you get a faction and some are more militant than others. The Japanese developed a very strong riot police, which they still have, to fence these guys off. They let them demonstrate but kept them from doing really crazy things. And, of course, they protected the embassy. We still have armored vehicles in front of our embassy. So do the Russians. The movement combined with the labor movement where the communists made a lot of headway in the '60s, particularly government workers unions, teacher unions. There was a lot of Marxist influence which was anti-American, anti-Security Treaty, anti-alliance with the United States, and the Russians were trying to mess up our alliance with Japan as did the Chinese later on. And then the Vietnam war came along and that was a focus for everybody as it was here, of course. So, there were a lot of demonstrations.

Q: You were at the embassy in 1963-64 and then went back for more training?

BREER: I was on home leave in 1963 and then I went back for six more months of Japanese language. Then I was assistant science attaché and later worked in the political section.

Q: You were there until when?

BREER: I had another home leave in 1965 and went back for two more years in political/military work and a year in Sapporo as principal officer.

Q: So really you were in Japan for seven years from 1961-68.

BREER: I think Mr. Obuchi came to my house for dinner during one of those years. He is now the prime minister.

Q: Looking at patterns, did the universities have the same kind of pattern that they had in so many other countries where students would go through the university and be Marxist and out demonstrating against the embassy and the next year they would be in a neat suit sitting in one of the large firms being good capitalist citizens?

BREER: There was a lot of that. I had foreign ministry friends who demonstrated in the '60s and '70s until the Vietnam war was over. The guy most likely to be the next prime minister, not this year, but in two or three years, was a demonstrator while at Tokyo University.

Q: As you were moving into this work in the political section, how did the political section work?

BREER: It was headed by a Japan hand, one of the Russian language officers. He came back as aide to the ambassador and then political counselor. He was a work-alcoholic. The section was divided up into international affairs with a first secretary, David Osborne and two of us who did domestic affairs. The head of the section did the LDP (Liberal-Democratic Party), the main party and another guy did the Socialists and I had the rest being the youngest. There was an external affairs division which dealt with Japan's third country relations and the Okinawa issue, I think. There was another section which did political/military which was all liaison work with the U.S. military there.

Q: You were involved with that at one time?

BREER: Yes, for one year.

Q: Putting these American troops into Japan must have been a difficult relationship.

BREER: Well, American forces were there but declining fairly rapidly and even more so in the '70s. I don't know how many troops we had there when I first got there, but over the years we gave up a lot of real estate, especially for the Olympics. We gave them the huge Washington Heights complex and facilities around the Diet building. Managing that transition through something called the Joint Committee which was set up between the embassy, the American forces of Japan and the Japanese. It was challenging.

Q: You were given the bits and pieces. Were you allowed to make contact with the Japanese Communists?

BREER: They were off limits. They came to protest so we saw them in the office but I don't

think anybody contacted them. Everybody was scared about John Emerson's experience.

Q: Could you explain what the John Emerson's experience was?

BREER: He was involved with Jack Sherbert and others in reporting on the Communists in China. After the war he came to Japan and evidently sought out the Communist leaders to track them down and report on what they were thinking and doing. McCarthy didn't like that. John was a super language officer and ended up as DCM in Tokyo which I think was basically his final posting.

Q: He wrote a book on the Japan threat.

BREER: Yes, an excellent book. If I remember correctly on the last page he sort of wonders why he was ever caught up in this suspicion. I can see why he was, but he shouldn't have been. He should have been totally exonerated. He never made ambassador because of that. He was a super DCM. I knew him better later after he retired.

Q: Did you find getting into Japanese training that you felt disconnected from the overall foreign service? (End of tape)

BREER: -outside of Japan and East Asia in general.

Q: How did one make contacts with the Japanese at this time?

BREER: You picked up the phone and asked to see them or invited them to lunch or dinner. Japan was then and I think still is one of the most accessible places going. People are busy, but if they have time they will see you. I still go there and see politicians, people I knew when I was there.

Q: In your early years when you were following the political side, were you able to get a feel about how the political system worked? Was it as difficult as it sometimes is portrayed?

BREER: Reischauer knew how things worked pretty well. We had a lot of tutors in those days in the embassy which is true today. During the course of language training we had lectures on the government and what was going on in Japan. I think by the time I got through with the language I had a fairly good sense of how things were.

Q: Japan in the international field. This wasn't your bailiwick at the time, but it always seemed to be holding back a bit compared with its potential.

BREER: Clearly then, in the '60s, it was just getting going and concentration was on catching up by searching the world for technology and buying it, importing it and using it. There was an enormous capital investment in building factories. They were still building steel mills. The auto industry in the '60s was just getting started. Their cars were not exportable then. We saw that kind of thing taking place and the '64 Olympics gave a huge boost to construction in Tokyo of expressways, boulevards, etc.

Q: What was the view of the major party, the LDP?

BREER: The principal focus of its foreign policy was relationship with the United States. The defense policy was the security system with the United States. It was totally steady in the support of U.S. forces in Japan. Even in the face of a lot of opposition to the use of facilities in Japan in support of Vietnam. We had field hospitals in down town Tokyo in the early '60s. We had a lot of troops evacuated from Vietnam that were in horrible shape. Burn cases were the worse thing. I remember taking a congressional delegation down to a hospital for Thanksgiving dinner in Yokohama one time and they were just stunned at the sight of the burn cases. Then the Japanese were too. The Japanese government, despite popular opposition to the war, student opposition to the government, pacifism as a result of the horrible experience of losing in World War II, was totally supportive of our needs in Japan during the Vietnam war.

Q: How was the Vietnam war viewed by your group, the Japan experts, at the time?

BREER: We all spoke in support of it. Although I had serious misgivings from the beginning I was a loyal government employee and defended our actions vigorously. At one time I took on a local newspaper with 600,000 circulation going to see the editor. I thought they were clearly writing biased stories on Vietnam.

Q: What about the Soviet connection, particularly when you are in Sapporo, the holding on of the northern territories?

BREER: The government was not the least bit attracted to the Soviets at that time. They wanted the northern territories (islands) back. It wasn't such a big issue when I was there. It became a more important issue when they started a movement to get the northern territories returned at a later date. The Russians opened a consulate general in Sapporo just as I arrived and we saw each other occasionally having dinner with each other. They had a huge operation compared with ours. We had consul, vice consul and secretary. They tried to make inroads in Hokkaido by recruiting friends and supporters. But the governor of Hokkaido was a staunch conservative LDP guy who was correct in his dealings with the Russians. He didn't have a lot of time for them.

Q: Was Hokkaido a different world than Honshu?

BREER: It was really countryside then with a population of 4 or 5 million people, which has declined since then. [There were] at least two American military installations.

The streets behind the consulate were paved in Sapporo. The governor had a nice house. Hokkaido was kind of an economic basket case and still is. Coal mining even in the '60s was petering out. I don't know that there were other minerals. It isn't a great agricultural area. They tried to grow rice there and it is the biggest rice producing prefecture in Japan but it is the biggest prefecture too. It is pretty far north for rice. They tried the dairy industry and they became very dependent on imported feed. There was some deal where they couldn't ship milk to Tokyo cheaply to protect the Honshu dairy industry. There was a steel mill and at one time a big word processor industry. I think Hokkaido's biggest industry now is tourism.

Q: During these times were you running into trade problems faced by American businessmen because of various regulations?

BREER: Well, I don't think we were so conscious of it in the '60s. There were people who were doing good business in Japan. My father's first cousin was working in California for a company that sold chain saws and they had good business in Hokkaido.

It really wasn't a big issue then. One of the principal businessmen in Sapporo had an office in Portland, Oregon. I'm not sure what he did but Portland was a sister city of Sapporo and there was a lot of enthusiasm for that. I think the biggest business in Hokkaido was government at that time.

Q: Was Okinawa an issue during this time? It was before the reversion business wasn't it?

BREER: Yes, but I wasn't too conscious of it. Pressures were beginning to build in Japan but I hadn't really worked on it. We had a reversion of another island group in the '60s, but I didn't work on that. The pressure began to build on Okinawa more or less after I was in Sapporo and one didn't feel it up there.

CLIFF FORSTER
Japan/Korea Desk, USIA
Washington, DC (1961-1964)

Field Program Officer, USIS
Tokyo (1964-1965)

Deputy Public Affairs Officer, USIS
Tokyo (1965-1970)

Cliff Forster was born in 1924. His career with USIA included assignments in Japan, Burma, Israel, and Washington, DC. He was interviewed by G. Lew Schmidt on May 29, 1990.

FORSTER: I was assigned in June to the Japan/Korea Desk with USIS just about the time Professor Reischauer was going out as our Ambassador to Japan, and Charles Fahs was being assigned as Public Affairs Officer. I was in that assignment from 1961 right up through the assassination (of President John F. Kennedy) in 1963. I recall that we were both in Washington at that tragic time.

Q: Yes, I was in Washington at that time.

FORSTER: I felt I was very fortunate coming in on my first Washington assignment during those years. Those were great years, I thought, for USIA. I know how close you were to the late

Ed Murrow, and I always had had a great admiration for him. Then suddenly, to have him as our director of USIA, I was just thrilled about this. There was an excitement about work at the Agency then, a real sense of purpose, with President Kennedy and Mr. Murrow's strong interest in Japan and the assignment of the Japan specialist, Edwin Reischauer, as Ambassador to Japan and a PAO like Fahs, who knew Japan. There was to be a whole new relationship, which certainly pleased the Japanese following the tense period of the Security Treaty riots. I must say, I take great pride in having been in on the beginning with Ken Bunce, who was our area director, as you know. He certainly knew Japan well, and you were there running the administrative side of the Agency with your long Japan experience. So we just had, I felt, a ready-made situation for improving our relations in spades.

Q: I think we did. I think probably Ed Murrow's incumbency as the Director was the highlight of the USIA Agency.

FORSTER: I certainly think so.

Q: At the moment, I'm about halfway through reading Joe Persico's book. Have you yet read that?

FORSTER: I want to get hold of it. I read some very good reviews.

Q: I also read the first book on Murrow by (A.M.) Sperber, which is not as bad a book as some people say. But Persico's is a much better one.

FORSTER: Was Persico a former USIS officer?

Q: Persico was, yes. Sperber, the woman who wrote the first book, obviously didn't have the insight into Murrow and his personality, and she didn't have access to nearly as many people who knew Ed intimately. She spent ten years researching it, but she didn't deal with many of the people whom Persico got to. The difference is between night and day. The Persico book is so much better than this Sperber book. You really feel that you know Murrow when you get through with that book. I can't say more. It's an excellent book. It didn't get the publicity nor the acceptance of the Sperber book because the Sperber one beat Persico's by two and a half years. But it's a tremendous book, and it ought to be read by anyone who wants to know anything about Murrow.

FORSTER: I certainly want to get hold of it because I've heard such fine things about it.

They were, indeed, great years. Of course, it ended so abruptly there for all of us with the assassination. I might mention one story about USIA during those last days with President Kennedy. We were hosting the U.S.-Japan Cultural Conference in Washington just a few weeks before the assassination. It was in October, I believe, and Mr. Murrow was to have been one of the American delegates to that conference when he had to go in for surgery for the cancer ailment. He was so interested in the conference because Mr. Maeda, President of NHK, was to have been his Japanese counterpart, and they were scheduled to discuss the subject of educational TV exchange.

I was summoned one morning by Don Wilson, the Deputy USIA Director, and informed that Murrow wanted me to go up to see Frank Stanton, President of CBS, to invite him on his behalf to take over as his substitute. Of course, Stanton, because of his admiration for and long association with Murrow, consented right away. That cultural conference turned out to be a very productive one and led to the establishment of a very active TV exchange program between NHK and our public television stations. It was a real breakthrough, and Murrow pulled it off with the help of Frank Stanton. The direct result was the improvement of American TV programs viewed by Japanese audiences and an introduction to American audiences of Japanese educational films.

Q: What year was that?

FORSTER: That was October, 1963 -- just before the assassination in November of '63.

Q: We lost the President from the nation, and we lost Murrow from USIA

FORSTER: It was a double blow, which I shall certainly never forget. One other event at the time involved the White House, and since it was rather historical and so little is known about it, I should like to mention it here. We were told by NASA that they were going to be putting up this relay satellite -- I think it was Relay 2 -- that would be going in the direction of Japan on a westerly course. The plan was to launch it from the Mojave Desert. We suddenly had the idea that it would be great if we could get President Kennedy to address the people of Japan as the satellite moved over Japan for the first time and then to have a special program, arranged by USIS with three national networks, to follow in behind the President's message. The White House bought the idea right away.

I remember the President was in New York giving a speech at the Waldorf Astoria, and Don Wilson told me to call Pierre Salinger to give it the go-ahead. We immediately prepared the message for the President, which we delivered to him the following week at the White House. Actually, he had prepared his own very personal message and really didn't need our draft. It was a beautiful message to the people of Japan written in a warm, informal style.

What happened subsequently was that the relay satellite went up within minutes, as I recall, after the President had been shot. There were then some anxious moments with someone at COMSAT who was involved with the satellite launch that day. Whoever it was, there was this bureaucratic response of, "Well, we're not going to be able to use that footage because the President has just been shot."

I was infuriated about this and went charging in to see Ken Bunce, and I said, "Look, Ken, they can't do this. This is the President's message to the Japanese people when he was still very much alive. He's still alive according to news reports. We can't assume that this is the end until there is confirmation." Ken was in touch right away with Don Wilson, and in very short order, we were able to get it back on the relay to Japan.

Q: Who read the speech?

FORSTER: The President did. The President had prepared the speech prior to the launching of the relay.

Q: Did Johnson read the speech that Kennedy had written?

FORSTER: No, no -- because Kennedy had been on camera at the White House the previous week, and it was ready to go before the assassination. Then whether it was NASA or COMSAT, I don't exactly remember, but the response was, "We're not going to be able to use that. The President has just been shot." We argued very strongly that it should be used, and it was used.

The impact of that speech, followed by the NHK use of live coverage on the relay satellite of the assassination and that terrible weekend in Washington, was very great in Japan and reached viewers just as they were getting up that morning. When the relay satellite first came over, the Japanese were getting the President live and listening to his message to them. By the time the relay was around again, they were getting the reports of his death. The NHK correspondent in Washington called us early in the morning to see if it would be possible to use the satellite just to send all the weekend coverage. To this day, when you talk to our Japanese friends like Sen Nishiyama and others, they describe the tremendous impact of that event, which has never been forgotten by those who viewed it at the time.

Q: I think we might say for the record here that Sen Nishiyama, although he started out his career with USIS and worked there for years, subsequently became the Special Assistant to the President and founder of Sony and became almost a worldwide figure. Also, he was the one who was so prominent in Japan because he had been an American-born nisei, and he had been an electrical engineering graduate from University of Utah. When the walk on the moon took place, NHK got him on the TV, and for that whole week of the moon walk, he handled the transmission -- the announcing and analysis of that whole program. In the process, he became a national figure in Japan. He's not just some person who is an unknown individual.

FORSTER: Yes, I'm glad you entered that background on Sen because he has been so important to the USIS efforts through the years -- not only USIS, but to the whole U.S.-Japan relationship.

It was shortly after the assassination in early 1964 that I was reassigned to Japan. Reischauer was still the Ambassador. Charles Fahs was the PAO. Walter Nichols was the Cultural Affairs Officer. Charles Fahs' Deputy was Ed Nickel, and I was assigned as field supervisor for the USIS centers throughout Japan. Having come up through the centers, I guess they felt maybe I could make some kind of contribution. Again, as a continuation of that whole period -- the Kennedy period -- there was the legacy of that -- the relationship with Japan -- and I returned at a time when the relationship was very good. It was a marvelous time to go back in and to work not only in cultural exchange, but on the information side, as well.

So I did spend the next few years in Japan, first as field supervisor and then subsequently as deputy to Ed Nickel when he became PAO. Ed was transferred to the JUSPAO operation after the Tet Offensive in Vietnam, and Ned Roberts came in as PAO. I was with Ned as his deputy for the next several months before being reassigned to Washington to enter the Senior Seminar

Program of the State Department from 1970 to 1971.

Those years in Japan were never dull in terms of U.S.-Japan relations, and we returned to Tokyo just at the time of the Olympics. The Japanese were becoming more international in their approach. You could see how the Olympics changed the Japanese almost overnight. So many of them were so anxious to have the world come to Japan, to Tokyo. They took great pride in this. As you know, they put in new subway systems, the monorail, the fast-speed *Shinkansen* trains and countless new hotels, which we thought would never fill up. Of course, they're all filled today, one hotel after another. Tokyo was a mess! I'm sure you remember it. It was being torn up and rebuilt for the Olympics, and we thought to ourselves, "How will the Olympics ever start on time? This city is such a mess." But by golly, that opening day, everything was set to go. I've always been impressed by how they got it all together in time.

Q: I didn't see Tokyo at that time because from the time I left in the spring of 1956 until I came back on a visit in 1967, I had never been in Japan again. I was gone for eleven years. I came back after the Olympics, and I think it was the Olympics that really brought Japan into the modern world.

FORSTER: It really did. We left six years later -- we were there for two three-year tours -- from the time of the Olympics to the World Expo in Osaka in 1970. By that time, things had really changed. Talking about Japan into the modern world, the Olympics in 1964 were the Olympics that they were planning to host before the war to follow the Olympics in Germany in 1936, weren't they?

Q: Yes, they were supposed to have had the Olympics in 1940. Incidentally, I landed in Japan with the Japan-America Student Conference on July 14, 1938, the day that Japan announced they were withdrawing as the host of the 1940 Olympic games.

FORSTER: Interesting.

Q: All the press swarmed aboard the ship as we came into Yokohama Harbor. The first question that was asked to me by a correspondent, who happened to be Brad Coolidge, by the way, working for the Japan Advertiser: "What have you got to say about Japan's cancellation of the Olympics?"

We hadn't even heard about it. We'd been on the ship for thirteen days. I remember what excitement that caused when they announced they would not handle the Olympics in '40.

FORSTER: So finally, they were getting them back in 1964. Then, of course, the Expo in 1970 -- and to be there at the time of the Expo in Osaka was just amazing. You were having so many of the folks from the prefectures -- farmers, housewives, students -- all coming in and carrying these little passports to go from one foreign pavilion to another. Now today, of course, they're all over, aren't they? But that was bringing the world to Japan in 1970. Then things really started opening up. I'd say the Olympics in Tokyo and the Expo in Osaka -- the impact of those two events was very great. Japan was now going the international route in a big way for the first time since Meiji, wouldn't you say?

Q: Yes.

FORSTER: So I think whenever you stop to reflect about this, Japan has not been all that international until just these recent years.

Q: And they still have a long way to go. They really haven't fully, I think, understood what role they have to play in the modern world.

FORSTER: That's very true. And there again is where USIA, I believe, has been trying to assist in shaping that role through international exchanges and communication, but it's been tough going at times.

Q: It's a tough row now because the Japanese are so bitter against the United States. We haven't handled it very well. Mutual recrimination is very ----

FORSTER: -- does not help, no. The bashing that we now have -- and I'll get into that, I guess, when I get back to the period with Ambassador Mansfield, because he was trying to handle that and doing it so well, but the odds were very great against him at that point.

WILLIAM LENDERKING
Japanese Language Training
Tokyo (1961-1963)

Director, American Center
Sapporo (1963-1966)

Chief of Protocol, American Pavilion, Expo '70
Osaka (1970)

Desk Officer for Japan, Korea and Micronesia, USIA
Washington, DC (1970-1972)

A native of New York, Mr. Lenderking graduated from Dartmouth College and served a tour with the US Navy in the Far East before joining the Foreign Service of the US Information Agency in 1959. As Public Affairs, Press and Information Officer, he served in posts throughout the world and in Washington, D.C., where held senior level positions in USIA and the Department of State dealing with Policy, Plans and Research. Mr. Lenderking was interviewed by Charles Stuart Kennedy in 2007.

LENDERKING: My initial idea was that I had never seen much of Latin America so I asked for a Latin American tour and fulfilled that desire by going to Havana and Bolivia. But my heart was in Asia, as a result of my Navy experiences. Deep down I also wanted to see Western Europe but

I felt embarrassed to ask for Europe because that's where many people wanted to go for obvious reasons, but I thought the real Foreign Service was in the more exotic countries where we were facing fresh challenges and greater danger. So I applied for Chinese language training, but there were already more Chinese speakers than could be accommodated because we had no relations with the mainland and Chinese speakers would go to Singapore or Hong Kong or some place like that to deal with the Chinese community. These were not exactly mainstream jobs and there seemed to be more satisfying opportunities than to go to these cities, deal with the Chinese community and wait for relations to be established with Communist China. In those days that seemed a long way off, and in fact it didn't occur for another 20 years or so. So USIA said okay, we're going to send you to Japan.

Q: Okay, you took Japanese language training; what was the course, from when to when and where?

LENDERKING: Oh, I should also mention I was first assigned to Kwangju, Korea. I had never heard of Kwangju. By then we had two small children and it just sounded like the back of beyond and I felt that I really didn't want to be in such an isolated place with two small children, especially since I didn't know the language. I wanted to be in a big city, the capital. Someone in personnel finally said I shouldn't be given an assignment in an isolated backwater like Kwangju, but as a young officer I should have a broader experience and the benefit of exposure to senior colleagues. So they came up with Japanese language training, where there were openings, and that fortuitous decision changed my life in a big way.

Q: Where did you start your language training?

LENDERKING: Unlike now, where students have the first year of two years at FSI (Foreign Service Institute) and then go to Yokohama, in those days we had a leased house, a lovely private home with a Japanese garden right in the center of Tokyo. It was an oasis of quiet, but very near the bustling area of Shibuya. There were about 12 students and an equal number of Japanese language teachers and an American director. We spent our days learning Japanese and immersing ourselves in Japanese culture and everyday life. The Japanese language is very difficult, and some experts consider it the most difficult language in the world for a native speaker of English.

Q: How did you find it?

LENDERKING: The experts were right, but it was a fascinating experience. It's tough to do something badly for two years. Not good for one's confidence. But at the end, we could speak Japanese pretty well, and my assignment to Sapporo, a vibrant city of over one million where there were few Americans, for the next three years helped enormously. At the end of that five year immersion I was confident of my Japanese in almost any situation or context. I could read a newspaper, at least the political and economic articles, with some ease and confidence, and many days I spoke more Japanese than English.

There is an old story about the early Christian missionaries, who thought Japanese was a language invented by the devil to prevent the Christianization of Japan. Because it is difficult,

being at the language school was not totally satisfying. The quality of instruction and the small class size were excellent. But we were isolated in a close-in Japanese suburb, cut off from meaningful work and daily contact with our embassy colleagues who were dealing with Japan, and it was frustrating too. If you're struggling every day with the complex grammar, and nuances, and learning all the Chinese characters, and feel you're doing it badly, you don't have much job satisfaction, which is contrary to the mindset of most FSOs, who are generally a self-confident bunch. And so to deal with that -- we had six class hours a day and then homework at night -- I took up tennis. I joined the Tokyo Lawn Tennis Club where the Crown Prince (now Emperor) and Princess Michiko played, and a lot of the Japanese elite played there as well. Every day after school we would be on the court at 3:30 and I got a pretty good tennis game out of that. And I eventually learned a lot of Japanese.

Q: Looking back on it, how did you feel the training went?

LENDERKING: I thought it was superb. Of course we all grouched about it but it was superb. We also had some special programs. At least twice a year we were given \$100 or \$200 or something, which was a lot of money in those days, to go off for a week, on our own, unaccompanied by anyone, no translators, family, or anyone like that, and you could go anywhere you wanted and just go out and mingle with the natives, so to speak. And that was very good. The teachers were excellent -- they were wise and generally patient, and understood enough English so that they knew why we were having such a hard time putting our thoughts into good Japanese. Some of the teachers ended up marrying the students but that is not why they were good; it was basically one-on-one teaching or maybe one teacher to two or three students or maybe three. A class with three students in it was considered almost unwieldy. You really got face-to-face instruction, intensive teaching and at the end of the day you were tired. But there was a special course where we would have an hour or two hours a week with reading newspapers and so we learned all the newspaper terms with a specialist. There were other special programs that were good. All of the students were keenly interested in learning the language and absorbing Japanese culture and history and there was a strong sense of competition. The FSI texts and special materials were also first rate.

Q: Well, can you think of any of the people who were in the course with you?

LENDERKING: Sure. Bill Clark and I entered about the same time and had about the same learning aptitude, and he later became ambassador to India and had other senior positions. Mark Peattie and Tom Rimer were close USIA colleagues. Both of them had a special interest in Japan and after serving with distinction in Kyoto and Kobe/Osaka, respectively, both resigned from the foreign service and went back to get their PhDs in Japanese studies, Mark in military history and Tom in literature and culture. After that, both had long and distinguished careers as university professors. Most of my fellow students went on to reach senior levels of the Foreign Service, and several became ambassadors.

Q: Bill Clark -- he was political counselor in Seoul when I was consul general.

LENDERKING: Really? Bill and I had a lot of class time together. Later he was consul general in Sapporo when I was the center director there. And, Bill Breer was another- he came after me

but had already learned a lot of Japanese on his own. He and his wife Peggy spent most of their career in Japan, and Bill ended up as DCM. Dave Hitchcock was another. Tom Shoemith, who just passed away (2007), later became ambassador to Malaysia. .

Q: Now, this was a two year course. How did the second year go?

LENDERKING: By the second year we had learned a lot and we were also dismayed to see how much we still had to go. By then we had probably learned maybe 1,000 characters and we could read a fair bit of the newspaper and we were in advanced Japanese but we realized how complicated it was. Almost every utterance you can think of is said differently than you would say it in English – word order, grammar, levels of politeness, and so on. So we were functional but I don't think any of us felt we really had reached the level of educated professional fluency.

Q: After the second year – 1963? -- what did they do with you?

LENDERKING: I was assigned to Sapporo, which is on Hokkaido in the north, with a population of over one million. It was and is probably the most congenial large city in all of Japan.

Q: Why?

LENDERKING: Because it was settled rather late and with American influence. It was considered Japan's frontier and was less traditional. People were more open, and more inclined to make friends with foreigners. I was there for three years and I had a near-total immersion because there were very few Americans there. There were some missionaries and there was a small army base about 50 miles outside of the city at the airport, but I was speaking Japanese all day, every day, and in the evenings, too. We ran programs, lectures and discussion groups mostly on foreign policy issues, and that was a great way to learn about what Japanese thought and to improve my Japanese. I got so I could get on my feet and give an impromptu greeting, presentation, or short remarks without nervousness and with very few mistakes. So I gradually regained my confidence.

Q: How about your kids? Did they start picking up a lot of Japanese?

LENDERKING: Oh, yes. The kids were marvelous. We sent them to Japanese yochi-ens, nursery schools, and they had some adjustment problems; the kids were not used to the Japanese system. They would get up and walk around and they didn't see why had to sit in a group on the floor like the Japanese children, or couldn't go out and play or do whatever they liked, and the teachers were sometimes vexed by their non-conforming and individualistic ways. It was a classic difference – the Japanese children, obedient and group-oriented; my children, independent and curious. But they picked up Japanese very quickly. Unfortunately, when they left Japan they also forgot it quickly. But like most people around the world, the Japanese are great with kids. My second and third sons had flaming red hair and they were real oddities to the Japanese children. We would go to the zoo or some public place and people would stop looking at the animals and flock around them and touch their hair. They were just little fellows and it got too much at times and I would have to shoo the Japanese kids away, but they didn't mean any

harm; they were just curious.

Q: You were running the American Center?

LENDERKING: Yes. We had centers in six main Japanese cities, established in the post World War II period during the U.S. military occupation. They were accepted as important parts of the community and the Japanese flocked to the libraries and our programs. In Sapporo, we also had a small consulate with three American officers, and we worked very well together and became close friends. What was special about that assignment I think -- I was then all of 29 years old -- is that the Japanese were so welcoming and treated us well above our station. By that I mean the Governor, who was a nationally prominent figure and one of the most impressive men I've ever met, would occasionally invite us to play a round of golf with him; we had the President of Hokkaido University and his wife at our house for dinner a number of times, and so on. The Japanese regarded this as a very important assignment, and sometimes asked why it had gone to such a young officer. In their eyes it was unusual, and they interpreted this, incorrectly, as signifying that I had some special talent or abilities. They seemed to think "Why did this young guy get such an important assignment, he's still a kid." My predecessor was in his mid-40s.

Well, after a while, we knew many of the top people in town, in government, the media, the universities, the political parties, cultural life, and even to some extent the pro-Marxist labor unions. All of us spoke Japanese well and we all had good personal friends among the Japanese. My wife learned enough Japanese -- she wasn't an official student at the language school, but took advantage of the self-study opportunities -- and developed friends and contacts on her own. In a situation like that we all felt we were really representing America in a direct and personal way.

Q: Who was your predecessor?

LENDERKING: John McDonald. He was very popular because he spoke very good Japanese, had a Japanese wife and also was an excellent golfer, the sport of choice for the power elite of any Japanese city. So most of the top people and the ordinary folks of Hokkaido were very friendly and made us feel welcome. Even if we were meeting people who didn't like us, such as some of the labor union folks who organized anti-U.S. demonstrations over Vietnam and things like that, they would be cordial when we met and sat down, and then they would light into us. Our Japanese was good enough so we could often hold our own, although I don't think we convinced anyone of the rightness of our policies. Even some of the Marxist university professors who didn't like the United States at all were personally cordial and we often asked them to participate in our programs, making sure they had a chance to speak. That willingness to listen was an important factor, although I sometimes regretted it because Japanese responses during a discussion tended to become monologues or almost speeches, and so we would sometimes have to impose a time limit.

When I first arrived, I had an informal meeting with a small group of Japanese professors who were experts on American literature. Since I had majored in English and American literature, they asked me on the spot to speak on trends in contemporary American literature. I gulped -- they were far more learned than I on the subject, and in recent years I had done more reading on

foreign policy than on modern American literature. Since they all spoke excellent English I at least could stumble better in my own language than Japanese, and had the good sense to make my remarks short. .

Q: What was the center's focus?

LENDERKING: Basically, the center was trying to establish a stronger dialogue with opinion leaders of all kinds. More specifically, we were trying to make intellectual and political inroads into the very strongly entrenched Marxist ideology that reigned virtually unchallenged in the universities and in Japanese intellectual and cultural life. It was kind of an established orthodoxy, especially in the history, economics, and political science faculties. Now, for historical reasons and most recently World War II, the Japanese had no particular reason to feel any affinity at all for the Soviet Union, but because the leftists embraced Marxism and rejected capitalism, they naturally gravitated to the Soviet Union. So we would often hear senior Japanese leftist politicians, scholars, and intellectuals speak about the Soviet Union as the "peace force," with the United States of course labeled the "war force." Communism, or radical socialism was the wave of the future; capitalism a remnant of a retrograde past.

The practical impact of all this was that the professors were mostly pro-Soviet and influenced their students in that direction. So we were trying to challenge them enough with facts and scholarship so they would ease away from the rigid ideology that was being transmitted from one generation to the next by the feudalistic university system that still prevailed. The president of the Hokkaido University was sympathetic to this effort but had to be careful because the faculty and labor unions wielded a lot of influence. So that was one thing we worked on.

The President of the Teachers College was personally cordial but a flat-out pro-Soviet Marxist and made no secret of it. The Governor detested him and said if he could have his way, he'd throw him in jail.

We also had a fair number of cultural events. We had a nice library that was used all the time. We had a very active speaker program. We taught English. And there was a lot of scope for me as a young guy bursting with ideas, to try out some of these ideas. And some of the Japanese staff would say hey, you know, you aren't going to change this society overnight, just take it easy. And they would rein me back in. And they were so good, supportive but wise about our American ways and where they might rub Japanese the wrong way. We were blessed to have people like that who wanted to work for us.

Q: I would have thought there would be a lot of resentment over the Soviets hanging on to, what is it, the Ryukyus?

LENDERKING: The Ryukyus are where Okinawa is, to the south. You're probably referring to the Kuriles.

Q: Yes, the islands to the north. I mean, because this has always been the great blessing of our policy with Japan over the last 16 years; the Soviets had hung on to those islands to no great benefit...

LENDERKING: That's true. There was some political resentment of the Soviets on this issue, but it didn't have much popular resonance for some reason. I think the Japanese were still in their post-World War II mode of semi-shock. They hadn't quite regained their feet and their full confidence, although the country was prospering and coming on fast. The 1964 Olympics marked Japan's coming of age as a confident regional power with a world class economy, but until that time they preferred a low profile. Still do, as a matter of fact, so they don't wield the influence on the world stage commensurate with their importance. Anyway, even though the Japanese had legitimate grievances over the Soviets' continued possession of the Kuriles, Marxist ideology among the interi, or intellectuals, was a much bigger issue. As pro-Marxists, they condemned Japan's wartime excesses anyway, so many of them thought Japan had brought its troubles with the Soviets on itself.

Q: The issue has always made it a lot easier for the Japanese to dislike them and like us.

LENDERKING: Well, that's a good point. The business sector was not at all sympathetic to Marxism and the top businessmen were friendly to us. And the business sector really is what controlled Japanese politics, certainly in Hokkaido. The governor was a conservative in the Liberal Democratic Party and a very powerful man.

Q: Did you spend much time trying to show what we were doing in race relations and all, because this is a time of civil rights?

LENDERKING: We did. We had a very fine movie that USIA produced, you've probably seen it, which we showed all over Hokkaido at the universities and elsewhere. It was about Martin Luther King and the March on Washington and it was very moving and quite popular. We must have shown that to hundreds of thousands of people and we did have occasional discussions about that in some of our programs. We had a small program of inviting outstanding students to visit the U.S. for a few weeks and they invariably wanted to visit Harlem or have some insight into race relations. So we did address that problem.

Q: Were we trying to do anything about the gender issue with women? Or was it that this was a Japanese situation and we were not trying to proselytize or anything like that?

LENDERKING: We took that up too. We were very lucky in having an advisor for women's affairs who was recruited outside of the Foreign Service, Dorothy Robins-Mowry. She had been very active in women's affairs in the U.S. and although she didn't speak Japanese she knew her subject and was very empathetic. She sought out non-traditional women with leadership potential who wanted to break out of their traditional roles and restraints, and she established rapport with women community leaders all over Japan. We invited her to Sapporo as a speaker and conference participant several times, and she had some fascinating meetings with Japanese women, activists, who were trying to push against the system. We weren't trying to overthrow the Japanese system but we were trying to just give them some ideas to think about and suggest things they might do to bring about change within their own system, and in accordance with their own social mores and cultural values. This is a problem the Japanese are still struggling with. Japan is a truly impressive country but still this problem is not solved, and young women today

as a group are massively dissatisfied.

Q: How was the Japanese economic miracle at that point?

LENDERKING: 1964 was the dividing point. The 1964 Olympics took place in Tokyo and there was a frantic effort to modernize parts of Tokyo. They built the facilities, widened the highways, improved their transportation system, and did all kinds of things. And that was a psychological dividing line because the Olympics were a tremendous success. They really marked the end of the dowdy, post-war era when Japan, it seemed, would never, ever get out of the World War II doldrums and frame of mind, reform their society and energize the sluggish economy. But after that Japan took off, and that's when the Japanese miracle really started. Our ambassador there was Edwin Reischauer, who of course was very familiar with the Japanese situation and was listened to very seriously. He was in some ways a cheerleader for the Japanese, encouraging them to open new ways of thinking and doing, and when he criticized, which he occasionally did, they would really listen to him.

Of course, I'm not suggesting that Japan reformed its society because of a few Americans, even of the stature of Ambassador Reischauer. They did it on their own, but America was a key factor, because the Japanese were watching us all the time, sometimes adapting our innovations and improving of them, sometimes learning from our mistakes, sometimes reinterpreting their own values in the light of the demands of the modern world. The Japanese are constantly innovating, testing, building, and at the same time remain a quite conservative and traditionalist society. The push-pull of these conflicting aspects was always fascinating and we could talk with the Japanese openly about such things. To have lived in Japan without speaking Japanese would have reduced the richness of our experiences by 90 percent.

Q: Was there much travel to the United States at this point?

LENDERKING: More and more. It was growing. There was tremendous prosperity in Japan but generally people were still looking inward but more and more people were traveling to the United States. Young couples would go on their honeymoons to Guam or Honolulu and wealthy businessmen traveled back and forth all the time. Tourism was just starting to take off.

Q: In Sapporo, and the rest of Hokkaido, did you get into the hinterlands much?

LENDERKING: Sure. Yes, Hokkaido has a lot of beautiful scenery, sort of like New England. Not as spectacular as New England but with lovely fall foliage, some accessible mountains to climb and hike in, great skiing places, hot springs all over the place, that sort of thing. Yes, we traveled a fair bit. And Hokkaido is much more rural than the rest of Japan.

Q: Were there any Koreans there?

LENDERKING: Sure. There is a large Korean population, millions of people, not so much in Hokkaido but in the rest of Japan. There were two very large organizations, one was pro-North Korean, one was South Korean, which had a great influence, especially in the labor unions. Oddly enough, the pro-North Korean group was larger and had more influence. The Japanese

were very concerned about North Korean influence and in fact still are because the North Korean group is close to the DPRK politically and there is still a very uneasy, hostile relationship between Japan and North Korea, the DPRK. There is a huge Korean minority in Japan, and many mixed marriages. Prejudice against Koreans is still alive, and is one of the few ugly aspects of modern Japan.

Q: Well, it is about the only minority they had, really.

LENDERKING: Yes.

Q: You were there from when to when?

LENDERKING: From 1961 to 1966; five years in a row.

Q: Five years. So Vietnam really did not raise its head.

LENDERKING: At the end, it did. The demonstrations against our actions in Vietnam started, and the criticisms didn't come just from the radicals on the left. Most of the intellectuals and ordinary folks were strongly opposed. And we started to be very active on this issue, because we were getting hammered every day. We were stressing that this was not just a homegrown insurgency in Vietnam, but fomented by outside forces in violation of the treaty that established separate Vietnams, north and south. We brought in outside experts as speakers, and by this time my Japanese was quite good and I really enjoyed going up against someone on the other side who was spouting rigid ideological stuff. Of course, I was doing my duty but I enjoyed it because so many of the critics, especially among the intellectuals, were so arrogant and smug.

Q: You were saying the Marxists were quite rigid...

LENDERKING: Yes. There were not, as I recall, a lot of really thoughtful critics; they were basically ideological critics and it was hard to get through to them. I guess as a personal note I enjoyed the back and forth; it was fun but also I thought I was making good points against some of this rigid thinking. And oddly enough, I am skipping ahead, my next assignment was Vietnam. And when I got to Vietnam I didn't agree with the doctrinaire socialists but I certainly became a very harsh critic of our own policy and actions once I saw it upfront with my own eyes.

Q: Okay. Well, is there anything else -- for example, how did the Japanese fare in language learning? Were they able to pick it up? They all seem to have a problem with learning English, as we have had a problem learning Japanese.

LENDERKING: That's right. They had trouble and they still do have trouble learning English and other foreign languages. English used to be mandatory in the schools, and may still be, but the emphasis was on reading, especially technical and scientific texts. So English was not taught properly, as a way to understand a complex foreign culture, but as a means to making someone a better engineer, or something like that. That approach reveals a weakness in Japanese attitudes, what some people call their superiority/inferiority complex. As an island nation, they are very self-centered, like the British in a way, but more so. And we, as a continental country aren't so

hot at learning foreign languages and relating to other cultures ourselves. In Japan, students are taught English to read but not to speak properly. I think the Koreans have much better knowledge of spoken English than the Japanese. They learned it when the missionaries came in the late 19th century, and unlike the Japanese they welcomed the missionaries, mainly because they needed outside help to keep their bigger and stronger neighbors -- Japan, China, and Russia -- from swallowing them up.

I would like to mention one program that I did in cooperation with some others that I thought was particularly good. We got a leading professor of modernization from Princeton, Cyril Black, to come out to Japan for about a month and he spent time in Sapporo, Kobe-Osaka and Kyoto, and I worked hard on this for a long time but we arranged for him to give, for the first time ever at Hokkaido University, which was the leading university in Hokkaido and one of the best in Japan, a formal course with senior students and graduate students. I can't remember whether they allowed a certain amount of credit for it but it was a formal course and we provided the interpreter and Cyril Black was a marvelous professor, a marvelous lecturer, and he taught it just the way he would teach a course at Princeton. And this was a revelation because the methodology was different from anything the Japanese students were used to. After initial reluctance on the part of the students, who were accustomed to listening quietly at a formal lecture and accepting the professor's words as gospel truth, Black got the students to participate and present diverse opinions -- it was not just a rote lecture. He gave an exam and graded the papers himself, with the help of an interpreter. Afterwards, he told me the exams were weak and well short of U.S. standards. Most of the responses were just regurgitation and showed little evidence of independent thinking. So Black lightened up on the grading standards. But it was a new experience for the students and something of a revelation. I thought it was very exciting. And the professor who was the head of the political science department at Hokkaido University, whose cooperation was essential for this project, was initially very skeptical but he and Black got along very well and cooperated. So this turned out to be a marvelous example of what could happen when you do something right. That experience reverberated years and years afterwards. The professor became a good contact at the center where before he never had anything to do with us. And Cyril Black, Professor Black, who died a few years ago, had the same experience in Kyoto and Kobe-Osaka. It was really worthwhile.

Q: Okay. After Sapporo we're in 1966, and going to -- where?

LENDERKING: I did a year in Vietnamese language training. So I picked up another foreign language.

LENDERKING: I went back home and did a quick refresher in Japanese and was assigned as the chief of protocol at the American pavilion at Expo '70 in Osaka, Japan. That EXPO, or World's Fair, was the biggest ever, and certainly one of the best. It was a huge success, and the Japanese went to extraordinary lengths to make it so. Also, it was the last Worlds Fair the U.S. participated in where we went all out to have a really first class pavilion, and put our best foot forward. And we did, and we had a huge impact, but unfortunately most of the world thought that Worlds Fairs had become redundant in the age of instant communications and they were

probably right. But we had a marvelous pavilion, with huge crowds waiting patiently in the broiling summer sun to get in. Our pavilion was the biggest hit of the EXPO. As for me, I had gone from counterinsurgency in Vietnam to chief of protocol at the biggest Worlds Fair ever in the space of about three months. You can't beat that for variety.

Q: What was the period you were there?

LENDERKING: The EXPO, by international agreement, lasted five months, mid-April to mid-September. So I finished my Japanese refresher and went out to help with the setup and preparation of the pavilion in February and March of '70, and the opening was in April. And in the five months, if memory serves, something like 18 million people visited EXPO, and about 7 million came to our pavilion. We were of course hugely gratified, but we had terrible problems with crowd control and related problems.

Q: Describe what EXPO was about and what was shown and particularly what we were doing.

LENDERKING: As I said, this was maybe the last truly great truly World's Fair, or world exposition, the purpose of which was to present ideas and information to the world's people and governments that would spur innovation and progress. In earlier years, particularly around the late 19th century, these fairs had a tremendous impact because they would showcase innovations in technology, science, and culture and the arts. For EXPO 70, we had a commissioner general, Howard Chernoff, who was very effective in raising money, especially in fashioning a skillful pitch to Congress to fund the basic appropriation, and then visiting major corporate donors to get them to shell out big time. He did, and they did. We also had a very able and experienced professional staff, plus some gifted Japanese staffers. As Chernoff liked to say, "We're going in there with our first team," so we all felt we were part of something special.

Howard Chernoff was a genius at fund raising. At the time, he'd been a special high level advisor to the Director of USIA Leonard Marks, but he came from an extensive media background in the private sector and seemed to know everyone of influence on the face of the earth. So he raised a heap of money from corporate contributors and other people to supplement our congressional appropriation, which as I recall was about \$13 million total, and we put on a really first rate pavilion. He'd go to a potential contributor, demand to see the top decision makers in the corporation, promised to take no more than 15 minutes of their time unless they wanted to ask him questions, and tell them what was going to be in the pavilion, how it would be totally first rate and genuine, only genuine artifacts used, and so on, and how their message could be showcased. And he'd also tell them they couldn't plaster commercial messages all over the place, but spell out exactly what we would do for them, which was considerable, while still preserving the integrity of the operation and avoiding crass commercialism.

That was the era of the moon walk, and somehow Howard wangled actual moon rock samples from NASA and most days it seemed like the whole world wanted to get inside to have a look at them. We also had the actual capsules used to transport the astronauts. No models or reproductions were allowed, and even the marks from reentry were clearly visible. Everything in the pavilion was an original. Sometimes the lines were so long, the people waiting to get in would have to stand outside as long as five hours in the hot sun. Many of the people who came to

EXPO were Japanese from the country and had never seen anything like that, especially something as exotic as the moon rocks. So they would wait patiently, and never complain. Since we were there to present an image of America, making them wait became a big headache for us. So we built awnings to provide shade, and got the great golfer Billy Casper to come and give shotmaking exhibitions several times a day. We built a small platform for him and he would chip golf balls into the crowd, and they would catch them in their hats, and loved it. Japanese love golf more than any other sport and they all knew who Billy Casper was, so it was a big success. This was Howard Chernoff's idea, and he made it happen through his connections. It was an eye opener for me and my Foreign Service colleagues on the staff. We operated by the book, and the freewheeling way of doing things in the corporate world – you scratch my back and I'll scratch yours – was rather new to most of us.

Another problem was also caused by our popularity. Of course we had a VIP entrance for special guests, and a range of favors depending on who they were, and I was in charge of all that. A lot of people tried to present themselves as VIPs (very important persons), who really were not. I dealt with arrangements for visitors ranking from emperors to kings, queens, political leaders, congressmen, senators, actors and actresses, corporate leaders, and other celebrities from around the world. They all felt they deserved special treatment and most of them did. I have to say most of them were very gracious and it was fun meeting them.

Q: Okay. Let's take a king or a queen or something; what would you do?

LENDERKING: We had to set up procedures from scratch, but we worked carefully with other pavilions and with the Japanese overseers of EXPO to handle VIP visitors on a reciprocal basis. Our problem was that we were so popular we were usually overwhelmed, every day. We had to learn to say no gracefully, or make alternative VIP arrangements. Sometimes there was a dispute over what kind of treatment we would give them. But if they were a king or a queen or someone of that rank we would treat them well. Most just wanted immediate access to the pavilion and a personable and knowledgeable guide to take them around, and we had some magnificent American university students who spoke Japanese to do that. Sometimes we'd offer them a drink in our lounge, or even a reception or luncheon or dinner in our small VIP restaurant, which was catered by Pan Am, still one of the world's top airlines at the time. Our pavilion was visually exciting and stimulating, and it would take maybe 45 minutes or an hour to go through it. Our lounge and restaurant weren't open to the public, but we had VIPs flowing through there every day. Some were so grateful to just sit down for a few minutes and have a glass of cold water, or a soda, or beer or something. Most weren't demanding at all. We formed a theory about VIPs – the more eminent they were, the better they behaved. It was the ones who hadn't made it but who thought they should be in the big time that might be rude or demanding.

As for other corporate donors, Chrysler gave us 13 new cars, including a limousine for the commissioner general, so everything was first-class. We had Chivas Regal scotch and ample supplies of food for our receptions and a nice budget. So we did things right for people who were interested in our pavilion, and for people we wanted to contact. The large Consulate General staffers in Kobe/Osaka used us quite a bit for their purposes, and that was fine. They were also a bit jealous of us because we had a lot of fun, a dynamite pavilion, and excellent resources at our disposal. I think it was the first and only time in my entire Foreign Service career when

everything we had at our disposal for representation was first rate, and we had ample supplies. The general Foreign Service experience throughout my career was to scrounge – make the most of limited resources, scrounge amenities, pare guest lists (and thereby limit outreach capabilities to people who were important to U.S. interests, and so on. We all had that experience.

Q: How did the Japanese run the EXPO?

LENDERKING: As you might expect they were meticulous in planning and details. They were consummate organizers. The fair itself was designed with flair and imagination; sometimes their idea of what should happen and what we thought should happen would differ but they were usually very accommodating; they provided housing for our staff and for the commissioner general that was very comfortable and it was all new. They put in new metro lines and commuter access facilities and all kinds of infrastructure in suburban Osaka, and it was most impressive. I doubt if any U.S. city could do as well on such a large scale in such a short time, even with help from the federal government. In our federal system, authority is too dispersed, and organizing people on a grand scale is really beyond us except in emergencies like World War II.

Q: This is still the Cold War, still in full bloom. Were we competing with the Soviets?

LENDERKING: Yes. I'm really glad you asked that because it was one of the most interesting aspects of my experience. It was also amusing at times but it was also deadly earnest. For any younger people who read this, the Cold War was serious; the threat from the Soviet Union was serious; and the contest between us raged around the globe for 45 years.

In Osaka, the Soviets put up a huge pavilion – they were there to make a statement about the attractiveness of their system, and to engage in competition with us, and they wanted to win. Their pavilion was about twice the size of ours, and dominated the landscape at a different corner of the EXPO than ours. We were clearly in competition. We had two Americans – I and a deputy, Pat Wazer, who was very knowledgeable and correct, although underneath it also an iconoclast -- in charge of our protocol operation and six really excellent Japanese local hires who were just super young people. We worked fast and furiously for long hours and without our bilingual Japanese staff we couldn't have been successful. The Soviet Pavilion was enormously popular and they had a lot of talent and impressive exhibits, but our pavilion was the one “must see” attraction at EXPO. Among the Soviet professional staff there were quite a few spies, KGB agents, and their thinking was that EXPO was a good place to put their KGB people because they naturally came into contact with all kinds of personages and people and they could pursue their own interests with a perfect cover. My counterpart in the Soviet pavilion, who I met very early on -- we sought each other out -- was a KGB person. He did not identify himself as such but we were able to find that out, with the help of our agency personnel downtown.

A number of the high ranking people in the pavilion were also KGB agents and their cover was their protocol office. The funny part of it was that they assumed that I was, of course, a high ranking CIA person and they paid a lot of attention to me. In other words, they naturally assumed that we would do things the same way they did. You could conclude that maybe this was a reflection of Soviet provincialism, and one of the flaws of their system. Here is another example: they had a large number of guides, and they all spoke perfect unaccented English. It was really

impressive, the more so when I discovered that none of them had ever been outside of the Soviet Union before. In other words, they put these attractive young people through a rigorous and lengthy language training that went far beyond what I had in Japanese, and that was quite rigorous in itself. That is, after two solid years of doing nothing but study Japanese I could get around well, had a good professional vocabulary, could read most sections of a newspaper, and could engage in professional conversation with educated people. But my fluency was not the same as these young guides, who spoke English like American university students, but without the slang. But here's the flaw: Howard Chernoff, our commissioner general, insisted that all our guides would represent a cross section of multi-ethnic America, and they all had to pass a fluency test in Japanese. Very few of the Soviet guides spoke Japanese, so in a sense their command of English was somewhat wasted, although they were able to provide good explanations of their pavilion in English. But Chernoff wisely never let us forget that we were there to reach out to the Japanese, so all of our guides were able to take a Japanese group through the pavilion and communicate with them, or escort Japanese VIPs through the pavilion and give them a fun tour in Japanese. I must have had hundreds of compliments from Japanese VIPs about our American guides – they were so obviously American, yet they all spoke Japanese, having learned it in university, from their parents if they were Japanese-Americans, or through exchange programs.

If the American people and our congressmen ever understood clearly what a tremendous impact at low cost something like this has, we wouldn't have to go begging every year for funds, while the Pentagon gets almost a carte blanche to produce weapons. Of course we need weapons; that's not the point. But we also need to communicate effectively with people and their leaders and we often sadly neglect that aspect of foreign policy.

Anyway, back to the Soviets, who considered me a very important CIA agent. My protestations to the contrary -- that I was just exactly who I said I was -- were regarded as cleverness. They used to say to me, "Bill, you're very clever, but we really know who you are," and they paid me an awful lot of attention and treated me as a much more important person than I really was. But another advantage we had was that we had CIA people elsewhere, where the Soviets did not.

So we did not need to have agents working in our pavilion. I met with CIA colleagues occasionally, perhaps several times during the course of Expo, on contacts I had and especially who in the Soviet pavilion might be spying, and we were able to identify many who were KGB agents and those who were legitimately working on just protocol. The CIA had pictures of many people they thought were agents and I was able to identify many of them. They had a lot of KGB agents in the pavilion, and in due course they tried to entrap me.

Q: How did that work?

LENDERKING: It was kind of amateurish. I was very friendly with my counterpart, and we got along well, even though I knew he was KGB. The business side of our relationship we both handled quite efficiently, and that was dealing with scores of VIPs high on the other's daily lists. We sent quite a few of our VIP visitors to the Soviet pavilion – it was large and imposing and second in popularity only to our own, but Sergei often sent us hundreds of their so-called VIPs at a time, creating logistics problems for us. We had a complicated pavilion in that the roof

consisted of a translucent fabric that was held up by air. The effect was magical, because the large building had no posts or beams, and the roof let in lots of sunlight, so the effect was light and airy. But to keep the roof from collapsing two airtight doors were required, and they could only be opened one at a time or the roof would collapse. So it was logistically difficult getting hundreds of VIP visitors into the pavilion at one time. Further, they weren't really VIPs, but ordinary Soviets off the tourist ships, and Sergei promised anyone who came ashore VIP access to the U.S. pavilion. It got so bad, Chernoff, who had a small bantyish physique but was afraid of nobody, marched down to the Soviet pavilion and into the office of the Soviet commissioner general, and said "you're leaning on us and you've got to stop it." I wasn't there but I heard the effect was electric: the astonished Soviet CG, expecting to receive his American counterpart and bestow some affability and hospitality on him, but being instead confronted by an indignant American with some ridiculous complaint on his mind...well, I'm sure it was a shock.

Incidents like those provided some laughs, and weren't serious because they were quickly forgotten in the crush of business. And, we all knew that we were there to create good will so Chernoff and everyone else in our pavilion were hospitable to the Soviets and we got along well, although we kept them at a distance. For example, we didn't invite them to our small intramural parties where the guests would usually be favored Japanese from the EXPO staff, and friends from other pavilions. It was too risky that the Soviets would make some contacts or compromise someone who might have had too much to drink. So we were friendly, but careful.

As for my counterpart, Sergei, he was smart and charming, and spoke good English. It was usually easy to identify KGB agents even without the help of the CIA because they generally were more sophisticated, spoke good English, and had much more freedom to move around EXPO – attend parties and official receptions, stay out late, and so forth. We enjoyed arguing politics with each other and would run to see each other at receptions. He was very visible and well known, and it was hard not to like him. He also was working hard to further his country's interests. And he beseeched me one time; several times actually, to go with him to a massage parlor in downtown Osaka that he said was popular with the people in the Soviet pavilion and it would be a very nice experience. It was such an obvious setup it was ludicrous. I told him very firmly I had no interest in that proposal, but he asked me several more times, before he finally gave up. I was a bit disappointed that a slick outfit like the KGB would try something so obvious and amateurish, but I guess they nailed quite a few people through that kind of thing during the course of the Cold War, so for them it probably was worth a try. If I had gone they would have taken pictures and tried to blackmail me.

Q: Tell me more about our guides.

LENDERKING: We had 60 guides and they were super; I call them kids, because they all had the freshness of youth, but many of them were in their mid to late twenties and were in graduate school or professional jobs. As a group, they were bright, they knew about Japan, and they were a diverse bunch so they really reflected many aspects of our society.

Q: Were they mostly Nisei, or Sansei (second or third generation), or were some of them what we might call Anglo-Saxons?

LENDERKING: There were a few with obvious Asian heritage, but most were not. And the Japanese were surprised and pleased that people who had no ancestral connection with Japan whatsoever had taken the time to study their country's history and culture and learn their language. To see the impact of that realization was a kind of revelation. Also, I think almost a third of the 60 were Mormons who had been in the Mormon system as overseas missionaries, and we called them the M Squad because they were very aggressive. They did some proselytizing too, in a good natured way, but they were among the most self-disciplined and reliable of the guides. I had a lot of contact with them because they were dealing with the public, and if I wanted a tough job done I almost always would go to one of them and they would get it done. They were superb.

Q: Did you get any movie stars or people that were well known in Japan who visited the pavilion?

LENDERKING: Oh sure. We had a huge number of people from Congress and the Senate. The one I remember best was Hubert Humphrey, who just like his reputation had a marvelous flair for people and was always behind schedule. But he went through the pavilion and just loved every part; he rhapsodized over the various sections and objects, and he was genuinely enjoying the experience. And later on that evening we had a reception for him, a huge reception, in a separate meeting hall, attended by all the VIPs we could round up. And my wife had gone through the receiving line a couple of hours before because I was still working in the pavilion. Altogether about 600 people attended that reception, and I came through the receiving line about an hour after my wife, and when I met him, he said "Oh, Mr. Lenderking, I had the pleasure of meeting your lovely wife a little while ago when she came through." He had an extraordinary memory for people and an ability to connect instantly with them. No wonder he was a successful politician.

So we had a lot of people. Julie Nixon came out on National Day and represented the United States and she was very gracious. Nixon was of course president at that time. We had a number of movie stars, Dina Merrill and her husband, many others. Dina Merrill was not only beautiful and gracious, but an expert in her own right on art and some of the modern structures we had in our exhibit. Quite a few eminent people came through, celebrities of all kinds, every day.

Q: Who designed the pavilion?

LENDERKING: We'd had a competition to choose the design team and the winner was Ivan Chermayeff, an architect and designer very well known in New York and design circles, and he designed the pavilion. I mentioned the inflatable roof – you could walk on it as long as it was fully pressurized, and it was a very innovative structure. The effect on the inside of the pavilion was almost magical.

The guiding artistic spirit, though, was a USIA career Foreign Service officer named Jack Masey, who in 2007 still worked for the Chermayeff company in New York. He has done a lot of major exhibits, such as the marvelous one on immigration on Ellis Island. He'd also done the U.S. pavilion at Montreal for EXPO 67, which some said was even better than our exhibit at EXPO 70. I think doing these two major exhibits and pavilions were his crowning achievements

in USIA. In those days, we had a full time design section: USIA had been put in charge of U.S. participation at all foreign expositions, so our exhibits people designed these but also a series of traveling exhibits, large and small, that we sent around the world. Budget cutting and developments in the way people communicated with foreign countries changed all that, but it was beautiful and impressive while it lasted. And maybe it's true that mounting those huge exhibits was not cost effective when the world moved to instant communication, but they were beautiful, substantive, and said something about America that made an impression on people, and there is nothing we do overseas now outside of the Olympics that has nearly the impact.

Q: What was the Japanese public response? What was your impression?

LENDERKING: Oh, they loved it. And the one thing that everyone wanted to see was the moon rocks. Well, to look at they are just rocks, even if they were mounted in a revolving glass case with special lights shining on them. But the Japanese also responded well to the rest of the exhibit -- we had a sports section, a section of space exploration which had three or four space capsules that had actually been in space; a modern art section; and an antique section with genuine old *objets*, and they were all great crowd pleasers and the Japanese just loved it. We had relevant music piped through each section, and a great collection of contemporary prints, and we were all pleased that the vitality and diversity of America was displayed so creatively, with no bluster or boasting but with a lot of verve and energy.

I mentioned the appearances of Billy Casper to keep the crowds from wilting in the sweltering heat; he was there for two weeks. And we had a crew of professional folk singers who also performed every day. They were the only ones permitted to have beards or facial hair of any kind. In accordance with the custom of the period, I had let my hair grow so it was quite thick and long, over my ears, although I didn't have a beard or mustache. But Chernoff made me cut my hair short; he was very positive about what kind of image he wanted the pavilion in its entirety to project, and he was right. Guides and staff were to look fresh and clean cut; folk singers were folk singers and beards were welcome. We also passed out refreshments to the crowd from time to time, but we had to be careful because there were thousands more people than we could accommodate with those gestures.

Q: Well then, so late 1970 you left Japan?

LENDERKING: Yes. EXPO closed on September 15, I think. I stayed on for a few days to write the necessary reports about the protocol section and what we did, and then I left.

Q: And where did you go next?

LENDERKING: I was offered the job of director of the American Center in Kyoto, which was one of the top centers anywhere because of the cultural and historical importance of Kyoto and its being a university and intellectual center. And that job was very attractive but I'd been away from America for so long I really felt out of touch with my own country, especially because so many changes were happening so quickly. The Vietnam war, women's lib, music, dress, language, and behavior were all changing rapidly. I'd already had five years in a row in Japan before Vietnam, so I was ready to come home. So I became the desk officer for Japan, Korea and

Micronesia in USIA.

Q: And you did that from when to when?

LENDERKING: I did that for the rest of 1970 until mid 1972.

Q: So we are talking about probably '71 to '72?

LENDERKING: Yes, that's right. After my desk officer job, which was busy and interesting, I was the head of Policy, Plans and Research in the large policy planning office of USIA.

Q: Well one of the things that I guess took place, a new Japanese word, "shokku." (shock). Can you talk about that? Because you must have gotten involved in that. I'm referring to the opening to China, known in Japan as the "Nixon Shokku." It was in '71 or '72. Anyway, it was during your time there. The announcement that Kissinger had gone to China and we had not told the Japanese until the last minute...

LENDERKING: Yes. There is a marvelous story connected to that. What I recall is that it must have been when Alexis Johnson took over as ambassador from Edwin Reischauer, who was a great ambassador. I think the Japanese ambassador to the U.S. was named Asakai, and he told senior people in our government that he had a recurring nightmare that he hoped we would avoid giving him at all costs, and that was that he would wake up one morning and read in the paper that we had gone ahead and recognized Communist China. It was a grave matter for the Japanese because successive governments had stood up to a tremendous amount of domestic pressure by resisting chances to draw closer to Communist China. They did this because they felt that the American connection was their number one alliance, so they took a lot of flak, but it was painful for them. It was such an important matter for the Japanese that the possibility of our normalizing relations with Communist China without telling the Japanese came to be known as "Asakai's nightmare." We of course repeatedly assured the Japanese we would do nothing of the sort without full consultations with them beforehand and then we went ahead and did it. To find out we had actually made a major overture to China behind their backs would seem to them something like the ultimate betrayal. But that is exactly what happened, and the Nixon shokku was the fulfillment of "Asakai's nightmare."

Q: Well, what were you doing during this period, as Japan desk officer?

LENDERKING: We had a very active USIA program, information and culture, to administer and so I was the backup and the point of contact and expertise in USIA in the East Asian office for everything like that. Our job, simply stated, was to be the post's backup in Washington for anything they needed, whether it was personnel, policy guidance, support for producing new information materials, cultural presentations, everything. And we also relayed Washington's concerns and suggestions to the post. We had a very innovative PAO in Japan, Alan Carter, who was trying to put in all kinds of new ways of communicating --super graphics, faster response on policy topics, more serious and focused intellectual content in all our products, you name it. He wanted to introduce a lot more of the exciting ferment that was going on in American culture at the time, the early 70s. Alan was very imaginative and forceful, but there were a lot of old guard

traditionalists in USIA who often regarded new ideas as trendy fads that would quickly run their course. So there were strong disagreements, but it was good for USIA, and Alan's ideas quickly permeated throughout the agency, particularly among the younger officers. Many of them were put into practice and were effective. I don't recall specifics, but I suppose that some of them were discarded along the way. But Alan's watchword for judging these ideas was, "quality, relevance, speed." Those are still viable criteria and I'm convinced that if the Bush administration's practitioners of public diplomacy had applied those simple criteria to some of their ideas (instead of being prisoners of the neo-conservative ideology, which had some interesting aspects but also displayed an appalling ignorance of the rest of the world), our response to 9/11 would have been much more effective.

I'm of course oversimplifying a bit, but this was the essence of it. So, returning to the 70s, I was the post's representative in Washington in selling their ideas to the bureaucracy, to the various support elements in USIA in Washington that were responsible for getting him the resources. And it was a little bit of a struggle and frankly I did a pretty good job but I could have done better. First, I had to resolve my own initial skepticism, but Alan was such an articulate and forceful advocate that he quickly convinced me. The end result, anyway, was that USIA programs improved and the innovations caught the Japanese attention.

As for your original question, I don't recall how the post dealt with the reverberations of "Asakai's nightmare," but Alan's insistence on quality, relevance and speed meant that we responded directly to our critics with authoritative answers to their criticisms.

Q: Did you find that there was a pretty good connection between what was going on in advertising, education and other areas of the civilian world regarding communicating across cultures, influencing people and getting people to do things?

LENDERKING: Yes, Alan was quite interested in communications theory and introduced a note of realism to USIA's way of thinking. He borrowed some concepts from the academic world regarding the process of communication, starting with awareness, to understanding, to agreement, and finally to active support for our viewpoint. He stressed that it was illusory to suggest that any information program, except in unusual circumstances, could ever achieve the final step – active support. But it could and should strive for awareness and understanding among our target audiences, and that was difficult enough. Occasionally, we might persuade people that our viewpoint was correct and win over some of our critics, but that was unlikely. It was good for USIA to come to terms with those concepts, because one of its traditional weaknesses was a tendency to exaggerate its achievements in order to justify its existence. That in fact, was one of the chief defects of reporting by CORDS in Vietnam – many CORDS employees in the field confused activities with results. Alan Carter and those who were influenced by him played a big part in educating USIA on realistic assessments of our activities.

USIA then and certainly later on was able to call on really good people, Americans, to travel to posts as speakers and participate in special seminars, conferences and discussion programs and the Japanese were receptive to those. Almost always we were able to get an impressive turnout from leading Japanese intellectuals and other opinion leaders. We had center directors who were for the most part very energetic in getting to know the people in their cities who were important

in their various fields and getting them interested so they would be receptive to these initiatives. So, what the Japan program achieved in those days was to have a very high quality exchange of ideas and information on all sorts of subjects with a great cross-section of Japanese opinion leaders. That may sound easy, but it isn't, and it's my opinion that very few posts in the world had that same quality.

Q: What about Korea? Here you were, you studied Japanese, served in Japan, a real Japanese expert, and all of a sudden you have Korea on your plate too. The Japanese and the Koreans don't have the happiest of relationships and the Japanese tend to think themselves quite superior to the Koreans. Did you find yourself infected with some localitis when you first took this on in looking at Korea, and were you perhaps looking at northeast Asia from a Japanese point of view or not?

LENDERKING: Yes, to some extent, unfortunately. But I also was dismayed by some of the Japanese attitudes that were really just raw, naked prejudice. I remember one eminent woman telling me I know exactly how you people in America feel about blacks because we feel the same way about Koreans. If I am in a swimming pool and I see a Korean in a swimming pool I get out of the swimming pool; I will not stay in the swimming pool if there is a Korean there. I tried to correct her and she said no, no, I know what you have to say, you are an American diplomat but I know how you really feel. So nothing I could say had an impact on her.

On another occasion, an eminent Japanese, I think it was the Governor of Hokkaido, who as I said earlier was a man I both respected and admired, told me the Koreans were "difficult" people. When I asked why he thought so, he answered, "When we occupied Taiwan, we got along very well with the people there. There were very few incidents and it was a successful occupation. But in Korea, the Koreans gave us nothing but trouble, even though we had the same colonial policy as we did in Taiwan. They are difficult and stubborn people."

This eminent Japanese was a staunch conservative and anti-communist, and had lived through the periods he was talking about, so he was at least reflecting honestly his views as an old colonialist. But I was flabbergasted by his point of view.

But certainly there was a feeling that Koreans were the sort of people who would come into your house with mud on their shoes and be a bit rough and aggressive. You have to fight those stereotypes. While I was in Japan, my exposure to Korean people and intellectuals was much more limited and I didn't speak the language, but your obligation as a human being and a professional diplomat is to fight prejudice and stereotypes and keep a balanced view. My experience with Koreans was that they tended to be more open and direct; you did not have to wade through a lot of polite verbiage to have a substantive conversation with them. They would get to the point much quicker, and although I was fierce in my enjoyment of Japan and respect for the Japanese people, I found my limited encounters with Koreans interesting and refreshing.

Q: Just to give you the GI point of view, I served as an enlisted man first in Japan and then in Korea. This was the middle of the war, you know, the place was devastated. But I found that the Koreans were kind of like Americans. I mean, if you shove them, they would shove back, you know what I mean? It was very straightforward. Now as far as Japan was concerned, there was

too much bowing and all that for an American GI. I later went back as consul general to Seoul 25 years later and I found the Koreans very refreshing. They were awfully hard working, almost embarrassingly so. But you did pick up a prejudice, their prejudice against the Japanese as their former oppressors who had done everything they could to grind them down and there was just no love lost there at all. But having also served in Yugoslavia where I watched the Croatian/Serbian prejudice and how it affected even the American officers serving at post in Croatia and Serbia, I was just curious whether you noticed that your colleagues in Japan had this infection of looking down at Korea.

LENDERKING: Well, it was there, but it wasn't much in evidence. I think it was manifested mostly in a sense that we in Japan were working in one of the most complex, interesting, and important countries in the world, and matters Korean simply took a back seat most of the time. I didn't have the same depth of experience that you had in Korea, but there was a large Korean population in Japan. A lot of those people tried to mask their identity in one way or another because there was prejudice against them, including job prejudice. It was tough for them, no doubt about it. I was very sympathetic to them and I am certainly sympathetic to the Korean community that I see here today in Washington, robust, hard working, all those good qualities that I'm sure you're very familiar with.

Q: Yes, in Japan the Korean community is divided between the North and the South. I was also surprised that there is a strong community sympathetic to North Korea; I would think that North Korea is so horrible, that once they were in Japan their allegiance would shift away from North Korea.

LENDERKING: In fact, the organization representing the North Koreans, Chosen Soren, I think it was called, was much larger and more powerful than the South Korean organization. Because most Japanese perceived North Korea as hostile, this had a certain traction among Koreans who had experienced prejudice in Japan. In other words, the enemy of my enemy is my friend.

Q: Do you recall any crises where you had to mobilize any big public affairs campaigns?

LENDERKING: I don't recall any special mobilizations, but we spent an awful lot of time on the nuclear issue and whether our nuclear ships could call at Japanese ports or whether any of our ships that did call were carrying nuclear weapons. And that is controversial to this day. We spent a lot of time crafting what we could say about that.

How did you feel our operations in both Japan and Korea were funded and run?

LENDERKING: I think the talent pool we had at the American embassy was the best of any embassy I served in. Many of my colleagues spoke good Japanese and found service in Japan challenging and stimulating. They took the time to learn about the country and build contacts. Collectively, we had a lot of country expertise, and an ambassador, Edwin Reischauer, who encouraged us to learn more and get out and talk to people. When we had meetings in Tokyo, he encouraged younger officers from the field to speak up and not just sit quietly while the section chiefs in Tokyo imparted wisdom. Owen Zurhellen, head of the political section for a time, used to take his subordinates to lunch and challenge them to read difficult kanji. Later, when I went to

the Embassy in Rome, I was surprised to find very few fluent Italian speakers and very few American officers who knew much about Italian history and culture. Many of them were just happy to be in Rome and thought they had really arrived if a wealthy Italian conservative invited them for Sunday lunch at his place in the country. Of course, they absorbed partisan views very quickly and many of them had warped judgments, in my view. There was certainly not the same commitment to serious analysis and country expertise that I'd experienced in Japan. This was surprising and disappointing to me, because Italy was not only a delightful country, it was crucially important to us, and was going through difficult times. Further, Italy is an extremely complex modern country, and Italians, although charming, are far from easygoing and laid back.

Q: What about the Pacific islands? What were we doing there?

LENDERKING: Well, we had minimal presence there except in a couple of places like Fiji and Papua New Guinea, where we had small embassies. In the smaller islands, our USIA activities were pretty much limited to occasional visits and finding good people from the universities there to accept Fulbright grants, or studies at the East West Center in Honolulu. We didn't have much in the way of money or resources, but the challenges were minor compared to the complexity of our relationships with Japan and Korea. I just didn't have enough time and there were too many places to visit to get into that very deeply. The problem is that if you have a national interest even in some out of the way place like most of the Pacific islands, you ignore it at your peril. George Shultz, who I thought was a superior Secretary of State, once said, "Diplomacy is more like gardening than architecture, and you'd better water your garden and nurture your plants every day if you want to be successful."

Q: Did President Fujimori cross your radar at all at this time?

LENDERKING: Yes. I don't remember when he came in but certainly-

Q: I mean, was he a figure and I was wondering whether you, you know, because of your Japanese experience, got involved with the Japanese community in Peru?

LENDERKING: I got involved with some of the artists who were Japanese, Peruvian-Japanese. Otherwise not. They were not very prominent in leadership circles in Lima. The embassy put on a huge and very impressive show of Peruvian contemporary art every year to raise money for charity, and it was always a showcase event. Susan, my wife, put it together one year -- working with all the artists, arranging for their works to be exhibited, setting up handling the money, and all the rest of it, and we got all the top artists to exhibit and raised a lot of money for charity that way. But I never met Fujimori. Certainly in the beginning he was quite impressive, and he organized the fight against Sendero Luminoso and began to get results. Some Peruvian journalist friends who knew him told me some stories later on that he seemed very level-headed at first but went off the tracks with megalomania.

EDWARD M. FEATHERSTONE
Vice Consul
Kobe (1962-1964)

Mr. Featherstone was born in New York City and raised there and in Japan. After graduating from the University of Pennsylvania and serving in the US Army, in 1961 he entered the Foreign Service. As a Japanese language and area specialist Mr. Featherstone served primarily in Japanese posts, including Kobe-Osaka, Yokohama, Niigata, Okinawa (Consul General) and Tokyo. He also served in Barbados and in Washington. Mr. Featherstone was interviewed by Thomas Dunnigan in 1999.

FEATHERSTONE: My first posting was to Japan at the American consulate general in Kobe-Osaka. Then I was posted to the Language School in Yokohama for continuation of language training, which I had started at FSI [Foreign Service Institute]/Washington.

Q: *When you were in your initial training back here, had you requested an assignment to Japan, or was this just out of the blue?*

FEATHERSTONE: No, I had requested an assignment to Japan. I had been slated for Japanese language training, under Eleanor Jordan, who was the chief linguist, and I believe at that time, she was head of FSI. I spent about eight months with her. Then, I went out to Japan to Kobe. I was a vice consul in Kobe, Japan, from 1962 to 1964.

Q: *Who was the consul general there?*

FEATHERSTONE: The consul general at the time was a man named Robert (Bob) Chalker. Later on, it was Owen Zurhellen, who is long dead, of course. He was a wonderful man. Anyway, before Owen, there was a person who was not a Japan type. Owen was a longtime Japan man. I knew Owen very well. In fact, I knew Owen when I was a child, in Kamakura where I was raised, a city on the seashore of Japan. Owen was, at that time, a vice-consul, I suppose. We went to Mass at the same Japanese church. So, I knew Owen well.

Q: *How large was the consulate when you were in Kobe?*

FEATHERSTONE: In Kobe, we had about 12 Japanese employees, and four or five Americans.

Q: *Did we have a branch off of Osaka, or was it all...?*

FEATHERSTONE: Yes, we did. It was split. We had the American consul general, Kobe-Osaka. We had an office in Osaka and an office in Kobe. The consulate general spent two days a week, I believe, in Osaka and three in Kobe. Later on, of course, Kobe was demolished. It all became American Consulate General, Osaka. At the time, I was very fortunate because Kobe was a very nice city, first of all, and second of all, it was nicer to be farther from the embassy.

Q: *What were you doing?*

FEATHERSTONE: I was the vice consul. I did the typical consular work. Everyone started in consular work when I was a young officer. I issued visas, and was engaged in protection and welfare of American citizens, people who had been arrested or had difficulties, or were sick or had died. I dealt with that. People always decry consular work, but I thought it was some of the most interesting work I have ever done. The only dead people I had seen, for example, were in McLaughlin's Funeral Home in my hometown of Wilkes-Barre, Pennsylvania. A couple of cases that I had included one case where a man was in an airplane that had and crashed and burned. I had to pick him up. It was one of those things where they pull out the tray and I said, "Yeah, that's him. You can close it now." Anyway, I thought consular work was really interesting. The only thing that kept me from not making a career of it was I didn't care too much for my peers in consular work. I gravitated more toward Owen Zurhellen and the people who ran the political and economic side.

Q: Did you have any opportunity to do any reporting?

FEATHERSTONE: Yes, I wrote some pieces. I don't know how important they were. I think they were more for my edification than for the department. We had air grams at the time. I wrote probably a dozen air grams, a few cables. Now and then I would write a cable, mostly on consular affairs, usually debts or something that was fairly unimportant and timely, and that sort of thing. I enjoyed myself. I had a good time there. I loved Kobe.

Q: Were there any U.S. military in your area?

FEATHERSTONE: Not too many. When I was at the embassy in Tokyo, we had a few dealings with the U.S. military that were mostly in places like Yokosuka, which was about an hour's drive. It was a large navy base, and still is. We used to go down there occasionally. I didn't have all that much to do with it, but sometimes, I would have to go down there on a consular matter. I usually did this by train, which was the easiest way to travel in Japan. I went down there and talked to one officer or another about whatever matter we were faced with.

Q: Were there any Communists demonstrations against the consulate?

FEATHERSTONE: Oh yes. We had those regularly. I don't know about the term "Communist," but they were certainly leftists. In some cases, they were anti-American. They were always anti-American. It was usually anti-A bomb, or some policy that we were pursuing at the time. Usually the people were fairly polite. There was one case, I recall, where they had a demonstration, and they had a thing they were carrying, which had some play cards and so forth on it. They knocked against the consulate and they knocked off a lantern like thing we had. The next day they came around with compensation. Even though they were against us in a way, they were decent fellows.

Q: Were you there when Attorney General Robert Kennedy visited the area?

FEATHERSTONE: I was there, but I was not involved with the visit, other than being acutely aware of it and so forth. I think I may have had a minor role in carrying papers around. I was not directly involved in it.

Q: What was the reaction to the assassination to President Kennedy?

FEATHERSTONE: A great shock. The Japanese thought a great deal of Kennedy because of his youth and his energy. He was a rather dramatic figure to them. Japan is a country that has complete gun control. There are no pistols allowed. You can have a firearm for hunting, but there are no pistols allowed. So, it was quite a shock to them. I think we had a ceremony, a Mass, I believe for his death and a lot of people came to it. There were a lot of Japanese people who came. It had quite an effect on them.

Q: Did the ambassador visit from Tokyo very often?

FEATHERSTONE: Not very often, no. He came down once or twice while I was there.

Q: It was Ambassador Reischauer.

FEATHERSTONE: Ambassador Reischauer was there. I think he came only once while I was there. I saw him very briefly. I didn't have a lot of contact with him at all. Most of my contact was, of course, with my superiors and people like Owen, who I knew very well. He was also my superior.

ELDEN B. ERICKSON
Economic Officer
Kobe-Osaka (1962-1964)

Elden B. Erickson was born in Kansas in 1919. He served in the U.S. Air Force and the U.S. Army in World War II before joining the Foreign Service in 1946. His career included posts in China, Algeria, Paris, Laos, Japan, Lebanon, the Netherlands, Ottawa, and Frankfurt. Erickson was interviewed by Charles Stuart Kennedy in 1992.

Q: Today is July 9, 1992 and this is the second interview with Elden Erickson. You just said that you went to Kobe-Osaka, where you were from 1962-64. How did that come about, and what were you doing?

ERICKSON: I don't know how it came about, I was just assigned there. The vacancy came up in January, and I was available.

Q: I take it you were considered kind of a Far Eastern hand?

ERICKSON: Yes, I had been in China, Laos and all four years in the Department in the Far East Bureau. I was Economic Officer and Deputy Principal Officer there in those days.

Q: Kobe-Osaka, what was the reason it was there, and what was it dealing in during this period?

ERICKSON: It was the second or first industrial center of Japan. Tokyo/Yokohama was important, but Osaka, also for heavy industry, also ship building, trade, tourism, automobiles.

Q: Your main concern then was industrial reporting?

ERICKSON: Yes. And trade promotion.

Q: Let's talk about trade promotion. In the 1990s, it is probably the biggest bone of contention between Japan and the United States.

ERICKSON: In those days, we had a rather heavy surplus in trade with Japan.

Q: So you weren't being pushed overly hard on it?

ERICKSON: But we did have lots of trade fairs and trade promotion activities, though.

Q: Were you seeing any of the closed economic system that has since developed?

ERICKSON: I think it was always there, but it continued to develop as they wanted to move faster and became more protective as time went along. Administrative management, or whatever they called it, they still had a way of promoting certain products and closing the market to the outside.

Q: What was your impression on what we were reporting back about Japanese industry at that time? How did we see it, and what were our interests at that time?

ERICKSON: Our main interest was exchange and balance of trade. Really, at that time, we were heavily on the credit side, so we wanted Japanese exports to the United States. Not that we didn't want to increase ours, but we wanted more to increase theirs. They didn't feel they were getting a fair shake in our market either. We had some fairly restrictive practices at that time, too -- especially textile quotas and auto parts. We restricted quite a number of things to protect United States industry.

I even felt strongly about it. I did my paper at the Air War College about how we had to be less restrictive....I regretted this later, but at that time, it was not so much the Japanese as it was us.

Q: How did we view the political situation in Japan?

ERICKSON: Well, since the war, it was as stable as it could be. We got along very well security-wise. We were friendly economically, even though the trade balance was not so good. Our relations with the LDP were good.

Q: Liberal Democratic Party, which has been in power since 1948. How about our ties? Was it easy to talk with them?

ERICKSON: Oh, very easy. I know that some people think that the Japanese are difficult to understand, but I found dealing with them was very easy. I felt I could understand them, and they understood me. I think part of it was age. They did not trust really young officers who spoke fluent Japanese. They always wanted to talk to someone older who didn't speak fluent Japanese.

Q: Was it that they felt they were talking to the top?

ERICKSON: It is in their own society, too, the older a person...but often they would say, "I prefer not to speak to your young junior officer."

Q: Were you beginning to feel any impact on the Japanese economy of our involvement in Vietnam, which was just beginning to get started?

ERICKSON: Well, we threw a lot of business to Japan during Vietnam to help the Japanese economy improve.

Q: Was this a period when our involvement was under question?

ERICKSON: No. We really had no serious problems with the Japanese at all during that period. Things were really very smooth.

Q: How about relations with the Embassy. Reischauer was the Ambassador.

ERICKSON: He was very well respected throughout by all elements of Japanese society.

Q: Did you feel his hand at Kobe-Osaka?

ERICKSON: He didn't come down too often to Osaka. I don't think we felt any heavy or light-handedness. He just left us more or less alone, and we functioned independently.

Q: Did you get any impression about the Japanese hands...those who trained in Japan? Were they mostly junior officers?

ERICKSON: Mostly, but they were very bright junior officers. They were really top quality, in my opinion. Bill Clark, one of them, is back now to be Assistant Secretary.

Q: Then you left there in 1964 and attended the Air War College from 1964-65.

RICHARD N. VIETS
Commercial Officer
Tokyo (1962-1965)

Ambassador Richard N. Viets was born in 1930 and raised in Vermont. During his career in the Foreign Service, he served in Afghanistan, Tunisia, Japan, India, Romania, Israel, and was ambassador to Tanzania and Jordan. Charles Stuart

Kennedy conducted this interview in 1990.

Q: You then went to Tokyo. What was the commercial, situation and what were you doing at that time?

VIETS: I was thinking about this the other day because I was at dinner with a distinguished American lawyer who had just come back from a couple of years in Tokyo, and we were trading comments and reminiscences.

In those days, Japan was still in its pre-pubescent period. The Japanese were still very busy copying things. They were already well into the radio and television business, but nobody wanted their cars. The Japanese didn't think much of their cars. I remember bringing an American Ford car there, and crowds would gather around it out in the countryside. It was a cheap American Ford, but it was always greeted with great appreciation.

I have always thought that the threshold of Japan's transition to a mature industrial society really was marked by the Olympics in 1964. It seemed to me from that point onward, the Japanese suddenly demonstrated a self assurance in a societal sense that we hadn't earlier seen. They had labored night and day, seven days a week in Tokyo for several years prior to the Olympics in changing the face of the city. Everything suddenly seemed to come together for the Japanese. They became increasingly important players in the international marketplace. They were becoming more assertive in their relationships with us. They grew up. It was for that reason that it was an especially interesting period to be there.

It was made all the more exciting because we had as our Ambassador one of the more remarkable men I have ever worked for, Edwin O. Reischauer, the famous Japanese/Chinese scholar from Harvard. I think the United States was inordinately fortunate to have him as our principal representative to that country at that period because he was very much a father figure for the Japanese. They paid great heed to his advice and counsel. He was a very wise, exceedingly competent man. I think his contributions to the Japanese transition from a sort of occupation mentality into a more normal relationship with us have never fully been appreciated either by policy makers or by historians.

Q: What were your responsibilities, and how did you see him as he related to the commercial side of things?

VIETS: Unlike almost any of the other politically appointed chiefs of mission that I either worked for or saw at close distance over the ensuing years, there was very little in the Embassy that didn't interest Ambassador Reischauer.

We had established as part of our Embassy operations at that point -- indeed it was one of the reasons I was sent there -- a trade center, where every six weeks we mounted a major exhibition. The center was a display case for American products. I remember that the Ambassador took a very keen interest in that operation. He was always there for openings and often came over to see how things were going, etc.

He was also very much personally involved in negotiations in the economic arena. He, of course, was essentially bilingual in Japanese-English, but he used a very clever device. If he were in a press conference, for example, with Japanese journalists, he used the principal Embassy interpreter to do the English to Japanese portions of the affair. And, you could rest assured there would be several points in the course of this exceedingly proficient interpreter's rendition of what Reischauer had said when the Ambassador would interrupt him in Japanese and say, "Now that is not quite the right shade of meaning that you have given to this, rather it is etc. etc." Of course, the Japanese just loved this because it revealed his inner knowledge of the most refined elements of that very sophisticated language. A remarkable man in many respects.

Q: Working for Commerce at that time, what sort of instructions were you getting?

VIETS: The Commerce Department, I think, was essentially a reflection of the general American attitude toward Japan at that point. That is, Japan was an important potential market for American exports. We were beginning to worry about our trade deficit. My recollection is that in those years, we had a shocking global trade deficit of something like \$18-20 billion a year -- we would be on our hands and knees if we could get it down to that today.

So Commerce's view of Japan was almost exclusively focused on exports. I must say it was rinky-dink stuff that Commerce was focusing on. I have no particular respect, looking back on that period, for the competence and vision and foresight of the people in the Department of Commerce or State, for that matter, on what was coming down the pike. I can remember those of us on the commercial staff. We had six or seven American officers -- it was a large establishment -- who were principally devoted to kind of hand holding American businessmen who were visiting Japan for the first time. We were involved in explaining distribution systems and patent office problems and MITI (the Ministry of Industry and Trade) and arranging appointments, etc. There was no real understanding that the Japanese industrial juggernaut was gathering steam and would soon be rolling down the road over everything in front of it.

I do recall, however, working on a major study that Commerce never asked for but we decided we should do, on the fledgling Japanese automobile industry and the potential it had for becoming a major player in the global marketplace. I haven't, of course, read that despatch in many years, but I think we demonstrated surprising foresight in our predictions on what was going to happen. I can remember the study reaching Washington and eliciting guffaws...what were those young guys smoking?

So we had it all wrong. We didn't understand very well. And when I say "we," I am really speaking of the policy makers here. Those of us out there in Tokyo realized what was happening, although perhaps not with all the vision that there should have been.

WALTER NICHOLS
Cultural Affairs Officer, USIS
Tokyo (1962-1969)

Walter Nichols was born in Tokyo in 1919 and was raised in Japan until the age of 15. He attended Harvard University but never completed his degree, accepting a commission in the U.S. Navy just before the outbreak of World War II. Mr. Nichols worked for USIA and the majority of his assignments were in Japan. He was interviewed on October 10th, 1989, by G. Lewis Schmidt.

NICHOLS: Actually it was in about May of 1962 that I went out to Japan again. Oddly enough, I had been assigned much earlier to Kabul in Afghanistan. I had protested that I didn't see what qualifications I had for that because, I, among other things, couldn't speak the language. I was assured that there was nobody in the Agency who could speak the language, so that wasn't a factor at all, and they were sure I'd like the ambassador very much, he was a nice guy and all that sort of thing. So I had finally said, fine, I'll go, and finished reading up on it. I think I had about a week to go before we were scheduled to depart when all of a sudden I was called in and told, no, you're going to Japan as the Cultural Attaché. Apparently what had happened, as I understand it, was that shortly before that time, Reischauer had arrived in Japan as ambassador. I understand that he got a commitment out of Kennedy when he accepted the appointment that he would have a right to try to get as many Japanese speaking people from the Foreign Service as he could get. So he had asked for all the data on all the Foreign Service Officers, what their rankings were, their language ability and so forth. He'd been looking all this over and he had picked certain people to come out because he wanted to reach, he thought originally, something like a 75 percent proficiency in the staff, which of course was absurd and impossible. But he had gradually been latching onto people from this list. I don't know why he picked me, particularly. He didn't pick me for any particular assignment, of course, it was just to get people out here. I wasn't on any FSO list at all but he had jurisdiction in this sense I suppose over the USIS operation, too, as part of his promise, as well as on embassy staff....

Let me make a few comments about being Cultural Attaché. It's a fine title and usually I suppose in most posts it would be something rather interesting. In my case I had a rather curious situation to deal with, so that I can't say that as Cultural Attaché I really functioned in any normal sense. That is to say, first we had Reischauer as the ambassador, and Reischauer being a famous scholar, very well-known in Japan and very culturally oriented, naturally in a way was as much cultural ambassador as he was a political ambassador. So you might say we had a cultural...

Q: When the other tape ran out, you said that first of all you had Reischauer as ambassador, who in effect was a high level cultural officer in himself, and then I think we can go on from there.

NICHOLS: Right. So you might say that he as the ambassador skimmed the cream off the top of whatever a cultural attaché normally handles in the way of contacts with the international community, at least insofar as the academic community was concerned, just by virtue of his title. And next to him was a DCM, Emerson...

Q: Oh, John Emerson.

NICHOLS: John Emerson was there as the DCM. And of course he was, he couldn't compete with Reischauer in language ability but he had certainly had a lot of training in Japanese and a

great interest in culture. So he, too, was very anxious to get himself very much involved in cultural affairs. He of course was several levels above my rank so he skimmed off some of the rest. But in addition to that, our PAO at the time, Burton Fahs, was you might say exclusively a man of culture, former Rockefeller Foundation vice president and a person that had been immersed for years in funding and programming for the Japanese intellectual community, especially the academic community. So there were three very senior officers above my rank in the embassy who were front and center in all sorts of cultural pursuits. So when it came to just strictly cultural representation, I was only required, if you want to put it that way, I was only required to handle the normal chores like going to cut ribbons at department store openings or shows or make speeches at farewell parties or something or attend more low-level affairs. So I was kept very busy in this capacity doing things like that, but none of them really amounted to a great deal. My functions were divided, as I said, between running administratively and programmatically the cultural division of the embassy and the field operation and serving on the other side as sort of the person to appear when required to make speeches on behalf of the embassy, I mean minor things, not major speeches but just congratulatory messages and things like that.

So I was very busy and I was very happy to be kept busy in these ways. But I did not have any major functions to pursue regularly that I myself really participated in except for two areas. One in which I was almost exclusively the activist, let's say, one was the State Department's cultural presentations program, which had in the past been handled by the educational exchange section but now was handled by the cultural attaché, myself. And this involved me in many, many projects like visiting orchestras, visiting ballet companies, visiting modern dance companies, stage attractions and things like that. I even had a lot of fun and a lot of headaches being involved with the first appearance in Japan of a bona fide Broadway musical, "Hello Dolly" starring Mary Martin.

Q: What was that?

NICHOLS: "Hello Dolly" starring Mary Martin.

Q: It was not...

NICHOLS: It wasn't Carol Channing from the Broadway cast, but everything else was the Broadway cast after they closed on Broadway, but with Mary Martin taking the Carol Channing role. And that was the kind of thing I had enjoyed doing. I'm more of a project sort, as you may have guessed from what went on before, I like to be involved with projects. But each of these things that came along had a time frame. I mean, you could plunge into it, get it organized, get the thing functioning and then it would be over and that would be that. This is the kind of thing I like to do and I thought I was reasonably good at, and so I spent a lot of my time on cultural exchange programs of that nature.

But on the more substantive side, I was the one in the embassy who worked on more significant projects in the international conference or discussion field, the seminar field, where we're not talking about groups from the United States coming out and touring around and meeting people and giving lectures and things like that, but where you have an event staged as a conference on

some particular topic with experts from various countries. I worked on this most closely with the Asahi newspaper, because I had very good contacts over there from my activities in the cultural affairs area that I have just mentioned. Because Asahi--at the time, there was no cultural ministry in Japan, the Ministry of Education was not involved in international cultural affairs--so the Asahi newspaper had more or less taken over the role of sponsorship to bring things like French treasures from the Louvre, the Mona Lisa and the Venus de Milo, the Egyptian King Tut exhibit, exhibitions from the Museum of Modern Art in New York and American Museums, so that the chief of their cultural section you might say was my opposite number at the Asahi newspaper. He used to joke and call himself really the cultural minister for the Japanese government, because they were putting up all the money and the Japanese government wasn't putting any money into it.

But because of my connections in the performing arts field, with them, they took on a lot of these things from the State Department. I had a very good in with them and got them to sponsor several big symposia for me. Symposia was the word I was looking for earlier, conferences and everything. The one I think I recall most vividly was a tremendous symposium they had on the economics of Asia, which...

Q: Where would you stage these?

NICHOLS: Well, actually the Asahi Shimbun undertook all the financial sponsorship of this whole thing and they staged it in the premises of the, what is it called? The Economic Federation building, which had adequate facilities for this kind of thing.

Q: Oh, yeah. Keidanren (The Economic Federation).

NICHOLS: Yes. Keidanren. Right, the Keidanren building. The new building up there north of where the old Tokyo station was. You remember?

Q: Tokyo Eki (station) down there.

NICHOLS: North of that, in that area. This new big building, beautiful building.

Well, I went to them to start with about this idea of having a big symposium on a subject that we thought would be of interest to a lot of people in Japan as well as abroad. The idea was to have distinguished international scholars whom they would invite to participate and we would expect them to invite some American scholars. We would be willing to help in any way we could, for example with grants for the scholars from the United States. We weren't going to subsidize the whole thing, but would help.

They bought this idea. The man who was the director of this cultural section in Asahi at that point fortunately had formerly been for seven years a reporter way back earlier in his career in San Francisco so he was absolutely bilingual, a very intelligent, active person with his feet on the ground, if you know what I mean. Because a lot of people in the cultural field often have rather vague views of lofty things, but he'd been a reporter for seven years in San Francisco and he

knew his way around in business and everything else. So, he was a very functional person with a good background, and he picked this idea up and ran with it.

So we were able to get a tremendous thing organized by them underway. We brought out from the United States the people they wanted. We had one case where rather belatedly we ran into a security question. Can you stop this just one second?

Well, for example, we did have a problem with one of their proposed grantees and believe it or not this was John Kenneth Galbraith. They were adamant about having him come out so they had invited him and then turned around and told us they had invited him so please give him the grant. I had the unfortunate job of sending it in for confirmation and getting a message back saying please tell them no, for security reasons. I absolutely leveled with this man, Mr. Kaji at Asahi, as I always...

Q: You always did?

NICHOLS: Yes. His name was Kaji. K-a-j-i. Director of cultural affairs and planning at Asahi newspaper.

Because I had always found it in the past to have been the best thing to do, I did it this time, too. I was very honest. I went to see Kaji and I said, "Mr. Kaji, you know, you and I understand each other very well and I'm sure you've been around a lot and you understand what I'm going to say when I say it, but I regret very much that I have to say we're not going to be able to finance Mr. Galbraith's participation." And he said, "That's okay, we will." So I said, "Well, I'm delighted to hear that he's going to participate and I hope that this doesn't go beyond this room." He said, "It won't," and as far as I know, it never did. He didn't bat an eye.

Q: I'm surprised that Galbraith would have been turned down by a Kennedy Administration, or was this after Kennedy's death?

NICHOLS: Well, it's very strange. I don't know--I'll never forget this as long as I live. Of all people, John Kenneth Galbraith.

Q: I know he was a bit controversial, but I didn't think he was that controversial. He had been ambassador to India, appointed by Kennedy.

NICHOLS: Yes, I know, it was just unbelievable. You know, who would imagine this? And Kaji sort of looked at me and said, "Really?" I said, "Well, that's what I'm telling you." I couldn't believe it either. And I think I told Reischauer and he couldn't believe it either.

Well, anyway, this all worked out very well and Galbraith did come. As a matter of fact, when he was there, during one of the intermissions he collared me and he said, "Well, Mr. Nichols, I hope you don't mind if I make an inquiry about something quite different than what we're discussing here. Tell me honestly, do you think that Ambassador Reischauer would make a good Secretary of State, in the new Kennedy Administration?" Well, I won't go into all of what I said, but I did say, "Well, maybe yes, maybe no. But I'd come down on the no side simply because while he's a

very fine man and a great scholar, I don't think he's really much of an administrator. Not that he'd have to be an administrator in that role necessarily, but I think he's more academic than functional." He said, "Well, you should know, I just was asking because we are thinking of running him, we're thinking of putting him in as Secretary of State and we're just trying to get different opinions. I hope that doesn't get around anywhere."

But in general, Lew, in those years between 1962 when I got there and 1969 when I finally left and then resigned when I got home, it was just one project like this after another. This series of lectures with--this symposium with Asahi was so successful that they undertook to do about three or four others with us, some of them not only in Tokyo but down in Kyoto for example. "Man In the City" was one, which was about city planning. We had the mayor of Boston who was very prominent in that field at the time and several American experts that we'd brought out, and experts from Europe and England and Southeast Asia, people like that. It was a big symposium on where were we going in planning for man in the city, environmental problems and so forth.

Q: I suppose that with Asahi sponsoring it, you got all sorts of publicity on these things.

NICHOLS: Oh yes. There's a plus and a minus in a case like this. When a newspaper like Asahi sponsors something like this, the other papers don't touch it. They try to get interviews with the people on the side, but never mention the symposium. And if they succeed in getting interviews on the side with these people, they publish them because they're famous people. But what you do gain is guaranteed front page and full page coverage. Every one of these things, because of the stature of the people who showed up from other places, like the man from the Philippines was the cultural man at the United Nations and then the cultural--what was his name? He died recently. At the UN. He was at the UN for many years. The education Minister for the Philippines at the time of the symposium. Well, anyway. Romulo, it wasn't Romulo. Well, anyway. Whatever it was. It was people of that level, and from Australia and other places.

So that what you do get is front page coverage of this symposium because of its sponsorship. And then also coverage in depth. And even printing of the speeches in sheet after sheet of the newspapers and the inside sections of the newspaper that has the largest circulation. It's like putting all your eggs in one basket, but it's a pretty big basket, and it was the one basket that carries the most intellectual weight. I don't know if you know, but the newspapers are sort of tagged. Asahi is considered the intellectuals' newspaper, or the academicians' newspaper; the Mainichi is considered sort of more on the business side and the down-to-earth news side; and Yomiuri is more sort of like sports and activities side.

Q: Then you've got the Nihon Keizai.

NICHOLS: Nihon Keizai of course is like the Wall Street Journal, so that's a special paper with a very small circulation, compared to millions. You know, the morning edition of the Asahi alone is something like 12 million. Then they have the evening edition, and then other editions and the specialties, too. So you hit a tremendous audience with just that one sponsorship. But you can't have them all. That's the way it works. We did do some with the other papers, too, but none that were as prestigious. Once you start a series like this with a paper, they like to carry it on. And in

every case it's like pulling teeth to get it going with a new sponsor because they haven't been through the drill.

We even had one on, I've forgotten what it was on, the subject matter, but we initiated this thing that's now very common in Japan, we got a very famous Harvard man--at the time, he was at Yale, then he went to Harvard--sociologist. I'm trying to think. But anyway, he was supposed to come to the symposium sponsored by Asahi in Tokyo and he was the key man, he was the most famous of the participants who were going to attend, and he couldn't attend at the last minute because of some physical ailment. At the very last minute. And they were horrified. But he was living in New York at the time. We arranged for him to go to the Voice of America studios in New York--this was the middle of the night New York time--and during the symposium in Tokyo he appeared three times, first giving his own talk simultaneously translated locally by the interpreter. So he spoke initially with his set presentation; then twice, two other times to answer questions, in the question and answer series where the people there could ask him about his presentation and other things that had been said by other speakers. So he was participating in absentia.

Q: Was this on radio or on television?

NICHOLS: This was in the conference call.

Q: No, but I mean he was in New York.

NICHOLS: He was in New York.

Q: I mean, was this transmission to Tokyo just a radio transmission?

NICHOLS: I think it was by phone, by telephone line.

Q: They hadn't reached the point of projecting a television...

NICHOLS: I'm trying... No, no, it wasn't visual. But it was very clear, and this was the first time that this had ever been tried so of course they wrote that up as a "first". You know what I mean, big news. Anyway, I'll think of that, too, later.

But this kind of thing was famous. Every time we did something like this there were new wrinkles, very intriguing things. Also we in these symposia really were the first people with Asahi to subsidize simultaneous interpretation at these conferences. The International Cultural Conference got its start really working for these symposia. The very first one they ever did was sponsored by Asahi with us. Of course, now they cover all sorts of things, tremendous.

That was the kind of thing I was doing. But again, there's nothing you can put your finger on like this is what I was doing consistently. It was administrative in the sense of division chief, and all the speech writing, reports and budget.

Q: But the idea, you were the one who approached Asahi with this concept.

NICHOLS: Oh, yes. Yes, that's right, yes, that's right. I found that I had--and this is very interesting, because Ed Nickel was PAO at the time there, and Ed I've known quite well for a long time and he knew my track record, you might say, the family man and so forth. So he was going to give me absolutely Carte blanche. If I'd say, Ed, I'd like to go and talk to these people about this, I'm going to take this kind of risk, he'd say, go ahead. You've got my okay for that, no problem. So I never had anybody, sniffing around saying, what the hell are you doing, and trying to pull the rug out from under me. I took some risks sometimes as I did like going back and talking to this Asahi guy about Galbraith. My conviction was that if you got to know these people well enough, you could really level with them and they were pretty good about observing mutual agreements about what should be said and shouldn't be said. Nobody ever pulled a trap on me, anyway.

WILLIAM CLARK, JR.
Economic Officer
Kobe-Osaka (1963-1965)

Ambassador William Clark, Jr. was born in California in 1930. Ambassador Clark's career included posts in Sierra Leone, Japan, South Korea, Egypt, and India. He was interviewed by Thomas Stern in 1994.

CLARK: As I said, in 1963, we were assigned to Osaka. I was there as an economic officer, principally to follow the textile industry. I became an economic officer because that happened to be the vacancy then available. I think the "cone" concept was developed while I was in Osaka and because of my assignment, I became an "economic" officer in the Foreign Service system. My degree, eight years earlier, was in social sciences and that meant that I had split my courses between economics and political science. So I had some academic acquaintance with the "dismal science". The Consulate General in 1963 was quite large -- much larger than it is now. It had two offices -- one in Kobe and one in Osaka. It covered several prefectures in the southern part of Honshu and all of Shikoku. We also had establishments in Nagoya and Fukuoka. We must have had twenty Americans in the CG. There were also USIA offices in Kobe, Osaka and Kyoto as well as some CIA representation.

Osaka was the center of Japan's textile industry, primarily cotton. The Spinners' Association was headquartered in Osaka and so was the Cotton Traders Association. The latter represented the cotton buyers whose purchases were spun by the members of the Spinners' Association. I learned to become a diplomat. In the morning, I would go to the Spinners and urge them to reduce the amount of textiles they were exporting to the United States; in the afternoon, I would go to Traders and urge them to increase their purchases of cotton in the United States. Being able to do both with equal fervor made for a good diplomat.

Even in 1963, we had concern about trade with Japan, particularly in the textile areas. We still had a trade surplus in Japan, but in the cotton area, we had to push for greater sales because we were still growing more in the US than the world was using. It was just being warehoused and

we were instructed to sell as much as we could possibly do. Before I was assigned to Osaka, the continuing large amounts of textile exports to the US finally required that a treaty be negotiated between the two countries. That first agreement was rather simple compared with the current multi-fiber agreement; it only covered cotton textiles, for example.

I monitored other goods as well. I used to go to Tokyo to talk to the baseball gloves manufacturers. I would ask them also to restrain their exports to the US. I made that pitch until Spaulding stopped manufacturing gloves in the US; then we didn't care about Japanese production and exports. We needed the Japanese to make the goods needed to play our national game! I also followed the steel industry. Sumitomo Metal Company had a continuous metal casting process which I believe they had bought from the Soviet Union. There were three different casting processes in the world at the time. It took me two months to convince the Japanese that I wasn't an engineer who would make detailed reports to their American competitors. Finally, the company agreed to give me a tour of the mill which I found very interesting. For several years thereafter, I used to ask American manufacturers why we didn't use a continuing casting process. They said they had other means which were easier to use. They may have been easier but they were not as efficient and cheap. It has now changed, but it took a long time for the American manufacturers to catch up. So I became interested in a number of commercial enterprises on which I used to report regularly.

By 1963, Japan had recovered to a considerable extent from the War. There were some areas which still bore the scars, like the area in front of the main railroad station in Osaka. In that area where some flimsy building all occupied by squatters. They were booksellers who wouldn't move and the government couldn't figure out how to get them out. If a fire burned a building down, by the next day, it was put back up again. We did a survey of Osaka looking for space for an office building so that we could abandon our offices in Kobe. We found that the land then occupied by the squatters by the railroad station was more valuable than any footage in Manhattan. So even thirty years ago, land in Japan was extraordinarily expensive. However, in the early 80's, I did cut a ribbon opening our new building in Osaka.

There were other reminders of the war. Across the C.G. building in Kobe, lived some Korean refugees who had become squatters. Many of them had been brought to Japan during the war. But in general, the standard of living was on the rise. Covered arcades could be seen. Shopping was inexpensive for us because the exchange rate was 360:1. A bowl of noodles cost 80 yen. A lot of the infrastructure that we take for granted, like sewers, had not yet been constructed, particularly in the rural areas. But you could notice that Japan was about to enter a modern era. There were big buildings, but they were still flimsily constructed. The maintenance left something to be desired. However, we found living conditions quite adequate particularly when compared to what we were used to in Africa.

The Japanese did not show any resentment toward Americans. No one ever castigate us for the war. They were especially pleased if you tried to speak Japanese with them. As Mark Twain noted, it wasn't important if you spoke well; the important thing was that you spoke at all. So I used my Japanese all the time.

During the Osaka tour, we lived in a U.S. government-owned compound behind the Consulate

General building in Kobe. We had a one-bedroom apartment. We all commuted to Osaka. The Consul General had a home between Osaka and Kobe, where we now have housing for our staff. We have closed the office in Kobe. Kobe and Osaka were essentially one city, but two very distinct communities. Kobe was where the foreigners lived. It was the port with the trading houses, the golf course, the country club. Osaka saw itself as Japan's real commercial center, although Tokyo was clearly becoming the center even in the mid-60's. Osakans compared themselves to New Yorkers and Tokyo to Washington, but that was just not the case. Osaka is still an important commercial center, but certainly not the main one.

There were many representatives of other countries in Kobe-Osaka, mostly in Kobe.

My colleagues in the economic-commercial section followed other commodities and products. We fulfilled the requirements of the world trade directories. We all submitted special reports on the trade that we were following. We traveled around reporting on the firms we had visited. At that time, end-user checks were still required. That is, the U.S. government was interested in making sure that items sold under the foreign military sales program were being used for the purposes intended and had not been diverted to other programs or even worse, exports to third countries, especially communist ones. We would go to see what happened to surplus brass that we sold; the buyer of course often could not trace precisely what had happened to his procurement. As long as he didn't export, we didn't worry too much.

Kobe was a nice small city which had been damaged in the war as had most of Japan. Being a major port, Kobe was subject to bombing, although it had not been hit as heavily as Osaka. I have always assumed that Kobe was spared to some degree because it had a high concentration of foreigners living there, although I have no documentation to substantiate that thesis. It had not recovered as fully as some other cities had. It was falling behind in terms of importance and influence. Yet it was a more comfortable city to live in than Osaka. It was more international and had been so historically since it was a port for a lot of foreign vessels. An American ran a restaurant called *The Texas* on the main street of Kobe. It was a pre-war restaurant which had been operated by non Japanese for a long, long time. There were other foreigners living in Kobe who owned and operated businesses. They all gathered at *The Texas* at lunch time, rolling dice. I always wondered what they did in the afternoon -- probably slept!

There was a sizeable foreign representation in Kobe-Osaka, mostly in Kobe. Our Consulate General had been built in Kobe and was an award-winning structure. It was a two story building over-looking a fish-pond. It was a beautiful design, all glass -- something you wouldn't dare design in today's security conscious atmosphere. It was also an easy building to work. That did create a small problem because the C.G. had a beautiful office with private bathroom overlooking the port. He didn't like to leave those surroundings for his office in Osaka. The consular operations were principally in Kobe as were the administrative ones. Two political officers and the six of us in the economic-commercial section were in Osaka.

The political reporting, which then consisted primarily of memoranda and despatches, went to Tokyo. The trade directory reports went directly to Washington as did most of the other commodity reports. Embassy officers would come to Kobe-Osaka from time to time to discuss our findings and views. The Economic Minister came. The Embassy people traveled perhaps

even more than they do today. The Reischauers came a couple of times; they liked to travel.

The social life was active. Our friends were either Japanese or Westerns who spoke Japanese. One of our friends was a young Episcopalian minister, Ed Browning, who together with his wife lived in Kobe to study the language. I later met them again in Okinawa where he was the Bishop. After reversion, he was sent to Europe as a roving Bishop and now he is the presiding Bishop of the Episcopal Church.

I had an interesting tour in Kobe-Osaka. I learned a lot about the Foreign Service. My first boss, as I mentioned, was Owen Zurhellen. He used to scare people; he growled at them. I just growled back. In those days, we used non-professional couriers to carry the mail back and forth from Tokyo. Our CG would do it for three weeks out of a month and the CG in Nagoya would service all of us one week per month. One time, Zurhellen was having a fight with his administrative officer and I wasn't aware of it. I was meeting with him alone; a phone call came in and the Japanese operator put me on because she wasn't going to ask the C.G. to answer it. It was an employee of the Nagoya C.G. saying that he was at the station waiting for someone to pick up the pouch that he had brought with him from Tokyo. He wanted to know what he should do. I reported the conversation and asked Zurhellen what I should tell the courier. He looked up from his desk and said: "Bill, are you in administration? If not, tell the courier to come to the office". The courier arrived and we waited for a half-hour. Finally, I went back to Zurhellen's office to tell him that the courier was cooling his heels waiting. I asked what I should do with him. Zurhellen said: "Didn't I ask you before whether you were in the administrative section?". So I walked out. A few minutes later, Zurhellen came out of his office and took the Nagoya courier out for lunch. Later in the afternoon, I told Zurhellen that perhaps I had been out of line, but that I didn't want our office to look as stupid as it did in those circumstances. No one else would have talked to Zurhellen as I did, but because I did, we got along quite well.

The C.G. who followed Zurhellen was one of the more insecure people I have ever known. He was an old Japan hand, but had had some rough spots in his career that he attributed to the malice of others. He thought that all of his staff were hell-bent on acting like the Consul General. It was nonsense in any case, but especially for a post in Japan where everybody was always concerned with their position in society making sure that one never operated at a level higher than one's position. It turned out that I became the only officer on the staff that he would talk to. When I was assigned as Consul in Sapporo, this CG asked whether I would stay to manage the Kobe office. I told him I would think about it, although I was sure that I wanted to move to a post of my own. I think the CG wanted me stay because he had come to realize that I was not going to sabotage him. So the experiences in Kobe-Osaka were very useful because I learned a lot about people and management.

There was a definite effort on the part of the Japanese to do things that today would not be acceptable. For example, the Governor of Osaka had a mushroom-hunting party in the Fall; he hosted another event in the Summer. Everyone was being very hospitable. Today, that is just not done; it would be too expensive and questions would be raised why all these resources were being spent on the consular corps. During that period, Japan was seen as needing the help of the foreign community. Much of the Japanese public relations effort were concentrated on the question of how foreigners' attention could be focused on development of their locality, even

though the plans were not necessarily adequately considered. But all the Japanese were thinking about this issue with each city or prefecture competing for attention. The Japanese would build the necessary infrastructure and then seek foreign investment for plants and other economic development projects. Not many Americans built in Japan, but that was not because the Japanese weren't trying very hard. The Consulate General, although not involved in encouraging investment, did survey its district and reported on what the Japanese were doing and what kinds of investments they were seeking. I am not sure that anyone ever read any of these reports, but we did write them.

Q: In this period -- 1961-68 -- were there any visible indicators which might have presaged the major industrial revolution which subsequently transformed Japan?

CLARK: Quite clearly. The first sign that caught attention were the developments that were taking place in preparation for the 1964 Olympics. While I was at language school for two years, the Japanese were building the ring roads around Tokyo. They also built a high speed highway between Tokyo and Osaka. They built a monorail to the airport. The Japanese were very proud of these infrastructures because it made them feel that they were entering the "modern" world. Of course, by this time, Sony was already the preeminent producer of transistor radios, but that was not a major achievement. I remember talking one evening to Akio Morito to the Ambassador's residence -- language officers were brought to the residence for parties to serve as interpreters, to greet Japanese guests and introduce them to the Ambassador -- a practice that has since ceased. Morito said that his company was developing a tape recorder for television; he thought that it would be an attractive product. I asked what the price might be. He said that he thought it would probably sell for \$ 300, which in those days was a handsome amount. I expressed the view that I thought that at that price, the market might be limited; that episode clearly shows why I stayed a bureaucrat and Morito became a famous industrialist. It was clear in the early 1960s that the Japanese were planning to become a major player in the world's economy.

That Morito story is an illustration also that Japan is a society which has an amazing amount of access. It was true in the early 1960s; it is still true today. Even as a young officer, I would talk to the Finance Minister at the residence. He was delighted to talk to someone who spoke Japanese; he did not mind talking to someone considerably his junior both in rank and age. Even then, I could always talk to senior political officials; that is still true today. Junior officers from the Embassy can still visit with Diet members; that would not be possible in Washington. The key was the ability to speak Japanese. We had far better access than, for example, young Japanese unless they were from the member's district. Japanese are much more accommodating for face-to-face meetings than Americans. They make time for these discussions. It is just more important in their culture to have such sessions than it would be for us. This approach was perhaps more prevalent in the 1960s than today, but it is still practiced today. I had a lot of access even as a younger officer; some of those contacts I have maintained through the years. We have matured together.

As I said, the Olympics was the first major Japanese effort to modernize itself. The Japanese have an elaborate tax structure which permits them to collect revenues and redistribute them. It is called *kofuze* (the redistribution tax). It is based on that old philosophy which taxes those who are able to pay and allocates those resources to those who need them. That spread resources

around the country. That gave the Japanese government an opportunity to target development. The Tokyo Olympics served as a rationale for upgrading traffic flow in the Tokyo area and to other cities, both roads and trains -- the bullet train. The next great event was the 1970 International Exhibition in Osaka. That was used to build more transportation systems and other infrastructure projects. Then came the Winter Olympics in Sapporo, which people there said they would never host again. But it got them a new subway system and new roads and other facilities. This approach to development is one of the reasons for Japanese disappointment when Seoul was designated as the host for the 1988 Olympics; they had hoped that Nagoya would be chosen so that it could join the list of cities that had enjoyed infrastructure development. Japan used these major events as rationales for economic development. It happened when Okinawa was returned to Japan. They build an ocean exhibit and then roads and other transportation projects so that visitors could reach the site. Major events of the kind I have mentioned permits the government to spend resources disproportionately to certain areas, which would not have happened otherwise to the same degree. The event was the excuse for a major economic development effort. Without the event the government would be accused of favoritism.

There were other signs in the early 1960s of Japan's future as an economic giant. It was at about this time that Toyota exported its first car to the U.S. It was a car that worked relatively satisfactorily on Japanese roads of the day which didn't go very far nor could they accommodate much speed. When the same car traveled on US roads, it was different story: it blew up, as the Renaults did. There were enough Japanese that knew something about the rest of the world, but certainly not nearly as many as today. But as a society it reads voraciously. That doesn't mean that all had an accurate picture of the world, but they certainly tried their best. They were always interested in the US. I used to get many questions about the US. As many other Americans, I used to run into people who had studied the US in minute detail and who had some minute fact that they wished to check. It didn't occur to them that I might not know everything about the US! The Japanese were very interested in learning English. It has been true for a long time that wives of American officials could make a very reasonable income from teaching English; some could make more than their husbands if they were willing to work long hours. Some of that is still true today. In the 1960s and 1970s, school children would invariably approach us just to say "Hello". Today, that doesn't happen anymore because everyone expects them to know that word of English and many more. They didn't go as far as some others Asians in touching a Westerner, particularly one with blond hair. But they would point to you and say "Gashinda" (foreigner) partly because in the 1960s the school children didn't see that many foreigners -- even in Tokyo. Today, that is not done very often. I remember one day when Judith and I went by boat to Shikoku. It was a hazy day and we sat on the top deck. She is red-haired and light skinned. By the time we got to Shikoku, she was glowing red. That attracted a crowd of kids who followed us around; she was the original red-haired barbarian. They were amazed!

MARSHALL GREEN
Deputy Assistant Secretary
Washington, DC (1963-1965)

Ambassador Marshall Green was born in 1916 in Holyoke, Massachusetts. He

received an undergraduate degree from Yale University in 1939. In addition to his service in Washington, DC as Deputy Assistant Secretary, Ambassador Green was posted to Australia, China, Indonesia, Hong Kong, and South Korea. He was interviewed on March 2, 1995 by Charles Stuart Kennedy.

GREEN: I came back to Washington in 1963 to be Deputy Assistant Secretary, basically to take a long, hard look at China policy. However, after President Kennedy was assassinated [in 1963], it was clear that we couldn't get some of our major proposals through our government, although we almost got liberalization of travel to all countries, removing any restrictions on travel. However, ARA [Bureau of American Republic Affairs], claimed that this would upset their understandings with the Organization of American States. So we never got that one through. Meanwhile, Vietnam was increasingly taking up everybody's time.

During this period from 1963 to 1965 when I was Deputy Assistant Secretary of State, my concerns with Japan were really quite secondary. In fact, it's rather hard for me to remember some of the things that we did at that time.

I remember one meeting we had at the Chiefs of Mission Conference in 1971 in Baguio [Philippines], where Armin Meyer, our Ambassador to Tokyo, made a very "upbeat" presentation on Japan. It certainly pictured Japan as our most important partner in the world. Our Ambassador in Korea, Bill Porter, really "savaged" Ambassador Meyer on that. He made a long, fairly sarcastic and sometimes humorous reply to Armin Meyer, asking what the Japanese were doing for us. What burdens were they carrying? What is their attitude toward the world and toward Korea -- which had been the object of Japanese contempt for a long time. Ambassador Porter was speaking like a Korean.

Q: But in a way, isn't there a considerable kernel of truth in this? In the case of those two countries, China and Japan, haven't we had something of a "love-hate" relationship? But the "love" relationship gets more involved. It strikes me that we really weren't asking much of Japan.

GREEN: No, we weren't asking much of Japan. We could see that Japan was going to be terribly important in the future. Its GNP was rising very rapidly with growth rates running around 9% a year. Japan loomed as the major contributor to economic development support programs for East Asia and even for Africa and other parts of the world. We saw Japan in those terms.

During these years we also developed closer contacts with the Japanese Foreign Ministry. When I was Deputy Assistant Secretary, Bill Bundy [the Assistant Secretary] had meetings quite often with the Japanese. That was a system which I carried on later. In fact, during Bill Bundy's tenure as Assistant Secretary, I was more or less the person representing the Bureau of East Asian Affairs on all issues relating to Northeast Asia, because he was so involved with Vietnam and Southeast Asia. I was virtually the Assistant Secretary for Northeast Asia, as he was for Southeast Asia, except when he would go on a trip, I would have to take over his problems, and vice versa. He and I were a very close team. We had gone to school and college together and traveled to Europe together between our graduation from Groton and arrival at Yale. So we knew each other very well.

I would say that there was a lot of forward motion in Northeast Asia during that period. The growth figures, of course, would show that. While we felt that Japan could do more to help developing countries, its "rate of donations" was greatly improved over what it had been earlier on. We were grateful for that. Furthermore, on the diplomatic side Japan was eager to play a more active economic and developmental role in all parts of the world, including in Afro-Asian affairs. As I was to find out in Indonesia, Japan was able to help out in these aid donor groups. Japan was "coming of age" -- that's all, though it had a ways to go.

We had these annual meetings with the Japanese Foreign Ministry. I remember attending one such meeting during this period in Williamsburg, VA. I also went to Japan as the chief of our delegation to a meeting with the Japanese up in Miyanoshita, near Mt. Fuji. We and our Japanese Foreign Office counterparts felt that we had a common stake in the world, with the US coming to depend more and more on Japan, particularly in economic terms. We also saw advantages for all concerned in the United States-Japan Mutual Security Treaty, because it provided a kind of protection for everybody, including, paradoxically, China and Russia. So the Japan-America relationship was highly "stabilizing" in that part of the world.

Q: In some countries you can talk to the Foreign Ministry, but they just don't play any significant role in their government. There is a sort of "disconnect" involved. With Japan did you find that the Foreign Ministry played a strong role, as did the State Department, with some exceptions, in our government regarding foreign policy?

GREEN: The officials of the Japanese Foreign Ministry were very important within the Japanese Government because, first of all, the ministry contained many of Japan's elite. They were extremely well educated. They had good foreign connections, with Japan heavily dependent on other countries, both politically and, of course, economically. The problems we had with Japan at that time were not so much directly with Japan. They were largely subjected to third countries problems.

Japan was worried about our relationship with China. They were worried about our relationship with Southeast Asia, especially Vietnam. They were worried that the United States was going to draw Japan into "dicey" situations. When they read about how our Congress and Washington in general behaved, they weren't always sure that we would act sensibly in crises. If we did wrong or guessed wrong, Japan would be drawn into the vortex. So these are the kinds of things that bothered the Japanese.

Q: Could you "allay" these concerns at all?

GREEN: Yes, we allayed them by consultations -- real consultations. Before we did anything, we made a practice of letting them know. We would try to get their agreement. That's how this whole question came up of not having gained their support when President Nixon went to China. This was such a major irritant in our relationship, because we'd been telling the Japanese, year after year, to stay with us on the Chinese representation issue. They did. They "played ball" with us, though they were very anxious to trade with China. We advised them to "go easy" and so forth. So we had a staying hand on their wrist. And all of a sudden, without telling them, we got to Peking first.

Q: This was when you were Assistant Secretary?

GREEN: I was Assistant Secretary. We'll come back to that, of course. I've been jumping ahead. I was simply trying to say that the whole question of consultations developed during the period we're talking about -- 1963 to 1965. This was part of the formative period in the consultations process.

Q: When you were Deputy Assistant Secretary, what was your feeling about President Johnson's interest in Japan?

GREEN: I'm not sure whether I remember much about President Johnson's interest in Japan. I don't remember his being that much concerned with Japan.

Q: Well, that's an answer.

GREEN: I remember talking with President Johnson about Indonesia and about how important Japan was as the principal economic supporter of Indonesia. I also told him that I consulted with my Japanese colleagues, whom I'd known very well. This became kind of a way to "get through" to Sukarno. Sukarno's Japanese wife was a close friend of the Japanese Ambassador to Indonesia, who then introduced me to her. Of course, LBJ was primarily concerned with our growing involvement in the wars in Indochina, and he must have become aware of the fact that any heavy bombing of Asians in Southwest Asia was likely to be deeply disturbing to Asians elsewhere, including Japan. The Japanese government cooperated with us in not raising major obstacles to our military operations in Indochina, but they did this with many reservations and considerable reluctance.

Q: There were those who felt that there was a certain amount of racism in that situation.

GREEN: That's right.

RICHARD J. SMITH
Vice Consul
Nagoya (1963-1965)

Richard J. Smith was born in Connecticut in 1932. He graduated from the University of Connecticut in 1955. He served in the U.S. Coast Guard from 1954 to 1958 and entered the Foreign Service in 1962. In addition to serving in Japan, Mr. Smith served in Japan, Sweden, Canada, Germany, Poland, Vietnam, the Soviet Union, and Malta. He was interviewed on July 30, 1996 by Charles Stuart Kennedy.

Q: Now, were you slated to be a Japanese language officer or was this sort of familiarization.

SMITH: It was more familiarization. It was the short six-month course. It was enough to do a lot of good during the two years we spent in Japan. The Japanese are extremely appreciative even if you're doing a hatchet job on their language, as long as you're trying.

During my two years at the Nagoya consulate, I was in the central complement program. In this program you spent four or five months in each of several areas, including the administrative, consular, economic, and political sections. The United States had the only consulate in Nagoya. All of the other countries covered Nagoya out of Kobe or Osaka. We were in a very nice situation because we had the attention of the Governor and the Mayor. We didn't have any competition and were a fairly small post. There were about five or six officers there.

Q: During this period, you were there from '63 to '65, how were relations with Japan?

SMITH: They were quite good. Ambassador Reischauer had arrived by then. Douglas MacArthur II had a rough ride as ambassador in the early 1960s, and there was a lot of tension in the relationship. But after Reischauer had been there a little while, under the Kennedy Administration, the relationship became something of a love-in. His wife was Japanese, descended from a noble family. He was viewed correctly as a great scholar of Japan and Japanese history, and he was a wonderful man.

The few dealings I had with him were memorable. He came down to Nagoya a couple of times, including once when I was putting together a labor exchange team. I'd brought the team in to talk to him, and he spoke to them in English, using an interpreter even though he was one of the best American speakers of Japanese. He said afterwards that when you get into serious business, you want to be very careful even if you think you know Japanese, because there are a lot of nuances that a non-native speaker may not be sensitive to. I remember an incident that exemplified the spirit of the man. We were walking out of the consulate, and some Japanese were crowded around the entrance. Reischauer walked down the steps and over to them. He reached into the crowd, removed a lens cap from somebody's camera, and said, "You'd better take this off." He was always aware of his surroundings and had an almost Zen-like calmness about him.

Q: What were our economic concerns in the area? Where there any at that time?

SMITH: Yes, certainly in the Nagoya consular district. If it had been a country, it would have been America's sixth largest trading partner. The special steel industries and much of the automobile industry were located there. I remember going to the Toyota plant, when Toyotas weren't so well known in the United States, and thinking that this was a remarkable product and that we were going to hear more about these cars. The textile industries and the fine china companies, such as Noritake, were also located there. So we had a huge economic interest and a very high level of trade between US companies and Aichi Prefecture, of which Nagoya is the capital.

Q: As a former Commerce officer sitting there in the '63 to '65 period, did you have any disquiet or was there any within our establishment about Japanese trade with the United States?

SMITH: No. At that point we were holding our own in our trade with Japan. We were just

looking to open and expand trade in both directions. The kind of issues that we face now had not yet arisen.

Q: *How did the assassination of President Kennedy hit Nagoya?*

SMITH: Like a ton of bricks. I guess everyone remembers when that happened, where they were and all. I recall working in the consulate and getting that message. We put up a picture of President Kennedy, and the crowds just swarmed in to pay their respects. The Japanese felt about him like they did about Ambassador Reischauer. There was a tremendous response. It was a shattering experience, not just for the Americans but clearly for the Japanese, too.

JOHN E. KELLEY
Economic Officer
Tokyo (1963-1965)

Japanese Language training
Yokohama (1965-1966)

Consular Officer
Fukuoka (1966-1969)

John E. Kelley was born in California in 1936 and raised in Washington, DC. He attended Pasadena City College and the University of Virginia. He then went to Hawaii with the Weather Service and joined the Coast Guard, receiving a degree in government from the University of Hawaii. Mr. Kelley later obtained a master's degree in international relations of Northeast Asia from American University. In addition to serving in Japan, Mr. Kelley served in Korea, Portugal, and Australia. He was interviewed by Charles Stuart Kennedy on May 21, 1996.

Q: *What was your first assignment?*

KELLEY: I was in Tokyo, surprisingly enough, since I had Japanese.

Q: *When did you go to Tokyo?*

KELLEY: I got there in 1963.

Q: *How long were you there?*

KELLEY: I spent two years there, from 1963 to 1965.

Q: *What was your job when you went to Tokyo?*

KELLEY: I was just a trainee, a rotational officer. I started off in the economic section, then I

rotated around among various sections. At the end I was sent back to the economic section because that was the year that they had the first of the U.S./Japan Cabinet meetings. Since I had experience in the economic section the guys thought that I could be of help to them and they sent me back there to help organize the conference.

Q: Let's talk a bit about when you were in Japan. Who was the Ambassador then?

KELLEY: Ed Reischauer was the Ambassador at that time.

Q: Did you have any contact with him, or was he pretty far off?

KELLEY: I had a lot of contact with him, and that's the way I thought it was supposed to be. Maybe at the time I was spoiled by the experience, but he was very approachable. For a Junior Officer I thought that I had quite a bit of contact with him. He came over to my house for a function that I held for some young people. I was invited to things at his residence even though I was the most junior of the Juniors, Christmas things and other functions of that kind. I think he was a very personable, very outgoing, kind of guy, who really made a terrific effort to reach out to the young people on the staff. To everybody on the staff as far as I could tell.

Q: What would you say was sort of the political economic situation in Japan during 1963 to 1965?

KELLEY: Actually I stayed in Japan until 1969, I just wasn't in Tokyo for that time. But for that beginning period, the Japanese were as they continue to be, they were highly protectionist. They were still struggling with their reputation for producing shoddy goods and that sort of thing. They were pushing very hard to get their merchandise exported and protecting their markets for all they were worth. It was a very difficult time for us, I felt at that time because the Japanese were capable of retaliating against any American company which would try to get the U.S. Government involved to help it get a better access to the market. With the kind of fear that they instilled into the American companies, we could get no cooperation from American companies and we really couldn't push for opening up the market. Of course the security relationship was totally dominant at the time, so it was a not a very good atmosphere for making any kind of progress in the trade area.

Q: When you say that the Japanese would get back at any firm, how would this happen? Can you sort of explain how this would work?

KELLEY: I'm not the best person to answer that because being a Junior Officer at the time and not an Economic Officer, I didn't get to sit in on any of the meetings with American companies at which they would try to get us to help them without providing us any information. But I talked to my colleagues and the word that was coming through from the American companies was that the Ministry of International Trade and Industry could step in and hold up any applications they might be making for entering into any kind of partnership with a Japanese company, for example. They could make it very difficult for them to do business in Japan -- for example refusing permission they might need to open branches. At that time, opening branches was almost unheard of, and permission just to enter into any kind of agreement or partnership with a

Japanese company could be denied. The problem Kodak is having is illustrative. That problem began in the early '60s, and is still going on. The Japanese government refused to allow Kodak to open a distribution system in Japan, to protect Fuji Film. I don't know what tactics they're using now, but their objective is clearly unchanged.

Q: For what you were getting, and granted you were kind of off to one side, but the thing was that the U.S. Government was almost going along with this and saying "Let's not make cases of this?"

KELLEY: No, quite the contrary. We were trying to make cases and we couldn't get any U.S. companies to allow us to use their names as examples of protectionism because the companies involved feared retaliation. Without being able to be specific the Japanese would just stonewall us. As I said, the security relationship was really paramount. The U.S. Government as a whole was not willing to put pressure on the Japanese, absent a good defensible case.

Q: Did you have much contact with Japanese officials, at your level?

KELLEY: Most of the contact I had, interesting enough, was through my own private arrangements. I taught English to officials at the Ministry of International Trade and Industry. I developed a lot of friends through that, and actually there was a certain sense of obligation, as you know that sets up between the Japanese and their teachers. So they were very open with me and helpful with me about a lot of things about how they worked. We wouldn't get into policy a lot, but I did learn a lot about how they functioned.

Q: What was your impression about how the system functions, say in the Ministry of International Trade and Industry (MITI)?

KELLEY: The main things that I talked about would be careers and how they would advance. What kind of requirements they had for getting ahead and that sort of thing. What the relationships were with their superiors. Also how MITI ranked in the pecking order among the agencies, how much influence the Ministry itself had, how it exercised its influence. The feedback that I got was that they could exercise their influence through the political parties and the Ministers because they were controllers of the information that the Ministers needed to do their jobs. They would work these incredible hours, they were very responsive to the Ministers on one hand, (and they spent endless hours briefing these people) and on the other hand they would craft policies which they would then without great difficulty be able to sell to the Ministers. They were able to maintain great consistency of policy and control over policy by virtue of their control of their information.

Q: What was your impression of the people that you knew who were learning English?

KELLEY: Extremely bright, very bright guys. Very inquisitive minds, outgoing, hardworking, and very likeable. I didn't run into a single person that I thought was a difficult case that would hard to deal with. I'm sure they could be if I were negotiating with them, but in the way I dealt with them they were extremely outgoing.

Q: What was the impression at the Embassy of the Japanese economy? We're talking about what seems like a far gone era, I guess, in the early 1960's.

KELLEY: It was already pretty clear at that time that the Japanese were a powerhouse on the make. It was our impression that we needed to give more recognition to their potential and their status as an important economic power despite their inability to do anything of an offensive nature, or an overseas nature in the military field. We wanted to reward both their willingness to keep their military under control and not to be a threat and their willingness to try to be as helpful economically to us as they could within the incredible constraints imposed by the constitution in other parts of the world. When I say an economic sense, I mean in using some of their economic power to advance our mutual security interests.

Q: I take it that the men, was it all men that you were dealing with in those days?

KELLEY: Exclusively, yes.

Q: Were they inquisitive about our Foreign Service and how we thought it worked?

KELLEY: Yes, they were. They would ask all kinds of questions. They were mainly interested in the mundane aspects of how we operated rather than policy - how our assignments worked, our living conditions, those sorts of things. They wanted to learn as much as they could about everyday America, I think. They had a wide range of interests. They were also interested in American policy. I remember giving one fellow a book that I had on the economics of the Kennedy years.

Q: Were you married at the time?

KELLEY: Yes, I got married right after college.

Q: Was there much social life with the Japanese?

KELLEY: Yes there was, there was some. Since these were all guys, usually when I would get together with them outside of the class, it would be on outings in which they were going out as a group. Actually, I had two different groups that I taught, one was the Ministry people and the other one was a group from Waseda University who was sort of scattered into all walks of life in Japan. My experiences with these two groups were complimentary, really. We were invited by one fellow and his wife, for example, down to their family home in Kyoto where we spent a delightful week. On another occasion I had the whole Waseda group down to my home when I moved to Kamakura when I was going to language school, and they all spent the night there. We went out fishing at 4:00 in the morning, pulling in the nets and so forth. We would go off to retreats which belonged to this company or that company. My wife and I were both invited to some of these occasions, and then I was invited alone to others depending on what the guys were doing. If the guys were all going as a group among themselves, then I would be invited by myself, otherwise my wife would be included.

Q: What was the main preoccupation of the Embassy, that you were noticing?

KELLEY: There really was this question of giving Japan some recognition for being an important economic power and ally, despite its inability to project its military power. That was our principal preoccupation, I think. It was to reach out to young Japanese, particularly university students, to take advantage of the tremendous popularity of our Ambassador and of our President, to improve our image in Japan and to try to blunt the radical trend in Japan. At the time, I know our political section was very preoccupied with the possibility that the trend lines between the socialist and the liberal democrats (the conservative party) were such that at some point in the late 1960's the two lines would cross and the socialists would become the majority party and they were anti-security treaty, etc.. Those were the kinds of focus that we had - what would we do with that kind of situation, what could we do to forestall it, or to bring the socialist party around to a more accommodating point of view.

Q: Were you concerned about the student groups, such as Zen Gaku Ren?

KELLEY: Zen Gaku Ren was a big problem at that time because the security treaty was coming up for renewal. In the 1950's of course, we had the problem with student demonstrations preventing President Eisenhower from visiting Japan, I was there after that. We knew in another ten years we would have to face that again, that was another reason why Reischauer was there, because it was generally accepted that he would have a better chance of reaching out to the student population of the left wing of the political spectrum than anybody else might.

Q: I think this is the era when we had Youth Officers?

KELLEY: We did have Youth Officers, Packard was our Youth Officer. Mike Armacost, who later became Ambassador, was in that job. George Packard was the first one.

Q: I was wondering if you, with your contacts and all, were sort of encouraged to meet young people on their way up? Was there much of that?

KELLEY: I don't remember being specifically encouraged but it was almost commonly accepted that's what we were to do. It was our inclination in any event as young guys coming into the Embassy. We knew that Reischauer was emphasizing this himself in his own contacts. He wanted to reach out to young people. That's one of the reasons why that became one of the functions that I held, because I had invited young people. He wanted to encourage this kind of thing. It was just accepted that's what he wanted to do, I don't recall that it was stated specifically by him. It was certainly the evidence he gave by having a Youth Officer who had ready access to the Ambassador I had a lot of contact with Packard, and just gravitated in that direction.

Q: You were there when Kennedy was assassinated weren't you?

KELLEY: I was.

Q: How was that taken? I was in Yugoslavia at the time and flags were at half mast everywhere and huge lines coming in. Really in many ways, Kennedy was more popular abroad than in the United States, I would say at the time.

KELLEY: Certainly there was almost a physical blow to the Japanese. They were involved in it in a number of ways. First of all, half the U.S. Cabinet was in the air on the way to Japan for the first of the conferences between the United States and Japanese cabinets when the assassination occurred - they turned around in mid air and flew back so it impacted the Japanese in an official way. At the same time there was this incredible visceral blow that the Japanese felt, because they just didn't understand how something like this could happen in America. They were disoriented by it.

Q: Was Reischauer attacked while you were there?

KELLEY: He was attacked while I was there. In fact I was upstairs in the chancery, just on the floor above where it happened and rushed down just in time to see him getting some first aid from a friend of mine. I didn't see the actual attack.

Q: Did this attack seem like just an odd ball manifestation, or was this a concern that there might be more to it than that?

KELLEY: I don't think at any time did we think that there was anything more to it than it was just some nut who managed to get over the wall. I wasn't involved in any of the discussions involving the security officers in the Embassy or the police. The Japanese reaction was immediate overkill, because they had lost face. They were going to do everything they could to provide massive protection and Reischauer's real concern was that there not be this kind of overreaction. That was the guidance that we were essentially getting from Reischauer and from John Emmerson who was the DCM, who had to take over. In fact, Reischauer was clearly still running things from his hospital bed. We weren't going to blow this thing up.

Q: You went to Japanese language training in Japan?

KELLEY: I'd taken some Japanese when I was in FSI, here, and then of course I studied early morning Japanese and that sort of thing. And of course I had Japanese in college. Then I went down and got another year of Japanese at Yokohama.

Q: Can you tell me a bit about how the training worked? What was the concentration?

KELLEY: The primary concentration was on conversational and spoken Japanese. It was just that pure written memorization and practice, repetition, sort of child-like absorption of the language. Just constant emersion, the best you could get it. Two-person classes. Endless hours of tapes and drills and things like that. Less focus on reading. I thought it was really excellent.

Q: I've heard about the language school at Oberammergau for people going over to the Soviet Union, where actually they use Soviet defectors to teach just in Russian, and give lectures, everything was in Russian. We'd call it both, language enhancement and area studies. Your studies were in Kamakura?

KELLEY: It was in Yokohama, I lived in Kamakura.

Q: Was there much in the way of what we would call area studies?

KELLEY: No. There was hardly any of that. The closest thing we got to any kind of cultural studies was a tape of a Japanese soap opera that we got to study, because it gave us a chance to learn colloquial Japanese and hear how it was pronounced by actors who knew how to put the right emphasis and emotions into the language. You'd absorb a little bit of everyday life as a consequence of that, but that was about as close to that as we got. There would be field trips, but most of what I got -- and we were encouraged to do things that would help us to absorb the culture and learn more about it -- was from a historical study society I joined in Kamakura. This was ideal for me because Kamakura was such an old city and had this terrific tradition. Kamakura was the old military capital in the 1100's. It had a rich focus on history and it was always considered an intellectual city. A sort of bedroom town for Tokyo, but a very high-class bedroom town. You had a lot of rich access to cultural organizations. That's why I joined this historical study society. I traveled all over Japan in buses with the Japanese who were interested in history and couldn't speak anything but Japanese, so I had some great times and learned a lot, about half of which I understood. [laughter] It was terrific exposure and this was all encouraged. I would get time off from school when they had a trip so that I could go with them, because it was something the school wanted us to do.

Q: When were you in Yokohama?

KELLEY: That would have been from 1965 to 1966.

Q: There was sort of the feeling in the Foreign Service that if somebody took Japanese they'd disappear over the horizon and almost never be seen again by the rest of your classmates because once in Japan, you stayed in Japan. Did you have the feeling that you were joining a monkhood or something of this nature?

KELLEY: I had the feeling that I was joining a very exclusive society. In fact, it was a brotherhood of sorts. I at least tended to absorb a lot of the idea that we were to be loyal to each other, and that we were to be supportive to each other, that we were a band of brothers, in fact. And I would spend perhaps most of my career in Japan. It was a big investment for the Foreign Service, it was a difficult language and not many people wanted to study it.

Q: You got out of the school in what year?

KELLEY: In 1966.

Q: Then where did you go?

KELLEY: I was assigned to the Consulate in Fukuoka.

Q: What job did you have in Fukuoka?

KELLEY: Again it was a variety of jobs, it was a Consulate that was being whittled down and so

I started off being an Administrative Officer. I was a Consular Officer for a short time, I was a Commercial Officer the whole time I was there. I covered labor affairs and in the end I ran the whole place, or at almost the end, because everybody else left.

Q: You were there until 1969, was it?

KELLEY: Yes, I was there until 1969.

Q: You were on the island of Kyushu. Was there a difference between Kyushu and Honshu? I mean as far as a Foreign Service Officer would look at the political economic situation?

KELLEY: Well, the difference was more of the kind of difference that you would find in America, where you get out of the capital, you were closer to the grass roots. People weren't as concerned about the big policy issues and you really felt like your function was more representational -- trying to convey some sense that America cared about that part of Japan and Japan as a whole. And to encourage as much as you could a feeling of good will toward the United States.

Q: We had a rather large base at Tangashia(?) Wasn't it, was that near you?

KELLEY: At that time we had three major bases and a small facility. The closest base to us was Itazuke, an Air Force base which was our main air support base during the Korean War. It would have been the base that we would have operated from if hostility resumed. It was where we flew support missions when the Pueblo was taken, for example, little good that they did, they flew out of there. That's where the big build-up took place when we activated reserve air units and sent them out there. We also had Sasebo, which was one of the two major Naval bases in Japan. It was near Nagasaki which was in our Consulate district. Then we had the big Iwakuni Marine air base that was up near Hiroshima.

Q: What was the impact of the Americans? We're talking now in 1996, where our troops are having a hell of a time on Okinawa. I was wondering how the Americans and service people meld with the Japanese?

KELLEY: At that time, Okinawa was one of the big issues. Again the military bases agreement was a big problem and the question of nuclear weapons was always something that people were concerned about. The Japanese attitudes varied depending on what part of the political spectrum they were from. I was talking to everybody across the whole spectrum. I would talk to labor unions and socialists as well as the conservatives. The conservatives were all trying to be very helpful, but they were very puzzled about the nuclear thing. They, like everybody else in Japan, had this nuclear allergy. They knew that they had a policy against the introduction of nuclear weapons into Japan. They knew that we carried nuclear weapons on board our planes and aircraft carriers and other ships. They were all very anxious (the conservatives were at least, and that would have been the majority of people in Kyushu) that we somehow be accommodated, without violating their concern about the introduction of nuclear weapons. They thought somehow that we were making accommodations that kept weapons out of Japan. They were just willing to accept and hope that was what was going on. Their attitude was to try and be as helpful and

supportive as possible of the U.S. because they were really worried about Korea, the Chinese, the Soviets. Their attitude was: we're out here all by ourselves and we're a small country. They had been told all of their lives that they were weak and unprotected. They needed us. They needed to be able to count on us and they had to be accommodating to do that.

Q: There was sort of in the background, this idea of an unstable Korea, an unknown China, but not necessarily a friendly one at all, and very definitely not a very friendly Soviet Union there.

KELLEY: They had always been hostile to, and afraid of, Russia. The Soviet Union was just more of the same as far as they were concerned. There was great ambivalence towards China, on the one hand they wanted to be understanding and friendly toward China and knew that they had really screwed it up during World War II, and really didn't have a relationship with China at the time, and were anxious to do something without fouling up the relationship with the United States. Of course the United States at that time was still very hostile to China, hadn't made it's own opening yet to China. The war in Vietnam was just getting underway.

Q: Well, you were in Fukuoka when the real build-up in 1968-69, was going on in Vietnam. Did you see an impact in Japan where you were?

KELLEY: Incredible impact on the young people. It really soured the atmosphere. It would have been difficult with Reischauer there, but at least he was able to reach out to the Japanese and bridge the gap. If he had been there later in the day I think even he would have had a hard time. Although we had a very capable Ambassador and very a capable successor in Alexis Johnson, it was just getting worse and worse. It was very hard to overcome it. There wasn't anybody there who was as capable as Reischauer was at reaching out to the young people, and they were the people who were becoming disaffected. Younger people like myself did what we could to reach out to them, the Youth Officer in the Embassy did, but they were influenced by American youth and by their own idealism. They were having none of it, for the most part.

Q: Did you have any particular problems such as demonstrations and that sort of thing?

KELLEY: Yes, there were demonstrations. The particular problem that we had was after I was there by myself and one of our reserve-officer-piloted airplanes crashed into the University Computer Center. It was still under construction and hadn't been finished, and the students went out and laid siege and they wouldn't let anybody pull the plane out of the building. It was left hanging in the rigging for over a year, while they made it a symbol of anti American feeling. There were other kinds of problems as well. There was an allegation that radiation had leaked out of one of our submarines in Sasebo and there was a big scare about eating fish. Every one of these things was really blown up. The Japanese had this nuclear allergy anyway that was bad enough, and then the press would play on this and there would be this big left-wing drum beat that would go on for a long time. There would be demonstrations in Sasebo, there would be demonstrations at the Embassy, demonstrations at the Consulate, about all of these things.

Q: What was the feeling about Okinawa reversion? Was it your feeling at the time that things are going to happen or was it a matter of time?

KELLEY: The main problem was with the U.S. military, quite frankly. They had a situation there that they would have much preferred not to have to deal with. They felt like the Okinawans were willing enough to continue under their tutelage and if it isn't broke why are we trying to fix this, etc. I think there was much more debate going on within the U.S. Government than there ever was between ourselves and the Japanese once we got the U.S. military on board. There really was Reischauer's selling job - trying to get people to start moving in this direction. I wasn't really directly involved in the Okinawa negotiations, so I didn't have a lot to do with this. From my peripheral point of view, once I left Tokyo and went down to Fukuoka, we had very good cooperation from the Japanese government in dealing with this. They just wanted to make this thing go away, essentially. From the U.S. optic, Japan was an ally, and it was incongruous for the U.S. to occupy Japanese territory. In the event, Okinawa reversion was a Godsend to the U.S. It led to a resurgence of Japanese conservatism, and focused attention on continued Soviet occupation of Japan's Northern Territories.

Q: How about the local officials that you dealt with in the Fukuoka era? How did you find them?

KELLEY: Extremely accommodating, they were basically conservative, they had to trim their sails somewhat to the very different political winds that were blowing as a consequence of our increasing unpopularity because of the war in Vietnam. Personally that never interfered with the relationship at all. The man who ran for governor had to run as an independent, although everybody knew that he was a conservative liberal democrat. I remember running into him the night that he was elected, over at the newspaper office where I had dropped by to talk to a couple of reporter friends of mine. He was there for an interview and the first thing he did was walk up to me, shook my hand and said, "Don't worry about the air force base anymore." That was it, the only thing he said to me. That was the first thing he said, virtually, after being elected. That was the kind of attitude that I think we got from most of the elected officials.

Q: Did we have contact with the communist party or any of the parties on the extreme left?
